Timber interests, conservationists, sociologists, legislators, Congressmen, and many others began to study the import of this termination law. Congress was persuaded to extend its final effective date from the original August 13, 1958, to August 13, 1960, to allow more time for examinations of its effect on the Indians and the economy of the Klamath Basin.

Senator RICHARD L. NEUBERGER, chairman of a Senate Indian Affairs Subcommittee, has carried the ball in Congress seeking a better solution to the termination problem than offered in Public Law 587.

NEUBERGER, deeply concerned over the consequences of a termination, has amassed a voluminous record from repeated hearings on the issue.

But Public Law 587 still stands, and NEUBERGER has concluded that the prospects for getting Congress to change substantially the terms of the law are bleak.

The termination act sets up a procedure for winding up Federal supervision over the Klamath Indians after 94 years of continuous guardianship.

The law first required the Klamaths to close the roll of tribal membership, effective as of midnight August 13, 1954. That has been done. No child born to members of the tribe after that date is eligible for membership in the tribe for purposes of the act, although they have inheritance rights. Membership now stands at slightly more than 2,000, of which about 1,300 live in Klamath County, mainly on the reservation, and the rest elsewhere in Oregon and in 18 other States.

The law then required the employment of a committee of management specialists with these specific duties to perform:

1. Secure an appraisal of all tribal property, "showing its fair market value by practicable logging or other appropriate economic units."

2. Immediately after the appraisal, give each enrolled tribal member an opportunity to elect to withdraw from the tribe and have his interest in tribal property converted into money or to remain in the tribe and participate in a plan for management of the property remaining after sale of the portion necessary to pay off those who withdraw.

3. Select the portions of the tribal property to be sold to pay off the withdrawing members.

4. Undertake whatever studies and reports deemed necessary or desirable by the tribe or the Secretary of the Interior in connection with termination.

5. Prepare a plan satisfactory to the remaining tribal members and the Secretary for managing the tribal properties not sold.

CLEAR TITLE SET

The Interior Secretary was also directed to give the Indians by August 13, 1958, clear title to property on the reservation previously allotted to them and remaining unsold by them and to clear title to those allotments already sold.

About 200,000 acres of allotted lands have been sold, some of it timber and some grazing land. Consequently, the reservation now consists of about 800,000 acres. A few allotments arer still being sold under supervision of the Indian Agency. The last of these will be disposed of this month.

The members of the tribe are given the right, under the law to purchase the lands put up for sale to pay off withdrawing members and those withdrawing may use the money due them from the conversion of their interests to cash to buy the land. But they have to meet the highest bid of outsiders.

RIGHTLY PROTECTED

None of the cash or property distributed under terms of the act will be subject to Federal or State income tax. But thereafter, all property will be subject to State and Federal taxes.

The act specifically declares that the Indians' water, fishing and hunting rights conferred by treaty shall not be abrogated by the act.

The law also authorizes the Secretary to appoint guardians for minors or incompetents to protect their rights. The Interior Secretary is given the right to determine whether a tribal member "does not have sufficient ability, knowledge, experience, and judgment to enable him to manage his business affairs, including the administration, use, investment, and disposition of any property turned over to such member and the income and proceeds therefrom, with such reasonable degree of prudence and wisdom as will be apt to prevent him from losing such property or the benefits thereof."

The Secretary is also authorized to undertake, if money is available, a special program of education and training designed to help the members of the tribe to earn a livelihood, conduct their own affairs and assume their responsibilities as citizens.

No one is satisfied with Public Law 587. So far, however, no one has proposed an alternative except purchase of the reservation by the Federal Government. NEUBERGER introduced a Federal purchase bill but abandoned it for the sake of harmony in favor

of a bill drafted by the Interior Department providing first for private purchase with certain restrictions and then Federal purchase.

But, like Public Law 587, the bill (labeled the Seaton bill after Interior Secretary Fred A. Seaton) has produced conflict, inspired by some of its provisions and by facts outside its terms.

Few are optimistic about its prospects. NEUBERGER's subcommittee has aproved it and it is now lodged in the full Senate Committee on Interior and Insular Affairs.

The Highway Act of 1958

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Road Pace Quickens," published in the Minneapolis Star of April 9, 1958, dealing with the Highway Act of 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROAD PACE QUICKENS

The Highway Act of 1958, passed by Congress last week, makes an additional $1.5 billion of Federal money available for road-building in 1958. States would add $300 million as matching funds. Sponsors of the measure hope at least 88,000 more jobs thus will be created by the end of the year.

The trouble with highway appropriations as an emergency stimulant to jobs is that a lot of planning must precede actual construction. The huge interstate highway program voted by Congress in 1956 is just beginning to take hold and won't be rolling in high gear for at least another year.

Principal speedup in the new bill is a supplemental item of $400 million for the ABC program (primary, secondary, and urban roads). Ordinarily the Federal Government pays 50 percent of the cost of these roads and the allocations are divided 45 percent to primary, 30 to secondary, and 25 to urban. But the supplemental appropriation, under which the Federal Government will pay two-thirds of the cost, may go to any category. The projects must be contracted for by December 1958 and completed by December 1959.

Minnesota's share of this supplemental item is $9.5 million. There is excellent opportunity for cities and countries to get allotments from this sum for projects for which plans have been made but which may have been delayed for lack of funds.

Minnesota's regular allotment under the ABC program is about $21 million for the present fiscal year. The 1958 act makes a slightly larger amount available for the following 2 fiscal years.

For fiscal 1959 Minnesota already was scheduled to get $45 million for interstate highways (the Federal Government pays 90 percent of the cost). This allotment had been expected to drop to about 30 million for fiscal 1960 and thereafter. But under the new act $45 million will be sent the State for both 1960 and 1961.

The Minnesota Highway Department has speeded up planning for the new roads by streamlining its own procedures and by hiring outside firms to help. Thus it expects to contract for $128 million of Federal-aid highways in all categories between January 1, 1958, and July 1, 1959.

Construction contractors are still chafing about the delays in letting contracts. And there are plenty of workers available. It would be fine if all could go to work on the highways tomorrow. But they may be sure that the pace will start to quicken this spring.

The Polaris Submarine

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. COTTON. Mr. President, Rear Adm. W. F. Raborn, director of the Special Projects Office of the Navy's Bureau of Ordnance, addressed a symposium on seapower last Friday, April 11, 1958, on the Polaris missile program.

He presented a forceful, informative discussion of this vital new weapon which can add immeasurable strength to our national defense.

Admiral Raborn declared:

It is not violating any security factors to report that we believe that the basic problems have all passed from the scientific to the engineering stage, so that no new breakthroughs are required to carry this new weapons system into reality.

As if to back up this statement, the Navy announced the successful testing of the pop-up device, which fires the Polaris missile from the submarine hidden "quite deep below the surface," moves it through the water, and gets it into the air where its rocket engines can fire and speed it on to the target.

Mr. President, the progress we are making in the Polaris missile system is one of the most heartening developments in our entire national-defense picture.

But our success with Polaris raises a grave question: Are we going to be ready to use this weapon when its development is complete?

Some of the facts have emerged from the shroud of secrecy which necessarily surrounds an undertaking like this. We will have operational Polaris missiles in 1960, but we are only building three submarines to fire them, despite the clear testimony on the record that we can have nine nuclear-powered missile submarines within the same length of time by stepping up the program.

We cannot afford to waste time with the Polaris submarine. Nine of these unique weapons are a minimum and a must.

Mr. President, I ask unanimous consent to have the address by Admiral Raborn printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY REAR ADM. W. F. RABORN, UNITED STATES NAVY, DIRECTOR, SPECIAL PROJECTS OFFICE, BUREAU OF ORDNANCE, NAVY LEAGUE SYMPOSIUM ON SEAPOWER, WASHINGTON, D. C., APRIL 11, 1958

I am particularly pleased to have this chance to address the members of the Navy League on this occasion because there have been few periods in our history when the Navy League has been in a position to render a greater or more tangible service to the Navy than right now.

As you so fully realize, one of the basic functions of the league is to help keep the American public informed of the Navy's job and responsibilities in times of peace, and of the problems which our Navy faces. The Navy League has been of great help in impressing on the public the need for supporting a strong and vigorous Navy as an instrument of seapower and as an absolutely vital factor in our national security.

There has been so much printed in the press and said over the air about our various missile programs that a substantial amount of public confusion on this subject is hardly surprising. I believe that this is an unusually good opportunity for the Navy League to play an active part in helping to clarify just what the Navy's Polaris missile program is, and where it fits into the broader picture, not only in terms of our various missiles, but also in terms of our defense program as a whole.

Perhaps no program in our defense plans illustrates more forcibly just how much we've had to change our preconceived ideas of what weapons belong where than does the unique marriage of the missile of outer space to the atom-powered submarine.

I am sure that I do not have to tell you, the members of the Navy League, of the basic difference between the various so-called guided missiles being developed by the Army, the Air Force, and the Navy, and the several programs concerned with developing rocket weapons which will use outer space as their medium of flight. We have all had to become familiar with a new terminology. ICBM and IRBM have become familiar words in our vocabulary, and the names Atlas, Titan, Thor, and Jupiter have taken on new significance, as have the purely scientific Vanguards and Explorers. We have even had to learn an entirely new word, "sputnik," which has become very familiar.

What many people do not realize, however, is that in the Polaris program we are talking not only of a missile, or "bird" as it is commonly called, but of a wholly new concept of weaponry, the dispatching of this bird from beneath the surface of the sea.

That is the basic difference between the Polaris project and the other ballistic programs under development.

There are really three things that set Polaris apart from the other outer space weapons in the ballistic missile category.

The first, of course, is that the missile itself has had to be designed within the limitations of space and weight which would permit its being carried on board a submarine. That has required some very radical changes in design from the currently developed land launched missiles where these conditions do not apply.

Though it will have the capability to carry a thermonuclear warhead, that is, the H bomb, as its payload, and though it will have about the same 1,500 mile range as the Army's Jupiter and the Air Force's Thor, the "bird" itself will be very substantially smaller than either of these other missiles. It will, in fact, be small enough to permit carrying quite a sizable number of missiles in a single submarine without increasing the size of such a vessel appreciably beyond present nuclear powered submarine dimensions.

More significant, perhaps, is another difference between Polaris and the land-launched "birds." This is in the propellent which will drive the missile far into outer space and build up the speed needed to give it its full range.

The Polaris propellent will be a solid fuel as opposed to the present liquid fuels used to drive both the land-launched weapons and the scientific rockets such as the Navy's Vanguard and the Army's Explorer. It was another case of necessity being the mother of invention for the development of such a solid fuel was a vital factor in making the sea-borne missile possible at all. There was just no practical way to store or handle liquid fuels effectively or safely on board a submerged submarine. The Navy's technicians simply had to come up with a wholly new kind of propellent fuel if the concept of the Polaris system was to be translated into a military reality. In developing such a fuel a real scientific breakthrough was scored.

Leaving the missile itself for a moment, let's look into the wholly naval problem of designing ships to carry it and equipment to launch it from below the surface—in fact, from quite deep below the surface.

Fortunately, we already had in existence, and fully proved out, the ideal naval missile carrier, in terms of the nuclear-powered submarine. Here was a vessel which had already demonstrated that it could operate independently of its land bases for months at a time, that it was free of the shackles of fuel limitation, that it could go where it wanted to go without counting the gallons of fuel left in the tank.

Our nuclear submarines have shown that they can travel fully submerged for thousands of miles and at high speed. I am sure that you all read about the record recently set by the submarine "Skate" in voyaging from a European port to New London in some 7 days * * * under water all the way. You may have read, too, that another one of our nuclear submarines, the *Nautilus*, journeyed more than 1500 miles under the Arctic ice pack during a single voyage.

Our job in the Polaris program was to design stowage, handling, launching, and fire control equipment, which would permit submarines of this type to be used as the launching platforms for the missile.

This involved a whole flock of specialized problems which, I am glad to say, have been very largely solved. I would like to touch on just three of these as typical of them all.

One was to develop equipment which would fire such a missile from below the surface and get it up into the air, where its rocket engines could ignite and take over the job of propelling it hundreds of miles into outer space. This device is now actual hardware, and is under daily test even before the missile carrying submarines are built. In a few minutes you'll see some movies of the test of this launcher—which we've aptly christened pop-up—firing dummy missiles from below the surface of the Pacific. Before building a launcher to use under water, we had made extensive tests with another device, this one being called the peashooter, which fired similar dummy missiles from a land position and taught us much of what we needed to know in designing the underwater device.

The other item I'd like to mention as typical of the specialized problems we've had to resolve is that of navigation. I find quite a few people do not realize that one of the absolute musts in firing a missile at a target fifteen hundred miles away is to know where you are, and very exactly, at the instant of firing. Otherwise, you can make an awfully costly error in your aim.

In terms of the practical value of ballistic missiles as military weapons, the real core of the development problem lies in the effectiveness and dependability of their guidance systems. We know, and the Soviets know, that rockets can attain the speeds and ranges called for that has been proved in actual test. Now the real trick is to make sure that these rockets will actually go where they are directed to go, and do so dependably and within very close limits of accuracy.

Unlike the missile technicians beyond the Iron Curtain, we must make our tests in a goldfish bowl. Reporters, movie cameras, TV and radio carry to our public the details of almost every firing at Cape Canaveral, so that everybody knows when a test has worked and when it hasn't. What they do not know, however, is just what facet of the problem is being tested, what results can be expected, and to what degree each test forms a valuable part of the overall pattern. I'd like to emphasize that we have every reason to be encouraged by the state of our missile guidance as of now. We believe that the tests indicate clearly that guidance development is keeping fully abreast of the development of other components of the program, and that our eventual "birds" will be well trained and dependable. We are constantly narrowing the margin of accuracy which we set in our specifications for the guidance devices.

So we've had to develop new and far more exact methods of determining a ship's position than anything needed for normal navigation. We had to take into account that the firing ship would be submerged, and might have been so submerged for days before the firing took place, so that it had to be able to determine, under water, its exact latitude and longitude. This problem, too, is well in hand. In fact, we converted a Mariner-type merchant ship into a special navigational test ship, the *Compass Island*, which has for more than a year been testing and refining the new navigational devices needed to accomplish our purpose. I'm happy to add that this phase of the project is also very much under control.

The questions which are possibly asked of us most frequently are three in number. They are: "Where do you stand in this program?" "How many missiles will we have when it is completed?" and "How will this new weapons system be used?"

The first of these questions must be answered in two parts. One deals with the performance of the hardware, and the other deals with the timetable.

While we have not fired any complete Polaris missiles to date, we have launched what are called test vehicles, successfully, and have put virtually every component of the entire weapons system to practical test. That includes the new solid propellant fuel.

It is not violating any security factors to report that we believe that the basic problems have all passed from the scientific to the engineering stage, so that no new breakthroughs are required to carry this new weapon system into reality.

We are much farther along, technically, than any of us had dared to hope even a year ago. We have collaborated closely and wholeheartedly with our colleagues of the Army and the Air Force on many elements of the development, and have gained much from such teamwork. We hope that they have profited equally from contact with our technicians.

As to the timetable of the program, I firmly believe that we will have actual operational missiles in 1960. We have moved up the dates of our proposed test schedules time and again, and expect now to be in business with an operational weapons system on about the date we had originally set for the beginning of our actual tests. If there is any way that we can beat the present timetable, you may be sure that this will be done, and without any prodding by anyone.

The question as to "How many?" I will answer this way: For one thing, of course, the exact number of missiles to be carried by each submarine is a classified subject. But I can say that the number is very substantial and very impressive. Suppose we leave it at that. The present number of Polaris-launching submarines actually authorized by Congress stands at three. Funds for another two are included in the 1959 fiscal year supplemental budget request sent to Congress last week. How many we will have in the future, I do not know, as it is my job to turn out a finished and efficient weapon system. The number of these systems which we will require must obviously be determined by national policy.

Now, I'd like to spend the rest of the time allotted to me on the vital subject of the place of this weapons system in our overall defense plans.

In Polaris we have combined the almost limitless cruising range of the nuclear-powered submarine and the vast potential for concealment offered by the ocean depths with the longest range, highest speed, and most lethal weapon ever developed, the H-bomb-armed ballistic missile.

In its purpose this weapon is primarily a deterrent to aggression, for if it is ever actually fired the chips will be down, and the all-out general war will have become a tragic reality.

As a deterrent, however, the Polaris weapons system will fill a needed and entirely unique position on our team of capabilities to retaliate instantly, unpreventably, and with annihilating firepower.

Polaris will add to our network of land bases, both in this country and overseas, a system of mobile, fully concealed missile-launching bases wholly under our own flag and control. They will enable us to shift the weight of our military firepower from one area to another, quickly and secretly, adding strength when it is needed.

Polaris will bring within range of direct attack from the sea virtually all important military targets in the Communist-controlled heartland. It can reach these targets in some 15 minutes from the instant of firing. With a relatively small number of submarines on station, dozens of Polaris missiles, each carrying the H-bomb, can be sped on their way even before the first salvo has landed.

With their worldwide cruising radius, nuclear-powered submarines can patrol for months at a stretch, move submerged at high speed for thousands of miles. They will be almost impossible to locate and trace by even the most advanced methods of surveillance. The very knowledge that they are there, within range and ready to launch their missiles within minutes, would exert a strong and constant deterrent influence on any leadership, no matter how reckless or power crazy.

No one connected with our missile development, least of all those of us who are dedicated wholly to the Polaris program, minimizes the need for our complete defense structure, here and abroad, our bases, our forces overseas, our alerted Strategic Air Command, and our mobile carrier fleets, or for our Navy both on and below the surface charged with keeping the seas open for the free world.

We do feel, however, and very deeply, that in the Polaris project we are developing a weapons system for which the country has a pressing need and without which there would be a serious gap in our overall defense structure. That the potential enemy would exploit such a gap to the utmost is hardly a matter for debate. He is very adept at finding weak spots and at taking full advantage of them.

Now, you of the Navy League can be of highly tangible service to the Navy in passing along the word about the Polaris program to the many groups with whom you come in contact. You can help by clarifying what this project really is, how it fills a place of its own in our defense plans, and how important it is that this place be filled.

The Polaris project is not in competition with any other weapons development, nor a duplication of effort at public expense. It

is not an infringement on the role of any other military service, but stands on its own feet providing a form of potential firepower and a strategic use which, quite obviously, no actual or proposed other weapon system can duplicate.

Possibly most of all, you can serve the Navy by getting across to the public the Navy's daily awareness that so complex and urgent an undertaking as the Polaris program owes much to the know-how and painstaking research of our country's scientists and technicians, to the resourcefulness and collaboration of its industry, and to the countless contributions which have been made all the way up and down the line to help resolve the big problems and the little ones, not only on schedule but many times well ahead of schedule.

Finally, I'd like to leave this thought with you. The Polaris project is not a part of any scientific competition to solve the secrets of outer space, to land a man on the moon, or to develop interplanetary travel.

It is a grimly realistic race to meet and cancel out weapons development beyond the Iron Curtain. It is a race to provide the sobering realization to potential aggressors that no thoroughly staged surprise attack can wipe out at a stroke all sources of immediate retaliation in nuclear dimension.

Polaris is a weapon which will serve its purpose best if by its mere existence and readiness it completes the chain of deterrents needed to enforce all-out peace. To speed the day when that readiness becomes a fact is the purpose to which all of us have dedicated everything that we've got.

I thank you.

Doctor Shortage

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. MULTER. Mr. Speaker, one of the acute problems confronting our country at the present time is the shortage of doctors. I commend to the attention of our colleagues the following editorial which appeared in the New York Times of March 31, 1958:

DOCTOR SHORTAGE

Columbia University's president, Dr. Grayson Kirk, has called attention to one aspect of our medical training program that is often overlooked. In an address under the auspices of the National Fund for Medical Education and the Association of American Medical Colleges he pointed out that the number of persons in medical and nursing training is not increasing at a rate proportionate to the increase in population. As a result there are actually fewer doctors per 100,000 population in the United States than there were 20 years ago.

It is also true that the distribution of medical personnel in this country leaves much to be desired. The figure of 130 doctors to each 100,000 of population must average out the urban areas, where there are many more doctors than that, with many regions where the total figure would be so much less as to be ominous. Mere statistics do not tell the whole story.

At the same time, it is observed, the present instruction rate will within a short time, provide only about two-thirds of the persons needed, and supply even that only if there is a complete disregard of the desire to provide better facilities than those which now obtain. The loss, therefore, can be qualitative as well as quantitative.

We are in a period of gigantic medical advances. We know more about disease than we have ever known and are doing more to meet it. But obviously we will need more trained men if we are to maintain our pace. The warning and the plea come at a good time.

Social Security Isn't Broke

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. HUMPHREY. Mr. President, a good many sensational stories, promoted by groups fundamentally antagonistic to our social security program, have been in circulation concerning the alleged deficiencies in the social security fund.

In the April 6, 1958, issue of Parade there is an excellent article by Sidney Margolius entitled "Social Security Isn't Broke." In an accompanying statement, Charles I. Schotland, Commissioner of Social Security, had this to say:

The accompanying article should be reassuring to you. To me, it also is a source of pride. Our system of social security, established in 1935, now protects more than 70 million American workers and guarantees them and their families against destitution in later life. This system has not been "in the red"—and, so far as it now is possible to tell, will not be. It is continuing, and will continue, to help you make your old age a secure one.

Mr. President, I ask unanimous consent that the text of Mr. Margolius' article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIAL SECURITY ISN'T BROKE

(By Sidney Margolius)

One recent day in San Antonio, Tex., the local social security office was swamped by more than 350 phone calls and visits. Elderly men and women—and younger widows—jammed the reception room and corridor. Many of them were crying. Over and over, two questions were repeated:

"Are you broke already? Aren't we going to get our checks?"

What had happened? Nothing, except that the social security checks had arrived on a Saturday and, instead of being delivered on the third of the month, were held over the weekend. But on the morning of the third, when the checks failed to appear, people panicked all over town.

The same panic has hit other cities of the Southwest, Kansas City, Birmingham, several Eastern areas. Why? Because of widespread rumors that social security is running out of money. What started the rumors? Reports—in financial publications, magazines, radio broadcasts—that more people than expected have applied for social security in the past 18 months, and that the program is running in the red. But these reports are based on only partial information, and frequently were misinterpreted.

As a result, Congress and the administration have received thousands of letters asking for reassurance that, as one woman put it, "I will get my money at 62." She explained she is now 58, "sick a lot of the time but trying to work and stick it out 4 more years."

Other various citizens reacted variously. A California woman wrote President Eisenhower offering to give up her payments. A 76-year-old Clevelander pleaded with his Congressman that he and his wife would be ruined if they don't get their checks. Even people years from retirement were alarmed, like the couple who asked for guarantees of the payments due them in 15 or 20 years.

What is the truth behind all this? Parade has checked official sources. Following are questions you may be asking—and the answers:

ARE SOCIAL SECURITY FUNDS RUNNING OUT?

No. At the start of 1957 the reserve stood at $22.5 billion. The year saw more claims than expected—that is, they were earlier than expected. Main reason: Some 670,000 workingwomen and wives 62 and over retired early on reduced benefits, as permitted by a 1956 change in the law. The net cost to social security was the same as though they had waited until 65 and retired on full benefits.

Even these unexpected claims hardly dented the reserve. At the end of 1957 it stood at $22.4 billion, a drop of less than half of 1 percent. It was as though you had started the year with a reserve of $310, met some early expenses and ended the year with $308.70—hardly a fatal difference.

WHAT ABOUT THE NEW DISABILITY PAYMENTS?

There's no cause for alarm here. The new benefits for disabled workers of 50 and over are paid not from the social security reserve but from a separate disability trust fund. This fund is financed by a separate tax. In 1957 it actually piled up an unexpectedly big surplus. It took in $709 million, paid out only $60 million, by now has a tidy $649 million cached away.

WILL THE RESERVE CONTINUE TO DROP?

Only slightly—and temporarily. Social security's financial experts expect the reserve to dip this year and in 1959; the 1956 nest egg of $22.5 billion may drop to $21.5 billion. But in 1960 it will start rising again.

There are two reasons for the expected rise, which was anticipated by Congress 2 years ago. First, the outgo will level off as the run of new applicants for benefits dwindles. Second, the income will jump. Congress scheduled the social security tax so it rises every 5 years until 1975. Beginning in 1960, you and your employer each will chip in half of 1 percent more than at present—on the average, about 40 cents a week each.

BUT CAN THE RESERVE MEET ITS LIABILITIES?

The answer to this is a matter of arithmetic. It's true that, to allow for payment of benefits to everyone covered by social security, an accumulated liability of $323 billion has been built up. This is a staggering sum—but, obviously, it will not have to be paid out all at once.

Social security is a compulsory insurance plan. The experts say such a plan can be financed safely on the assumption that it won't quit in the future and will continue to get contributions from your pay. The rates have been worked out so that, over the long run, your contributions plus the interest earned by the reserve will produce the income needed to meet current payments. That's why the $22.4 billion reserve is enough to have on hand now—and why the planned larger reserve should be enough in the future.

A STATEMENT FROM CHARLES I. SCHOTTLAND, COMMISSIONER OF SOCIAL SECURITY

The article should be reassuring to you. To me it also is a source of pride. Our system of social security, established in 1935, now protects more than 70 million American workers and guarantees them and their families against destitution in later life. This system has not been "in the red"—and, so far as it now is possible to tell, will not be. It is continuing, and will continue, to help you make your old age a secure one.

Blackmail in Spain

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. PORTER. Mr. Speaker, under a previous consent, I am including in the Appendix of the RECORD an article from the Progressive for April 1958, entitled "Blackmail in Spain," written by Lawrence Fernsworth.

Lawrence Fernsworth is now a Washington correspondent. He has been a Nieman Fellow, has represented the New York Times and the London Times in Spain and other countries of Europe. His articles have appeared in Foreign Affairs, Current History, the Fortnightly—London, and the Economist, among others. His books include Nothing But Danger, Dictators and Democrats, and Spain's Struggle for Freedom, published by Beacon Press, Boston, a few weeks ago, which has aroused wide interest in Latin America and has been condemned by the Franco press as the work of a reptile Republican.

The article follows:

BLACKMAIL IN SPAIN

(By Lawrence Fernsworth)

"Blackmail" and "double cross" are hard words. They stand for hard facts. And these facts assert themselves with increasing insistence in the course of the United States Government's dealing with the Spanish dictatorship in matters pertaining to what are known as the Spanish bases agreements.

The agreements, three of them, involving construction of bases, military aid, and economic assistance, were concluded in September 1953. As soon as the new Congress convened it began voting money to implement them. Senator MIKE MANSFIELD, Montana Democrat, in a recent report on the subject, stated that we have provided Spain with $350 million in military equipment and $721 million in economic assistance—a total of $1,071,000,000. Additional Spanish demands are now being processed. These will bring the total to about $1¼ billion, with more to come in fiscal 1959.

In a matter of months after the first funds became available—the first part of 1955—the Spanish press, which publishes nothing political that is not officially inspired, began to complain that Spain wasn't getting enough. Along with the complaints went thinly veiled threats.

The first of these threats, published in Arriba, the organ of the official Spanish party, Falange, was followed by a succession of others, each more truculent and menacing than the one before. The latest of these, published within a matter of days after the ostentatious and, in Spanish eyes, subservient visit of Foster Dulles, contained a blunt warning which was no less than a threat that NATO faced utter failure, unless—

The "unless" of the matter was that, as to NATO, Franco wanted in, and that Dulles, in failing to open the door, wasn't doing his job. Of this more later.

The Arriba article was full of menacing words of which this is an example: "If, after having squandered fabulous amounts of Marshall plan aid in Europe without notable results, we were to be denied what is indispensable, the great program of aid and mutual cooperation would be in grave danger."

This became the theme song, rendered with variations from that day to this. Having got the pitch, the Spanish press began chorusing that it was now Spain's turn to get a slice of the American melon, that the melon had better be juicy, that the Americans would best start producing in the grand manner or suffer the consequences.

The club in the hands of the Spanish dictator is a simple clause in the agreement regarding the bases which says that their use in wartime shall be by mutual agreement. The Pentagon and Mr. Dulles both know that Franco, or any other Spanish regime, merely has to say "no" at the critical moment to render the four air bases, the naval base, and various forms of military assistance useless.

Money, plenty of it, and deliverance from the stigma of being the outcast of Europe by being admitted to NATO—these are the two great objectives of Franco.

About the same time that Arriba was uttering its warning, La Vanguardia of Barcelona published a violent editorial, It Is Necessary To Fulfill. Its theme was that the United States was not fulfilling its bargain.

The editorial lamented that the West seemed unaware of the fact that "Spain is the keystone of the arch in the defense of the West." It was time, said the article, to ask "concretely and clearly, without euphemism or doubletalk . . . that the United States decisively turn into the pathway of fulfilling the facts." "There is," it explained, "a movement of uneasy wonderment and even of suspicion with respect to the economic pacts signed between our nation and the United States in September 1953." "It is necessary to fulfill the pact," it insisted, "and we are certain that the United States will not fail to do so."

On March 16, 1957, the Monarchist organ, ABC in Madrid, published a scathing criticism by former Commerce Minister Jose Antonio Gimenez of the inadequacy of United States economic aid. He said that "to include American agricultural surplus sales in the context of sales is like writing a letter to a readymade clothing merchant to thank him for condescending to sell you a suit."

Here are some highlights on the way the United States has been pouring out money under various kinds of Spanish pressure, with their connotations of blackmail. The last mutual security appropriation gave Spain $40 million, which was more than was given to any other country of Europe, plus another million for technical assistance. Spain also got $20 million from the President's secret fund. Now it is asking for another $30 million immediately on an emergency basis, with the President's secret fund again indicated as the source. For all Americans know, this may have been given already. Although these facts are known in Spain and reported in dispatches from there, they are kept under cover in Washington.

In addition to these contributions, it was revealed here in January that the United States and Spain were signing a $69 million economic-aid program, that Spain was asking for another $65 million from the Development Loan Fund for power, irrigation, and industrial projects, and $40 to $50 million from the Export-Import Bank. These figures, added to the $1,071,000,000 reported previously by Senator MANSFIELD, reach a grand total of $1,282,000,000 shelled out, in process of being shelled out, or being negotiated, to date. On top of this are more funds due for appropriation and assignment from other sources in the fiscal year just ahead.

The point has been made that Spain is helping to pay for the bases with counterpart—that is, Spanish pesetas obtained by Spain through its sale of surplus commodities bought from the United States. These commodities have cost the American taxpayers their market value. They are sold to Spain below value—largely a paper transaction. Spain resells them, pockets part of the proceeds, gets a loan for another part which it also pockets, and deposits another part to the credit of the United States foreign Operations account. It also gets outright surplus grants.

The latest piece of practically open blackmail appeared in the Spanish press on the heels of Dulles' December visit to Franco—his second. Again it was published in Barcelona's La Vanguardia. It was an inspired page one editorial that said:

"The Paris NATO meeting had hardly terminated when Foster Dulles, bearing a special message from President Eisenhower, hastened to Madrid to make his report to Franco concerning what transpired at Paris. Once again Franco, the great political leader, the grand statesman of the West that is the Caudillo, has not found it necessary to petition or even to suggest his right to participation in the international conferences, because once again the Western World has discovered that without the collaboration, without the assent, and without the alert vigilance of the generalissimo, the Western World would be irreparably condemned to utter failure of its chosen political course.

"And of its entire military apparatus."

This last line is the stinger. The clear announcement that without Franco the entire military apparatus of the West which perforce includes the United States bases in Spain and all that goes with them, will be a failure, is a way of serving notice on the United States that European acceptance of Franco is part of the bases agreements.

Responsible Spaniards in exile who know Franco and his ways also interpret it as an intimation that Franco could make a deal with Russia for the use of the bases.

This editorial and others have made it clear that one of the things Franco expects of the United States is deliverance from its unhappy position of being the shunned nation of Europe—shunned as unclean by all Western countries except the United States and totalitarian Portugal.

To win respectability and recover face is more important to Franco than ever, in view of the fiasco of his pretentious plans for making himself the protector of the Arab world and the dominant Mediterranean power. This ambitious scheme, so painstakingly pursued and so long in the making, was known as "Mediterraneanismo." Its collapse has been ttoal. The Arabs he courted, feted, and flattered have taken Spanish Morocco from him, are in the process of taking from him his other North African enclaves, and are laughing at him. His tactics have been publicly denounced by the King of Morocco. He looks to Dulles to extricate him from this humiliating position. This is the main import of Dulles' visit to him immediately after the NATO conference in Paris.

The Barcelona editorial is arrogant, almost insulting in its treatment of Dulles. Spanish eyes will catch its drift immediately. He is "Foster Dulles," a mere messenger, coming to give an account of himself for his failure at Paris; bearing at the same time a message from President Eisenhower; an almost non-

descript fellow not even mentioned in the terms of respect usual among Spaniards.

The day before Dulles' visit the Spanish press splashed on its front pages the text of a note which the Soviet Government had handed the Spanish delegate to the U. N., warning Spain that, with bases "under foreign control" on its soil, Spain "cannot avoid the disastrous consequences of a modern war." Franco had kept this Soviet note on ice for a week so he could flaunt it when Dulles arrived.

At the same time the Spanish press was printing more warnings that unless Spain got more American money to strengthen the Spanish economy—euphemism for propping up the Franco regime—United States operations in Spain might have to be interrupted. The United States Embassy would, of course, take note of these stories and tell Dulles about them.

About 5 years ago, at the time the bases agreements were signed, the United States was helping Franco attain respectability by easing his way into UNESCO. Next he became a member of the United Nations as the result of a package deal between the United States and the Soviet Union. But he is not yet a member of NATO, the organization in which he aspires to cut a figure as a European power, equal to, if not even more equal than, his European neighbors. It hurts him that countries less powerful than Spain turned thumbs down on him at Paris. As the editorial bluntly suggests, he let Dulles know that Dulles wasn't producing.

Dulles' anxiety to please Franco also accounts for the surreptitious manner in which resolutions were slipped through both the House and Senate in March, 1957, expressing the "unanimous" sense of Congress that Spain be invited to become a member of NATO. In the House the unanimous consent resolution was moved and passed immediately after the prayer. The chamber was virtually empty. Those few Congressmen who had planned to attend early were still walking through the tunnels on the way from their offices. About half an hour after the passage of the NATO resolution, and after a long eulogy for a late Congressman had been pronounced in a deserted Chamber, there was a roll call. With those who had arrived after the NATO resolution had been "unanimously" passed, there were only 26 of the 435 members present.

Dulles' statements to the press in Madrid and his praise of Franco's Spain as one of the ties that held the free world together, when he appeared in a broadcast with the President December 23, shocked that part of the free world that lies outside Spain and across the ocean from us. It asked how praising the most oppressive dictatorship in Europe as one of the ties upon which freedom depended corresponded with inspiring words about the right of all peoples to freedom, uttered by both Mr. Dulles and the President.

For instance, there was the evening of May 18, 1956 when the President, at a dinner for President Sukarno of Indonesia, told his guest that "unless we defend the freedom of the other fellow we are endangering our own."

How is the freedom of the other fellow defended by making a deal to strengthen the hand of his oppressor? That is what some of the critics wanted to know. They also inquired about the morality of this sort of thing and asked how it corresponded with words about political morality which Dulles uttered often. For example:

"There is a school of thought which claims that morality and foreign policy do not mix." That never has been, is not, and I pray never will be the American ideal. Diplomacy which is divorced from morality also divorces the government from the people."

Other angles of the Franco blackmail pattern cannot be set forth in the space of this article, such as evidences of Franco's flirtations with Soviet Russia, his praise for Russian efficiency in a public speech, the praise bestowed on Nasser by the Spanish press at the time he seized the Suez Canal, and so on.

Recently Franco has been making a great show of fighting the common enemy of communism—in a country where communism is almost nonexistent. Correspondent Dick Mowrer, writing in the Christian Science Monitor April 5, 1955, said that a Spanish official told him: "We have no Communist problem. If we did we would probably be getting 3 or 4 times more aid than we are getting now."

According to the publication Iberica, which has Salvador de Madariaga, the eminent Spanish historian, and Norman Thomas as its honorary chairmen, more than 200 university students and workers were arrested in Madrid alone during January as part of a stepped-up campaign of terrorism. They were subjected to violent beatings and tortures, such as being forced to hold their hands or feet on red-hot electric stoves. And of course they were branded as Communists—a kind of accusation that always impresses Washington's Capitol Hill when there is a question of providing more money for Spain.

Washington legislators might well reflect on the warning uttered by Lord Templewood, the former Sir Samuel Hoare, which is as valid as ever: "As long as it [the Franco regime] exists there will always be danger of a treacherous blow."

They would do well to know that Spaniards have a saying, "as gullible as an Englishman," meaning also North Americans because they speak English. Gullible, Spaniards say, because they believe everything. Unlike Spaniards, they don't "use the eye." Spaniards who "use the eye" are convinced we are headed for about the biggest double-cross in history in relying on Franco. It is something to think about.

WCTU Petition

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. NEAL. Mr. Speaker, I want the House to know that the Women's Christian Temperance Union is extremely active in my district in West Virginia.

Since the first session of the 85th Congress, I have received scores of petitions from various groups of these ladies urging the passage of measures which would forbid, first, the advertisement of alcoholic beverages in various advertising media; and second, prevent the sale of alcoholic beverages on aircraft.

I would like it called to the attention of the House that still another petition has arrived, bearing some 100 names of ladies in Huntington, W. Va.

The body of the petition states:

With juvenile court judges, domestic court judges, and police officials complaining of the part played by alcohol in the deterioration of our homes and in the delinquency of our children, we again most earnestly urge you to pass legislation taking alcoholic beverage advertising off the air and out of the channels of interstate commerce. No civilization can long survive which is destroyed from within by alcohol. The glamorous and deceptive advertising which becomes constantly worse, is drowning out the warnings of the home, the school, and the church with disastrous results.

Results of Questionnaire Mailed by Hon. John F. Baldwin, Jr., of California, to Residents of the California Sixth District

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. BALDWIN. Mr. Speaker, early this year I mailed a questionnaire to every family of registered voters in the California Sixth Congressional District. The response to this questionnaire was the largest that I have ever received. Many constituents not only answered the questionnaire, but sent supplementary letters or wrote detailed comments on the back of the questionnaire. I have spent many hours personally reading all of these comments, and they have been most helpful. I am firmly convinced that a Congressman can better represent his constitutents if he knows the views of all of his constituents, than if he has only heard from pressure groups.

The tabulation of the questionnaire is summarized below:

1. Do you feel that our expenditures for national defense, including missiles, should be (a) increased, 68.5 percent; (b) remain the same as last year, 24.2 percent; or (c) decreased, 7.3 percent.

2. If you had to choose between an adequate national defense and a balanced budget, which would you prefer? (a) Adequate national defense, 90 percent; (b) balanced budget, 10 percent.

3. If it becomes evident in the coming year that Federal expenditures will exceed Federal revenue, which of the following would you prefer? (a) That the balance be raised by increasing Federal taxes 48.6 percent; (b) that the balance be raised by issuing bonds and thereby increasing our national debt 51.4 percent.

4. Do you feel that we should, or should not, enter into disarmament negotiations with Russia? (a) Should, 49.7 percent; (b) should not, 50.3 percent.

5. There has been much discussion as to the rivalry between the Army, Navy, and Air Force in the missile program and in other defense plans. Which of the following reflects your views? (a) Such rivalry is healthy and should continue, 27.1 percent; (b) such rivalry is harmful and should be eliminated, 72.9 percent.

6. Would you be in favor of a program of Federal scholarships and fellowships to stimulate increased interest by students and potential teachers in the field of science and mathematics? Yes, 72.2 percent; no, 18.9 percent; undecided, 8.9 percent.

7. It has been proposed that Congress pass legislation regulating the administration and control of union trust funds, in order to reduce the possibility of misuse of these funds.

Answer from all constituents: favor, 76.8 percent; oppose, 15 percent; undecided, 8.2 percent.

Answers from union members: favor, 73.1 percent; oppose, 19.9 percent; undecided, 7 percent.

Answers from nonunion members: favor, 79.3 percent; oppose, 12.3 percent; undecided, 8.4 percent.

8. Do you feel that the annual rate of expenditures being made by our Federal Government to support prices of farm products, should be (a) increased, 13.4 percent; (b) remain the same as last year, 29.4 percent; (c) reduced, 57.2 percent.

9. It has been proposed that a constitutional amendment be passed to define more accurately the circumstances under which the Vice President should assume the duties of the Presidency in the event of disability on the part of the elected President. Do you favor or oppose such an amendment? Favor, 82 percent; oppose, 10.8 percent; undecided, 7.2 percent.

10. There has been much discussion as to whether the Federal Government should expand its direct production of electric power (so-called public power), or whether it should encourage the expanded production of such power by private utility companies wherever possible (so-called private power). Which of these principles do you favor? (a) Expansion of public power, 37 percent; (b) encouragement of expanded private power, 51.3 percent; (c) undecided, 11.7 percent.

11. It has been proposed that Congress pass legislation to ban pay television. (Pay TV is a procedure whereby the viewing TV audience must pay a charge in order to view a TV program.) Would you favor or oppose such legislation? Favor, 52.9 percent; oppose, 37.6 percent; undecided, 9.5 percent.

A Look at Profits, Wages, and Productivity

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. COLLIER. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to an article that appeared recently in the Christian Science Monitor, one of America's great newspapers. The article discusses in detail what its author, Joe Harsch, and his editors term a "radical idea." This idea could be summed up as a proposal that the wage-profit rise should never outstrip the national productivity. I think the article and the idea merit further study.

The article follows:

A RADICAL IDEA

(By Joseph C. Harsch)

Britain's trade balances and gold and dollar reserves have been going up.

The rise is not vast and has not been going on long enough to make a major difference yet, but the trend is upward.

Partly this is simply because the Macmillan government has taken drastic steps to support the pound and has at last convinced bankers and investors that it will not be devalued.

Partly it is because small British motorcars happen to fit the American demand at a moment when Detroit seems to have misjudged both the market and the taste for chrome and multiplied headlights.

But there is a third explanation which can only be described as radical in terms of the economic ideas of this generation.

The British Government is making the first real effort of this generation to break free from one of the major consequencese of the age of mass trade unions, and surprisingly is making some headway and conceivably may even succeed.

The mass trade union possesses enormous bargaining power. For the better part of a generation this power has been used generally throughout the Western World to obtain an annual round of wage rises. No government for a very long time has dared to say where and when the line should be drawn between a justifiable and an excessive wage rise.

The result has been that with monotonous regularity of late years wages have gone up by a margin which exceeded the rise in productivity.

Undoubtedly this is not the only reason we have been living through a period of dangerous inflation. Management shares in the blame. It long since ceased making any real stand against the annual demand. In general it has shown little restraint in profit taking. Governments have shared simply because they lacked the political courage or ability to say either to labor or to management that the sum total of higher wages and higher profits must not exceed the annual rise in productivity.

But in broad general terms the major inflation-building factor over the past few years has been wage inflation—that is, the kind of inflation which results from wages going up faster than the increase in output. Governments have, in effect, been clipping the coinage rather than finding a way of keeping wages and prices in line with productivity. The result has been about 3 percent per year of inflation, which is another way of saying an annual devaluation of the currency by 3 percent.

This has produced a redistribution of wealth. Perhaps this has been in some way a good thing. But it has been at the expense of fixed investment, of savings, of annuities, and of pensions. It has benefited those living on earned income at the expense of all those living on fixed income in a way which never was planned or intended by any government or voted by any legislature.

This redistribution of wealth by wage raises has been imposed by the power of the trade unions exercised for the most part unconsciously and even unintentionally. It is also in the larger sense unconstitutional in that it results from group action, not from governmental action. No legislature ever voted an annual 3-percent devaluation of the currency. The process has involved an abdication by government of control over the currency.

It is this act of effective abdication which the Macmillan government is attempting to reverse. It is trying to reclaim governmental control over the currency. It is not against wage rises. It is against wage rises which impair not only the currency but even the economic survival of the country.

The issue has reached an acute stage in Britain earlier than in other western countries because Britain more than any other must trade to survive. When annual devaluation forces export prices upward, then national survival is threatened. The process has prevented Britain for a generation from building a reserve sufficient to weather any serious economic drop.

The radicalism of the new approach lies in the fact that the Macmillan government is seriously trying to stop the inflation long enough and by enough margin to permit reserves to accumulate. But to do that it must run very grave risks of political unpopularity at home. It must break the long-established assumption that every worker is entitled to the maximum annual wage which the bargaining power of his union can extract from the employer. Even more, it must risk a rise in unemployment figures.

There is now a widespread sense of concern about rising unemployment. It is assumed by politicians to be an entirely undesirable condition. Anyone who dares say there could be a plus factor is vulnerable to the charge of brutality. A serious unemployment condition would, of course, not be tolerated by the voters in any western country.

But a limited degree of unemployment also can stop inflation from wage demands. The half-million figure in Britain today is having that effect. Reserves are going up. There may well be a round of wage rises in Britain this year which will be a little bit less than the rise in productivity leaving a margin of credit for the economy of the country.

This is political daring of the first order. It can be fatal to the Macmillan government. But it might be economic salvation of Britain, and an experiment which other countries some day might find useful in solving their own economic problems.

It would be a pity if communism mastered the world from failure of the capitalist countries to solve the problem of inflation.

The Power To Tax

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, an excellent review of the deterrent effects of our present punitive income tax rate structure as it affects the creation of jobs in American industry is contained in the 1957 annual report of the United States Steel Corp. I was particularly impressed with this statement as it shows that our present tax structure penalizes efficient firms and in effect imposes a sales tax on their products. In the last analysis, all corporate income taxes must be recovered in the cost of the products sold or services rendered if any firm is to survive.

This review also develops at some length how our present tax laws foster capital financing either through the retention of earnings or the sale of bonds rather than common stock. Certainly, over the long run, if we are to preserve our system of competitive private enterprise, we cannot single out success for special punishment.

I found this analysis of such interest that, by unanimous consent, I am including it in the Appendix of the CONGRESSIONAL RECORD for the benefit of my colleagues:

THE POWER TO TAX

All are aware that taxes are a crushing burden on the economy, but few realize the extent and growth of that burden. In America there are over 100,000 taxing authorities. The biggest taxes are those levied by the Federal Government, but the burden of State and local taxes has also mounted.

In the 1920's total taxes were about $9 billion, or 10 percent of net national product; but by 1956 they had risen to over $100 billion, or nearly 30 percent of the net product. Moreover, in this troubled world a mounting proportion of national effort may be needed for defense, while groups at home and abroad increasingly seek, even demand, aid from our Government. Taxes cannot endlessly mount without destroying the productive initiative and strength upon which all must rely both in war and in peace.

Of significance equal to or greater than the total burden itself is the unfortunate manner in which Federal taxation bears upon the efficiency and growth of economic endeavor. Since 1940 the Federal tax (normal plus surtax) on corporate income has risen from less than 25 percent to 52 percent. And over the years the taxes on higher income brackets of individuals have been steepened until they take up to 91 percent of such income.

Inflation has aggravated the situation with the result that to have the same buying power after income tax an individual's $2,000 income earned in 1940 would now have to be nearly 2.3 times as great; but a $10,000 income would have to be 3.2 times and a $50,000 income would have to be a 9.8 times as great.

When taxes are low their injury to progress can be borne in relative disregard of the famous saying, "The power to tax involves the power to destroy." But when, as now, taxes reach confiscatory levels it is time to take heed. In wartime the effort to survive obscures tax deterrents. In postwar decades the big backlog demands also temporarily obscure the tax effects. But it now seems prudent to review the tax structure in broad perspective. The following facts then emerge:

INDIVIDUAL INCOME TAX

United States Steel, together with all enterprises, has an interest in the taxation of individual income because the prosperity of the Nation can be profoundly affected by it. The steep progressive taxation of individual income systematically eliminates a principal source of venture capital upon which progress depends. It should ever be remembered that a new self-sustaining, productive job—of which we will need millions in years to come—can come into existence only when money is risked to purchase tools of production, thus creating the environment in which a man may produce the marketable values to cover his continuing wage and the investor's compensation.

Those best able to risk—and often lose—venture capital are those who earn larger incomes. Some few people are undoubtedly either lucky or unlucky; but the great truth is that, in the absence of fraud or coercion, those of larger income receive it only as they and their property equivalently serve the community at its own competitive prices. The skilled machinist gives more and gets more than the apprentice. Service rendered and income received are two sides of the same coin. Taxing the more skilled and the more productive at ever increasing rates undermines both their incentive and ability to provide the venture capital on which new jobs depend.

It also is profoundly shortsighted because as the sources of new jobs are dried up Government is called upon to support the unemployed and aid many undertakings such as agriculture, housing, shipping, stockpiling, and so on. This we have seen even in the midst of boom. Thus a steeply graduated income tax can energize a spiral into some sort of statism.

CORPORATE INCOME TAX

Taxation of corporate income also unhappily tends to impair productive incentive and to dissipate the seed corn of progress. Thus the higher the rate of tax the greater is the tendency to impede the very growth that has been characteristic of the economy of our country in the past and is particularly important in this present period of international tension. For each dollar of profit for dividends or reinvestment at present tax rates more than $1 must be paid to the Government. The company that operates more efficiently pays a higher tax per unit of production and thus in effect pays a penalty for being more efficient. Taxes levied at high rates against efficiency cannot help but impair that efficiency and it may well be time to ask if this can be in the public interest.

Especially significant is the tax dissipation of receipts vitally needed for reinvestment in the business; for without this "seed corn" income no company can either make good the insufficient depreciation allowed on the existing tools of production or have money to purchase additional job-creating tools. Nor can it readily attract outside capital. This works especially against corporations seeking to grow in periods of inflation when all business, big or little, must seek additional dollars just to finance the same volume of business.

It is not good sense to tax away money otherwise destined to provide new jobs and products at a time when these may be much needed. This is not money to be distributed and dissipated in consumption, to enrich selected groups of people. It is, instead, the very core of growth in corporate America upon which more than three-quarters of all non-Government wages and salaries depend.

PROGRESSIVE TAX ON CORPORATE INCOME

As just noted the corporate income tax already tends to impair productive incentive and growth. Despite this there has been talk of taxing corporate income in progressive fashion, which is to say that the more efficiently a group of people cooperating through a corporation served the community and expanded its operations, the more punitive would be the rate at which the tax was levied.

If this were done it would further undermine the incentive of all corporations to expand their employment and production, and thus retard the Nation's growth in times of peace and its defense in periods of emergency.

EFFECT ON FINANCING

A company possessed of profit margin or prospect, and thus in position to seek outside financing, presumably has the choice of selling new stock or of borrowing. The profit tax weights the scales against equity financing, and the greater the tax rate the heavier the weight, thus encouraging creation of dangerously mounting perpetual indebtedness.

In 1954 United States Steel sold $300 million of debentures, which called for interest payments of $6.8 million in the first year thereafter. This additional cost could have been covered by an increase of about one-fifth of 1 percent in the prices charged customers during 1954. Alternatively to have obtained $300 million new capital, United States Steel could have sold about 6 million shares of new common stock at the then price of about $50 per share. To generate the $3.25 per share dividend of 1954 on the new shares would, in view of the tax on income, have required an increase in prices charged customers of about 1⅛ percent—6 times as much as in the case of the bond interest. From a cost standpoint the choice for United States Steel was obvious.

The great cost disparity is due in good measure, of course, to the differing yields on the bonds and stock; but the fact remains that for each dollar obtained, either in higher prices from customers or by cost reduction, to pay bond interest more than $2 must be so obtained to pay a dollar in dividend.

The tax, furthermore, tends to perpetuate indebtedness. It is true that borrowed money spent for facilities can be paid off out of depreciation recovered, at the end of which process, however, both the debt and the facilities are retired. If by replacement purchases the capacity of facilities is to be perpetuated then so also must the indebtedness, or else it must be paid off by sale of stock or out of earnings. But to pay off out of earnings $1 that has been borrowed, more than $2 additional must be obtained from customers or through cost reduction in order to cover the Government's tax take. In this respect the tax amounts to a more than 100-percent penalty on paying off debt.

It is, however, to the formation and investment of new venture capital—equity money—that the Nation must primarily look for progress in creating new jobs; bond money, indeed, is unobtainable for new enterprises until a cushion of risk capital has first been provided. It surely cannot be considered to be in the public interest heavily to hamper, through taxation, the formation and investment of venture capital and thus encourage creation of dangerous perpetual indebtedness.

EFFECT ON CAPITAL MARKETS

As the corporate income tax rate grows it inevitably and powerfully affects the functioning of the Nation's capital markets. The tax strongly influences corporations to rely to the maximum extent possible upon internal financing—that is, to retain and reinvest a bigger portion of income instead of paying it out in dividends. A tax equal to more than 100 percent of the retained amount has already been paid in the course of acquiring it. To pay it out in more dividends would subject it to further individual income tax dissipation to the extent, in the case of United States Steel's stockholders, of not less than 37 percent. Thus less than two-thirds of such additional dividends could actually get to the capital market and become available for re-use through that market.

Under this tax influence about half of all new capital invested by corporations is represented by direct reinvestment of income. The scope of the capital markets is thus narrowed, as is also the competitive opportunity of new seekers of capital in that market.

TOWARD EXTRAVAGANT GOVERNMENT

The structure of individual and corporate income taxation undoubtedly constitutes a serious temptation for government to engage in extravagance. The majority electorate is persuaded that there is no longer an identity between voting benefits for itself and taxes on itself; whereupon there is general resort to the age-old fallacy of promising abundance for all by robbing selected Peter to pay for collective Paul. But of what avail if in the process the seed corn of progress on which all depend be consumed? And how different it would be, for example, if every voter understood that there could be no added expenditure without a proportional increase in the tax he himself would have to pay. It is perhaps in these attitudes that one may find the hidden key to ever mounting taxing and spending.

TAX EROSION OF CAPITAL

Some companies, because of the nature of their business, must be heavily invested in long-term facilities. The real capital of such companies is eroded away by the present corporate income tax. This is because it takes many more of today's dollars to replace equipment as it wears out than it took originally to purchase the equipment many years ago. But depreciation allowed in computing taxable income is limited to the smaller number of dollars originally expended. The difference between such depreciation and the larger amount needed to recover the purchasing power expended—and so to keep the facilities intact—is arbitrarily called income

and taxed as such. For United States Steel alone such tax erosion of capital as it turned over through depreciation amounted to over $650 million in the years 1940 to 1957 inclusive. Thus the corporate income tax not only hampers the formation of new capital but also erodes away existing capital, and does it in highly inequitable fashion because of the varying importance of depreciation to the businesses taxed.

THE TAX PASSED ON

Neither individuals nor corporations can or do pay taxes of any sort except as they first receive the dollars with which to do so in exchange for products sold or services rendered. The prices of corporate products and services must be higher to cover the taxes corporations pay. In this sense these taxes can be assumed to be sales taxes passed on to consumers, even if done so in highly inequitable fashion because they vary in amount on similar products depending upon the efficiency of the respective producers.

But the tax problem cannot be dismissed on such an assumption, for American hopes for ever more and better living rest squarely upon ever evoking the initiative, the effort, the leadership of its most able and efficient citizens and corporations. It cannot be done by taxing away up to 91 percent of any fruits of the individual's additional effort. Nor can innovation of new products and job-creating investment in facilities be helped by taxing away the corporate funds for their financing.

This brief review of but a few broad aspects of Federal income taxation impels one to wonder if the tax trends in America as they have developed over a long period of war and postwar boom do not point toward making the enterprise system unworkable. The heart of that system is the competitive investment of savings in tools of production thus both multiplying the jobs of operating them and the products that flow from them. Unhappily the taxation of income of both individuals and corporations has now come to bear most heavily upon that vital creation of savings that flow into job-creating investment. It tends to undermine the incentive of everybody to engage in superior effort.

This may not have been of much moment while the Nation was energized by war and postwar reconstruction demands. It may be of considerable moment in the period ahead. The saying, "The power to tax involves the power to destroy," is not an outworn adage; it is a deadly warning to which, at this juncture of our history, heed had best be paid.

Nine-Point Program for the United Nations

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. HUMPHREY. Mr. President, the American Association for the United Nations has recently released a nine-point program. It has urged action on the nine points in a statement to the President of the United States.

Many of the recommendations which the AAUN has made are ones which Members of Congress, including myself, have repeatedly endorsed.

I ask unanimous consent that the text of this nine-point program be printed in the Appendix of the RECORD.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

A STATEMENT FROM THE AMERICAN ASSOCIATION FOR THE UNITED NATIONS

To the PRESIDENT OF THE UNITED STATES:

Let us save the world from destruction by giving the United Nations strength and support.

At the end of World War II, the statesmen of the world joined in creating the United Nations to preserve a permanent peace.

Surely every thinking citizen will agree that the best hope for savings our world from nuclear destruction is to use the United Nations organization—as it was originally intended.

The American Association for the United Nations urges the following program:

1. NEGOTIATE NOW

In his state of the Union message, the President of the United States said: "In the last analysis, there is only one solution to the grim problems that lie ahead. The world must stop the present plunge toward more and more destructive weapons of war, and turn the corner that will start our steps firmly on the path toward lasting peace."

The conviction is overwhelming that the time has come for "give and take" negotiations between the West and the Soviet Union. Reasonable agreement is the sole alternative to the danger against which the President warns—and which we all know exists. It is the only way to put our feet on the road to lasting peace—no matter how difficult such negotiations may seem at the moment.

2. SUCH NEGOTIATIONS MUST TAKE PLACE WITHIN THE UNITED NATIONS

The United Nations provides a neutral meeting place and the necessary techniques and staff—including the person of the Secretary-General. Eighty-two nations members accept the law and moral principles upon which any agreement should and must be based. The United Nations provides a wide variety of both private and public means for negotiations.

Should a "summit" conference between the heads of the United States and the Soviet Union be deemed desirable—then the Secretary-General of the United Nations should be present. This will give assurance to all nations that no decisions are made that will be prejudicial to the future of all—and to world peace.

It seems to us that if the United Nations is not used fully in the present crisis it will be because its potentialities are not fully appreciated—or that some fear that the United Nations may become too strong—and prefer to keep it weak by not using its negotiating facilities.

3. WE MUST CONTINUE TO PURSUE A SOLUTION TO THE DISARMAMENT PROBLEM

The problem of disarmament will not wait. We must meet this problem and the political questions that seem to hold it back, now.

The United States should advocate the abandonment of nuclear tests for a specific period of time when the principle of inspection is accepted by the United Nations. We should advocate the same treatment of the problem of long-range atomic missile testing.

4. WE SHOULD URGE THE ESTABLISHMENT OF THE TITLE OF THE UNITED NATIONS TO OUTER SPACE—AND THE COORDINATION BY THE UNITED NATIONS OF ALL OUTER SPACE EXPERIMENTS

The United States should present to the United Nations General Assembly the need for the international community to establish its justifiable right to control outer space—and all experiments relative thereto.

Our peace of mind and the peace of the world may well depend upon the acceptance of the principle that outer space is not subject to ownership or control by individual states—but only by the U. N., representing all nations of the world.

5. A PERMANENT U. N. FORCE SHOULD BE ESTABLISHED NOW

We should advocate a permanent force, including aircraft, composed partly of contingents earmarked by small states for immediate use, and partly of officers and men enlisting directly and serving continuously. These latter could be used to guard installations of the International Atomic Energy Agency, accompany truce teams or missions, and engage in technical-assistance projects. But overnight, they would be available as an emergency police force under the direction of the Secretary-General.

It is important that the successful experience of the United Nations emergency force not be lost.

6. UNITED STATES FOREIGN AID SHOULD BE GIVEN INCREASINGLY THROUGH THE U. N.—SUCH AID SHOULD BE INCREASED—NOT DECREASED

Nothing is as important in winning the support of the uncommitted nations of the world as an expanded program of economic assistance. Such assistance must be given on the basis of need—and carefully administered.

In order to avoid an economic race comparable to the arms race—we believe that to the greatest possible extent such aid should be given through the United Nations. We believe that an agency similar to the International Atomic Energy Agency should be established for the economic advancement of less-developed nations.

7. WE SHOULD CONTINUE TO HELP DEPENDENT PEOPLES ACHIEVE SELF-GOVERNMENT OR INDEPENDENCE THROUGH THE UNITED NATIONS

We, in the United States, should be the first to appreciate the significance of the revolutionary movement which has resulted in 700 million people winning their independence from colonialism since the beginning of the Second World War. We should assist the last vestiges of the colonial system in obtaining self-government of independence and developing an appreciation for the responsibilities of freedom.

The U. N. Charter contains a declaration of freedom for dependent peoples. Wisdom and moderation, however, must be used in applying the principles. In winning their independence, it is important that the colonial peoples do not substitute a new tyranny or retrogression; nor should their newly found freedom result in narrow nationalism.

8. WE SHOULD ADHERE TO OUR ORIGINAL INTENT OF MAKING THE INTERNATIONAL ATOMIC ENERGY AGENCY A BANK OF FISSIONABLE MATERIAL

If nations use atomic energy as an instrument of the cold war—it would defeat the whole idea and purpose that the President of the United States had in mind when he initiated the idea for the agency.

9. THE U. N. BUDGET MUST BE INCREASED IN PROPORTION TO ITS GREATER RESPONSIBILITIES

A comparison of the expenditures of the nations for military preparedness with their expenditures for the U. N. brings graphically to mind the remark of Canada's Lester B. Pearson, "We prepare for war like precocious giants and for peace like retarded pygmies."

We believe that the greater responsibility of the United Nations will require increased budgets. We further believe that an independent source of income must be developed

to supplement the contributions of governments.

These nine points represent the essential elements in the moral and spiritual offensive which we believe the United States should launch in the United Nations at once. The goal of this offensive is not only world peace but the improvement of the dignity of every human being—and the advancement and safeguarding of human rights and fundamental freedoms for all.

NEW YORK, N. Y.

New Stature for the Vice President

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. COTTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Outsider," published in the Boston Herald of Monday, April 7, 1958.

The editorial not only contains some very pertinent comments about the role of the Vice Presidency, and emphasizes a fact, of which most people are aware, that Vice President NIXON's conduct in the office has added much to its dignity and prestige, but it also proves beyond question his capacity to meet any responsibility that may devolve upon him in future years.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE OUTSIDER

The Vice Presidency is no longer quite the most insignificant office that its first incumbent found it. RICHARD NIXON is considerably busier and more imposing in the second-in-command post than John Adams or most of his successors were.

But the office is still a problem. It has still not developed into what the Constitution makers hoped for it. And it will not during Mr. NIXON's incumbency.

Mr. Eisenhower made this clear at his press conference Thursday. Despite the great personal confidence he has shown in Mr. NIXON and the opportunities he has made for the Vice President to join in administration policymaking, he has never given him any official status. "I decided as a matter of good governmental organization," he told the newsmen, "that it would not be correct to give him a governmental position in the executive department."

The reason for this is apparently the Vice President's constitutional assignment to the legislative branch. So long as the President lives and he is able to perform his duties Mr. NIXON's main job under the basic law is to serve as Presiding Officer of the Senate and cast a tie-breaking vote when the upper Chamber deadlocks. The doctrine of separation of powers, in Mr. Eisenhower's view, precludes his having a major executive assignment as well.

The President has misgivings on another score. He is deeply aware that the Vice President is elected by the vote of the whole people, just as the Chief Executive is, and cannot be removed except by impeachment. Mr. Eisenhower and Mr. NIXON are on the best of terms. But what if they were not? This, the President thinks, would create "an impossible situation." Indeed he feels so strongly about it he once said a presidential nominee should resign rather than accept an uncongenial running-mate from the nominating convention.

These are important considerations and the President certainly cannot be accused of acting capriciously or unfairly toward his Vice Chief. Yet it seems a pity that Mr. NIXON's office, having been brought so far above its former estate, cannot be made more useful still.

Mr. NIXON is now generally recognized to be better prepared to succeed to the top office, in case of need, than almost any of his predecessors. He has grown in the job as few others have. But he is still isolated in his stand-by role. He is neither legislator nor executive. He advises, presides, consults. But he is not allowed to act. He is caught in the impossible design of the vice presidential office.

Congress, while considering various revisions to the Constitution and laws on the subject of presidential succession, should also work out some changes on the Vice Presidency. It is time to free the Vice President of his meaningless legislative duties and make him a functioning part of the executive branch. He should be made an insider instead of an outsider in the governmental framework.

By good luck we now have in the "insignificant office" a man of sufficient stature to take over the great office for which he stands surrogate. But we have not always been so lucky, and we may not be in future, unless we can make the stand-by post more attractive in itself.

Improving Health Standards of the Nation

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. NEAL. Mr. Speaker, H. R. 11414 has been reported out of the Interstate and Foreign Commerce Committee.

I objected to the committee's action not because I oppose its worthy objective.

No one is more enthusiastic for the cause of public health than one who has spent most of his life promoting and observing its progress.

I opposed it solely on the grounds that the Congress, by piecemeal appropriations, is invading a field where multiplicity of efforts, each directing its resources to the same end but without coordination, need to be studied and correlated to avoid duplication and waste of effort.

Since the beginning of this century I have been a student of health problems and an observer of progress toward improving the health and welfare of our people. During these years I have witnessed the greatest progress toward eradication of epidemic and endemic diseases ever accomplished by any people of any age in history. It is significant that doctors of medicine have fronted in this great movement, but it must be recognized that much of the credit is ascribed to ancillary groups working toward the same end without whose combined efforts the Nation's standards of health as we now know them, could not have been attained.

The development of and the application of sanitary principles, scientific research into the causes, modes of transmission, response to drugs and chemicals, and developments in immunology have made major contributions toward disease control. Pharmaceutical houses, experimental clinics and treatment centers, and research programs, together with the mechanical artisans and designers of therapeutic devices, have made possible the control and cure of many of the disease abnormalities to which the race is subject.

Preventive measures, vaccines, inoculations, isolation of acute contagions, quarantine procedures, and the dissemination of knowledge of personal care through intensive campaigns by health officers, medical practitioners, public and private nurses, and school authorities, have made contributions of great value. When we add to these the combined efforts of voluntary fund-raising organizations, insurance companies, radio, press, and so forth, one wonders at the magnitude of effort made to keep our people well informed about matters pertaining to individual and community health, and the recordbreaking prolongation of the life span. Its worth is beyond measure.

With so many agencies, both private and governmental engaged in promoting better health, a certain amount of overlapping can hardly be prevented. There are listed about 100 foundations that devote their resources toward improving facilities and personnel in medical research and personnel training. Voluntary groups appealing to the public for voluntary contributions abound everywhere. The public responds generously to fund-raising campaigns for polio, heart, crippled children, blind, mental health, and what have you. Local, State, and Federal Governments appropriate funds to encourage greater availability of information and to augment teaching and research programs. Each of the armed services maintains facilities and personnel to develop and to direct an awareness of the importance of the prevention of disease among enlisted men and their families.

The National Health Councils have recently been recipients of appropriated funds to encourage special effort in research in many of the diseases that now baffle us. The financial support so freely given by public and government in the cause of health is an outstanding example of the generous character of a free people.

The medical colleges, institutions, and hospitals for training nurses, health workers, and sanitarians are and have been engaged in studies to determine the anticipated needs of our growing population. Matters such as the nu-

merical relationships of doctors to patients, the number, location, and types of hospitals to provide adequately for the rapidly increasing numbers of older residents are under continuous study. These are among some of the problems to be met in the future. Because such matters have a very important influence on our social and economic welfare, they deserve careful attention and planning. It is quite apparent that if we expect to receive full returns for the money and effort expended in the cause of national health, these endeavors should be coordinated as far as possible by a central advisory agency.

The United States Public Health Service, the arm of our Government that has heretofore trained and assigned public health personnel to areas for specific health problems, and to local units of Government where effective organization of health effort is desired, would seem to be the logical agency to assemble and coordinate information and advice with all institutions offering special training courses for doctors, nurses, sanitarians, and public-health workers.

The Congress in amending title II of the Public Health Act in 1956, gave recognition to this need for coordination of training efforts. It provides for the appointment by the Surgeon General of an expert advisory committee composed of persons representative of the principal health specialties in the fields of public health, administration and training to advise him in connection with the administration of these traineeship programs.

This amendment also authorizes the Surgeon General to provide for similar studies and recommendations regarding traineeships in specialized training in public health for physicians, engineers, nurses, and other professional health personnel.

It is my view that these studies should cover the whole field of health endeavor. They should reveal the extent to which the existing haphazard approaches to our medical problems are unavoidably competing with each other. They should assemble information upon which the Department of Health, Education, and Welfare, through its primary administrative agency, the Public Health Service, can coordinate the resources of voluntary groups, foundations, and Government agencies for more direct and more efficient results. In the absence of a central coordinating agency, we can never realize the full potential of funds derived from private groups, endowments, foundations, and governmental appropriations. A clearer picture of the overall program will enable members of the Committee on Appropriations of the Congress to understand more clearly the purposes for which Federal funds are to be allocated.

The same holds true for the Bureau of the Budget. Such an agency, empowered by Congress to present a single packaged budget will then be expected to justify its appropriations requests for additional activities as the needs arise, rather than have separate agencies appealing for special legislation year after year.

H. R. 6771, the bill now before the House to authorize an annual appropriation of $1 million per year over a period of 5 years to aid the schools of public health is an example of a long series of uncorrelated Federal authorizations. The schools of public health, both private and public, are separate units of colleges and universities, especially engaged in training health officers and other health personnel. They are performing a grand service with limited financial support. They, like most educational institutions, need assistance, but they are not alone in their fields.

Many of the medical schools and allied institutions devote special attention to the training of personnel for this phase of health work, another indication that there is great need for coordination. The Public Health Service, during the hearings on H. R. 6771, suggested that the Congress delay action on this bill until the findings and the report of the Surgeon General's study committee became available before the end of 1959.

In view of the overall picture I have attempted to present to you, I am inclined to believe we should defer the passage of this bill and remind the Surgeon General that the Congress insists on the selection and activation of his committee at the earliest possible date.

For Those Who Think

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. HÉBERT. Mr. Speaker, a great newspaper retains it greatness by doing great things.

The Times-Picayune and New Orleans States are two great newspapers. They have done a great thing.

They are published by the Times-Picayune Publishing Co. of which an old and lifelong friend, John F. Tims, Jr., is the president. The editor of the Times-Picayune is an old working reporter colleague of mine, George W. Healy, Jr., and the editor of the New Orleans States is Carl Corbin, whom I knew even before he had graduated from journalism school.

Recently the Times-Picayune Publishing Co. caused to be printed a series of full page advertisements in the interest of the People Who Think.

This series has just come to my attention. They are indeed great pieces designed to stimulate thinking. They are direct, provocative and challenging. They furnish must reading for those who think.

I dare not attempt to elaborate on them. I merely say to you: "read them."

WHO HAS THE ULTIMATE WEAPON

In a sense, it took America 119 days to discover the space age. That was the interval between the launching of Sputnik I and the lofting of Explorer I.

It was a time of profound national embarrassment. It was also a time when we opened our eyes and saw, many of us for the first time clearly, the whole immense scope of the Russian challenge.

We discovered that it would take more than 1 satellite, or 2, or even a sky full of satellites to turn back this sweeping challenge.

We saw it gathering momentum, applying pressures against critical points in the free world's defenses. We cannot measure the precise force of these pressures, but for safety (and reacting neither as Pollyannas nor Jeremiahs) we must assume that they are as real as they seem:

In weapons—a competence in rocketry that has surpassed anything yet demonstrated by any nation.

In science and technology—a forward motion of startling pace, and a training program that provides new manpower faster than our system provides it.

In economics—a campaign than marshals the resources of a billion people in a powerful bid to draw the world's markets into the Russian orbit.

In politics, a relentless drive to win the uncommitted nations and soften up the NATO alliance.

This comprehensive challenge demands answers to these questions:

Can a free way of life provide the strengths for survival in a space-age world where a dictatorship has harnessed the minds and energies of an empire to its purposes?

Can a free people apply its strengths in time and for long enough to get the job done?

Can we define the job so clearly to ourselves that every ounce of our strength will be applied to the real objective?

The driving pace of the Russian effort has set in motion a count-down that measures the very days in which we have to find the answers.

A part of the answer is in full view:

Geared to the needs of our people, freedom has built a productive system of such energy that no accurate measurement has ever been taken of its full potential.

If there is a capacity for momentum in a dictatorship that can throw its whole weight into a crash program, so is there in a democracy that from a standing start built history's mightiest arsenal and at the same time supported a steady in domestic consumption through a 4-year war.

If there is strength in a system that can bend a billion people to its will, so is there strength in a system that can turn out $430 billion worth of goods and services in a year; that can keep its people well fed and to spare, using one-tenth of its manpower in farm production, while Russia, with almost half its manpower in farming, scrapes out a bare subsistence.

There is strength, and the promise of infinitely greater strength to come, in a system that can perform these material prodigies and at the same time afford its people the leisure to contemplate and enjoy life and the means to improve it—that can develop a hydrogen bomb and in the same span arrest the polio virus and bring into sight the conquest of cancer, heart disease, and a dozen other major plagues.

In 1945 the world accepted as manifest that whatever this country decided to do, it could do. Nothing that has happened since—and no danger on the horizon—modifies that assessment of the power of freedom geared to the physical and human resources of America.

Our national ambition remains what it has always been—to help build a durable structure of world peace in which each people has the right to choose its own way of life.

It is an ambition shared overwhelmingly by the world's peoples, and given expression in the charter and day-to-day business of the United Nations.

To achieve it in the space age requires no strength beyond the capacity of freedom to provide. And if the ruggedness of a challenge is measured by the odds involved, this challenge is no tougher than Americans have faced before. By that measurement we were a poor risk to win our freedom at all, or to hold the Union together in the 1860's, or to emerge from the great depression stronger than we entered it.

The whole history of freedom is a testament to this resilient quality. (Even Khrushchev concedes it, doling out freedom by the cupful to speed the work of his scientists and sharpen the initiative of his factory managers.)

Whatever strength and courage we have needed, we have found.

But to realize our ambition, or even to survive, in tomorrow's world requires of the American people a swifter, more discriminating, more comprehensive exercise of commonsense than, quite possibly, has ever been asked of a people before.

We can realize it, not by trying to make the world over in America's image, for the world's peoples are as deeply committed to their own dignity and freedom of choice as we are to ours. And because we must have the help of our neighbors, to earn a living and defend ourselves, they can now insist upon new respect as the price of that help.

We can reach our goal only by building the strength to surpass the best efforts of communism and get on with the positive job of bringing the world's peoples into an understanding in which freedom will flourish as a common right. Communism cannot survive this ultimate onslaught of freedom—but neither can it be overcome by any simpler means.

To build that strength requires a set of positive decisions by the American people:

To provide the confidence and judgment to keep the economy on course, or see it falter in the face of its greatest challenge.

To give the Nation's scientists the respect, support, and freedom they must have to carry on their work, or see their talents frustrated and wasted.

To supply the inspiration and guidance American youth must have to face the space-age job or see a better trained Russian generation surpass it in all critical areas of competence.

One hundred and seventy-three million Americans must make these decisions with the singleness of purpose to match that of one man—and these decisions must be made now, against a need that may only come into full view 5 or 10 years hence. This is what the count-down means.

If the decisions are soundly made, they can link the energies of a new generation to the abundant strengths of freedom and open a door to the age of peace. For no source of power yet discovered can match the energy that freedom can release in the minds and hearts of its people.

Freedom is a force that gives purpose and vitality to every individual, institution, and idea.

Freedom is a tool—the marvelously facile tool which has built the most competent, the most nearly perfect system yet devised by which men and women can live and work together, in dignity and the pursuit of happiness.

And freedom is a weapon, stronger than any gunsmith or nuclear physicist ever invented.

Dr. Wernher von Braun told a Time correspondent the other day: "Man will always seek the ultimate weapon. And you know what this is? The ultimate weapon is what the other fellow doesn't have."

In this struggle, that ultimate weapon is the vigorous practice of freedom.

WILL WE WIN THE PRODUCTION BATTLE?

Khrushchev has put this challenge to the American industrial system: Can it match and finally top the pace of Russia's global military-economic offensive without destroying its own freedom in the effort?

He has put the full force of his empire behind the challenge.

He has harnessed a major part of this force to the weapons job. To extend the power of the world's largest army and a submarine fleet three times greater than our own, he has added tactical and intermediate missiles with nuclear warheads and is pressing us hard in the race to perfect the intercontinental ballistic missile.

He has concentrated another major part of his force on the economic struggle—the effort to install Russia as the economic big brother of the nations still straddling the fence in the cold war. He has brought Russian steel production from 12 million tons in 1945 to more than 50 million tons in 1957. Other programs for weapons, machinery, and factory building have kept pace.

He has spent about $2 billion in foreign aid in the past 2 years, and portioned it out with shrewd talen for getting the most for his money. Nasser's Egypt has had $465 million. Yugoslavia, teetering on the fence, has had the same. Syria—hotbed of anti-Western feeling—has received $280 million plus a regiment of 2,000 Communist technicians. So it has gone around the uncommitted world—even little Iceland is getting five new fishing ships on credit from Communist East Germany.

For his purposes it is of no present consequence that the $2 billion he distributed was taken from the Russian people (in defaulted domestic bonds) and from the United States (in repudiated debts). Or that the goods he sends abroad as well as the weapons he builds are made possible only be restricting his own people to the same living standard that their parents enjoyed, or enduring, 3 decades ago. The Russian people, for the time being, can be handled.

But it may be of some consequence to Khrushchev to take a fresh, hard look at this American economy he has challenged for the championship of the world. There is a fundamental difference between his system and ours:

A controlled economy is an economy of scarcity. A free economy is an economy of abundance.

There's no secret about the source of this strength, it springs naturally from the freedom of the producer to sell, and the freedom of the customer to buy.

From these freedoms flow all the skills and disciplines of the American industrial system—the incentive, the competition, the development of trained managers and skilled craftsmen, the technique of research, of mass-production, mass-transportation, communications, and marketing that weld this economy into the creative force that it is.

If you look at this economy in one way, the Soviet way, you see only the tops of its smokestacks: clusters of huge corporations, with a few in each industry producing the bulk of our steel, automobiles, oil, appliances, or chemicals.

If you look a little closer you see each of these big corporations as the core of a great network of large, small, and middle-sized companies, supplying materials and parts and skills, retailing products, or serving needs created by the basic products, as the automobile brought into being the repair shops, the motels, the tourist, and roadbuilding industries.

If you look still closer, you see people, whose manual skills, creative talents, and organizational genius have put the whole pattern together and made it work, and who all profit by the efficiency of its workings.

This is an economy of unprecedented power.

Overall, we're outproducing Russia by more than 3 to 1. Even in basic industries where Russia has concentrated her full strength, as in steel, we outproduce her by more than 2 to 1.

At the height of World War II, when we were building 300,000 planes and mass-producing the greatest arsenal ever seen, our consumer-purchases climbed steadily year after year and our military production never did top 40 percent of our total output of goods.

Since the beginning of World War II we have doubled our productive power.

And against the Soviets' $2 billion we can range a sum 40 times as great—the $78.5 billion of funds and credits we have distributed to the free world since the war's end. This sum, that helped turn the tide against communism in Europe and elsewhere, is still less than one-fifth of the total wealth produced by the United States in the single year of 1957.

We have done this, not by freezing the American living standard at the level of 30 years ago, but by creating buying power and a standard of living almost double that of 1928.

This might seem on the surface a dangerous kind of self-indulgence.

The truth is just the opposite.

The skills, technology, and productive apparatus that have brought television sets and washing machines into 80 percent of American homes—and cars to virtually all of them—provide as well the main strength to carry us through a cold war of any foreseeable duration.

For our living standards not only demand the very skills needed to build the complicated weapons for space-age defense; they also generate the dollars to buy the tools, to build and staff the laboratories and schools, to carry on the trade and foreign mutual aid programs needed to meet the whole range of space-age challenges.

This is the economic momentum upon which our very survival depends, and the current tapering off provides a sound reason to reexamine the requirements to keep it moving.

An urgent need in this reexamination is to see today's business level in perspective: To keep in mind that the most recent report (for February) showed an economy providing jobs for 61,988,000 civilians—a total that exceeds all but two previous years in our history. And, at the same time, to take every needed step for a turn-around and a strong, renewed climb.

It's up to Government to hold to a tax level that will encourage investment, and will make possible that extra margin of consumer spending that means the difference between prosperity and recession.

It's up to management to hold to a profit level that will support expansion of plants and payrolls and attract investors, and still encourage the consumer's confidence in spending.

It's up to labor to sustain productive efficiency, and hold to a level of wages adequate to its own valid ambitions for a steadily increasing living standard, but prudent enough not to defeat its own purposes by pricing products out of the market.

Public confidence expressed over the past 8 years brought the economy to its highest peak of prosperity and strength.

As it brought more goods and money and better living to the American people, it also doubled the flow of individual and corpo-

rate taxes paid into the National Treasury. That financial strength enabled the Government to project for 1958 a major security program costing $10 billion more than the Government took in from all sources in 1950.

We didn't reach that peak by doubting ourselves.

We got there by working and planning, buying and building, with confidence in ourselves and our future.

We can meet the challenge of the space age in the same way. For the vigorous practice of freedom is the ultimate weapon.

WILL WE DO THE JOB IN SCIENCE?

We Americans have been drawing comfort for years from a plausible proposition:

Freedom is the lifeblood of science. Therefore, as the largest free nation on earth we produced the most and the best in science.

Then Russia, which only yesterday was packing off to Siberia any scientist who upheld natural law against Lenin dogma, shot a missile through our complacency. She beat us into space by 4 months. She served notice that she was ahead of us in certain critical areas of rocket development. She unveiled an education system for scientists and engineers that turns them out much faster than we do.

On the threshold of a space age in which the side that is strongest in science will inherit the earth, or what's left of it, she sent us searching frantically for the proofs of a proposition we had taken for grant, in fact, for the answers to three questions:

Has our system failed us?

Have we failed our system?

In either case, what can we do?

We can thank sputnik for putting the question so plainly. For the challenge had been there all along.

With or without sputnik, with or without Russia, we would still have had to solve the giant problems raised by the massive eruptions of human forces and natural forces in our time.

We would still have had to find a way to harness the energies of the atom to the task of bringing technology, food, and freedom to the hungry three-quarters of the world's people, or been engulfed as these awakening millions reached out for the tools, or the weapons.

We would still have had to discover new sources of energy, in the world around us, in the sun or the stars, or see the conventional reservoirs of fuel dry up.

We would still have had to find the credentials of space-age scientific leadership for which we are searching now, or surrender that leadership.

Sputnik only added the exclamation point to the challenge, and set a deadline for decision.

It wasn't the system that failed us, the proofs are plentiful.

The founders of America did far more than establish a climate for the study of science. They set up the means by which the findings of science could be put to practical use for the benefit of everyone.

They opened the way for whole industries to blossom from the seed of a single scientific discovery, and for those industries to reseed themselves and reseed science itself with profits plowed into research, into foundations and education endowments. There's no reason now to doubt the resiliency of a system that could bring into being the miracles of aviation and automation and electronics that are the trademarks of modern America, and at the same time could produce more than half of the Nobel prizewinners in physics, chemistry, medicine, and physiology between World War II and 1957.

A system that has pioneered the fission and fusion of atoms and at the same time conquered half a dozen of the world's deadliest plagues and plotted the final conquest of polio, malaria, cancer, arthritis and heart disease, gives reasonable assurance of doing any job asked of it in the future.

But it's hardly necessary to labor that point—Khrushchev, himself, has driven it home. He has cut his physical scientists loose from the restraints of Communist dogma, and given them a degree of freedom that would have brought cries of treason from his predecessors. He did this by invoking an even more fundamental Communist axiom, that the end justifies the means, even if they are freedom's own means. He has borrowed another page from freedom's book in broadening the base of his scientific manpower through expanding education. An informed people has long been considered the nemesis of any dictatorship. Khrushchev is willing to take his chances.

We can stop worrying about whether freedom can do the job in science—and start asking ourselves in what respects we have begun to fail freedom. The answer is easy; the cure is not.

Until sputnik, we weren't facing up to the space age—we were backing into it.

Secure, as we imagined, behind our H-bombs and our unmatched industrial power, we ignored a fact that Russia grasped early and clearly:

Progress in weapons and progress in technology—basic requirements for survival in the age we have just entered—both depend upon the scientist in the laboratory, unlocking new secrets of nature.

Russia has not only emancipated her scientists, she has made them princes of the realm, enjoying salaries and status reserved for her top-rung aristocracy. And she has assured a satisfactory flow of reinforcements.

In America we have been going the other way.

As the original proprietors of the incentive system we devised incentives for just about every talent under the sun, from playing a good game of football to recalling Henry VIII's third wife's middle name. But an American scientist engaged in fundamental research has had to scratch to find any token of appreciation. (Nobel, after all, was a Swede.)

A recent study among high-school students established an image of the American scientist as a combination of Svengali and the absent-minded professor. Another study among American adults developed that only 10 percent of those interviewed could call to mind the names of even 2 American scientists.

That we are still ahead in science, that we still have better facilities and greater aggregate scientific competence than Russia, is a tribute to the farsighted programs of the universities, industry and the foundations, and to the scientists themselves and their dedication to their own ideals.

But our margin of superiority is dwindling—and it will disappear unless we move swiftly to bring science into a condition to fulfill its mission in tomorrow's world.

The Federal Government has a responsibility here—to make sure that enough basic research is conducted to meet the minimum needs of national security. It is moving to meet this need, by stepping up the research, scholarship, and teaching-support programs of the National Science Foundation.

But the American people, not Government, control the incentives, the climate, and the training facilities that will finally determine whether we shall have enough science in time, or too little, too late.

They must know their own absolute dependency upon science in the space age, not that science, alone, can make freedom secure, but that the free world cannot survive without that steady flow of scientific discovery that produces new weapons, new technology, new instruments and methods to wage peace.

If this life-and-death dependency upon science is understood, the American people will provide, readily and eagerly, the means for their scientists to do their job.

These are their needs:

Respect and status in keeping with their service. One measure of that status, though by no means the only one, is financial reward, and until now many scientists have had to leave the schools and university laboratories and go out into private industry to get it.

Freedom, to work alone in a laboratory, or to pool ideas and findings, and attack a complicated problem in worldwide concert, as was necessary to split the first atom. Military secrecy can never be thrown to the winds, but secrecy that forecloses a vital new weapon or a revolutionary instrument for peace is a costly self-indulgence in the space-age struggle.

An ample supply of new blood, which can come only by giving prospective young scientists the tough, challenging courses that will whet their minds, the laboratory equipment to train them, and the teachers to inspire them.

These are modest requests for a group of Americans who are prepared to provide, in return, the instruments for a better life for all of us, for security in the space age, and for accelerated progress toward the kind of peace we all seek. Our scientists are ready to prove, if the American people will join them in the effort, that the vigorous practice of freedom is the ultimate weapon.

WILL WE DO THE JOB IN EDUCATION?

No other part of our postsputnik reappraisal has been so painful as our new look at education. We Americans have long accepted as self-evident that freedom provides the most and the best in education. The evidence appeared to bear us out. Freedom in the mid-20th century has brought more education to more people, helped develop more businessmen who have produced more goods, more scientists who have won more Nobel prizes, more engineers who have built bigger bridges, more doctors who have cured more diseases, than any other system.

We felt secure.

Then came sputnik, and with the unarguable proof that Russia's regimented educational system has threatened to surpass our own in momentum, and actually surpassed ours, in point of numbers, in those areas where the first battle for survival in the space age will be won or lost.

Russia last year graduated half again as many scientists and engineers as did the United States.

Every Russian high-school student gets 5 years of physics, 5 of biology, 4 of chemistry, and 10 of mathematics. In the United States, 23 percent of the public high schools offer neither physics nor chemistry, 24 percent offer no geometry.

Russia has 1 teacher for every 17 students. The United States averages 1 for every 27, in some places 1 for every 45, and has a national deficit of 150,000 teachers.

Russia screens her youth at the 7th and 10th grade levels, for ability, desire to learn, and knowledge of Marxism. The best qualified go on to the universities.

The United States experts who examined Russian education left no room for doubt that Russia's training is sound and the product, for Russia's own purposes, good. Unless our reappraisal brings drastic chapges, and fast, we are on the way to surrendering scientific and technological leadership to Russia.

How did we get in the predicament?

We all carry a share of the blame.

Busy exploring the intriguing byways of the machine age, living up the good life we made for ourselves, we were 10 years late in facing up to the space age, and the special skills it would require of our children.

We saw the national birthrate rise sharply in the postwar years, but we didn't bother

to build the new classrooms to meet the inevitable onrush of new school-agers.

We saw 116,000 teachers quit the schools in a single year, one-third of them taking better paying jobs elsewhere, but we didn't vote the bond issues or sanction the higher school taxes necessary to raise teacher salaries above the subsistence level.

We did a great deal about adjusting the child to his environment and his playmates, but we didn't do enough toward adjusting him to the challenge of a rugged future.

A fair number of us forgot that the disciplines of a competent mind are best taught before the age of 7, in the home.

Sputnik set an emergency program in action.

Congress is debating bills providing tens of thousands of new university scholarships.

Government, private, industry, the big foundations, State Boards of Education, and private groups are feeding tens of millions of new dollars into programs to speed the development of scientists and engineers, from the big research laboratories all the way down to the high school science and mathematics departments.

By these means we can hold off the Russian technological threat for a year, or 2 years, or 5 years.

But neither Government, nor private industry, nor the big foundations, can shoulder more than a fraction of the job.

A democracy holds the individual citizen responsible for shaping the minds and building the character of its youth.

That's where the challenge must be sized up, and where the decisions must be made now.

The challenge is not merely to produce the technicians who can turn back the physical threat, but to train the minds that can meet all of the exacting demands imposed upon America in the space age. This is why thoughtful leaders in education are gratified at the increasing number of unrestricted grants, to be applied wherever in the overall program the need appears greatest.

If we are to sustain our basic physical strength there can be no letup in the training of the managers, economists, the specialists in commerce and finance who superintend business and industry.

And if we are to project these economic and technological strengths in the shaping of a world peace secure against all future dictators, we must advance the study of history, languages, literature, and philosophy with equal zeal. For in these areas must be found the clues to the processes by which man can move toward the ultimate breakthrough—the mastery of human nature.

This is a massive challenge, difficult to pose, difficult to grasp.

It was one thing to understand the clear and present danger of a Pearl Harbor. It is another thing to translate the quiet beep of a sputnik into a warning that the survival of the Nation depends mainly upon the individual American, and the thoroughness with which he can help prepare the teenage youngster to become a competent space-age citizen.

We have all the tools we need to get the job done.

We have community leadership skilled in solving problems and in communicating solutions with clarity and force. We have a superb set of instruments ready at hand to transmit their messages into every American home.

We have a Nation of families drawn into close concert by these instruments, who have time and again proved they could make whatever effort was reasonably demanded of them.

We have a community of youngsters, born with the same energies and the same curious minds as every other crop of children, and who know a great deal more about everything than any previous generation ever did.

And we have, now, a clear idea of what must be done, within the community and within the family, to put these youngsters in touch with their space-age destiny.

One part of the job is to quit trying to make life easier for our children than it was for us—for it isn't and it won't be. We can serve them best by teaching them the meaning of responsibility, of finishing what they start; the satisfaction of hard work; the rewards of inquiring, of reasoning, of thinking for themselves.

Another part of the job is to re-evaluate education in terms of its critical importance in the national scene. The end-products of such a reevaluation will certainly be the provision of the 150,000 new classrooms that are needed, the 150,000 new teachers to man them, and a sharply increased scale of pay and a new respect for teachers.

A third part of the job is to overhaul curriculum—throw out the snap courses, measure each subject for its contribution to an authentic need and for its utility in training the child to think, and make a passing grade a reward for credit earned, not a measure of endurance.

A fourth part of the job is to recognize intellectual talent as a national resource, and set up the means to discover it and put it to maximum use. This doesn't mean denying to any child all the education he can absorb. It simply means extending the opportunity to millions of brilliant youngsters who don't have it now, and whose services the country desperately needs.

These are the processes by which a democracy can gear its educational system to meet whatever demands the space age may impose—and to surpass any effort that Khrushchev, for all his concentrated power of decision, can put forth.

For Khrushchev is still the prisoner of a dogma that will grow less tolerable as Russian education progresses. It will be an increasing problem to justify to the newly educated millions why Marxism's agricultural theories still can't provide enough for Russians to eat; or why Biologist Lysenko could be a national hero and a national clown in the same decade; or by what logic the great Soviet Encyclopedia had to clip out 4 full pages devoted to one Beria and replace them with 4 full pages devoted to one Bergholz, an unimportant courtier of Tsar Peter I.

Only a system of education extending the unhampered right to discover truth—and the flexibility to challenge dogma in the light of truth—can be nimble enough to accommodate the swift-rising, swift-changing needs of the space age.

But freedom is of service only as its opportunities are seized and used. In education, as in every arena of the struggle for survival, the vigorous practice of freedom is the ultimate weapon.

How Do We Look in the Space-Age Mirror?

The first space man, looking back through the window of his rocket, will see the earth shrink to the size of a medicine ball.

As it has in fact. Its latest timetable puts New York 24 hours from Tokyo by plane, a few minutes from London by phone, a split-second from Habana by television, and 15 minutes from Moscow by ICBM. The world has dwindled to the size of a village that a man with good lungs can shout across.

Two and a half billion people live in this village, practically all of them touching one another daily in some phase of their workaday lives. They differ in molds and habits of living and thinking. They share the same deep desire for peace.

The space age poses appalling problems to a civilization walled up in a village with enough live bombs to level it. It offers opportunities to match.

Science is now ready to harness new energies powerful enough to lift mankind to undreamed-of levels of well-being. These are some of its promises:

Food, converted from the inexhaustible plantlife of the sea, solving forever the problem of hunger that still plagues three-quarters of the world's people.

Power, released from the atom and drawn from the sun and stars, lifting from the backs of men the burdens they have borne since the beginning of time.

Health, fortified by triumphs over cancer, heart disease, dysentery, pellagra, malaria, mental disease.

Weather, if not made to order, at least forecast for an entire season with an accuracy that will work wonders in farming, transportation, industry, and everyday planning and living.

And off in the dim future are still greater miracles, interplanetary touring, actual control of the world's rainfall, perhaps even the discovery of the secret of life.

As these things come to pass, many of the age-old causes of war, hunger, poverty, and despair can be steadily reduced. And as men gain the leisure and will to learn and the means to exchange ideas they can press the attack on the other causes, ignorance, hatred, and suspicion.

This is the horizon of the space age. This is the challenge that confronts all of us, a challenge with equal parts of danger and of opportunity, presented with an urgency we have never met before. Just as the countdown sets the tasks and measures the minutes before the launching of an intercontinental missile, so the countdown touched off by sputnik sets the tasks and measures the minutes for the free world to complete its readiness.

The free world's main strength today is America. Inescapably, a major share of the challenge is put to us.

We can now see what must be done in each major area of the conflict, and no part of the task is beyond our strength.

We know that the resources to stock our arsenals and support our programs of aid overseas must flow from a thriving economy, and that increasing production of consumer goods is essential to the pace of this economy.

We know we must maintain the pace of scientific research needed for leadership in space-age weapons and technology. This requires the immediate provision of the climate, the incentives, and the facilities for our scientists to apply and pool their creative skills to best effect.

We know we must awaken in our children a new excitement for learning, a new curiosity for the next lesson, a new prestige for high marks. We know this is the basic responsibility of the home and the community, rather than government.

But there is one requirement that comes before all others:

As a people, we must take a fresh, searching look at ourselves and our role in the new kind of world we are entering. We were given more than a century to adjust to the machine age; the months just ahead will tell whether we shall carry our leadership and our freedom intact into the space age, or fall behind in a race that offers no second prize.

We must devise a strategy as clearly drawn as Russia's, but a strategy adapted to our purposes, not merely copied after Khrushchev's plan. For he has set for himself the relatively simple objective of dominating the world. Ours is far more ambitious, to hold back the Soviet threat, but also to fashion a peace that will assure justice and individual liberty to all of the world's peoples, including Russia's.

The strengths and material gifts we have derived from freedom have been so lavish that we sometimes accept freedom's virtues as our own.

We didn't invent freedom. We are not its sole custodians. We can claim no monopoly of bravery, intelligence, or enterprise. These virtues are found in equal degree among many other peoples.

What we have developed that is unique is a way to release and channel the vast energies of free men, by applying the concept of individual choice to every area of human endeavor. By using freedom in this way we have converted the universal discoveries of the machine age into history's greatest industrial structure, and used its productive wealth to advance the well-being of all of our people.

This is the strength and the example we have to offer our allies in the present struggle.

In today's new world we must depend upon global neighbors and they upon us. They can't gain the freedom they seek, or hold their present freedom, without the immense physical help we can provide them. Equally, our own survival depends upon access to their raw materials and their markets—and most of all, in this kind of world, upon their good will. For either we shall have that good will or Russia will gain it if she can. And if Russia has it, and the trade and raw materials and human resources to go with it, she will hold a power advantage to proceed, at her leisure, to the conquest of the rest of the world.

In today's new world we must also give broader application to the function of communication. It is more than a passing irony that the most articulate people on earth have failed, in important respects, to communicate with each other, let alone with our world neighbors.

A major part of this failure has been a lack of clear understanding of just what we had to communicate, and why it was necessary.

Now we have the picture before us.

Sputnik has done us this immense service: It has clarified what we must know, and what we must communicate to our children, our scientists, our economy, our world neighbors, and each other.

It has held up a yardstick to freedom and made us study each of its strengths against space-age demands. In every department, weapons, science, industrial production, education, America has the means of victory. Beyond that, it needs only the will.

Wherever you look there are signs of a people rising to responsibility, of editors reporting the space-age story and spelling out its meaning with fresh urgency; of network directors broadcasting the message with the immense impact of their medium; of private corporations applying thought, and dollars by the tens of millions, to the stimulation of education and science; of community and neighborhood groups coming together earnestly, to talk out the meaning of newly grasped duties in school and home.

Out of such activity, spread throughout the Nation, can come the clear directives that will best apply our strengths and carry us swiftly and safely into the space age.

The challenge is not to win a numbers race in scientists and engineers, nor to destroy Russia, nor to bury Nikita Khrushchev, but to refute a far wiser man named Voltaire, who once said: "History is only the patter of silken slippers descending the stairs to the thunder of hobnailed boots climbing upward from below."

The vigorous practice of freedom can alter that pattern, and provide both the ultimate weapon for survival and the ultimate promise of peace.

The Explosive Problem of Importing Foreign Arms and Ammunition

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. MORANO. Mr. Speaker, today I have written to the chairman of the House Foreign Affairs Committee, Hon. THOMAS E. MORGAN, explaining in some detail the urgent need for legislation to ban the importation of foreign military arms and ammunition for commercial use in this country.

Besides the unfair competition foisted upon American arms and ammunition industries, the importation of surplus military weapons has proven a definite safety hazard to American sportsmen inasmuch as some foreign-made rifles have a tendency to blow up in the shooter's face.

I have introduced an amendment to the Mutual Security Act to prohibit the importation of these unsafe weapons, a practice which not only jeopardizes life and limb of American citizens, but also is a contributing cause to unemployment and economic decline in our domestic arms industry.

Mr. Speaker, I wish to include herewith the text of my letter to Mr. MORGAN, and also a press release of today's date which briefly states the problem.

APRIL 15, 1958.

Hon. THOMAS E. MORGAN,
Acting Chairman, House Foreign Affairs Committee, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: As you know, I have proposed the attached amendment to section 414 of the Mutual Security Act which would prohibit the importation or reimportation of all military firearms and ammunition for sale in competition with domestic sporting arms and ammunition. I believe this amendment is required to alleviate a situation which has caused widespread unemployment and financial loss among the Nation's sporting arms manufacturers and their distributors and dealers throughout the United States. I believe that testimony now part of the Foreign Affairs Committee's records substantiates the need for relieving the serious threat to a vital defense industry.

In my study of this problem, I have come upon a phase of the matter which has greatly increased my concern above and beyond that which invokes such a hardship upon domestic industry. Among the thousands of military weapons declared surplus by mutual-aid nations and returned to this country to compete against American sporting arms on the commercial market is the Italian Carcano carbine. The Carcano being imported in greatest numbers is an 1891 model modified in 1938 for caliber 7.35 millimeters. The Carcano has been declared by the Italian Government to be unsafe for military use, according to testimony of representatives of our own Department of State, and an internationally recognized American gun authority, writing in an official publication of the National Rifle Asosciation, underscores this finding.

Based on these two sources alone, it would seem to me that there is sufficient reason for all responsible citizens of this country to be alarmed over the distribution of these questionable arms among our Nation's sportsmen.

Robert N. Margrave, deputy director, Office of Munitions Control, Bureau of Security and Consular Affairs, Department of State, pointed out in official testimony before our committee: "It is our information that the Italian Government used rifles other than the Carcano during World War II. The Carcano was regarded as an undesirable rifle for military purposes because of the tendency of a portion of the barrel to explode."

Mr. Margrave added, "The only safe way to fire it, I understand, is with American ammunition."

The Carcano carbine is of 7.35 mm. caliber, and I am informed that no American ammunition manufacturer produces this cartridge. Shooters who expect to fire the Carcano must obtain ammunition whose origin is other than domestic. The Department of Commerce reports that in last December alone, 4,482,000 cartridges for this gun were imported from Italy. It is obvious that a gun, declared by the Italian Government to be unsafe for use with this specific ammunition, would be just as hazardous in the hands of an American sportsman.

Furthermore, Mr. Walter H. B. Smith, author of "Rifles, Volume Two of the N. R. A. Book of Small Arms," copublished by the National Rifle Association of America, Washington, D. C., and the Military Service Publishing Co., Harrisburg, Pa., has this to say about the Carcano (p. 246):

"The safety system (of the Carcano) is an Italian design, and is inherently dangerous as shattering or shearing of a fragile holding lug will let the firing pin blow back out of the bolt."

I am informed by reputable gun designers that the shattering of this lug could be caused by a pierced primer in a cartridge. The expected, logical route of travel for the blownback firing pin would be rearward through the shooter's face.

I assure you I make no claims to be technically versed in the field of arms and ammunition, but I am appalled by what is, even to the most uninitiated, an obvious threat to the life and limb of the American sportsman. There is, I am told, no regulatory system by which these and other imports of dubious origin can be examined and tested before they are made available to civilian shooters.

I believe that this, together with the testimony of Mr. E. C. Hadley, demonstrates that it is necessary that Congress adopt my amendment or similar legislation to correct this situation.

I would appreciate it if you will bring the foregoing additional information to the attention of the members of the committee.

Cordially yours,

ALBERT P. MORANO.

APRIL 15, 1958.

WASHINGTON.—United States Representative ALBERT P. MORANO, Republican of Connecticut, told Congress today that he is appalled by an obvious threat to the life and limb of the American sportsman stemming from unsafe foreign military rifles imported for commercial sale.

Congressman MORANO, sponsor of an amendment to the Mutual Security Act which would prohibit the importation of all military arms and ammunition, said surplus Italian Army carbines, imported for use by American sportsmen, have a tendency to blow up in the shooter's face.

In a letter to members of the House Foreign Affairs Committee, which is currently

considering an extension of mutual security legislation, the Congressman said his amendment would automatically prohibit the importation of such firearms.

MORANO, pointing out that such imports also were causing unemployment and severe financial loss within the domestic arms industry, said:

"Among the thousands of military weapons declared surplus by mutual aid nations and returned to this country to compete against American sporting arms on the commercial market is the Italian Carcano carbine. The Carcano being imported in greatest numbers is an 1891 model modified in 1938 for caliber 7.35 mm. The Carcano has been declared by the Italian Government to be unsafe for military use, according to testimony of representatives of our own Department of State, and an internationally recognized American gun authority, writing in an official publication of the National Rifle Association, underscores this finding."

The Connecticut Congressman asserted: "Based on these two sources alone, it would seem to me that there is sufficient reason for all responsible citizens of this country to be alarmed over the distribution of these questionable arms among our Nation's sportsmen."

He quoted Robert N. Margrave, of the State Department's Office of Munitions Control, as saying the Italian Government regards the Carcano as an undesirable rifle for military purposes because of "a tendency of a portion of the barrel to explode." He added that Margrave claimed the only safe way to fire the gun is with American ammunition, but according to Morano, no American company manufactures ammunition of the type used in the Carcano.

The Congressman said: "Shooters who expect to fire the Carcano must obtain ammunition whose origin is other than domestic. The Department of Commerce reports that in last December alone, 4,482,000 cartridges for this gun were imported from Italy. It is obvious that a gun, declared by the Italian Government to be unsafe for use with this specific ammunition, would be just as hazardous in the hands of an American sportsman."

MORANO also pointed out that Walter H. B. Smith, author of a National Rifle Association article on the Carcano, has written that the safety mechanism of the rifle "is inherently dangerous, as shattering or shearing of a fragile holding lug will let the firing pin blow back out of the bolt."

The Congressman added: "I am informed by reputable gun designers that the shattering of this lug could be caused by a pierced primer in a cartridge. The expected logical route of travel for the blownback firing pin would be rearward through the shooter's face."

MORANO said he is "appalled by what is even to the most uninitiated, an obvious threat to the life and limb of the American sportsman. There is, I am told, no regulatory system by which these and other imports of dubious origin can be examined and tested before they are made available to civilian shooters."

Price Cuts Needed To End Tug-of-War

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. ABERNETHY. Mr. Speaker, I call attention of the Members to an article by J. A. Livingston which appeared in the Washington Post on April 13. The article, entitled "Price Cuts Needed To End Tug-of-War," graphically points out the need for the kind of price cuts needed to get the consumer back in the market and some of the reasons why prices were allowed to go so high in the first place:

PRICE CUTS NEEDED TO END TUG-OF-WAR

(By J. A. Livingston)

On the way to work the other morning, my eye caught a blind man confidently tapping his way toward a street crossing. Suddenly, the driver of a laundry truck, intent on making deliveries, backed into the pedestrian right-of-way. The blind man tapped to a halt, waving his cane, his antenna, questioningly before him.

I dashed to his side and took his arm. "What's wrong here" he said. "Something's in the way."

"A truck pulled into the crossing." I answered, as we walked around it. (Cop ought to hand out tickets to crosswalk hogs.) "What made you stop?" I asked. "How could you tell something was there?"

"I can tell," he answered. "I could hear it."

He thanked me and said goodby, leaving me to sense that blind men have extrasensory perception. They feel sound waves far too delicate for ears with eyes. And I should have thanked him. He helped me to resolve my problem.

BURNS VERSUS ANDERSON

I'd been mulling over the recession: What to do about it?

Arthur F. Burns, former chairman of President Eisenhower's Council of Economic Advisers, has come out for a $5 billion tax cut. This put him in direct opposition to the President, to whom he is fondly loyal. But Burns feels unemployment will get worse if action is not immediate.

Members of the President's present Council of Economic Advisers feel much the same. But the President says, "Not yet."

Mr. Eisenhower is influenced by Secretary of the Treasury Robert B. Anderson. The Secretary feels that steps already taken—to accelerate defense orders, highway construction, public works, and to make housing credit easier—will soon increase job opportunities.

Anderson, along with Secretary of Labor James P. Mitchell, hopes that the worst in unemployment is past. Recent data on new claims for unemployment compensation, when adjusted for seasonal and end-of-the-quarter peculiarities, afford some basis for thinking that layoffs have reached a crest. But how much is real, how much is wishthinking?

TUG-OF-WAR RECESSION

If only, I thought to myself, I had the gift of extrasensory foresight. Is this really the floor of the recession? Or just a temporary low plateau leading to another economic stepdown, another drop in production, another rise in unemployment? Is it, in short, the transition from recession to depression?

If I thought it were, I'd urge a tax cut to put more money into the pay envelopes of consumers. That would be a stimulus, but it wouldn't necessarily be the stimulus the economy needs. What would consumers, you and I, spend this increased income on? Automobiles? Homes? Appliances? Those are the doldrum industries.

This is a tug-of-war recession—a tug of war between consumers and producers, between buyers and sellers. I could use a new pair of shoes. I've been watching the store windows. But the prices. Nix. I don't need a pair of shoes that badly.

Last night at a dinner I talked to an automobile dealer in the town of Elmer, N. J. (population 1,500). A customer came in the other day, decided on a car, asked the price.

"Seventy-seven dollars per month."

"Too high," said the customer.

The dealer looked up his records. "But the last time you bought, you paid $96 a month."

"That's just it," said the prospective purchaser. "I just can't swing the difference. I'll wait."

EXECUTIVE RESPONSIBILITY

For persons who have lost their jobs, there is no such word as recession. Unemployment is a searing, humiliating experience. An emotional depression. And I'm convinced that as an aftermath of this decline there will be social reform. Executives, who sit in high-up offices, drawing excellent pay, overproduced in 1955 and 1956. Their overrich bargains with labor leaders forced up costs and prices. Result: Recession. Executives often pay themselves bonuses in good times. Maybe, instead, they ought to get bonuses based on the stability of their operations, of employment.

Today, the executives who overproduced have a responsibility to get us out of this recession. President Eisenhower says consumer are "disenchanted" with the goods producers offer. To that, I'd add, and the prices.

On the theory that business men will act sensibly in their own and the country's interest, I'd chance waiting on a tax cut. I'm hopeful that out of adversity, recession, will come sales-stimulating price cuts. But I'm waving my economic antenna ahead of me. I hope I'm not wish-thinking—hoping for some miracle man to take the economy by the arm.

I hope President Eisenhower's not wishthinking, either. His wish-thinking is more influential—more consequential—than mine.

Our Embassies Abroad

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mrs. ST. GEORGE. Mr. Speaker, we are sometimes very apt to be hypercritical of the money spent for and on our embassies abroad.

As a matter of fact, we are penny wise and pound foolish in these matters. All we do is make it impossible for anyone but a multimillionaire to represent us at any of the more important diplomatic posts. While many multimillionaires represent our country admirably, it seems unfortunate that others, notably career diplomats, can never aspire to the highest honors.

In contrast to our system, the nations of the Old World have always believed in, and paid for, adequate representation. The following article from the London Daily Mail shows what the United Kingdom spends on their embassies, and I would like to call your attention to the fact that these figures are in pounds sterling, which now stand at about $2.50:

MOSCOW ENVOY'S EXPENSES SLASHED

Slashing cuts in allowances to Britains envoys in Russia and the satellite states were revealed yesterday.

Britain's Ambassador to Moscow, Sir Patrick Reilly, has his expenses hacked from £36,580 to £13,335.

The Ambassador to Poland takes a similar cut. So does the Minister to Rumania.

The reason: The rate of exchange for the ruble has improved since last April. Its new valuation is about 8½d. now instead of 1s. 9½d.

BRITAIN SAVES

So the cocktail parties, the dinners, the servants, chauffeurs, and secretaries will all cost Britain less.

Diplomat with the biggest expense account is now Sir Harold Caccia, Ambassador in Washington. He draws £30,470 a year expenses.

Sir Gladwyn Jebb, Ambassador in Paris, is allowed £23,597, and Sir Pierson Dixon, Britain's permanent representative at the United Nations, gets £14,940.

Britain's most expensive embassy is Washington, which will cost almost £1,500,000 this year.

Next comes West Germany, with a bill of £788,400.

Spotlight on Communism

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Standard-Times, New Bedford, Mass., of March 26, 1958:

SPOTLIGHT ON COMMUNISM

The four-day investigation into New England communism by the House Un-American Activities Committee produced dramatic testimony and made major headlines in most daily newspapers of the six-State area.

The committee operates under a public law passed in 1946, authorizing it to study subversive activities with a view toward aiding Congress to create remedial legislation, but many Americans still do not understand its function.

The committee holds hearings, to which it invites witnesses; if hostile, they may be subpoenaed. Testimony is recorded, and often is published in pamphlets available to the public. The committee also may request that books, papers and documents be produced.

What does it do with the information received?

Most of its published documents, containing testimony and conclusions, are widely distributed, not only to Members of Congress, who may be guided in considering new laws, but also to the general public, with the idea that the citizens may know the nature of communism and thus be better able to combat it.

Here are samples of some of the committee's recent conclusions, based on thousands of words of sworn testimony, by the best-informed authorities on communism available, including former party members:

The Soviet satellite in outer space has presented fresh evidence of Soviet Russia's technological progress—a progress made possible to a large degree by the penetration of United States internal defenses by Soviet conspirators and their theft of some of America's most vital military and scientific secrets.

The circumference of the free world has shrunk further in recent months. The epic propaganda setback dealt the Soviet Union by the Hungarian revolution has been largely overcome. The struggle for power within the Kremlin has brought new strength to Khrushchev; America's allies and the so-called neutral nations of the world confront the Communist challenge irresolute and divided.

Communist political subversion, as disclosed by the Committee on Un-American Activities, presents a danger to the American people equaling that of Soviet satellites and long-range missiles.

The Soviet Union would prefer to achieve its program of world conquest without the physical destruction of its enemies; if the gates can be opened from within by dupes and Communist agents, overt aggression by the Soviet Union will obviously be unnecessary. This would be a fulfillment of Lenin's prophecy made at the inception of the international Communist empire:

"First, we will take Eastern Europe, then the masses of Asia, then we will encircle the United States, which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

The House committee, in its latest report, finds, "Within the United States, the Communist apparatus has evolved new implements of political conquest. These have found root in, and have, in turn, contributed to, a dangerous climate of complacency which itself presents an acute threat to the very foundations of our security system."

Spotlighting communism, as the Boston hearings did very effectively, is one of the best possible ways to overcome lack of awareness of the Red threat as it exists in this and every other State in the Union.

Economic Statement

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. DINGELL. Mr. Speaker, as you know, Congress has been working overtime hours since the beginning of the year to head off and turn back the current recession.

From the start, the two parties have differed sharply about the right way to conduct this pincer movement. In the beginning, the Republicans accused the Democrats of gloom-mongering. President Eisenhower assured us that the worst was over. Then as unemployment continued to rise, he repeatedly cautioned us against moving too quickly. Now that March has come and gone without the promised recovery, the President again suggests delay. He implies if only we let the economy alone, the natural forces of supply and demand will right the staggering giant and we can all live happily ever after.

I would have greater confidence in the President's optimism if it were not for the fact that this current recession is traceable to unwise economic policies of the President. It is not long since the Federal Reserve Board initiated the so-called tight-money policy in an effort, we were told, to halt inflation. The President and his advisers supported this policy, and talked of creating a "rolling readjustment."

Let us strip the Madison Avenue cover from this slogan. In plain English, a "rolling readjustment" is a small-scale recession. The purpose behind tight-money policy, then, was to make borrowing unattractive and thereby to cause a short recession. The Eisenhower administration believed that a small recession would cause a price roll back that would "restore the health of the economy."

This sounds plausible in theory and some intelligent people accepted it. But it is bad economics. High interest rates cannot affect prices without first affecting employment and production. We have ample proof of this. It happened in 1920, in 1929, in 1937, in 1953, and it has happened again in 1958. The Eisenhower administration was burnt once by tight money, in 1953, but did not learn the lesson. The economy's thirst for goods and for industrial expansion outlived that first Eisenhower recession. The patient took poison but survived, and somehow the notion was broadcast that poison was good for the system.

In spite of economists' warnings, tight-money advocates again undertook to launch a "rolling readjustment" by jacking up interest rates. But this time the economy was in no shape to take poison. Inventories were at record highs. Capital expansion was at a comparative standstill.

We were cast into this trough by faulty notions; we cannot depend on those same notions to raise us up again.

The theory of "rolling readjustments" or small-scale recessions is directly contrary to the principle of full employment which was written into law by Congress in 1946. Despite the terrible lesson of 1929, some Republicans still talk lovingly about the ideal of a "free market." Yet, except for a few Neanderthals, they now accept the reforms begun by Franklin Delano Roosevelt and promise to apply them—"but not just yet."

Along with most other Democrats, I believe in full employment. I believe it is the Government's duty to maintain full employment. And it is to the concept of full employment and to the means for insuring it that I believe our efforts must now be directed.

Accordingly, since early in the session, Democrats in both Houses of Congress have proposed a number of measures designed to repair the damage which the tight-money advocates have wrought. Some of these would take effect immediately. Some are standby measures designed to equip the Government for more drastic action if the situation does not soon improve.

All would supplement the arsenal of defensive and offensive economic weapons left us by the New Deal. Their purpose is not merely to halt the recession in its tracks but also to return us to the high level of prosperity from which we fell.

Already, certain of these measures have sped through Congress under Democratic sponsorship. A pace quickening of the Federal highway program has been authorized. Likewise, a speedup in defense construction.

An emergency housing bill has been approved, lowering downpayment requirements and increasing the Government's mortgage-buying resources. It was on this bill that the philosophical differences between Democrats and Republicans were most clearly shown. The Senate bill, as reported by committee, contained a provision raising the interest rate on GI home loans from 4.5 to 4.75 percent. Senator MONRONEY offered an amendment to keep the rate at 4.5. The final vote was 48 to 47. Six Democrats voted for higher interest rates; 41 voted against. But on the Republican side the vote was 42 for higher rates and only 6 against, and 1 of the tight-money votes came from Vice President RICHARD M. NIXON.

Congress has also passed two resolutions urging the President to act on powers he already holds. One resolution urged stepped up activity on $4 billion of authorized public-works programs. The other asked the President to hold the line for the present on farm price supports to prevent further farm unemployment. This request the President promptly vetoed. Again the difference in party positions is abundantly clear.

The President suggests that the Democrats are moving too quickly. My sole complaint is that the Democratic Party is not moving swiftly enough. I believe that our task is not just to seek revival of the economy with emergency measures but also to improve our defenses against an extended recession. The danger, alluded to by the President himself, is that we will get only a partial revival, that we will stumble along for an indefinite period with a floating corps of jobless workers. Our job, then, is not solely to prevent the unemployment lists from growing. It is to establish full employment now and forever.

To this end, since the beginning of this Congress, I have introduced a series of integrated proposals aimed at increasing our antirecession firepower. These would supplement the heavy artillery which is our precious legacy from the New Deal.

I have sought an increase in the national minimum wage to $1.25 an hour and in retirement benefits to civil-service employees. These measures would broaden the base of the economy and provide a needed boost in general purchasing power. I have also introduced a number of measures to liberalize the Social Security Act, and have proposed the creation of a Federal Agency for Handicapped. Similarly I am sponsoring a program of national health insurance and a system for distribution of surplus foods to the needy. All of these measures, if enacted, would reduce the severity of an economic slump and, even more important, protect the unemployed from the hardship and heartache which recession necessarily imposes on low-income groups.

A quarter-century has passed since the New Deal programs first went into effect. Price levels have risen sharply. The squeeze is on. Yet we are warned against moving too quickly to adjust the old programs to current prices. I cannot accept this verdict. It is the view of men who adapt slowly—if at all—to the facts of life. They never did understand the economics of free employment.

To fight unemployment successfully, the Federal Government must have a full kit of tools. Accordingly, I have introduced bills calling for the beginning of substantial urban renewal and public-works programs. I have sponsored legislation giving special consideration to areas where unemployment is most acute. This would mean, among other things, preference for these areas on defense orders. In addition, I have submitted companion bills raising income-tax exemptions from $600 per person to $700 or $800 per person. This would put purchasing power directly into the hands of lower income groups. This method is better than the across-the-board percentage cut which has been suggested by some and infinitely more desirable than the upper income tax cut which the administration is reported considering. Again, the difference in viewpoint is perfectly clear cut. The administration still cherishes the utterly false notion that prosperity can be made to trickle down from the highest to the lowest. Give the rich more money, it is suggested, and they will invest it. Investment will turn the wheels of the economy.

Again and again history has revealed how absurd this theory is. Without the expectation of profit, there will be no investment—regardless of the amount of cash jingling in the pockets of the wealthy. Without general purchasing power, there will be no expectation of profit. Our task is to put money in the hands of those who will spend it, creating demand, creating the expectation of profit and finally creating the urge to invest.

Lastly, our task is to help the disaster victims, the men, women, and children who are the helpless heirs of this economic catastrophe. Had this been a hurricane, a cyclone, or a flood, the Red Cross would long since have been on the scene. A Federal assistance plan would have streaked through Congress with the blessing of the President. We can do no less for the victims of recession. Unemployment is not the fault of the unemployed. It is a defect of the system, with results as terrible as any of nature's accidents.

I have therefore introduced a bill extending the unemployment compensation program to 39 weeks, raising benefits to a decent level and imposing Federal standards in the place of patchwork inadequate State standards. This would be paid for half by the States and half by the Federal Government.

Meanwhile, as his administration's contribution, the President proposes Federal loans to the States in place of grants. I reject this approach. Once more it spotlights the fundamental inability of the Republican Party to cope with economic crisis. Our economy cannot be Balkanized into 48 parts. We are strong only as we pool our substance and share our risks.

Unfortunately, economic logic will not prevail over hesitancy and stubbornness in the White House. The Federal Government can do its part only if it has the equipment. If the President will not furnish the necessary leadership, then it must come from the Congress. The differences between the Democratic and Republican Parties are sharply drawn. I, for one, am prepared to submit the record for the public's judgment.

National Conference on American Political Parties, Under Auspices of Gonzaga University, Spokane, Wash.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. NEUBERGER. Mr. President, the survival of democracy in a troubled world depends in great measure upon how well our people understand and appreciate the democratic process. Political parties are the lungs through which American democracy receives the oxygen essential to its continued operation.

I have just attended one of the most inspirational and useful conferences ever held on the functioning, methods and future of American political parties. The locale was Hayden Lake, in the magnificent timbered mountains and hills of northern Idaho. The conference was sponsored by Gonzaga University of nearby Spokane, Wash. The theme of the conference was described by the title, "National Conference on Political Parties."

Participating were 60 to 70 leading political scientists and public figures from throughout the Nation. The Ford Foundation generously granted to Gonzaga University the sum of $16,000 to underwrite the expenses of the conference and to make possible the necessary travel to Hayden Lake by train, airplane and private automobile.

For 3 days, in a scenic realm of outdoor America, the participants evaluated such crucial questions as broadening the base of our major parties, trying to solve the dilemma of huge campaign donations, and coping with the danger of dominance in politics of special-privilege-seeking forces. Guiding light of the conference was a brilliant teacher of political science at Gonzaga, Father Richard E. Twohy, who persuaded officers of the Ford Foundation that such an undertaking was a worthy contribution to maintaining and strengthening our national traditions of self-government.

I consider it a privilege to be on the program of the conference, along with my able and distinguished colleagues, the senior and junior Senators from Washington [Mr. MAGNUSON and Mr. JACKSON], the junior Senator from Utah [Mr. BENNETT], and the junior Senator from Michigan [Mr. MCNAMARA]. All of my colleagues made most valuable addresses, as did the brilliant young Representative from the State of Missouri, RICHARD BOLLING.

As the conference ended, I heard many of the participants—from academic as well as political spheres—declare emphatically that their own thinking on the role of American parties had been greatly clarified and enlarged.

Mr. President, I should like Members of the Senate to know something further about this impressive meeting at Hayden Lake, near the Washington-Idaho border, which took place from April 10 through April 13. Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD the formal program of the National Conference on Political Parties; an Associated Press dispatch from the Oregon Daily Journal of April 3, 1958, setting forth some of the colorful details of the meeting; and a summary of my own speech to the conference on April 12, in which I reviewed my sponsorship of legislation modeled after President Theodore Roosevelt's proposal of 1907, for Federal financing of the major expenses of national political campaigns in the United States.

These materials may serve to encourage similar conferences elsewhere in the Nation, a circumstance which I fervently trust may occur.

There being no objection, the program, article, and summary were ordered to be printed in the RECORD, as follows:

AN OPPORTUNITY TO CONFER UPON THE COMMON CRISIS—THE NATIONAL CONFERENCE ON POLITICAL PARTIES

Inherent in the term "democracy" is the presumption of individual participation.

Essential to the life of the State is the presumption of its ability to govern.

Lacking either or both of these components, the democratic state confronts ruin.

Political errors compounded since World War I underscore a common crisis: Does America possess the capacity to balance the forces released by science with the political wisdom and skill required to direct those forces to civilized ends?

ORIGIN AND OBJECT

The developing crisis of our political system has been under discussion by an increasing number of business, labor, farm, educational and political leaders of the Northwest. The problem, however, is not regional, but national.

Hence, the Ford Foundation has granted Gonzaga University $16,000 to bring together 60 to 70 leading citizens from private life and public office to study American political parties—the principal agencies supplying personnel and policy direction to government, and the official link between government and the people.

FORM OF THE CONFERENCE

The conference is designed to provide an opportunity for the fullest expression of opinion by each participant.

Five major topics will be initiated by keynote speakers.

Following these brief introductory talks, conferees will divide into three groups for further discussion.

TOPICS FOR DISCUSSION

1. Can our party system, without sacrificing its popular base, achieve a higher integration within the limits of our Constitution and pluralistic society?

The practicality of adjusting our diffused party structure and functions to meet more adequately the demands of national and international policy. The relevance to this problem of alternative methods of supporting party candidates and campaigns.

II. Do political parties realize their full potential in providing Government at once democratic and responsible?

The need of a more precise rationale for the American party system.

The practicality of providing for the national interest in domestic and foreign affairs by a system of party brokerage designed to respond fairly to the accumulative pressures of competing interest groups.

The relation of party leadership to this problem.

The use of communications media by parties and their joint responsibility to the public.

III. What is the role of the opposition party in policy formation?

The function of the "loyal opposition" in providing a strong and definite alternative government.

The role of bipartisanship in foreign affairs.

The opposition's function in building leadership.

IV. What is the role of interest groups in the American political system?

The positive function of interest groups in collaborating with parties and government in formulation of public policy.

Conversely, the conflict between individual and national interests.

The ethical problems involved here.

V. What is the role of universities in furthering the objectives of the American political system?

The responsibility of universities to expound the moral basis of democratic society, citizenship and party government.

How universities can best cooperate with politicians and citizen groups in serving the political needs of the country.

Sponsored by Gonzaga University, Spokane, Wash.

Consultants: Gov. Robert E. Smylie, Idaho; United States Senator Henry C. Dworshak, Idaho; United States Senator Frank F. Church, Idaho; United States Senator Warren G. Magnuson, Washington; United States Senator Henry M. Jackson, Washington.

Advisory committee: Rev. Richard E. Twohy, S. J. Gonzaga University, chairman; Dr. Boyd A. Martin, University of Idaho; Dr. Hugh A. Bone, University of Washington; Dr. Daniel M. Ogden, Jr., Washington State College; Mr. Richard T. Tench, Gonzaga University.

[From the Oregon Journal of April 3, 1958]

UNUSUAL CONFERENCE ORGANIZED BY PRIEST

HAYDEN LAKE, IDAHO.—A Catholic priest with $16,000 and a yen to promote an abstract government study puts his means and extremes together next week for an unusual conference of practical politicians.

Big names in education, labor and social welfare have agreed to meet in the Rev. Richard E. Twohy's first "national conference on political parties" at this secluded lake resort April 10-13.

Such practitioners as Senators NEUBERGER, Democrat of Oregon; MCNAMARA, Democrat of Michigan; BENNETT, Republican of Utah; JACKSON, Democrat of Washington; Republican Gov. Cecil Underwood of West Virginia; and Democratic Chairman Paul Butler will eat and sleep here, talk and think for 4 days about the state of the democratic process.

Father Twohy, 44, chairman of political science at Gonzaga University in Spokane, conceived the idea. He foresaw great merit in a quiet, informal roundtable of leaders from "the three great organs of our civilization—the stadium (universities), the regnum (civil powers) and the sacrum (churches)."

He switched from the academic to the practical, flew to New York and telephoned Henry Heald, president of the Ford Foundation. He wrote down his proposal in the telephone booth and then spent 20 minutes with Heald..

The Ford Foundation sent a $16,000 check 2 months later to pay expenses for 60 conferees.

Father Twohy then went after the biggest names. At Independence, Mo., Harry Truman showed him through his library, discussed the conference for an hour, then said: "It's a splendid plan. I'd love to come. Nobody knows more about the subject than I do."

But Truman was committed on the dates. The Jesuit priest then buttonholed Adlai Stevenson, Richard Nixon, and Thomas E. Dewey. All indorsed the conference but their schedules were full.

He finally lined up 5 Senators, 4 Congressmen, including Representatives McCarthy, Democrat of Minnesota, and Bolling, Democrat of Missouri; at least 2 governors, 2 college presidents, Chairman Jerome Kuykendall, of the Federal Power Commission, noted professors from Yale, the University of Chicago and UCLA, and Industrialist Edgar Kaiser.

Bertha Adkins, assistant chairman of the National Republican Committee, agreed to come along with Vice President James Carey, of the AFL–CIO and top echelon officers of the National Association for the Advancement of Colored People, the American Farm Bureau Federation and the American Medical Association. Father Twohy's own father James Twohy, a Los Angeles finance executive will represent the National Conference of Christians and Jews.

With Republican Gov. Robert Smylie, of Idaho as consultant, Father Twohy mapped his program and picked this quiet resort area to "provide a coign of contemplation, to offer the harried man of great affairs the chance he often says he wants and needs to separate the urgent from the important, the passing frenzy from the value that endures."

FINANCING OF POLITICAL CAMPAIGNS, NOT OCCASIONAL GIFTS, IS GREATEST PROBLEM OF ETHICS IN DEMOCRATIC GOVERNMENT NEUBERGER TELLS GONZAGA CONFERENCE ON POLITICAL PARTIES

SPOKANE.—"As long as candidates for the Nation's highest elective offices must regularly seek hundreds of thousands of dollars in campaign contributions from private donors, it is futile to pursue ethics in Government with conflict-in-interest laws and rules about civil servants accepting small courtesy gifts at Christmas," Senator RICHARD L. NEUBERGER of Oregon told the Natinal Conference on Political Parties under the auspices of Gonzaga University, Saturday April 12.

Underwritten by the Ford Foundation, the Gonzaga-sponsored conference at Hayden Lake, near Spokane, Wash., covered analyses of many phases of the political party system in modern American politics, with participants drawn from the fields of politics, educaton, labor, the professions, business, religion and communications.

"The recurring fuss over occasional airplane tickets, resort visits, speaking fees or Christmas hams fades into insignificance when compared with $30 million campaign treasuries to elect a President and $1 million exchequers to back a Senator or governor in a big industrial State," said NEUBERGER, who was elected to the Senate in 1954 as the first Democrat from his Pacific Northwest State in 40 years. True elimination of conflicts of interest will remain an elusive goal until an effective method is adopted to free public officials from being virtual prisoners of the huge campaign funds needed to reach the public through modern means of mass communication.

The Oregon Senator proposed that the dilemma be solved by adopting the recommendation first made by President Theodore Roosevelt in 1907, for Federal financing of the Federal election campaigns of the major political parties in order to liberate candidates from dependence on large private contributions. Teddy Roosevelt made this recommendation to the Congress half a century ago, long before the era of radio and TV and other costly modern political necessities. Yet even when election costs were only a tiny fraction of what they are today, this great and progressive Republican President spelled out the evil in a system under which officeholders must rely on donors with special interests for the wherewithal of their electors to office.

NEUBERGER described in detail legislation he has proposed in the Senate to put the Teddy Roosevelt plan into law by having the Federal Treasury underwrite certain election expenses as a "necessary cost of democratic government." This would be done by entitling major party candidates in Federal elections to Federal financial support based on a formula of 20 cents for each voter in the district; by Federally-purchased broadcast time made available on equal terms to opposing candidates; by offering a tax credit of up to $10 to every taxpayer for a legitimate individual political contribution made by him to a candidate or party of his choice; and by matching-fund grants to States for voters' pamphlets to make information about candidates and issues available free to all registered voters.

All such Federal support would be subject to two conditions, NEUBERGER explained: (1) That the candidate's campaign keep within legally set limits all its other expenditures from private sources; and (2) that the candidate receive at least 10 percent of the total vote cast, or forfeit a bond he must deposit in the amount of one-half the Federal contribution to his campaign. The 10 percent rule is necessary to rule out splinter-party or self-starting candidates running "for the purse," NEUBERGER said. "Under such a limitation, the Bull Moose candidacy of Theodore Roosevelt in 1912 and the Progressives of 'Fighting Bob' La Follette in 1924 would have passed the 10 percent qualifying level; the various Socialist, Communist and Dixiecrat tickets we have had would have forfeited their bonds."

The Oregon Senator said that, in his opinion, present campaign reporting laws are barely worth the paper they are printed on. "Even if they are amended and modernized, they would be useless unless affirmative responsibility for investigation and enforcement of reporting requirements is placed in the hands of an independent agency, removed as far as possible from politics.

"Can politicians, no matter how honest, satisfy the public that they are enforcing the election laws against themselves? I have proposed that the Comptroller General—a nonpolitical long-term official who is also outside of the executive branch—should have authority and responsibility to audit and investigate all spending in election campaigns, not just that which appears on filed reports. Campaign financing should be subject to at least as effective scrutiny as income tax returns are today—then maybe it would be possible to keep check on the size and sources of campaign treasuries.

"Most of the men and women I have met in Congress and in the legislature of my State are honest and trustworthy," NEUBERGER told his luncheon audience. "They would be outraged and shocked at any suggestion of taking money to influence their judgment on any policy issue which might come before them for decision. Yet to reach their own electorate, to influence the public to vote for them over their opponents, our system forces them to accept vast sums in campaign contributions from sources who have a direct stake in those policy issues.

"Moreover, this system invariably gives one candidate greater financial resources than another with which to place his program, or at least his profile, before the public—and thus actually denies the public a fair and equal choice," the Senator stated. "There is hardly an equal, democratic election between one candidate whose name has been heralded in billboards, newspaper ads and TV spectaculars and another who has been speaking from street corner soapboxes. Only if, by equal Federal financing accompanied by limits on private spending, we help all candidates to reach the public, can we eliminate the dollar from politics and speak of '1 man, 1 vote.'

"These are the implications for our philosophy of democracy, when a total of at least $200 million was spent on all the political campaigns—Federal, State and local—in 1956," NEUBERGER said. "The largest blocks of these campaign funds, and these are the ones politicians must largely rely on, came from a relatively small number of people. The implicit dangers to free, democratic government are obvious—and far greater than the danger from lobbying and petty favoritism—yet when election campaign costs have skyrocketed with the use of modern communications techniques, where is a candidate for elective office to get the money? Don't forget that Judge Leibowitz withdrew from a mayoralty race in New York because he said he had been advised that he would need a treasure chest of as much as a million dollars to be elected."

NEUBERGER said that the alternative of grassroots participation in political campaign financing would be encouraged by his proposal to allow each individual taxpayer one $10 tax credit annually for a legitimate contribution to a political party or candidate. "Tax incentives have been suggested by various bills introduced in recent years, but they would have to be in the form of a small tax credit of this kind rather than $100 deductions, as has been proposed," he said. "A credit taken directly against the tax would affect each taxpayer and voter equally. But a $100 tax deduction could mean that the Treasury in effect would put up as much as three-fourths of the $100 contributions of a wealthy industrialist and his wife, while it put up only about 20 percent of the smaller sum contributed by a bus driver or saw-mill worker. Such an unequal policy obviously could not be sustained."

The Red Menace

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle of April 9, 1958:

THE RED MENACE

J. Edgar Hoover's new book, Masters of Deceit, carries the subtitle of "The Story of Communism in America and How To Fight It," and surely no one in America is better equipped to write such a book because no man is more familiar with the story.

Mr. Hoover is particularly concerned with the danger of discounting the menace of communism in the United States. It is true that party membership has declined. It reached its peak of 80,000 in 1944, dropped to 22,600 in 1955, and has gone down farther since then. However, no less an authority than William Z. Foster has said: "We no longer measure the importance of revolutionary organizations by size. In some places where there are only 1 or 2 men more results are obtained than where they have larger organizations. * * *" If conditions are ripe, a comparative handful can take over a nation—and they have done exactly that time and time again. To quote Mr. Hoover: "Under communism, a tiny minority, perhaps 10 to 20 men, would rule the United States. An open dictatorship called the dictatorship of the proletariat would be established." Communist Party henchmen would take over, and opposition would be ruthlessly liquidated.

What can the individual do about the danger? Mr. Hoover's answer is "a lot." He must know the answers to communism's false claims. If what appears to be subversive activity comes to his attention he should report it, sticking to the facts, to the nearest FBI office—and the FBI, incidentally, is as much interested in protecting civil rights, including the right to hold unpopular opinions, as it is in combating those who would destroy us. He should be alert and informed. No one can fight communism if he doesn't know what to look for. In this connection, Masters of Deceit contains a glossary, in which terms frequently used by communists are listed and defined, which will be especially valuable to those whose familiarity with the movement is sketchy.

Nasser's Double Victory

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. DINGELL. Mr. Speaker, the recent happenings in the Middle East and the machinations of Dictator Nasser have been little understood and poorly interpreted in this country. For this reason I am inserting into the CONGRESSIONAL RECORD an editorial appearing in the April 7, 1958, issue of the New Republic entitled "Nasser's Double Victory" wherein the real meaning of recent happenings in the Middle East is set forth. The article follows:

NASSER'S DOUBLE VICTORY

Colonel Nasser has just won a double victory which necessitates a sharp change in United States Middle Eastern policy. Within 24 hours he eliminated two of his most dangerous rivals and brought himself closer still to realizing his dream as the Bismarck of Arab unity.

On March 23 Nasser accepted the resignation of General Bizri, former commander in chief of the Syrian Army and the last survivor of the pro-Communist triumvirate which was steadily increasing its power in Syria before the creation of the United Arab Republic. (The other two, Khalid Baqdash, the brilliant young leader of the Syrian Communist Party, and the Deputy Prime Minister, Khaled al Azm, were removed from their positions just as soon as the Syrian-Egyptian union was formed.)

Bizri's resignation also consolidates Nasser's personal control of the Syrian Army; its other leaders, including the formidable chief of intelligence, Colonel Sarraj, were given civilian jobs in the new administra-

tion. It was Bizri who, during the crisis between Turkey and Syria last autumn, organized the home guard which some western commentators saw as the tool for a Communist coup d'etat. Bizri's resignation now makes Nasser's control of Syria complete. And, at least, until after Nasser's coming visit to Moscow, it is hard to see what can prevent consolidation of Syria into the United Arab Republic.

In Saudi Arabia, however, the United States need not be so impotent. On March 24 King Saud, of Arabia, published a decree handing full power over his kingdom's foreign, internal, and economic affairs to his brother, Crown Prince Emir Faisal, who was already Prime Minister and Foreign Minister.

The reason which has most often been given is King Saud's failure to rebut accusations that he financed an attempt to assassinate Colonel Nasser; thus throughout the Arab world Faisal's rise is seen as a major triumph for Egypt. But this interpretation may be too simple. King Saud's decadent way of life and the corruption of his court have led to growing unrest in recent years. Despite colossal oil revenues, there has been no improvement in the living standards of the average Arabian, and the country has been so far totally unresponsive to the revolutionary social challenge which has begun to transform the other Arab States.

On the death of Saud's venerated father, the unifier of Arabia, a group of young, literate Saudis in the army, the government bureaucracies, and the urban middle class organized an underground—the Saudi Reform Movement. Instead of instituting reforms, Saud called out the tribal levies and gave power to the religious reactionaries. Wholesale expulsion of Palestinians, Syrians, and Lebanese accompanied by numerous executions of Saudis failed to bring to a halt the growth of the reform movement.

However, when Saud's dispute with Britain over the Buraimi Oasis and his southern boundary led him to finance—with his oil dollars—Nasser's political drive against Britain in Jordan and Syria, Nasser's (and the Communists') support of Saud as a loyal and valued ally in the struggle against imperialism persuaded most of the members of the Saudi reform movement to remain silent.

Despite Saud's efforts to save Hussein in Jordan and his flirtations with Iraq, Nasser did not move until Saud's oil dollars could no longer be effective in Syria. When his propaganda machine finally attacked Saud, however, Saud's days of independence were numbered. This fact was recognized in Saudi Arabia if not in Washington and, to appease Nasser, Faisal was given control of the Government. (Whether by prior agreement or not is immaterial; Nasser ceased his attacks on Saud on the same day.)

With full powers over internal (including the army), foreign, and financial policies Prince Faisal has become the only man with whom we can deal. But Faisal cannot, as we asked his brother Saud to do, implement what currently passes for United States Middle East policy. He does not have the necessary support in Saudi Arabia to risk it if he were willing. All our efforts should be to aid and encourage Faisal to institute the reforms that will bring him such support and that will in turn free him from dependence on Nasser.

For Faisal to consolidate his power he must not only eliminate his dependence on his royal brothers and the tribes with whom they are allied through their mothers and wives but also his dependence on the religious fanatics on whom his brother leaned. To rely on them will mean absolute dependence on Nasser. The reform movement and the rich merchants of the Hedjaz can form the basis of sound support for progressive reform. The sympathy and active encouragement of the United States (particularly an open-mindedness to what progressive Saudis feel are inequities in the Arabian-American Oil Co.'s policies and practice) may be the the essential element in persuading Faisal to risk reform and independence rather than the status quo as Nasser's satellite.

More Tax Windfalls

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. ABERNETHY. Mr. Speaker, in this week when millions of Americans will be filing their income-tax returns with the various collectors of internal revenue, I call attention to an editorial More Tax Windfall which appeared in the Scripps-Howard newspapers.

These newspapers have been supporting the rewriting of the income-tax laws on the grounds that the more than 10,000 pages of regulations at present in force are making it necessary for more and more citizens to go to experts to fill out tax forms, and that if we had a simpler law and fewer regulations, the taxes of most of us, including businesses, would be reduced.

The efforts of the Scripps-Howard newspapers in this direction, which began with a fine series of articles by Jack Steele, impress me as being a notable public service.

Under leave to extend my remarks I include this brief editorial in the RECORD as an example of the efforts of these newspapers to acquaint the public with the growing problems of taxation:

MORE TAX WINDFALLS

Our tax collector, the Internal Revenue Service, has just issued another set of regulations based on the 1954 Internal Revenue Code.

This is a constant process. New interpretations are coming out all the time. They are supposed to clear up misunderstandings but often have a reverse effect.

Among the latest rulings is one dealing with what is called in-service training—and it's retroactive to 1954, by the way. If you require more education to hold your job, you can deduct your expenses from your income-tax payments.

Now you can't deduct anything if you acquire this added learning for the purpose of taking another job, or advancing in your shop, or if you just do it for the general improvement of your mind—or, in the language of IRS, for personal purposes.

The way we read it, it looks like it would depend on what the tax collector believes your intent to be. But we are not so concerned with these specifics as we are with the general proposition.

This is just one of a sea of regulatings, emanating periodically from here in Washington, which keep adding to the mess we call our tax law. As Scripps-Howard writer Jack Steele pointed out in his series of tax articles published in the News last January, the law starts out by saying everybody is to be taxed alike. Then it goes on for 1,000 pages listing exceptions to this wholesome rule.

It is because the law is so loaded with gimmicks, special treatment, exemptions and exceptions that all these interpretations are necessary.

The result is a sieve. And because the law leaks so much, the tax rates necessarily are much higher. And the regulations so complex only a legal bird dog can find his way through them.

The only way we'll ever get a really fair, simple tax system is to cut out all the gimmicks and write a tax law designed only to raise revenue—not for economic, social or political aims, or to satisfy the demands of some pressure group. If that fine day ever comes, most of us will be paying less than now.

American Policy in the Middle East

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. LOSER. Mr. Speaker, under unanimous consent, I call to the attention of the House a rather penetrating report on American policy in the Middle East. This report is filed by a distinguished Southern editor of a great newspaper, the Nashville Tennesseean.

The Honorable Creed C. Black, executive editor of this newspaper, has just returned from a 6-week, 20,000-mile tour of 12 countries in the Middle East and Western Europe.

Black traveled under a grant from the Southern Association of Nieman Fellows and made a study of American policy in the Middle East.

Stories on the individual countries he visited were published while he was abroad. In this article, he summarizes his findings and presents his conclusions.

The article follows:

OUR MOTIVES ARE SUSPECT—UNITED STATES NEEDS AGONIZING REAPPRAISAL OF MIDEAST PROBLEM

(By Creed C. Black)

Like nearly everything else in the turbulent Middle East, the position of the United States there is changing dramatically.

It is not, unfortunately, a change for the better.

Our prestige is sinking, our influence is waning, and even our motives are now suspect.

Once widely respected in this crucial area as the international champion of free peoples everywhere, we now are often lumped with Britain and France in embittered blasts at western imperialists.

And things stand to get worse, much to Russia's delight and benefit, until Washington comes to grips with the major issues that dominate the Middle East today—Arab nationalism and Israel.

As it now stands, our policy for this historic land on conflict and crisis is primarily concerned with one major objective: keeping the area out of Russian hands.

For both the Western World and the Middle East itself, that is unquestionably a legitimate and supremely important goal. Commercially, economically, and strategically, the best interests of both will be served by keeping the sea routes and Suez Canal open, by the continued flow of the area's oil to western markets, and by the independence of the Middle Eastern countries.

WE'RE HELPING REDS

Ironically, however, our preoccupation with the Communist threat and our attempts to commit the Middle East to an alliance with the West are doing the very

thing we are trying to head off—strengthening Russia's position in the area.

This is not true, it should be quickly added, in Greece, Turkey and Iran. For those countries have all had experience with Russia's imperialist aims and are solidly committed, militarily and otherwise, to the West.

But it is a different story in the Arab world. These countries have had little experience with Russian imperialism. They remember instead the years they spent under British and French colonial rule.

They remember, too, the attack Britain, France, and Israel launched on Egypt less than 2 years ago, which certainly must go down as the biggest blunder of the Western World has made in the Middle East since Israel's creation 10 years ago.

They also have an eye cocked toward neighboring north Africa, where even today France is waging a war—in part with American arms—in a last-gasp attempt to hold on to the remnants of its diminishing colonial empire.

And they hold the West—especially the United States—responsible for the creation and preservation of Israel, which is considered not only a mortal enemy bent on expansion but a symbol of Western imperialism.

WHO IS THE WOLF?

When the United States continually emphasizes the Russian threat to the Middle East, therefore, it is talking about danger from a source that the countries there consider far less of a threat than some of our own friends.

Similarly, when we try to get politico-military commitments from these countries, we not only run up against a backlog of antiwestern ill will but arouse suspicions that we want to infringe on the independence they have finally achieved after years of foreign rule.

A Syrian diplomat with whom I talked summed all this up when he said:

"Russian imperialism is discussed only in very narrow circles here because we are tied up with our own problems, brought about by western imperialism. We know nothing about eastern imperialism. And there has been proof of Soviet willingness to help us escape western imperialism.

"What we want most is to keep our independence, and we are ready to resist anybody who tries to infiltrate us, whether from the East or the West. To try to force us to take sides—by joining pacts or accepting United States bases, for example—is not in line with our desire for independence."

And the desire to exercise that independence and regain a place in the sun for the Arab world is the strongest force sweeping the Middle East today.

EVEN MORE URGENT

As a problem for the United States, the question of how to deal with it is now even more urgent than the Israeli issue. And it canot be met successfully by clinging to our current insistence on viewing everything in the Middle East in terms of the cold war with Russia.

It is true that the Arab world itself has now split into two major conflicting blocs and a third group of neutrals. It is also true that the strongest partner in one of these blocs, Iraq, is a member of the Baghdad pact and that the other, Jordan, is dependent on United States economic aid for its survival. And it is further true that one of the neutrals, Lebanon, is oriented westward and that the other, Saudi Arabia, is at least not unfriendly toward the West.

But in none of these countries does the government enjoy the popular support that is accorded the United Arab Republic headed by President Gamal Abdel Nasser.

Nasser is undoubtedly the man of the hour in the Middle East, for he has become a symbol of a new order that has captured the imagination of the Arab masses—a new order that represents a break with the past, revives ancient dreams of pan-Arab glory, and promises to deliver the people from the disease, poverty, and ignorance that now engulf them.

The Kings in Iraq, Jordan, and Saudi Arabia, on the other hand, symbolize a link with the past, not a look into a better future. And they are currently holding their power only with military force. Lebanon, too, is feeling the pressure of Nasser's popularity, and the democratic government there is finding its neutral role increasing difficult to maintain.

THEY CAN'T AGREE

Perhaps these governments will survive, in one form or another. Time and again I was told that the inability of two Arabs to agree on anything for long makes it unlikely that the dreams of a unified Arab state from Baghdad to Cairo will ever come to pass.

It is a mistake, however, to think that Nasser is just a passing fancy. For he is the product, not the creator, of feelings that run deep. If he passes from the scene, others will rise to take his place and mobilize the emotions of a frustrated people.

In these circumstances, it seems to me that the United States is wrong in trying to isolate Nasser out of a fear that his so-called positive neutralism is actually pro-communism.

He is not, I am convinced, either Communist or pro-Communist. On the contrary, he has cracked down hard on Communists in Egypt and is now doing the same thing in Syria.

Nasser and his spokesmen probably exaggerate their charges that they have been forced to deal with Russia because of repeated rebuffs from the United States and other Western powers. The truth is that they want to work both sides of the street.

But the record is replete with instances in which Nasser has turned to Russia only after the West rejected his requests or stalled indefinitely or attached conditions that he insisted would compromise Arab independence.

EAGER HELPERS

There is a danger, of course, that in trying to play a Titoist role the inexperienced Nasser will be ensnared by the Russians, who have eagerly supplied the weapons, economic aid and markets that the West has chosen to deny the Egyptian leader.

But the best way to avert that danger, I believe, is to accept the Arabs' neutralism, as expounded by Nasser, and encourage their nationalism—with our friendship and help—so that they may develop strong and prosperous countries in which communism will have no appeal.

The alternative is to force Nasser into increasing dependence on the crafty Russians and further alienate the Arab masses who now heroize him.

It is not necessary to choose between the rival Arab blocs. It is necessary only to recognize that at this point the young Arab States want their independence respected as they grapple with vast problems at home and that they do not want to become involved in a bitter struggle between two world giants.

"Young people in the United States," an Egyptian editor told me, "make a mistake in judging the Arab world by your own 1958 mentality. We're about at the same stage you were in the days of George Washington. And remember that he warned your young Nation to avoid entangling alliances and stay out of Europe's quarrels."

While accepting Arab neutralism would require a major shift in American foreign policy, it can be more easily accomplished than a solution to the other major question plaguing us in the Middle East today—Israel.

UNITED DISTASTE

Whatever the state of their current relations with the American Government, all the Arab countries are united in their distaste for our role in trying to turn the clock back 2,000 years, as one Jordanian expressed it.

Although Russia supported the United Nations resolution creating Israel and was one of the first countries to recognize the new state, it has long since cast its lot with the Arabs on this issue and, much to our disadvantage, feeds their hatred of the Jews at every opportunity.

Even in Lebanon, which is probably the most pro-Western of all the Arab countries, a foreign-ministry spokesman called the creation of Israel the major United States blunder in the Middle East.

"From it," he said, "spring all other difficulties in your relations with the Arab world."

It is 10 years too late, of course, to remove this source of friction entirely. For better or for worse, preservation of the state of Israel is a firm commitment of American policy.

NOT TOO LATE

But it is not too late to try to ease the tension by working for a solution of some troublesome issues that time is aggravating, not solving.

Although the extremist Arab press and radio talk belligerently of driving Israel into the sea, my conversations with responsible officials convinced me that they are prepared to settle for something less than that.

The minimum terms would probably have to include:

1. Token repatriation of some of the 900,000 Palestine refugees and compensation for the property of the rest.

2. Border adjustments that would require Israel to give up some, but by no means all, of the area it won in its 1947 war with the Arabs.

3. An outside guaranty against future aggression by either side.

No solution, of course, is going to please both sides. But until the homeless refugees are settled somewhere, the borders fixed, and the mutual fears of aggression allayed, there can be no hope for real stability in the Middle East.

And as long as the United States continues to pour far more money into Israel than into any of the Arab states without actively working for a settlement of the problem, any effort we make to improve our relations with the Middle East will be severely handicapped.

TWO SOLUTIONS NEEDED

Like the nationalism issue, the question of Israel would exist quite apart from the basic East-West conflict. New approaches to both problems are needed if we are to retain the influence and position we desire in the Middle East.

Despite the handicaps we face in the area, I believe that deep down there is a reservoir of good will toward America in the Middle East, thanks largely to our own tradition of independence and anticolonialism.

Our problem now is to bring that good will to the surface by identifying ourselves as friends, not enemies, of Arab nationalism.

And that can be done if Washington will only recognize the fundamental truth of an observation by one of America's top diplomats in the Middle East:

"You can't meet a dynamite situation with static policies."

To Press Economic Assault

EXTENSION OF REMARKS

OF

HON. EDWIN H. MAY, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1958

Mr. MAY. Mr. Speaker, in an editorial appearing in the April 14 edition

of the Hartford Times, the editors discuss seriously the importance of international economic competition with the Soviet Union for the markets of the world. They point out that Lenin set an important goal in the Soviet policy when he stated "Some day we shall force the United States to spend itself to destruction."

They regard uncontrollable inflation as one of the greatest threats to the welfare of this Nation and the free world.

Because I believe the point here is well taken, I submit this editorial for inclusion in the RECORD.

TO PRESS ECONOMIC ASSAULT

The cold war may be entering into a new phase, at least into a stepped-up activity against the West. Khrushchev has declared that communism will win the struggle against capitalist nations "not by war but by raising labor productivity, increasing the output of goods and building up its economy. Then we shall see who eats better and who has more clothing."

That victory may be in doubt or at least a long way off but there are stern competitive factors involved which present a challenge to the United States bid for the foreign markets. Our home markets are not in jeopardy as they can be protected by tariffs against cheaper Russian goods. But this device is not available to us in foreign markets.

Russia is largely self-contained. It has tremendous natural resources. Its manpower and its brain power have high potential in the new upsurge of the Russian spirit. National pride can go far in promoting export trade even at the cost of self-denial in regard to consumer goods. The British people have been doing this since the war.

In the United States, the competition will challenge us in our strongest sector—mass production at prices and quality that other nations can hardly match. Management and labor may find it necessary to join hands in future effort to compete with Russian competition in foreign markets. This is bound to be a long contest. Probably it will have no foreseeable end.

We should remember that Moscow has an ultimate objective—smash capitalism. One has but to remember a statement from Lenin's writings which points the way for Red policy:

"Someday we shall force the United States to spend itself to destruction."

Uncontrollable inflation is inherently suited to do that very thing. We are possibly facing more ominous danger to our way of life on the economic front than from Red military conquest.

Having held Russia at bay with our defense program, it may now become a test of strength in the markets of the world whether we can stem the march of communism.

World Peace Through World Law

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. PORTER. Mr. Speaker, "there can be no peace without law." In his introduction to World Peace Through World Law, recently published by Harvard University Press, Grenville Clark quotes these words from President Eisenhower's pronouncement of October 31, 1958, as the fundamental premise of this book.

Under leave to extend my remarks in the RECORD, I include the following comments and summary of contents which appear on the jacket of the book World Peace Through World Law, by Grenville Clark and Louis B. Sohn:

"The proposition 'no peace without law' embodies the conception that peace cannot be insured by a continued arms race, nor by an indefinite 'balance of terror,' nor by diplomatic maneuver, but only by the acceptance of institutions corresponding in the world field to those which maintain 'law and order' in local communities and nations.

"This book sets forth a comprehensive and detailed plan for the maintenance of world peace in the form of a proposed revision of the United Nations Charter. In so doing the purpose is to contribute material for the worldwide discussions which must precede the establishment of truly effective institutions for the prevention of war."

The revision which the authors propose would retain the structure of the charter's 111 articles and supplement those articles, as revised, by 7 annexes. These revisions and annexes would strengthen the United Nations through the establishment of world legislative, executive, and judicial institutions, backed up by a strong world police force.

This practical plan also calls for complete national disarmament by stages under strict inspection, a nuclear energy authority, a world development authority to promote the economic and social development of the underdeveloped areas of the world, a United Nations revenue system, and a Bill of Rights.

In preparation for 7 years, the book represents the first attempt to spell out in explicit detail, rather than in the usual generalities, all the world institutions and basic rules which are required for the effective prevention of war. The plan provides strict limits on the proposed powers of the strengthened United Nations and presents the minimum requirements for peace rather than a utopian scheme for a perfect world community. Since preliminary drafts were widely distributed for criticism, this plan takes into account the views of many qualified persons in many nations. The authors do not purport to have all the final answers to the various thorny problems, but believe that these detailed and specific proposals will aid the necessary worldwide discussion.

The need for a plan such as this must be recognized by anyone in any nation who is interested in the problem of attaining peace—which means almost everyone, everywhere.

THE AUTHORS

The authors of this book are eminently qualified to formulate a workable plan for world peace. Both are distinguished lawyers, well versed in international law and relations. Their collaboration began in 1945.

Grenville Clark was graduated from Harvard Law School in 1906 and served in the United States Army during the First World War. He was the initiator of the Selective Service Act of 1940 and was consultant to Secretary of War Stimson in 1940–44. Since 1939 he has engaged in research and study on the problem of world order and is the author of A Plan for Peace (1950).

Louis B. Sohn was born in Poland, received his bachelor of laws at John Casimir University, Lwow, in 1935, and his master of laws from Harvard in 1940. Professor Sohn was a legal officer in the United States Secretariat and in 1951 joined the faculty of the Harvard Law School, where he now teaches courses in United Nations law and problems in the development of world order.

A SUMMARY OF CONTENTS

INTRODUCTION

Proposed Revised Charter: Purposes; Membership; Organs; General Assembly; Executive Council; Settlement of Disputes; Threats to the Peace, Aggression, etc.; Regional Arrangements; Economic and Social Advancement; Economic and Social Council; Non-Self-Governing Territories; Trusteeship System; Trusteeship Council; Judicial System; Secretariat; Miscellaneous; Transitional Security; Amendments; Ratification.

Annex I. Disarmament: Basic Principle; Plan and Procedure; Maintenance of Disarmament; Inspection, Authority, and Limitations; Nuclear Energy Authority; Financial Provisions; Enforcement.

Annex II. U. N. Peace Force: Basic Principles; Organization and Functions; Enlargement in Emergency; Transitional Arrangements.

Annex III. Judicial and Conciliation System: The Statutes of: International Court of Justice, World Equity Tribunal, World Conciliation Board, Regional Courts of the United Nations.

Annex IV. World Development Authority: Outline; Comment.

Annex V. Revenue System of the U. N.: Main Features; Limit on Annual Budgets; Apportionment; Procedures for Preparation, Adoption, etc., of Budgets Limitations on Sources; Need for Large and Reliable Revenue; Borrowing Power; Summary.

Annex VI. Privileges and Immunities: Privileges and Immunities of: United Nations Itself, Representatives in General Assembly, Officials, Permanent Observers, Others Entitled to Attend Meetings; General Provisions; Comment.

Annex VII. Bill of Rights: Outline and Comment.

Appendix A, The 1945 Charter: Text of: Articles 1–111, Statute of the International Court of Justice.

Appendix B, Proposed Revised Charter: Text of: Revised Articles I–III, Proposed Annex I on Disarmament, Proposed Annex II on U. N. Peace Force; Outlines of Proposed Annexes III–VII.

Geneva Convention on the Law of the Sea

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, March 28, 1958

Mr. PELLY. Mr. Speaker, if momentarily I might have the attention of the Membership of the House, particularly on my side of the aisle, let me point up the moral responsibility of the administration under the Republican Party platform as adopted in San Francisco in 1956 to protect the rights of American fishermen in the international field. Here, I have reference to the preamble of the platform entitled "Declaration of Faith," and in that connection let me read its clear and unequivocal assurance, and I quote as follows:

We maintain that no treaty or international agreement can deprive any of our citizens of constitutional rights. We shall see to it that no treaty or agreement with other countries attempts to deprive our citizens of the rights guaranteed them by the Federal Constitution.

Is this solemn and binding commitment to be honored by the administra-

tion I fear not. In fact, only a week or so ago the State Department announced that it had instructed the United States delegates to the United Nations Conference on the Law of the Sea to abandon its original position supporting a 3-mile territorial sea, as pertaining to fishing, and instead to agree to a 12-mile limit. In so many words, our State Department in seeking to reaffirm the historic 3-mile limit under international maritime law offered to forego our fishing rights in compromise for retention of the 3-mile limit for other purposes.

Is that honorable, I ask, in pursuance of what was pledged at the convention at San Francisco? Let me recall to my Republican colleagues how with loud and overwhelming voices our delegates at that convention proclaimed and pledged protection of our fishing industry and now again I quote from the Republican Party platform:

> We advocate protective treaties insuring the United States commercial fishing industry against unfair foreign competition.

Surely the United States official position at the Geneva Conference on the Law of the Seat is a complete contradiction of that solemn assurance.

The international conclave at Geneva, Switzerland, under the auspices of the United Nations has been in session since February 24, 1958, and shortly it is expected to adopt one or more international conventions based on Articles of the United Nations International Law Commission as related to the Law of the Sea. The Geneva discussions have covered maritime limits which affect our United States historic fishing rights and conservation and protection of American spawned stocks of fish in and out of territorial limits.

The fishing industry in this country believed the United States delegation would stand firm for reaffirmation of the 3-mile limit. Indeed our naval authorities insisted in the interest of national security this historical limit must be retained. The Soviet Union, on the other hand, has supported a 12-mile limit and on this it seems as usual in United Nations voting it was supported by other neutral nations such as India.

Canada, hoping thereby to gain exclusive fishing rights in the 9-mile contiguous zone outside her 3-mile limit, proposed a so-called compromise under which all coastal nations would enjoy exclusive fishing rights to 12 miles, and for all other purposes the traditionallly recognized 3-mile limit would stand.

Mr. Speaker, there are no finer people on this earth than the Canadians. My remarks today on the floor of this House of Representatives are neither designed to be personal nor to reflect on our friends and neighbors north of the border. We share with them not only common ancestors and a common tongue, but also both peoples generally have the same ideas about domestic and world affairs, and I am not unmindful either that of all nations on earth the men and women of Canada and ourselves have the closed community of interest. However, that does not mean to say that selfishness and greed cannot come between us; that does not mean to say that on either side sharp practice and thievery cannot exist.

In the past, however, fair dealings in fisheries matters have been traditional. Both nations shared the expense, for example, of clearing the Hells Gate slide area of the Frazier River on British Columbia and this jointly restored a salmon run which passes through both Canadian and United States waters and where we have a mutual advantage. We have joint fisheries commissions and over the years have cooperated together in the interest of conservation of resources and sharing them fairly on a basis of equal participation where these interests overlapped.

Recently the Canadian people strongly manifested through their national election a determination to strengthen their economy and to make it independent of American capital. That course of action is quite natural. That is their privilege. However, when their political leaders respond to this popular feeling and seek by international convention to maneuver United States fishermen out of fishing grounds beyond Canada's 3-mile limits they transcend the bounds of what is right. Indeed this move to secure exclusive use to themselves of this fishery is international banditry and I say would be of great disservice to relations between our two nations. And, may I say too, the same is true of Mexico and our source of shrimp—where I believe even without a change in the territorial limit we have been a market for 95 percent of Mexico's shrimp production. Adoption of the Canadian 12-mile proposal could do great harm to all three nations and I am frank to say such a compromise invites economic reprisals as I shall outline.

Of course, it sounds inviting to our neighbors that they might obtain exclusive fishing rights by such an international convention, but I am certain our Senate would never ratify any such treaty and then the trouble would begin, if not before.

Meanwhile, our State Department has informed the United States fishing industry it agrees fully with its claim of historic rights, but says in consideration of security it has had to instruct our representatives in Geneva to support the Canadian proposal. So our Government is officially aiding and abetting our neighbor on the north in a shameful and unlawful scheme. In thus bartering away these fishing rights, and buying status quo for other purposes, as a nation, we not only dishonor the obligation of the administration's political platform but also set an alltime low in our foreign relations. The glorious episodes of the past are forgotten as, for example, when a young nation refused to pay tribute to the Barbary pirates. Now, figuratively speaking, we are offering 20 pieces of silver in the form of fishing rights and the Judas is our own State Department. Fishery problems should be resolved between themselves by the nations involved. If the Geneva agreement goes against us, sooner or later that is the only way it can be finally solved.

Until that decision is made and the news reaches us, let those of us in Congress, who have not forgotten the moral obligation to our fishermen and fishing industry serve notice that we will stand firmly by our pledge or for what is right. May I say, Mr. Speaker, that I have been studying legislation which as a separate bill or an amendment to the Reciprocal Trade Act would establish an absolute embargo on the fish and seafood of any nation which acquires through the conference on the law of the sea exclusive fishing rights in zones which heretofore have been open to our fishermen on an equal basis.

Adoption of such a law would be in conformity with long established local domestic laws against receiving stolen property, such as those zones would yield. Legislation of that kind unfortunately is the only answer I can conceive of at this moment to deter the international thievery which is in prospect for us from the Geneva Conference.

In conclusion, let me add that I greatly regret the necessity of speaking out against my own administration. It is the first time I have felt compelled to do so in more than 5 years.

South's Pine Now a Kissin' Cousin

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI

Tuesday, April 15, 1958

Mr. ABERNETHY. Mr. Speaker, one of the most familiar objects in the southern landscape is the pine tree. Although farmers used to object to it because it grew so fast, the southern pine has long been a mainstay of industry in the South. It produced resins and turpentine. It furnished a very large proportion of our lumber and countless sawmills were based on its abundance.

Now a great new industry, papermaking, has grown up in the South based on the plentitude of this valuable tree.

This week the South is celebrating Pulp and Paper Day. In recognition of this fact the New York Times on April 13 published an article by John J. Abele giving the facts of the growth of the paper industry in the South. For its interest and importance I include the article in full in the RECORD:

SOUTH'S PINE NOW A KISSIN' COUSIN—ONCE-SCORNED TREE PLAYS A MAJOR ROLE IN TODAY'S BIG PULP INDUSTRY

(By John J. Abele)

The South will pay tribute this week to one of the fastest growing segments of its economy, the pulp and paper industry.

Tuesday, Pulp and Paper Day, ceremonies at many mills and woodyards from Virginia to Texas will stress the role the industry has played in the region's past and its potential for the future. Sponsored by the Southern Pulpwood Conservation Association, the observance will be the first of its kind in the South.

Statistics tell part of what the industry means to the South today:

Sixty-three primary plup and paper mills with a replacement value of $2,870,400,000.

Annual production of 12,126,000 tons of paper and paperboard, almost 40 percent of the national total.

Payment of $351 million a year in salaries and wages to 71,000 plant and office workers and $20,864,000 to 6,000 woodland workers.

Florida, long noted for its sunshine, tourists, and oranges, is one of the best examples of changes in the southern economy from the increasing importance of forest products industries, lumber and naval stores, as well as pulp and paper. These products now account for annual volume of about $400 million, second only to the revenues from the tourist trade.

The State's 10 pulp and paper mills—there was only 1 in 1931—are responsible for the employment of 40,000 workers, almost a fourth of its industrial force. They turn out 2 million tons of wood pulp a year and almost as much paper and paperboard, 3 times the rate of 10 years ago.

Florida now produces about 8 percent of the Nation's wood pulp in contrast to 1930, when the entire South produced only 7 percent. The State also is the leader in tree farm acreage, with 4½ million acres, 10 percent of the national total, devoted to the growing of trees as a regular crop.

The key to all these advances has been the southern pine, which, thanks to a long growing season, warm sunshine, and abundant rainfall grows to maturity in considerably less time than its northern cousins. Other contributing factors are plentiful supplies of labor and water, a year-long operating season, and nearness to major consuming markets.

PINES ONCE A NUISANCE

Ironically, the pines were long regarded as a nuisance by southern farmers because they grew so profusely that fields left idle for short periods were soon overwhelmed by the onrushing pines. As land became less productive for cotton and other crops, the pines became friends instead of enemies, supporting far higher levels of employment and income. In 1956, industrial purchases of pulpwood in the South reached $405,400,000.

Pulp and paper companies made their first appearance in the South in the early 1900's. The introduction from Europe of the kraft, or sulfate process of making woodpulp made possible the cheap pulping of southern pine into strong grades of paper and paperboard for sacks and bags, wrapping paper, shipping containers, and other heavy-duty items.

The industry underwent a major expansion during the 1930's, providing needed jobs and income for the depressed South. With the perfection of methods to remove the resin content of the pine, the way was opened to the production of other grades of paper, particularly newsprint.

BIG CONCERNS MOVE SOUTH

Meanwhile, producers of kraft and other papers thronged to the South. The roster of companies operating in the area represents a veritable Who's Who of the paper industry, with names like International Paper Co., Crown-Zellerbach Corp., St. Regis Paper Co., Champion Paper & Fibre Co., West Virginia Pulp & Paper Co., Scott Paper Co., Mead Corp., Union Bag-Camp Paper Co., Bowaters Southern Paper Co., and many others.

Expansion, now slowing somewhat, has been particularly evident in recent years. Within the last year, for example, St. Regis completed a $40 million expansion project at Jacksonville, Fla., that includes one of the largest kraft paper machines in the world. West Virginia Pulp spent $25 million adding a third machine at its Charleston, S. C., plant to make stretchable kraft paper. Container Corporation of America opened a $30 million plant in Brewton, Ala. Rayonier, Inc., completed a $25 million plant in Jesup, Ga., to make pulp for rayon fibers and paper.

All these mills have voracious appetites. In 1956 the industry consumed 20,270,300 cords of wood. In 1939 it used only 4,608,300 cords.

Meeting the increased needs for pulpwood represents a tremendous economic opportunity for the South, according to L. A. Whittle, president of the Southern Pulpwood Conservation Association, but will also require aggressive cooperation for a greater forest future.

The pulp and paper industry is believed to have achieved almost full utilization of its timber resources, but the yield from private woodlands is estimated at only 20 percent of maximum. These woodlands represent 75 percent of the total commercial forest land in the South and supply almost 80 percent of its pulpwood.

To spur reforestation the industry is planting 222 million seedlings a year on its own land and is supplying 56 million more to small landowners. These are supplemented by additional millions from State-owned nurseries.

Forest fires represent a major challenge to the effectiveness of these efforts to increase the wood potential of the region. Despite some improvement in recent years the South still accounts for 80 percent of all forest acreage destroyed by fire. Many of these are set intentionally either to clear land, chase game, destroy insects, or as an expression of plain maliciousness. Increasing awareness of the importance of forest resources to the southern pocketbook has resulted in a number of regional and State conferences to combat this menace.

Results of Ohio 22d District 1958 Opinion Poll

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mrs. BOLTON. Mr. Speaker, recently I took a poll of my district requesting opinions on 18 proposed Federal legislative questions which may come before the present session of Congress. The questionnaire was mailed to every household of registered voters in the 22d Congressional District and there were responses from approximately 12,000 families.

I was particularly impressed with the sound reasoning of my constituents. Many hundreds of letters came to me with the questionnaire, explaining the answers given in detail and giving extremely helpful suggestions. It is very reassuring to know that such serious thought is being given by my constituents to the domestic and foreign affairs of our Federal Government.

The Ohio 22d District is an amazing cross section of the economic, racial, political, and religious structures that comprise many large metropolitan areas in the United States. The replies represent a well-balanced composite of the views of these groups.

For the benefit of Members of Congress who may have similar districts, I am inserting the results of the poll as follows:

CONGRESSIONAL OPINION POLL

NATIONAL DEFENSE

The Soviet Union is constantly reaffirming its ultimate goal of world domination by either military or nonmilitary means. Consequently the defense of the United States, and the free world, must always be uppermost in our minds.

1. In view of the growing Soviet military threat, do you favor a larger congressional appropriation for defense purposes? Yes, 71.2 percent; no, 22.1 percent; no opinion, 6.7 percent.

TAXES

In spite of the administration's continuing efforts to cut Government expenses and give us a further tax reduction, the inescapable and increasing costs of national defense may prevent lower taxes this year.

2. Are you in favor of postponing any tax cuts in order that additional funds can be made available for defense needs? Yes, 73.1 percent; no, 20.3 percent; no opinion, 6.6 percent.

3. Would you favor increased taxes at this time if our defense and nondefense expenditures should exceed current national income? Yes, 24.2 percent; no, 63.9 percent; no opinion, 11.9 percent.

4. Rather than increasing taxes or increasing our national debt through deficit financing, would you prefer reductions in nondefense spending, even if existing Federal services and benefits were curtailed? Yes, 63.7 percent; no, 23.9 percent; no opinion, 12.4 percent.

If your answer is "Yes," what programs would you suggest cutting? Answers indicate that reductions are recommended in the following priority:

a. Farm subsidies.
b. Public housing.
c. Veterans' benefits.
d. Public-works projects.
e. Mutual-security funds.
f. Slum clearance.
g. Across-the-board cuts for all Federal agencies.

(A great number of answers indicated the desire for enactment of the balance of the Hoover Commission recommendations for more efficiency and economy in Government operation.)

FOREIGN POLICY

Our present foreign policy is based on a philosophy of maintaining peace through strength, and aiding the free nations of the world through a network of alliances (NATO, SEATO, etc.), and by economic and military assistance programs, in combating Soviet efforts at penetration and control.

5. Do you favor continuation of our mutual security (military and economic aid) programs? Yes, 79.4 percent; no, 15.5 percent; no opinion, 5.1 percent.

If your answer is "Yes," should such program be continued at present cost, increased cost, reduced cost?

The answers indicate that more people want program continued at present cost, followed closely by those wanting cost reduced, with approximately 14 percent response favoring increased cost.

6. Would you favor furnishing atomic missile weapons to our NATO allies in western Europe. Yes, 54.8 percent; no, 32.7 percent; no opinion, 12.5 percent.

7. Do you favor legislation authorizing a greater exchange with our NATO allies of classified scientific information? Yes, 63.4 percent; no, 24.9 percent; no opinion, 11.7 percent.

8. Are you in agreement with the Eisenhower Middle East doctrine of military support against Communist aggression when requested by any nation in that area? Yes, 70.8 percent; no, 17.5 percent; no opinion, 11.7 percent.

9. Are you in favor of extending the Reciprocal Trade Agreements Act? Yes, 66.3 percent; no, 9.3 percent; no opinion, 24.4 percent.

LABOR MANAGEMENT

Several proposals for new labor legislation may be considered by the Congress to

provide greater protection for the rights of individual workers, the public, management, and unions.

10. Do you favor Federal legislation to safeguard union welfare and pension funds? Yes, 85.6 percent; no, 8.9 percent; no opinion, 5.5 percent.

11. Are you in favor of extending the Federal minimum-wage laws to cover most retail and service businesses? Yes, 70 percent; no, 17.9 percent; no opinion, 12.1 percent.

EDUCATION

The administration has submitted a proposal to Congress calling for the expenditure of $1 billion over a 4-year period to provide scholarships for deserving college students primarily in mathematics and science. Other proposals to aid education have been introduced by various Members of Congress.

12. Do you favor Federal aid to education? Yes, 63.7 percent; No, 30.9 percent; no opinion, 5.4 percent.

13. Do you favor the 4-year, billion-dollar program of Federal scholarships primarily for mathematics and science students? Yes, 56.1 percent; No, 34.9 percent; no opinion, 9 percent.

14. In your opinion is this program adequate to meet our educational needs? Yes, 27.2 percent; no, 35.3 percent; no opinion, 37.5 percent.

If your answer is "No," what would you propose?

Proposals most frequently made:

a. Federal scholarship loan fund to be established at low interest rate, repayable in 10–15 years.

b. Income tax deduction for parents, or others, who support college students.

c. Income tax deduction for teachers for direct costs of obtaining additional education after receiving teacher certification. (It is to be noted that this suggestion is now being put into effect.)

d. Federal scholarship program should not be limited primarily to mathematics and science students.

e. Brilliant students should be given preference.

f. Grant Federal assistance to educational institutions for increased faculty salaries and educational facilities rather than to student scholarships.

g. No more frills in education.

GENERAL

Do you favor:

15. Legislation to end Federal controls over the production of natural gas at the wellhead, provided that adequate safeguards will guarantee a fair price to the public? Yes, 37.6 percent; no, 44.7 percent; no opinion, 17.7 percent.

16. Allowing experimental pay TV? Yes, 31.8 percent; no, 52.4 percent; no opinion, 15.8 percent.

17. Liberalization of immigration laws? Yes, 28.4 percent; no, 58.9 percent; no opinion, 12.7 percent.

18. Enactment of presidential disability legislation? Yes, 79 percent; no, 10.5 percent; no opinion, 10.5 percent.

If your answer is "Yes," with whom do you feel the power to declare the President disabled should rest? Answers indicate the following preference priority in combination with competent medical advice in all categories:

a. Supreme Court.
b. Congress.
c. President.
d. Cabinet.
e. Separate commission.
f. Vice President.

What's Good for the Breadwinner

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. JACKSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following speech by William Jackman before the Pennsylvania chapter of the Investors League, March 26, 1958:

WHAT'S GOOD FOR THE BREADWINNER?

(Speech by William Jackman)

The Members of the Congress of the United States are endeavoring to settle this question to the satisfaction of their constituents. Their constituents, other than members of organized leftist pressure groups, have been largely mute. Unless good people tell their representatives in Government what they want, they will get the bad laws asked for by those who make the loudest noise. In this great debate of the age, your voice from home must be heard in Washington over and over and over again.

The threat to freedom itself lies in the apathy of our good people to answer the constant barrage of misinformation dished out by our vociferous socialist planners who deny the ability of free business to serve free people who want to exercise free choice.

FALSE PROPAGANDA

Here are 11 fallacies of the foes of freedom which need constant answering:

Fallacy No. 1: The false claim that the interest of the manager and his employee are opposite, and that the manager and employee are even in some sort of a toe-to-toe economic and class struggle where the manager's success depends on exploiting and belittling the employee.

The fact is that the opposite is not only true but has to be true.

Too many politicians in government and unions have based their careers on trying to keep alive a misunderstanding of the economics and humanities of business, but they are beginning to be recognized as outmoded. The continuance of this false claim today can only exhibit inexcusable ignorance or unusually imprudent deceitfulness.

Fallacy No. 2: The false claim that new or increased buying power can be created artificially or even magically by forced cuts in prices without corresponding cuts in costs or by forced raises in pay without corresponding raises in production.

The fact is that real buying power cannot be raised by manipulating dollar income in relation to dollar prices. It can only be raised by people producing more for each other through better employment of minds, muscles, and machines.

Fallacy No. 3: The false claim that higher pay is needed to bolster the economy (this false claim being made at any time when free and able buyers are being reluctant to buy and are increasing their savings).

The fact is that higher pay—without higher productivity to match—raises costs and prices, damages savings, and does just the opposite of helping the economy to mend.

Fallacy No. 4: The false claim that the higher pay proposed can be taken out of the swollen profits of greedy corporations in order for workers to have their "deserved" share of the current prosperity (this false claim having usually been made in the past when the public was buying freely, jobs were plentiful and good, and profits were going ahead or at least recovering).

Fallacy No. 5: The false claim that the 4-day week can be had now as a great social gain for everybody. The equally false claim that even establishing the shorter workweek in principle—that is, having overtime pay start somewhere below 40 hours a week—would represent some sort of social advance for everybody.

The fact is that just the opposite is true. The shorter workweek means less goods for everybody—a lower level of living.

Fallacy No. 6: The false claim that an individual company's profitability or so-called ability to pay should determine pay increases.

The fact is just the opposite. Employees should be—and in the end, will be—paid the market value of the contributions they make from their inner resources, regardless of whether their employer is earning a profit, suffering a loss, or just breaking even.

Fallacy No. 7: The false claim that employees, employers and the rest of the public should understand and go along in making and supporting pay demands and settlements which have as their chief purpose the meeting of the fancied competitive political needs of one personally ambitious union official over another personally amibtious union official.

Fallacy No. 8: The false claim that steady work and steady buying power can be achieved either by forcing the individual employed to continue work which free buyers do not want him to do or by forcing the individual employed to continue payments to employees for work no longer done.

The fact is that steady work—with more good jobs to boot—comes from individual employers steadily increasing the attractiveness of the performance and value of their products and services.

Fallacy No. 9: The false claim that—while it is proper for a union official—it is improper for a manager to discuss bargaining questions publicly before or during negotiations.

Fallacy No. 10: The false belief or habit of mind that it is still good politics—as well as an excusable breach of sacred trust—for various public officials to give union officials the unbridled license to break laws.

The fact is that this practice is rapidly getting to be bad politics with most everybody but politicians. The voters want the protection of law enforcement. It is no defense that the laws are enforced against everybody else; the public wants the law enforced against everybody.

Fallacy No. 11: The lingering false belief that it is still not good politics for representatives of either party to be identified with Congressional investigations of the sources and misuse of excessive economic and political power by union officials now in good standing in the AFL–CIO, and that it is still not good politics for either party in Congress to be identified as sponsoring or favoring legislation that would go beyond thievery and attack the sources and use of the power with which union officials are now legally dominating employees, employers, consumers and the rest of the public.

The fact is that the revelations of the McClellan committee have suddenly stirred an interest by the public in important abuses far beyond thievery and racketeering. What the public wants to know is where union officials get the power to make it good politics for government to overlook their lawbreaking and the power to force employers to be silent about these illegal activities.

THE BASIC REFORMS NEEDED

These monopolistic powers of labor union bosses stem from two main causes. In an objective study shortly to be published titled "Personal Freedom and Labor Policy," Dr. Sylvester Petro, professor of labor law at New York University, has ably stated the two causes at the root of this evil as follows:

"First, the abandonment of personal freedom as the primary and exclusive goal of labor policy. Embodied for us in the principles of private property and freedom of contract, personal freedom is much more in our tradition than a mere philosophical abstraction or a romantic dream. It is the sturdy product of a heritage rich in experience of other systems and other methods of operating a community. Our civilization developed respect and reverence for personal freedom because it made complete sense; it worked; it brought to pass the things which real, living people wished to have brought to pass. Abandoning it has meant what it had to mean—the frustration of the goals of men. If we wish to resecure our liberties and our well-being, we shall have to make personal freedom—perhaps under the name "free employee choice"—the central and unqualified, principle of labor policy.

"Second, the neglect and distortion of law. This has come about largely as a consequence of wrong ideas which have prevailed now for almost 50 years concerning legal and judicial administration. I shall enlarge upon this point, and suggest remedies, before dealing with the problem of restoring personal freedom in labor relations.

"For a generation more or less, the administration of justice in labor relations has been taken away from the courts. Although our freedom and State constitutions uniformly establish the constitutional courts as the appropriate agencies for the administration of justice, crippling legislation has left them in labor law not much more than figureheads. Their power to deal vigorously and straightforwardly with vicious and unlawful conduct by trade unions has been greatly reduced by anti-injunction legislation. These are Federal and State laws which prevent the courts from ordering unions to cease engaging in unlawful conduct.

"While the anti-injunction legislation did not purport to prevent the courts from continuing to define the meaning of law and thus to direct the development and growth of substantive law, this result was achieved in another way. Congress and a number of State legislatures set up administrative tribunals, usually called labor relations boards, and delegated to them the law-defining and law-developing functions which our constitutions give exclusively to the courts. I have but recently completed an exhaustive study of the way in which the Federal labor board (the NLRB) has interpreted and applied the National Labor Relations (Taft-Hartley) Act. The conclusion of the study is that, although the constitutional courts worked manfully to correct the misinterpretations and distortions of the NLRB, the functional primacy of the board proved too much for them. A purely political agency, the board used political rather than legal criteria in interpreting and applying the Taft-Hartley Act. The results were, first, extreme distortion of the fundamental provisions of the act; and, second, the distortion of the free employee choice policy of the act.

"Proper administration of the law is at least as important as good law. The first thing necessary in order to correct the evils in labor relations, I therefore submit, is the restoration to the constitutional courts of the country the full responsibility for interpreting and applying our labor relations laws. Concretely, this means repealing all anti-injunction legislation and abolishing all labor relations boards."

The reforms in the law urged by Dr. Petro's study call for:

"Unqualified supremacy of the principle of free employee choice. Put generally, this means the total outlawing of every form of physical and economic coercion used by either employers or trade unions to dictate to employees concerning their choice as regards joining or not joining unions, or participating or not participating in concerted union activities. In detail, full implementation of the principle of free employee choice will require:

"1. A broad prohibition of restraint and coercion by employers and unions of the right of employees to make up their own minds on the question of union membership or participation in strikes.

"2. A specific provision of law to the effect that picketing, even when peaceable, is subject to that ban when it has or is intended to have coercive effects, either physical or economic.

"3. A specific declaration that the ban on restraint or coercion applies to the economic coercion implicit in all agreements proposed by unions or employers which make union membership or non-membership a condition of employment.

"4. A general prohibition against inducing any work stoppage by the employee of one employer when a union has a dispute with any other employer. (This is designed to outlaw all secondary boycotts and other monopolistic pressures.)

"5. Emphatic repeal of the exclusive-bargaining, majority-rule principle, including a positive statement that unions shall be the exclusive bargaining representatives of only those workers who expressly delegate such authority to them. The present statutory and doctrinal requirement, imposing a legally enforceable duty upon employers to bargain only with majority unions would need to be deleted."

THE INVESTOR'S STAKE

Occasionally we are asked why we devote so much time and effort to labor union legislation. What bearing does it have on the investor?

The answer is obvious. Walter Reuther urges socialism through regulation of corporate profits and destruction of our profit system. He also urges tax policies that would completely destroy the investor class. And Mr. Reuther and his well-organized allies wield tremendous political power which only can be checked by organizing individual investors and businessmen to take an active part in politics and demand that our labor laws be changed.

This is a formidable undertaking. We are starting at a sadly late date. What can now be done?

First, businessmen and investors must understand that Congress enacts all laws, not the President. In 1956, businessmen were busy electing a President, while the AFL-CIO was electing a Congress. Organized labor was active in 300 or the 435 congressional district elections in 1956. The men of their choice were elected in more than 175.

LABOR'S POLITICAL SPENDING

In addition to direct money contributions, labor-supported candidates received incalculable numbers of free campaign workers, union treasures paid for untold hours of radio and TV time, friends of the candidate inserted expensive full-page ads in local newspapers, wives of union men manned telephone brigades contacting voters, their teenage children did baby-sitting chores while parents went to the polls. Meanwhile the labor press gave full play to the election and the merits of their candidate. Special election editions were distributed. Business organizations do none of this.

Business, as such, is unorganized politically and therefore impotent.

In terms of known reported spending, New York Congressman RALPH GWINN recently stated, "We have already counted more than $2,200,000 spent or contributed by national and international unions exclusive of all State and local unions. One Senator benefited in an amount of $725,000 in 1954 from 1 union local for his campaign. The total for all the States will run high in the millions. From case histories we know that actual expenditures of the political affiliates of organized labor are at least 10 times those required legally to be reported. This means that approximately $10 million was spent in Michigan alone."

Organized business by comparison, spends virtually nothing in time or money to elect Congressmen or Senators. With rare exceptions individual business leaders are just as bad.

That's the sad story of how union leaders get men elected who agree with them and thereby force government into improper and socialistic activities.

Organized labor has supported all legislation passed which has added to the power and authority of the Federal Government and reduced the property and personal freedom of the individual and particularly legislation tending to destroy the investor class.

WHAT BUSINESSMEN CAN DO

Our thousands of business organizations for the most part, merely sit around passing the same resolutions over and over again. Business seems unaware of its own political danger. The average businessman is milkfed by the representatives of business in Washington, including the trade-association lobbyists and the Washington lawyers who have business clients. These lobbyists naturally seek to justify being in business themselves, but must they do this by urging their members and clients to keep out of politics? Why must they help create the businessman's illusion that this Congress, or the next, will do something—or maybe the President will—or somebody other than themselves, to solve their political problems?

Businessmen belong to thousands of business organizations, chambers of commerce, trade associations, management organizations, and the like, adding up to some 30,000 organizations in all. This is impressive and it would seem the businessman would be better informed on some of the political facts of life. It would seem that he should be stirred by fear, anger, or sheer patriotism to take off his coat, loosen his pocketbook, and get into the political battle for business and investment survival.

If only a small portion of the money now being spent by and for these thousands of business organizations—and mind you, gentlemen, this money largely belongs to 9 million corporate investor-shareowners—I repeat, if only a small portion of this money could be spent precisely as the unions spend theirs, and if business personnel might be employed in downright political action, to restore sound government and if business managements would encourage their shareholders to join in the battle as individuals—then, and only then, we might begin to see more than a few rays of hope. Business managements must stop looking for excuses to keep out of politics. Their legal counsels must stop telling them what they can't do. Instead they must tell them what they can do if they really wanted to.

There will be an important battle on in this congressional year—important because it will determine the extent to which we will be driven in the years ahead further and further down the perilous roads of inflation, paternalism, and socialism.

The Committee on Political Education of the AFL-CIO has fired the opening gun in the battle of 1958 with the brazen announcement that it hopes to spend almost $1 million for liberal candidates in 1958 elections with particular attention being given to United States senatorial contests in 20 States. COPE Director James L. McDevitt said the group will ask the 13,500,000 AFL-CIO members to ante up the tidy sum of $1

each, or $13½ million, to be used for political persuasion this year.

BUSINESSMEN AND INVESTORS—THIS IS A CHALLENGE

I ask you—Where will you be in this battle? Will you lose it without firing a shot? The thousands of members of the Investors League across the Nation will be there! Will you?

Jet Inoculation as a Public Health Tool in the Control of Contagion and Epidemics

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mrs. BOLTON. Mr. Speaker, Surgeon General Leroy E. Burney, of the Public Health Service, recently warned that serious outbreaks of polio could occur this summer unless there is a speedup in vaccination programs. Dr. Burney said that revised estimates indicate that 48.5 million persons in the susceptible age group, under 40 years of age, still have not been vaccinated.

A very successful mass polio and influenza inoculation program was carried out by the post office employees of the greater Cleveland area during the period of April 1957 through January 1958 in cooperation with Western Reserve University School of Medicine. During this time 17,061 injections were given. Careful followup studies have revealed that there has not been a single one of the personnel or their families so inoculated who has subsequently developed poliomyelitis. Similarly the instance of absenteeism due to influenza has been held to a low minimum in the inoculated group.

In a scientific paper to be published in the Journal of the World Medical Association, Drs. Robert A. Hingson, Hamilton S. Davis, and Joseph Carlucci, of the division of anesthesia, Western Reserve University School of Medicine, provide vital public health information on jet inoculation as a public health tool in the control of contagion and epidemics. Under leave to extend my remarks, I include the article herewith:

JET INOCULATION AS A PUBLIC HEALTH TOOL IN THE CONTROL OF CONTAGION AND EPIDEMICS

(By Robert A. Hingson, M. D., Hamilton S. Davis, M. D., and Joseph Carlucci, M. D.[1])

In peace, as well as in war, public health is vital to a nation's strength and is a primary concern of every physician. In 1948 Alton Ochsner, in addressing the officers of the United States Public Health Service in the annual meeting of the United States Marine Hospital organization, placed preventive medicine in the proper perspective in the statement: "If all the surgeons in New Orleans had been permanently removed in 1800, the population of the city today would be within 1 percent of its present census. However, if all the public-health specialists and preventive medicine experts had been eliminated permanently at the same time, New Orleans as a city would have suffered near annihilation six times: from malaria, from yellow fever, from cholera, from bubonic plague, from smallpox, and from influenza."

As rapid communication in our modern jet and rocket age shortens effective distances and increases intercontinental travel, it is literally possible for pandemics to move around the world in 80 days unless checked by mass immunizations, institution of intelligent quarantine, and flexible coordination of effective public-health practice with pharmaceutical manufacture and the distribution of the tools of the trade.

Within 5 years after the development of mediums for the culture of poliomyelitis virus and the subsequent development of effective vaccine by Jonas Salk, more than one-third of the population of the United States had been inoculated with vaccine. The striking fall in number of cases of paralytic poliomyelitis to one-third of the usual endemic incidence is more than a coincident corollary.

Since 1853, when Alexander Wood, of Edinburgh, developed the hollow needle to use with the syringes of Pravaz, LaFarangue, and Ferguson from an earlier decade, immunizations have been developed through mechanical injections into muscle, blood stream and skin through needle and syringe. This required the processes of cleansing, sterilization, aspiration, injection, withdrawal of needle, cleansing and resterilization of each needle and syringe. These eight steps in the procedure of sterilization are costly and time-consuming. All of them require at least 30 minutes per injection of nurse, aid, sterilization and physician time. When tens of thousands of injections are required in a mass immunization program, a tremendous expenditure of funds for needles, syringes, sterilization and cleaning equipment is required. The replacement of broken and lost items also requires considerable budget.

For example, in the recent program of the Academy of Medicine and City Health Administration in Cleveland, Ohio—a city of 1 million population—a team of 75 people working around the clock on 8-hour shifts was required to process, clean, match, replace broken and missing parts, sterilize and package equipment during the 8-week period. More than 300,000 people were inoculated. More than 30,000 syringes were required at costs from $2 to $3.50 each. During this program, almost 6,000 syringes and 12,000 needles were either broken or lost for a net equipment loss of more than $20,000 and a considerably larger initial capital investment likely to add considerably to this figure.

Since 1945 the principle of jet injection has been slowly revived in American medicine. One of the authors has shared in this development through animal, cadaver, and patient experiments and studies in the injections of normal saline, local anesthetics, antibiotics, vaccines, vasopressors, oxytocics, analeptics, vitamins and drugs used in the treatment of diabetes, leprosy, and tuberculosis. It should be remembered, however, that the origins of jet injection can be traced back in the medical literature to 1866 when the French physician H. Galante reported an apparatus using a filaform jet for "aquapuncture." Modifications of his method were reported by M. Guerart of Belgium in 1879, in his writings on douche filaforme and other European physicians between the years 1884 and 1910; by Arnold Sutermeister, a mechanical engineer on Long Island; and by Dr. John F. Roberts, an instructor in surgery at Columbia University in 1933. All of these reports antedated the recent patenting of a device by the New Jersey engineer Lockhart in 1936–38 with his subsequent sale of patents to E. R. Squibb & Sons Co. in New York, the Becton, Dickinson & Co. in New Jersey and the R. P. Scherer Corp., in Detroit.

Unfortunately, from the point of view of the patient, this new development has been delayed and seemingly abandoned on several occasions because of technical difficulties, increased capillary bleeding and trauma at the injection sites, legal patent contests, requirements of a staggering development budget attendant therefrom.

In September of 1947, Hingson and Hughes reported the first series of clinical studies with jet injection. In 1948 F. H. J. Figge reported his extensive anatomical and histologocal studies on the effect of jet injection greatly expanding a preliminary report on the same subject with R. P. Scherer in 1947. In 1951 Hingson and Figge summarized the progress to date with the spring and compressed gas powered jet injectors of the R. P. Scherer Corp. and the Becton, Dickinson & Co., respectively, describing for the first time the work in progress on the multiple dose jet injectors.

Even though the single-dose jet injectors had much to recommend them in eliminating the psychic fear of some patients and the children of the needle, it was not until the multiple-dose jet injectors were developed by the Z. & W. Manufacturing Co. in 1950–58 through electric-powered spring-compression power and the hand-pump serial-stage spring-compression power, that this instrument began to take its place as a public-health instrument. The R. P. Scherer Co. shortly thereafter began researches in this same field. Both companies have now produced effective automatic electric hand-triggered instrument capable of delivering one injection each 4 to 10 seconds, or approximately 500 per hour, through each single instrument by utilizing a postinjection siphon mechanism for refilling. Both instruments deliver within 4 to 5 percent of the calculated dose each injection, which can be easily regulated in one-half or one cubic centimeter quantities. This dosage is delivered through a fine-jet-punctured orifice in the skin that has been found through testing to be best accomplished between 0.03 to 0.05 inch in diameter. Much of this field testing has been performed at the Walter Reed Hospital for the Medical Department of the United States Army and previously reported by Lindberg and Warren and by Ziheri, Kish, and Walren.

With the perfection of the Salk vaccine in 1955, we began a test jet-inspection program with the Cleveland Academy of Medicine in consultation with the United States Public Health Service. With the latter we began the testing of the efficacy of this type of injection at the Communicable Disease Center for the Americas in Montgomery, Ala., and in Atlanta, Ga., in July 1957.

To date we have completed 19,252 injections of both polio and influenzal vaccine.

Our experience in the first 1,797 such injections was reported on May 1957 in GP. Our total experience to date with these 19,252 injections from the standpoint of complications, patient acceptance, organization of the programs in charity hospital clinics, in the suburban PTA groups of metropolitan Cleveland, and with the certain employees of the Cleveland United States post-office system, data from immunological responses, possibilities of inadvertent infections, hepatitis infections, and some studies relating to the efficiency of the injection method from the basis of the present report.

PRINCIPLES AND METHOD[2]

"Since 1936, continued engineering design, manufacture, and testing of three types of

[1] From the division of anesthesia, departments of surgery and obstetrics and gynecology, Western Reserve University School of Medicine, Cleveland, Ohio.

[2] Hingson, Robert A.; Hamilton S. Davis; Richard A. Bloomfield, and Richard F. Brailey: Mass Inoculation of the Salk Polio Vaccine With the Multiple Dose Jet Injector, GP, May 1957, vol. XV, No. 5, pp. 94–96.

jet injector instruments have accomplished such improvements that a new era of parenteral therapy is at hand. The hypo-spray, the velodermic jet, and the multiple dose Press-O-Jet are all capable of providing a safe and readily acceptable means of injecting most drugs subcutaneously.

"The principle of jet injection is based upon the development of a high velocity jet projected through a micro orifice (0.003 to 0.005 inch) from a sterilized metallic ampul. The butt end of the ampul, covered by a specially designed rubber or plastic seal, is acted upon by a plunger that builds up enormous pressure within the ampul. The encapsulated liquid is delivered through the micro orifice at a velocity of 700 miles per hour. However, because of the minute size of the stream, only 11 grams of penetrating force is transmitted through a diameter that is one-thirtieth the size of a 22-gauge needle.

"Previous work has shown by fluoroscopic technique that more than 90 percent of a 1-centimeter jet injection traverses the skin, subcutaneous fat and muscle sheath to distribute itself in the muscle about 0.75 to 1 inch below the surface. In about 5 percent of people, increased thickness of the skin decreases the depth of injection by about one-half but does not interfere with the efficiency of most drugs injected in present-day parenteral therapy. To date, amounts of penicillin, streptomycin, sulfones, promin, insulin, typhoid vaccine, diphtheria toxoid, ad tetanus toxoid in the blood have been found to be comparable to amounts found with a needle injection technique.

"The multiple dose Press-O-Jet, developed by Ziherl, Kish and Warren, produces the same results as those achieved by the hypo-spray and the velodermic single dose injectors. The Press-O-Jet has the added advantage that a large number of injections can be delivered as rapidly as every 4 to 6 seconds. This multiple dose injector uses a metalic stainless steel ampul of 1 centimeter capacity, similar in design to that used by the single injection units. The disassembled part of the multiple-dose injector are cleaned with distilled water, are dried and are then placed in towel packs for a steam pressure sterilization or in aluminum containers for sterilization by boiling.

"After sterilization, the assembly before inoculation is best performed using aseptic technique with the operator gloved. Following sterilization, only 15 minutes is required to ready the instrument for mass inoculations.

"In view of the fact that many municipalities are spending from $30,000 to $100,000 for syringes and needles alone, just for a poliomyelitis immunization program, the Press-O-Jet is not an expensive instrument."

ADVANTAGES

"1. Since a needle is not used, it is unlikely that the instrument can be contaminated by such blood borne agents as the malaria parasite or the virus of serum hepatitis. Preliminary trials in which typhoid vaccine was administered by an instrument employing the jet injection principle suggested that the procedure was safe and satisfactory for immunizing against typhoid fever. Work reported in this paper also supports this.

"2. Sterilization is not required between cases and there is no need to sharpen or replace needles.

"3. Jet injection is relatively safe. Intravenous injection is extremely unlikely as determined by intentional aiming at a distended vein with epinephrine in the intact laboratory animal and as determined from many thousand injections revealing no pharmacologic evidence of intravenous injection. There is no needle to break.

"4. Because the ampul is not exposed to the operator or to the external environment, it is impossible to contaminate the properly assembled instrument or the injected solutions.

"5. Pain is reduced. The jet is so fine that it strikes far fewer pain fibers than the finest needle. Trauma to the skin is thereby reduced to a minimum. More than 50 percent of the first thousand patients injected with the polio vaccine reported that the injections were painless.

"6. The fear of the needle is eliminated. Patients with apprehension concerning the needle injection welcome the change to the jet injector.

"7. Time is saved; the number of personnel preparing equipment and injecting is greatly reduced. With the Pres-O-Jet a team of 2 physicians have injected 200 patients within a 1-hour period."

DISADVANTAGES

"1. There is at least a 10-percent incidence of bleeding, whether the injections be made with medication in solution or in suspension as particles. In this study of 1,000 cases, 12 to 15 percent of the patients had a tiny drop of blood appear at the site of puncture. Three percent of the patients developed a fine trickle of blood unless the injected site was compressed with dry cotton or gauze.

"2. There is greater incidence of ecchymosis following injection with the Press-O-Jet which shows up in 24 to 36 hours because of the capillary damage within the muscle. This complication is only temporary since some of our test subjects have had thousands of triceps, biceps, and femoris injections without significant muscle damage. Because of the need for readjustment by the tissues which so suddenly receive the 1 cubic centimeter injection, we recommend keeping the injector nozzle compressed tightly against the injected site for 2 to 4 seconds after injecting.

"3. An occasional patient will experience considerable momentary pain from the injection when a nerve fibril is hit directly by the jet.

"4. Movement by the patient or the operator or muscle tremors will produce a superficial intradermal cut or a zig-zag ecchymosis."

Results

"All of the first 1,000 patients injected with the Salk vaccine were coded for evaluation against a group of simultaneously selected controls. Eight operators (2 with previous experience and 6 who had never seen the instrument before) were selected for the study. All of the operators expressed a preference for the Press-O-Jet method of injection from the point of view of time, convenience, and favorable patient response."

Table I, reproduced from the original paper, records the results observed in 1,797 of the first 2,700 injections carried out.

Since the early experience in Press-O-Jet inoculation of Salk vaccine, we have listed in table II an additional 6,538 injections documenting the efficiency of injection, pain response, and immediate complications in this group. These injections were carried out on United States post office employees and their families in Cleveland, Ohio, during six separate periods between April 22, 1957, and January 11, 1958. These data were collected by examination and questioning each person during the 5 minutes following injection. In those instances of children crying before injection, or extreme youth, interpretation was deemed impossible and is so indicated. It is also to be noted that through clerical oversight no data on efficiency of injection delivery were recorded for the periods of January 11 and 12, 1958.

The total injection team consisted of 6 anesthesiologists, 8 anesthesia residents, 2 medical students, and 2 anesthesia orderlies. The numbers of persons injected in each period varied between 650 and 1,572. It was customary to assign groups of 3 to 5 physicians, 1 orderly, and 1 medical student for each session. Usually at least two physicians at each session had had previous experience with the method. Two new physicians in training attended and assisted after about 15 minutes of instruction and observation. The medical students handled the clerical work. The orderlies were experienced in operating-room technics and assisted in refilling the hand instruments and assembling the motor unit with sterile technic.

The average session can be handled easily by means of two lines; larger programs were conducted through three lines. Post office employees assisted in paper work, in organizing the lines, in cleansing the arms for injection with alcohol sponges and in cocking and priming the hand units. Two such instruments were used by each line so that as the physician performed the injection with one instrument, the other was being cocked.

Letter Concerning the Recession

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. DINGELL. Mr. Speaker, I have been reading in the newspapers of pronouncements of confidence by the administration that the recession is either bottoming out or will shortly improve. The frightening thing is we have been hearing these same pronouncements since January, and each month the unemployment statistics have gotten worse.

We now have 248,000 unemployed in Detroit and 415,000 in the State of Michigan. This is at the rate of 14.3 percent for the State and almost 17 percent for the city of Detroit. This does not include the great number of people working 1 or 2 days a week. When the unemployment figures are adjusted to reflect the closing of a number of automobile plants to balance the ratio of inventories to sales, the situation in Detroit and Michigan will be even blacker.

At this point in the RECORD I would like to insert a letter I received from Mr. George Meany, president of the AFL–CIO, expressing his concern over the economy of this country.

The letter follows:

AMERICAN FEDERATION OF
LABOR AND CONGRESS OF
INDUSTRIAL ORGANIZATIONS,
Washington D. C., April 14, 1958.

Hon. JOHN D. DINGELL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: America today stands on the brink of depression.

This stark fact America must face with honesty and determination. America has shown its greatness—in war and peace—only when it has been willing to face the truth—and to take whatever action may be necessary. Confidence in America's basic economic strength can only be maintained by the knowledge that corrective steps are being taken.

On March 11, I publicly warned that unless the March unemployment figures show a seasonal drop of at least 200,000 jobs, we are in trouble. Instead of this drop, however, there has been an actual increase in March unemployment.

Today more than 5,200,000 Americans are jobless. Today more than 3½ million Americans are working far less than a full work week, adding the economic equivalent of 1.3 million to the unemployment figure. As a practical matter then, nearly 9½ percent of our labor force is jobless.

Close to 45,000 workers are exhausting their unemployment compensation benefits every week.

It is on behalf of these people—these millions of American workers that I am writing you today. Many of them are members of our unions. All of them are members of the great human family that is America. Their suffering cannot be measured statistically. There are no statistics which can measure the fears of a worker and his family at a time like this.

Unless America acts now to stop this suffering, inevitably additional millions will soon join the ranks of the unemployed. Every important indicator continues to point downward. There isn't a single ray of sunshine on the economic scene.

The Congress of the United States thus faces a grave challenge. The country is looking to you for the swift, meaningful action which the Congress has demonstrated in past crises.

I am aware of the antirecession measures adopted to date by the Congress and the measures which the administration is supporting. The economists of the AFL–CIO, after careful and thorough study, have concluded that these measures might pump up to a total of a billion dollars into the economy this year. But at a time when the United States is losing $25 billion a year in national production, this puny economic blood transfusion cannot possibly restore the economy to good health.

Clearly Congress must take bolder action.

First priority must be given to relieving the plight of the unemployed themselves. This can be done by the adoption of an unemployment compensation bill which will require larger benefits and longer duration. The McCarthy-Kennedy bill deserves your full support. Substantial increases in unemployment compensation payments will not only help the recipients but will increase general purchasing power which will in turn help the entire economy.

In order to relieve the plight of the economy itself, we renew our recommendation for a substantial tax cut which will affect primarily the lower and middle income groups. A $6 to $8 billion tax reduction in both personal income taxes and excise taxes could be decisive in the present situation.

The AFL–CIO has called for other antirecession measures. These include a real public works program, school construction, a much bigger housing program, an increase and extension of the Federal minimum wage, improvements in the social security program, and depressed areas legislation.

Clearly, now is the time for America to act before confidence in the bedrock soundness of our economy becomes undermined. To wait further weeks or months will only add to the suffering of millions and the need for more drastic and costly measures later.

Only last week a spokesman for the Soviet Union predicted that American would not be able to get out of its economic difficulties.

We can prove these Communist spokesmen wrong. We can end the economic recession. We can move on to further economic growth. But we must be willing to face the facts. America has shown in the past that free enterprise can meet any challenge, from any source. We believe it can again—if we get on with the job at once.

All America is looking to the Congress for action to end this recession.

Sincerely yours,

GEORGE MEANY,
President.

Public Service and the Mails in Alaska

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following as an example of public service by the Post Office Department:

[From the Post Office Department Information Service]

MARCH 9, 1958.—The last of the great Alaskan dog sled mail routes is now operating on remote St. Lawrence Island in the Bering Sea, Postmaster General Arthur E. Summerfield noted today.

Reports from postal officials in Alaska show only one remaining regular dog sled route on the once-considerable "mush mush" mail circuit.

Chester Noonwook, 22, of Savoonga, an Eskimo village about 50 miles southeast of Gambell (the island's main community, about 200 miles southwest of Nome) is the sole remaining dog sled mail carrier in Alaska.

Noonwook and his 10 huskies—Spotty, Brownie, Lassy, Boy, Mil-ko-buk, Frisky, Whitey, Doneky, Blackie, and Camel—cover the 100-mile mail route between Savoonga and Gambell about twice a week.

The dogs are used usually from November through May. In June through October, Noonwook uses a skin boat to carry the mails.

The dog route follows the northern coastline of St. Lawrence Island between the two points, rather than moving directly over the frozen Bering Sea where the "sea ice" is extremely rough and dangerous.

The skin boat route goes directly over open sea from Savoonga to Gambell, located on the extreme northern tip of the island. (The island itself is located out in the Bering Sea, 120 miles distant, at the closest point, from the Alaska mainland.)

Noonwook, who is a contract carrier for the Post Office Department, is paid $40 a round trip.

Starting out on his trip from Savoonga—a typical Eskimo settlement consisting of framehouses where the Eskimos live, a church, a Bureau of Indian Affairs School and a native store—the young carrier usually requires a day to reach Gambell, unless he runs into one of the frequent howling storms or has trouble on a "soft" trail.

These, incidentally, appear to be the principal dangers of the 100-mile round-trip run, because Postmaster John Waghiyi, of Savoonga, reports "No wolves on island."

After taking the mail from Savoonga into Gambell, Noonwook usually picks up a full load of 300 pounds or more of mail for Savoonga. The return trip usually requires about 2 days, because the load is heavier going back.

In addition to letters, newspapers, and the like, Noonwook usually has a heavy mail consignment of parcel post, which affords a real service bargain at low-cost rates in transporting goods in Alaska. Almost anything that can qualify as parcel post going between Gambell and Savoonga is, in fact, carried by Noonwook and his dogs.

Shortly after he began carrying the route in 1956 when he was 20, he had one of his heaviest mail jobs.

A new missionary at Savoonga had more than 5,000 pounds of parcel post sent in from the "outside," and it had to be hauled in—in December weather—by Noonwook and his dogs.

He took it all in safely, although it required many extra trips.

"Star Route Carrier Noonwook has never had an accident," Postmaster Waghiyi reported, "although he has had trouble at times. Some times he has to stop overnight on the way between here and Gambell in cabins due to the snowstorm and soft trail."

The virtual demise of the dog sled United States mail route in Alaska, where it was once employed by the Post Office Department in large numbers of open Alaskan frontiers to the mails, is due to factors such as greatly increased use of air facilities and other transportation.

"However," Mr. Summerfield commented, "it still symbolizes the spirit of dedication to duty in the face of adverse conditions, and is typical of the great tradition of service of our own people and of the star-route carriers who operate under private contract to help the United States Government in the huge task of moving the United States mails."

[From the Washington Evening Star of March 18, 1958]

THE CASE AGAINST THE 5-CENT NONLOCAL STAMP AS STATED BY POSTMASTER GENERAL SUMMERFIELD HIMSELF

"Any rate differential between local and nonlocal first-class letter mail would be discriminatory, costly, and extremely difficult to administer * * * Public confusion would be widespread."—Postmaster General Arthur E. Summerfield, April 25, 1956, in testimony before House Committee on Post Office and Civil Service.

No one has ever made a better case against the hybrid, 5-cent, 4-cent split rate for first-class letters than Mr. Summerfield himself. No one has ever done a better job of pointing out the injustice, the expense, and the unworkability of a rate differential between local and nonlocal mail.

Here is Postmaster General Summerfield's statement in full:

"A DIFFERENTIAL BETWEEN LOCAL AND NONLOCAL LETTERS

"Certain Members of the Congress have emphasized to this committee the operating difficulties and inequities in a rate differential between local and nonlocal first-class letter mail.

"Any rate differential between local and nonlocal first-class letter mail would be discriminatory, costly, and extremely difficult to administer.

"The term 'local mail' is difficult to define. In Memphis, Tenn., it means 100 square miles, while in Kingsport, Tenn., it means 5.5 square miles. In Chicago, Ill., it embraces 207.5 square miles; in Aurora, Ill, only 8.1 square miles.

"In terms of population, 'local mail' is equally confusing. In Saybrook, Ill., it reaches 485 families; in Los Angeles, over a half million.

"The boundaries of local mail seldom coincide with those of the community. In New York only 2 of the 5 boroughs can be reached at the local rate, while in Boston, local includes the entire city as well as the nearby cities of Cambridge, Chelsea, Newton, and Medford.

"A local rate clearly discriminates in favor of large cities. The smaller the community, the less significant is the local rate. Such a rate would be clearly discriminatory since it provides a wide difference in service to patrons paying the same rate of postage.

"The post office in New York City would serve at the local rate more people than could be reached at the nonlocal rate in Nevada, Wyoming, Montana, South Dakota, New Mexico, Idaho, and Utah combined.

"Public confusion would be widespread. In Long Island, for example, Kew Gardens and Queens Village are stations of Jamaica, while Elmhurst, Forest Hills, and Jackson

Heights are stations of Flushing. These are all large independent communities in close proximity in a very congested part of Long Island. People address mail to the community—not to its parent post office. Few people would know the difference between local and nonlocal mail in this area.

"As a result of public confusion, there would be a sharp increase in postage-due mail, which costs the post office an additional 5 cents to deliver and is extremely annoying to the recipient.

"In many areas mobile highway units are replacing local post offices. One such highway post office in the South covers 300 miles and numerous communities. What will be the meaning of local mail under such a distribution scheme?

"Furthermore, a rate differential is not justified by differences in cost between local and nonlocal letters since transportation charges are an inconsequential share of the cost of delivering a single letter. The main costs in mail distribution are for collecting, sorting and delivering operations which must be performed regardless of the destination of the letters. (Postmaster General Arthur E. Summerfield, April 25, 1956, before House Committee on Post Office and Civil Service.)

Lately, in his strong desire to get more and more revenue out of American citizens and business firms, Mr. Summerfield has tried to gloss over the objections he himself raised less than 2 years ago. But the fact remains: "Any rate differential between local and nonlocal first-class letter mail would be discriminatory, costly, and extremely difficult to administer * * * public confusion would be widespread." We urge Congress defeat the 5-cent stamp.

THE ASSOCIATION OF FIRST-CLASS MAILERS.

America Is Still Growing

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. VAN ZANDT. Mr. Speaker, on April 7, 1958, at a dinner sponsored by the Committee for the Betterment of Altoona, Pa., Mr. Ira T. Ellis, economist for the E. I. du Pont de Nemours & Co., delivered the following address on the subject America Is Still Growing:

AMERICA IS STILL GROWING

(Talk before the Committee for the Betterment of Altoona, April 7, 1958, Ira T. Ellis, economist, E. I. du Pont de Nemours & Co.)

It is a pleasure to be in Altoona and to discuss with you some of the current business changes and trends in your community and in the Nation.

You have been affected in Altoona by the current decline in business activity, particularly by the decline in heavy industry and in railroad equipment, but you are meeting the problem in a realistic way—by diversification of industry. It is often difficult to accomplish. It usually means starting with small units and waiting for them to grow, but that is the way a community, a State, or a nation grows. And America is still a growing economy.

Our population is rising about 3 million persons per year. Every 6 years we add a population equal to that of Canada. Merely providing the present standard of living for these newcomers will require substantial production of goods and services over the years.

And the standard of living of all of us must be kept rising—through increasing income of employees as output per worker is increased, through increasing income of proprietors—including farm proprietors—and through increased income of the ownership of property. But note that income must be increased by increasing production, not merely by raising prices.

Now let us look at the current business decline, the business boom which preceded it, how serious it is, and what the future may hold.

The previous business decline in this country occurred in 1953, due largely to reduction of military spending and the supporting inventories. Business activity remained low in the first three quarters of 1954, but it then turned up sharply because of a rising rate of residential construction and increased automobile sales. The high and rising rate of business activity in the spring of 1955 caused many businessmen to begin expansion programs. The high rate of business activity in 1955, therefore, was supported importantly by a high rate of residential construction, a peak rate of automobile production, and a rising rate of business spending for new plant and equipment.

Business spending for plant and equipment rose further in 1956, but automobile production and residential construction declined. A new factor added in 1956 was that investment in the country began to outrun our savings rate. Many businessmen favored financing further expansion by means of commercial bank credit, that is, by creating credit. The Federal Reserve Board, charged with responsibility for determining the desirable size of the money supply of the country, properly opposed the use of commercial bank credit for investment purposes. This was the tight-money policy we heard about. The Federal Reserve Board did not reduce the volume of commercial bank credit, they merely prevented it from rising rapidly. The demand for loanable funds, however, rose substantially from mid-1955 to mid-1957 and interest rates also rose.

The year 1957 was the best business year the country has ever seen. We employed more people last year than ever before in history. They earned more and spent more than in any other year. Personal income and farm income last year were up 5 percent above the year before, and retail sales rose by a similar percentage. Business investment in plant and equipment also made a new record last year. The year began with business activity at an alltime peak, but it declined during the year.

The decline is occurring principally because pressure is off the substantial investment boom of the past 2 years. Manufacturing capacity has temporarily outrun the demand for goods. Business inventories are somewhat high in relation to the expected output rate of the year 1958. New orders of durable goods manufacturers are declining, and inventories are being reduced.

There will be some further weakness in business activity over the next few months. Business spending for plant and equipment will probably be declining all this year. Inventories will be falling during the first three quarters of this year.

But there are also some elements of strength in the outlook. Residential construction has been falling during the past 2 years, largely because other outlets for loanable funds were more attractive. Residential construction is now rising. Its value this year will exceed that of 1957. Residential mortgages are now more attractive than they were in 1957. Spending by State and local governments is also rising, importantly for schools and roads—facilities that depend on the number and location of people, and on the number of motor vehicles in the country. Our population is rising steadily and people are moving from the farm to the city and from State to State. Federal Government spending is also rising, particularly for defense.

Consumer spending is also expected to hold up well in 1958. Employment is declining in manufacturing, mining, and transportation. It is rising in trade, finance, services, and government. And unemployment compensation, social security payments, private pensions, and personal savings will help to support consumer spending. The inventory change is expected to shift from minus to plus before the year end.

Spending in retail food stores is running at a high level. Sales of these stores in the first 2 months of 1958 were up about 10 percent from the same period a year ago—perhaps at the expense of automobiles and household appliances. The quantity of food sold this year will be about 3 percent above 1957, and the dollar value may be up 5 percent or more.

The outlook for food sales is good because of the composition of our population as well as because of our rising personal income. The 10- to 19-year age group—an important consumer of food—will rise from 24.5 million persons in 1955—little change from 1940—to 30.5 million in 1960 and to 36.5 million in 1965, or a rise of about 50 percent in 10 years.

Employment in February was down only 1.9 percent from a year ago—from the peak of the boom. Remember that there are 62 million people now working, in spite of this decline. Employment has declined over the past year among manufacturing wage workers and the related supervisory staff. Employment has risen among professional workers, particularly teachers and clerical workers, private household workers and workers in the service industries. A massive employment shift is occuring.

Another factor affecting the present employment situation is the very large increase in the number of married women working. From 1947 to 1956, the number of male workers in the labor force rose 6 percent, but the number of married women in the labor force rose 68 percent. As of February 1958, 30 percent of all married women in the country were in the labor force.

We must hold down costs to maintain or stimulate sales. Rising prices restrain sales. Labor negotiations now going on in the automobile industry are most significant. The hope is for a settlement that will not result in increased prices.

There is some probability of a tax cut July 1—with personal income taxes probably reduced by 5 to 10 percent. It would give the economy a shot in the arm if the reduction were as much as $5 billion, but it would not restore business activity to the level of December 1956. It would, however, help to cushion the decline.

But remember that a tax cut which increases the deficit of the Federal Government would be highly inflationary. It is almost equal to printing money. It may be desirable if business activity is still declining by midsummer, which is unlikely.

Instead of a tax cut, we should work for cost reduction and for other employment for laid-off workers. We should stimulate the construction of roads, schools, and homes. Two years ago we needed more saving and less spending by individuals. Today we need more spending and less saving.

If taxes are cut to stimulate the economy, the deficit should be cut as business activity and Federal receipts rise by reducing Federal expenditures.

In summary, we are experiencing a business cycle somewhat more severe than that of 1948–49 and 1953–54. The country was pressing against its capacity in skilled labor, the production of plant and equipment, and in savings in 1956 and early 1957. We

are now coming down from a rate of expansion that could not be sustained to a more nearly normal growth rate.

Looking beyond 1958, and assuming no further increase in international tension, the trend of business activity should be upward. This outlook is based on our rising population, technological advances, expected high rates of business investment in new plant and equipment and personal investment in new homes, and on an expected high level of construction of roads, schools, etc. The years 1959 and 1960 will see a rising trend of business activity after the readjustment of 1958, and after we absorb some of the current excess of manufacturing capacity. We snapped back quickly after the decline of 1954, and we can do it again.

The years 1961–65 could be years of normal growth, on the average—about 3.25 percent per year in industrial production: The output of our factories and mines. These years are not likely to be boom years for residential construction because the rate of family formation will still be held down by the low birthrate of the early 1930's.

The rate of growth will not be steady from year to year. There will be business readjustments from time to time. We have not eliminated the business cycle, but perhaps we have learned to moderate it by restraining the excesses of credit creation, expansion of business capacity, and inventory accumulation characteristic of booms. In short, while we are experiencing some difficulty in maintaining a high growth rate in economic activity at the moment, we have weathered periods like this in the past. I think the long-term outlook for growth in this country is excellent.

Nuclear Tests Compilation Reveals Hypocrisy of Reds' Propaganda To End Blasts

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the American Committee for Liberation:

NUCLEAR TESTS COMPILATION REVEALS HYPOCRISY OF REDS' PROPAGANDA TO END BLASTS

NEW YORK.—The hypocrisy of Soviet leaders in demanding a cessation of nuclear-weapons tests in the West is disclosed in a compilation of Soviet tests released by the American Committee for Liberation.

The compilation is based on press announcements of the Atomic Energy Commission from August 23, 1957 to March 22, 1958. It disclosed that while Soviet anti-testing propaganda has reached new highs the past 2 months, the Soviet Union itself exploded 3 nuclear weapons within a period of 5 days (February 23–February 27) and 6 more nuclear weapons in a period of 9 days (March 14–March 22). These were in addition to 5 other Soviet test explosions in the August-December period, making a total of 14 since August 1957.

"Significantly, while the United States has publicly announced all its test in advance, the Soviet Union has never announced one," according to an analysis prepared by the American Committee for Liberation.

"The incredible performance of Soviet leaders in championing an end to nuclear weapons tests while intensively conducting such tests themselves constitutes a vivid example of Soviet insincerity, bad faith, and perfidy."

The American committee, a group of private American citizens headed by Howland H. Sargeant, supports Radio Liberation's round-the-clock broadcasts to the Soviet Union in Russian and 17 languages of the U. S. S. R.

The American committee's analysis also pointed out that while the United States has officially invited members of the United Nations, including the U. S. S. R., to observe forthcoming nuclear tests in the Pacific, the Soviet Union has never done so.

"Moreover, while the United States Joint Congressional Committee on Atomic Energy conducted extensive public hearings last fall on the problem of radioactive fallout, the Soviets have never done so and are not likely to do so," the analysis contended.

Summary of AEC announcements on Soviet nuclear weapons tests, Aug. 23, 1957–Mar. 22, 1958

Date of AEC Press release	Date of Soviet tests	Range of yield
Aug. 23, 1957	Aug. 22, 1957	Detonation of substantial size.
Sept. 9, 1957	Within the past 2 days	Nuclear weapons test of moderate intensity. This appears to be the 2d test in a series which began Aug. 22.
Sept. 25, 1957	Sept. 24, 1957	Detonation in the megaton range. 3d nuclear explosion in the USSR announced by the United States since Aug. 22.
Oct. 11, 1957	Oct. 10, 1957	Another test conducted in Soviet series. Latest test was a small explosion.
Dec. 30, 1957	Dec. 28, 1957	Soviet Union is continuing its testing of nuclear weapons. Most recent nuclear explosion occurred Dec. 28. (No announcement re yield.)
Feb. 23, 1958	Feb. 23, 1958	Soviets conducted weapons test today. The yield was in the megaton range.
Feb. 28, 1958	Feb. 27, 1958 (2 tests)	Soviets have conducted 2 more large-yield explosions in current series. Today's test explosions were both in the megaton range, and brought to 3 the number of Soviet large-yield nuclear explosions in the past 5 days.
Mar. 14, 1958	Mar. 14, 1958 (2 tests)	United States has detected 2 Soviet nuclear weapons tests today. Neither test was in the megaton range.
Mar. 15, 1958	Mar. 15, 1958	Soviets today conducted another nuclear weapons test. The yield of the detonation was below the megaton range.
Mar. 21, 1958	Mar. 20, 21, 1958	Detection of 2 further nuclear tests by the Soviet Government. The first occurred Mar. 20 and the energy yield was small. The second occurred Mar. 21 and the energy yield was in a larger range.
Mar. 22, 1958	Mar. 22, 1958	The test of another weapon by the Soviet Government was detected today. This detonation, which appears to have been in the medium range, is the third in the past 3 days and the sixth in the past 9 days.

The Farmers Suffer From Economic Situation

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mr. BREEDING. Mr. Speaker, I notice that today's Washington Post and Times Herald, April 15, 1958, carries a story entitled, "Rise for Farm Income Noted." The article reports that yesterday, April 14, 1958, while announcing that prices received by farmers are running substantially higher than a year ago, Agriculture Secretary Benson said that agriculture has been a source of strength in the current recession.

I should like to have printed in the RECORD, at this point, several news items which I think strongly dispute Mr. Benson's claim of agricultural muscle; particularly economic strength, measured in terms of hard dollars and cents.

Surely, I find no justification for Mr. Benson's statement that agriculture has been a source of strength in the current recession when I read expressions of economic plight from the people of my area such as:

He—

President Eisenhower—

has turned his back on those people in our economy who already suffered a severe decline in income through being compelled to subsidize the rest of the economy because of administration cuts in farm income on the one hand and having to pay record high prices for the things they must buy.

And:

Now history may well record that 5 years of declining purchasing power on American farms is the direct cause of the recession in which the whole Nation finds itself during these early months of 1958.

And:

When the Republicans took over, the support rate [on wheat] was $2.09 a bushel. It has been reduced to $1.78.

Mr. Benson's glowing praise of agriculture's strength during the current recession appears to dim rapidly when shadowed by economic realities on the farm, reported by the people on the farm.

[From the Hutchinson (Kans.) News of April 6, 1958]

FARM VETO HIT

Ike's veto of the farm freeze bill is an unjustified and devastating blow to farmers, as well as a dangerous jolt to the economy of the country in general. If there was anything that needed to be lowered, it certainly was not farm prices.

The President's action in vetoing the bill is not one of statesmanship, but is instead a demonstration of this administration's subservience to processor groups and other big business interests.

Benson, in urging the veto before the measure was ever passed by Congress again proved that he is no friend of the farmer, as one would expect a true Secretary of Agriculture to be, but is instead a vassal of the processors and big business groups with which he has so liberally staffed his department.

These interests would enslave the farmer to a lower standard of living and in addition endanger the whole economy in order to profit from a depressed agriculture.

By forcing lower prices on the farmer, they can pocket the difference, since they would charge the consumer the same as before. This is exactly what they have done each time the administration has shoved farm prices down.

Ike's veto is simply a demonstration of the depths to which he has sunk in becoming the errand boy of the selfish special interest groups. He has turned his back on those people in our economy who already suffered a sever decline in income through being compelled to subsidize the rest of the econ-

omy because of administration cuts in farm income on the one hand and having to pay record high prices for the things they must buy.

ARVID MATTSON, *Inman.*

IT'S TIME FOR A CHANGE IN AGRICULTURE DEPARTMENT

Mr. Benson's failure has been pointed out to him time and time again. In the operation of his farm program we know he is responsible in large measure for the way the country as a whole accepts and understands the needs and problems of farm people.

But he has fallen down. He has been more of an apologist for farmers than a champion of them and their institutions, including our cooperatives. Indeed, he has set back agriculture's public relations a whole generation.

Does he really think he is justified in shaping his farm policies that way? He has condemned the farmers not only 1 year but ever since he has been in office. He is now, and now history may well record that 5 years of declining purchasing power on American farms is the direct cause of the recession in which the whole Nation finds itself during these early months of 1958. Certainly, the time has come to make a change. A new Secretary of Agriculture is a must.

JAKE MOHR.

McCRACKEN.

[From the Great Bend (Kans.) Daily Tribune, April 6, 1958]

ADMINISTRATION BURIED DEEPER UNDER GROWING WHEAT SURPLUS

(By Ovid A. Martin)

WASHINGTON.—The Eisenhower administration has lost ground during its years of trying to reduce the Nation's big wheat surplus.

Furthermore, the way things are going, no improvement is in sight.

This situation exists even though the Government has employed production-control measures on five wheat crops and proposes controls for the sixth, and has spent more than $2½ billion in trying to bring supplies into balance with markets.

Just why this should be is a matter for argument. The administration contends the tools Congress has given it are inadequate to do the job. Its critics reply that the tools it wants wouldn't succeed, either.

When the administration took over in 1953, the Nation's wheat supply totaled about 1¾ billion bushels—the largest of record to that date. At that time there was an annual market for about 978 million bushels.

The supply for 1958 has been forecast at more than 2 billion bushels, or 13 percent larger than when President Eisenhower entered the White House. Given unusually favorable weather during the growing season, this year's supply could easily exceed the present estimate.

This situation will be one of the matters wheatgrowers must weigh before going to polls June 20 to vote yes or no on continuation of marketing quotas on the 1959 wheat crop. Approval by at least two-thirds of those voting is required to make the quotas operative.

In a similar referendum a year ago on quotas for the 1958 crop, the vote was 86 percent in favor of the controls.

Many farm leaders say the fact that no progress has been made in getting wheat production and supplies in line with market requirements points up the need for a new approach to the wheat problem.

The continued existence of a big wheat surplus does not mean Eisenhower and his Secretary of Agriculture, Ezra Taft Benson, have not tried to remedy the situation.

The administration has searched the corners of the earth for new markets. It did succeed in moving a record quantity of the grain into export markets 1 year. In fact, foreign shipments during the Eisenhower years have been the highest of record of an equivalent peacetime period.

In opening up markets, it cut prices on its grain and offered subsidies to encourage export of commercial supplies into lower priced foreign markets.

It has cut price supports on the grain in an effort to discourage over production. When the Republicans took over, the support rate was $2.09 a bushel. It has been reduced to $1.78.

The administration has cut acreages under the control program to the lowest level permitted by law. But production continues to outstrip markets.

Boost the Rates—End the Deficits

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1958

Mr. BUDGE. Mr. Speaker, Mr. Robert M. Hammes, editor of the Minidoka County News, Rupert, Idaho, is certainly to be commended on his analysis of the postal-rate situation, contained in the editorial below, which he wrote for the April 7, 1958, edition of the countywide paper:

BOOST THE RATES—END THE DEFICITS

A million and a half dollars a day.

Wouldn't that be a nice income to have?

But it's not income as far as the United States Post Office is concerned, because that's the daily deficit.

Right now the question of postage rates is being thrashed out by Congress. The biggest noise is coming from the argument on the 4-cent or 5-cent letter rate, but the biggest part of the deficit comes from second- and third-class mail. (Second class is magazines and newspapers; third class is catalogs, advertising fliers, boxholders, etc.)

Now the raise in letter postage has merit. It was way back in 1932 that the rate was raised from 2 cents to 3 cents. It is certainly important that those who use the mails pay for them (and about 85 percent of the first-class mail is originated by business). So it only seems proper that first class should take some increase.

But the biggest deficit makers, second- and third-class mail, are not getting the ballyhoo and publicity that the debate about first class is receiving. Both classes need substantial increases. True enough, the rates on these classes of mail have taken increases in recent years. Second class is now paying 60 percent more than it did a few years ago. But this increase is still not enough to wipe out the deficit it causes.

The Post Office Department claims that one of the largest circulation magazines in the country is delivered at a deficit of over 3 cents for every one of the millions of copies issued every month. Another magazine, a weekly, contributes 1 to 3 cents per copy deficit on every one of millions of copies issued every week. The deficit is a direct subsidy to the publishers of these magazines—both of whom are violently opposed to subsidies for others.

Newspapers, too, contribute to this second-class deficit. However, most dailies are delivered by carrier boy and the circulation of most weeklies is closely confined to the city of publication. Over 60 percent of the circulation of the Minidoka County News, for example, goes to homes within 15 miles of Rupert. But, in spite of this limit of transportation, the newspapers also contribute to the second-class deficit. They, too, are enjoying a direct subsidy from the post office—and the taxpayers.

Third class mail, the circulars, advertising letters, catalogs, fliers, etc., also contribute heavily to the postal deficit. No one, in my hearing, has ever welcomed this stuff that always clutters up the mailboxes, and the postal employees dislike the stuff, too. This is also subsidized, a subsidy to the firms that use direct mail and to the printing plants that produce the stuff. Third class, along with second class, should be increased.

What this whole thing boils down to is this, the general taxpayer is paying a portion of his tax money to magazines, newspapers, advertisers using third class, a class of business that certainly should be able to stand on its own feet without subsidy.

This is wrong. The postal rates should be increased and the postal deficit eliminated. Write your Senators and Congressmen now, and tell them what you think.

Outstanding American

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article on an outstanding American, Congressman JOHN W. MCCORMACK, the House majority leader, which appeared in the Lynn (Mass.) Telegram-News on April 6, 1958:

OUTSTANDING AMERICAN

One of the greatest of all living Americans was recognized recently when the National Conference of Christians and Jews cited Congressman JOHN W. MCCORMACK, House majority leader in Washington, for his distinguished service in the field of human realtions.

For more than 30 years now, the name of JOHN MCCORMACK has been synonymous with justice and decency in Washington. No group has ever been too small or insignificant to merit his help or sympathy.

The powerful voice of Congressman MCCORMACK has seen to it time and again that the people of Ireland, Israel, and other small nations have been accorded their true diplomatic rights. One wonders just how these small nations would be treated in the absence of a man of MCCORMACK'S stature.

During the long years of the Roosevelt-Truman administrations, Congressman MCCORMACK unquestionably could have had any job within the gift of the party. But it is a matter of record that on many occasions he turned them down, even an offer of appointment to the United States Supreme Court bench.

"I prefer to stay in the Congress where I feel I can do the most good for the people of America and particularly for those who cannot come here to speak for themselves," he has often stated.

The hundreds who attended the recent 30th anniversary banquet of the Conference of Christians and Jews, at which Congressman MCCORMACK was honored, were privileged to be present at ceremonies honoring a great American.

Not only is Congressman MCCORMACK to be congratulated on his new honor which has been bestowed upon him, recognition is also due his devoted and talented wife, Mrs. Harriett McCormack. Mrs. McCormack has been a tower of strength in her husband's life. She deservedly stands at his side in his newest hour of praise and tribute.

Daily Digest

HIGHLIGHTS

Senate received President's veto of flood control bill, and again took up community facilities bill.

Senate

Chamber Action

Routine Proceedings, pages 5663–5707

Bills Introduced: 8 bills and 1 resolution were introduced, as follows: S. 3616–3623; and S. Res. 288.

Pages 5669–5670

Bill Reported: Report was made as follows: S. Con. Res. 77, to extend greetings to the Federal Legislature of the West Indies (S. Rept. 1435). Page 5669

Bill Referred: One House-passed bill was referred to appropriate committee. Page 5663

President's Communication—Civil Defense: Communication was received from President transmitting amendment to budget for fiscal year 1959 involving increase of $2,915,000 for Federal Civil Defense Administration—referred to Committee on Appropriations and ordered to be printed as S. Doc. 89. Page 5663

Veto Message—Flood Control: Message from President vetoing S. 497, Flood Control Act of 1958, was received, read, and ordered to lie on table and be printed as S. Doc. 88. Page 5721

Community Facilities: Senate again took up (following its postponement on April 1) S. 3497, Community Facilities Act of 1958, taking the following additional actions on amendments thereto:

Adopted: Javits amendment to add civil defense facilities to type of projects included in the bill; and by 54 yeas to 25 nays (motion to reconsider tabled), modified Case (New Jersey) amendment providing that on projects under bill the prevailing wage rate and 40-hour week or time and a half for hours in excess thereof shall apply; and

Rejected: By 40 yeas to 41 nays (motion to reconsider tabled), Fulbright amendment to limit interest rates on authorized loans to 3 percent instead of 3½ percent.

Pending at adjournment was Thurmond amendment to declaration of policy in bill so as to provide for extension of credit on reasonable terms rather than where such credit is not otherwise available on equally favorable terms or conditions. Pages 5707–5708, 5723–5760

D. C. Births: Senate concurred in House amendment to S. 1708, relating to children born out of wedlock in the District of Columbia. This action cleared the bill for the White House. Page 5760

Program for Wednesday: Senate adjourned at 7:58 p. m. until noon Wednesday, April 16, when it will continue on S. 3497, community facilities bill.

Pages 5760, 5762, 5768

Committee Meetings

(*Committees not listed did not meet*)

SUBCOMMITTEE BUSINESS

Committee on Agriculture and Forestry: Subcommittee on Agricultural Research and General Legislation, in executive session, ordered reported to the full committee (1) S. 1497, to require the use of humane methods in the slaughter of livestock and poultry in interstate and foreign commerce (amended by substituting the language of H. R. 8308, a related House-passed bill), (2) S. 1939, to amend in several respects the Federal Seed Act of 1939, (3) a clean bill in lieu of S. 672 and S. 2490, to control noxious plants on Federal lands, and (4) S. 3076, authorizing transportation in the U. S. of live foot-and-mouth disease virus for research purposes.

Subcommittee will hold hearings at 2 p. m. tomorrow to hear out-of-town witnesses with respect to S. 3538, to amend the Packers and Stockyard Act relative to practices in the marketing of livestock.

Subcommittee agreed to hold hearings on S. 724 and S. 2306, bills to provide for the increased use of agricultural products for industrial purposes.

APPROPRIATIONS—HEW

Committee on Appropriations: Subcommittee continued its hearings on H. R. 11645, fiscal 1959 appropriations for the Departments of Labor and Health, Education, and Welfare, with testimony from Dr. Leroy E. Burney, Surgeon General; Dr. David E. Price, Chief, Bureau of State Services; Dr. James K. Shafer, Division of General Health Services; Drs. Robert J. Anderson and C. A. Smith, both of the Communicable

Appendix

The Veto of the Rivers, Harbors, and Flood Control Bill

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. JOHNSON of Texas. Mr. President, we are now beginning to hear from the people regarding the Presidential veto, on yesterday, of the rivers and harbors authorization bill. The people in our States who have close knowledge of the need for the water-development projects provided for by the bill do not understand the reasons advanced for the veto. Neither do I.

This measure could have been followed quickly by the necessary funding legislation. It would have put people to work building projects that are important to the future of the Nation.

I deeply regret that the President saw fit to veto what I believe to be a constructive bill.

Mr. President, this morning I have received telegrams from city officials and other citizens of Texas who protest the veto. The bill authorizes a navigation project of vital and urgent importance to the city of Port Lavaca. The people of Port Lavaca are understandably distressed, as the mayor of the city states in his telegram. Their distress and amazement are shared, I am confident, by many, many persons throughout the Nation.

Mr. President, I ask unanimous consent that the telegrams I have received from citizens of Texas be printed in the Appendix of the RECORD.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

PORT LAVACA, TEX., *April 15, 1958.*
Senator LYNDON JOHNSON,
Senate Office Building,
Washington, D. C.:

The city of Port Lavaca, Tex., through its city council expresses the amazement and distress of its citizens at the President's action in vetoing the public works bill thus blocking recommended and approved public works at a time when the community is fast feeling not only the effects of the depressed general economy but the throttling effect on its local fishing industry by the holding up of navigation improvements that have met all the tests for approval. We strongly urge you not only to vote to override this veto but to use all your influence with other Members to do so.

JOHN H. CLEGG, JR.,
Mayor of Port Lavaca, Tex.

PORT LAVACA, TEX., *April 15, 1958.*
Senator LYNDON B. JOHNSON,
Office of the Democrat Leader,
Washington, D. C.:

LYNDON, we are sick over the veto. Is there a chance to override it?

CARROLL HARTZOG.

PORT LAVACA, TEX., *April 15, 1958.*
Hon. LYNDON B. JOHNSON,
Office of Democratic Leader,
Washington, D. C.:

The presidential veto of rivers and harbors bill will drastically effect our continued rising unemployment in Port Lavaca, Point Comfort, Victoria area. Attempt override if possible.

L. L. FROELICH,
President, Chamber of Commerce.

PORT LAVACA, TEX., *April 15, 1958.*
Senator LYNDON B. JOHNSON,
Office of the Democratic Leader,
Washington, D. C.:

Deeply shocked President veto river-harbors bill. Urge you to exhaust all possible means to completely assure us that this veto will be overridden.

CLEGG SHRIMP CO.,
JOHN CLEGG, *President.*
R. E. CLEGG TRAWLERS,
R. E. CLEGG, *Owner.*

Mr. CHAVEZ. Mr. President, I have listened with great interest to the comments made by the distinguished majority leader, the senior Senator from Texas [Mr. JOHNSON], in protesting the veto message of the President on the rivers, harbors, and flood-control bill.

As chairman of the Committee on Public Works of the United States Senate, I wish to enter my protest. Later in the day, I shall give facts and figures in regard to what the veto message actually means to the people of the United States.

Time for Action

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. HILLINGS. Mr. Speaker, with today's supersonic jet aircraft being operated by our military forces, there is no area of our country that can escape the phenomena of the sonic boom or its impact.

The boom, which creates a tremendous blast followed by terrific repercussion, is caused by jet aircraft crashing the sound barrier.

The sonic boom is becoming a fairly common but still frightening and damaging occurrence in California, where there is a large concentration of supersonic military aircraft.

We know supersonic aircraft is needed for our defense and security, we are going to have to learn to live with the sonic boom, even though it is an extremely unpleasane experience.

However, since the Government alone operates this type of equipment in the continental United States, it is time for Congress to fix the responsibility for damages caused by the sonic boom, which is capable of breaking dishes, cracking plaster, shattering windows, and causing other damage.

The extent of the damage which can be caused by this phenomena is documented in a story appearing in the April 11, 1958, issue of the San Francisco Examiner reporting clearly and precisely the result of a recent sonic boom experience in the Bay region.

I intend to press for early action by the House Judiciary Committee on any one of four bills now before a subcommittee to fix the Government's liability for damages and to place a ceiling on the amounts that can be paid when a claim is found to be legitimate by the appropriate Government authority.

In checking with the subcommittee, I have found that required reports from the executive agencies still have not been submitted with respect to some of the pending sonic boom bills. I have urged these agencies to expedite their reports.

The four measures now pending have been introduced by myself and my colleagues Mr. SISK, of California; Mr. CANNON, of Missouri; and Mr. SIMPSON, of Illinois.

I believe the time is overdue when we must resolve the question of responsibility for the sonic boom. The article from the San Francisco Examiner follows:

Window-shattering sonic booms rocked the entire East Bay area yesterday morning at 10:39 a. m. at the height of a full-dress defense exercise by Air Force and Navy supersonic jet fighters against a simulated enemy attacking force.

As the jet interceptors roared in the skies 7 miles above the San Francisco Bay area, with scores of planes participating in the war games, the sonic booms were felt with explosive force in Oakland, Alameda, Richmond, Emeryville, Orinda, Berkeley, and San Pablo. San Francisco police reported only two telephone complaints here, from residents of the outer Mission district.

In virtually every community in the East Bay, police switchboards were jammed with complaints of broken windows, pictures knocked from walls, and loosened plaster in homes. Emeryville police reported that the

city hall in that community was shaken by the sonic blasts.

At the time the booms occurred, 23 Navy Skyray jets and 2 Air Force Delta Dagger F–102 jets, capable of speeds over 1,000 miles per hour, were directly over the San Francisco Bay area, both Navy and Air Force officials conceded.

They added that it was impossible to determine whether the sonic booms had been created by Air Force or Navy jets. The Navy planes over the area at the time were from Moffett Field, and the two Air Force jets were from Travis Air Force Base in Solano County.

In addition to the 2 Air Force jets overhead when the booms occurred, another 11 Delta Daggers were participating in the same exercise, but were engaged over the ocean.

Divided We Fall

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. SCHOEPPEL. Mr. President, on January 29, before the Servicemen's Republican Club, at Topeka, Kans., the Honorable Clifford R. Hope, formerly a Member of the House of Representatives, delivered a speech entitled "Divided We Fall." I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

DIVIDED WE FALL

I appreciate the honor of speaking at this luncheon of the Republican Servicemen of Kansas. It is an organization of which I am proud to be a member. I do not recall exactly when these meetings began, but whatever the date, I have been present at almost every luncheon since that time. A very few times, as I recall it, my work in Washington prevented me from attending.

No one could want a finer audience than this. All of you have proven your devotion to your country by defending it in time of war, and by stanchly and effectively working for good government in time of peace.

I am happy to be here today, not as an officeholder or as a candidate for office, but as one of those in the ranks, ready and willing to do my humble part in winning victory next November. I have been a private citizen now for a little more than a year, and I am convinced that there is no individual in the world who bears a title any prouder than that of American citizen. And it's good to be a Kansan too. Never have I appreciated more the fundamental goodness of our State and its people than I have during the last 12 months.

But I did not come here simply to congratulate you on being Kansans or a brag about being one myself. We have serious business ahead of us during the next 9 months, and everything I say this afternoon will be spoken directly or indirectly on the subject of how we Republicans can win the election next November.

I am not going to talk to you about party issues—either State or national. The subject I want to talk about today is the Republican Party in the State of Kansas, what it has done for us in the past, and how important it is for us to be able to look to it for leadership in the serious and trying times which are head.

I want to begin by saying something of our two-party system of government, because I believe that it has contributed more to the success of our great experiment in government than any other thing. And this is rather ironic, because the founders of our government did not contemplate political parties as we know them today. George Washington warned against them. And these warnings might have been justified had we developed a party system composed of minority groups, as has been the case in many other nations which have attempted to set up government by the people. But here in the very beginning it was realized that popular government could be a success only if a majority of the people could determine and carry out governmental policy. That could only be done under a two-party system. That is the system we have followed. It is true, of course, that we have at times had third parties or even fourth or fifth parties, but these minor political groups have never become important. They have come and they have gone—sometimes flashing like a meteor across the sky—and usually lasting little longer.

And we realize especially how fortunate we have been in this country when we see what has happened in other nations where a multiplicity of parties developed. We saw Hitlerism rise in Germany because the large number of parties prevented a majority of the people from establishing a responsible government. We have seen what has happened in France since the end of World War II. That great nation, which has made real progress in many ways since World War II, is today impotent and slowly bleeding to death because its 20 or more parties prevent a government from being formed which has the confidence and support of a majority of the people.

Contrast this with postwar Germany. It was utterly prostrated in 1945—I saw it then, as did many of you. You saw the shattered cities, the desolate countryside, the chaos that prevailed everywhere, and yet Western Germany has risen from its ashes and debris in just a few years to become one of the great powers of modern civilization. And it has done so at least in part because it has had a two-party system, where a majority of the people have been able to express their wishes and the nation has had effective leadership.

Now why do I dwell on this matter of a two-party system? Primarily because I want to point out that under a two-party system of government each party must include people who have a wide range and variety of views and ideas. And yet ever so often we run into someone who expresses the idea that any Republican who believes differently, even a little differently than he does, should be read out of the party. That's where we get into trouble. The Republican Party contains men and women of many ideas and viewpoints but it has endured for more than a hundred years because we have learned that all of us don't have to think exactly alike in order to work effectively for good government.

No greater example of that was even shown than after the 1952 Republican convention when two of the greatest men that this Nation has ever known—Dwight Eisenhower and Bob Taft—men who sincerely differed on some important things—sat down, reconciled their viewpoints, and went on together to win a tremendous victory at the polls.

And we all remember how well things went during the early months of the Eisenhower administration when these two great men had a chance to work with each other—one as President, the other as leader of his party in Congress, in dealing with the great problems that confronted the Nation. If Bob Taft and Dwight Eisenhower could iron out their differences of opinion—could put aside personal feelings and work together for the good of America—then certainly every one of us in the Republican Party can and should do the same thing.

Now does that mean that ideals and principles do not amount to anything? And that people should give up their convictions and depend upon expediency? Certainly that is the furthest thing from what I am trying to say. But what I do say—and the one thought above all others that I want to leave with you today—is that if government and politics are to operate effectively there must be compromise and reconciliation. The American Constitution is the result of compromise in almost every section. No political party ever wrote a platform that wasn't based upon compromise piled upon compromise.

That's the only way that we can have a 2-party system, because if individuals are going to insist upon their individual ideas on every issue—major or minor—which may come up, then there can be no such thing as party government or a 2-party system.

We have had important differences in our party—important enough back in 1912 to split the party temporarily. We have them now—we have them nationally—we have them in Kansas—but don't forget the Democrats have their big differences too, and yet they have kept their party together for over 150 years or since the days of Thomas Jefferson, and the fact is that even with all their dissension now, they are still doing a good job of keeping together—maybe too good a job from our standpoint.

Sometimes we develop party splits on the basis of personalities. We don't like somebody in the party. Then we say they've got to get out or we're going to get out. Well, that may be all right in a social club, but if we are going to have just two parties in the country, you and I have got to associate with a lot of people that we may not agree with on everything. We have got to be tolerant of personalities. We could apply the same thing to our church—there are a few people in my church that I don't care for particularly; and if I ever get to heaven I will probably find some there that I haven't cared for down below. But I don't expect to ask St. Peter to open up the pearly gates and let me walk out of the place.

If the Republican Party is going to continue to be a successful party, and if we are going to maintain a two-party system in this State and country, then we can't have an exclusive membership. It's got to be open to all. No person and no political party or party leader can be the keeper of another's political conscience. No Republican has any right to say that he is a better Republican than any other Republican. The acid test of whether a man is a Republican is whether he works for and votes with the party.

I am proud of the Republican Party in Kansas and the record which it has made. The Republican Party and Kansas started out together. They had one great purpose—to promote the cause of human freedom. That's one of the reasons why we Republicans have a peculiar right to celebrate the birthday of our State. Kansas started out as basically Republican. It still is. I don't need to tell you that throughout the years the great majority of the officials in the court houses of Kansas have been Republican; that 99 percent of the elective State executive and judicial officers have been Republican; that at least 75 percent of all men and women elected to the Kansas Legislature in the almost 100 years of our history have been Republican. Even last year, when some people seem to think the Republican Party was practically wiped out, we elected all State executive and judicial officers except governor and lieutenant governor; we elected 83 out of 125 members in the house of representatives; we elected 32 State senators out of 40; we elected FRANK CARLSON to the

United States Senate; we elected 5 out of 6 congressional candidates, and we gave Dwight Eisenhower a majority of 270,000 votes.

Now all of us will have to admit that the Republican Party in Kansas is not as big as the Eisenhower vote. A lot of independents and Democrats crossed the line on that one. But let's look at the vote for justices of the supreme court. I think that's the best test of the essential Republicanism of the State because whether we like to admit it or not, very few people personally know who they are voting for when they cast their ballot for a justice of the supreme court. They follow the party line there more strongly than anywhere else. If a Republican is in doubt, he votes for a Republican. If a Democrat is in doubt he votes for a Democrat. And yet in 1956—when according to a lot of the talk we were just about sunk without a trace—the majorities for Republican candidates for the supreme court ranged from 65,000 to 90,000.

Does that sound like the Republican Party is dead? Anyone who believes that would believe in fairies. And I want to say that anybody who starts kicking the Republican Party of Kansas around under the impression that it is a corpse is due for the surprise of his life.

Now I think it is a good thing for Republicans in Kansas to be worried. We took a licking the last time, but the fact is that if I were a Democrat in Kansas today I would be worried a lot more than I am as a Republican.

After all, 1956 lacks a lot of being the worst year that the Republicans ever had in Kansas. Let's go back to 1912. Then we lost the President, a United States Senator, a governor, 5 out of 8 Congressmen, and the legislature. The party was split. Some people said the two factions would never get together, and yet the party came back in 2 years and elected a Senator, a governor, a lieutenant governor, and all of its candidates for the supreme court and the minor State offices. We still did not get back our Congressmen—that took a little longer.

How did we do it? Simply because the Republicans buried the hatchet, and most of them marched side by side and shoulder to shoulder to victory. We did it then—we have done it since under similar circumstances—and in 1958 we can and will do it again.

I have said it already, but I want to repeat that I am proud of the Republican Party of Kansas. The fact that for nearly 100 years the Republicans have elected governors five-sixths of the time proves not only that a majority of the people in Kansas are Republicans, but that the men we have elected to office in Kansas have done a good job. That has kept the State Republican.

I don't know whether you think the fact that no Democratic governor has ever been reelected proves anything or not, but it proves a lot to me. In the first place it confirms the fact that our Democratic governors were elected in the first place solely because we had a division in the Republican Party. In the second place it proves that after 2 years of Democratic rule, the people were more-than-anxious to return to a Republican administration. And we have had some pretty good Democratic governors, but the people of Kansas just couldn't stand for them for more than one term.

I'm reminded of what I heard that great Kansan and great Republican, Arthur Capper, say on more than one occasion. It was to the effect that our form of government is based on the idea of having one party take the responsibility for government, and the other party take the responsibility of watching it and seeing that it does a good job; and then he always added that the Democrats made the better watchers. That evidently has also been the view of the people of Kansas throughout the years.

Some of you go back farther than I do, but I have been well acquainted with all of the Republican governors of Kansas from Arthur Capper on down. You or I may not have agreed with all of them or with everything they did, but every one of them made a real contribution to the growth, welfare, and prosperity of Kansas. I doubt if any State can look back over any 40-year period and bring up a list of governors who will, on the average, compare in ability and integrity with the governors of Kansas during that period. I don't care where you make your comparison, but a good place to start would be among our neighbors. During most of this same period of time Missouri and Oklahoma have had Democratic governors and Democratic legislatures—in fact Oklahoma has had them all the time, and Missouri most of the time. Maybe both States have improved a little bit in recent years, but I can recall that for quite a period of time the standard way of ending a governor's term in Oklahoma was by impeachment. And when we think of what Pendergast and his lieutenants did in Missouri, it makes our Kansas political history shine out brighter than ever before.

And what I have said about Kansas Republican Governors applies to the Republican United States Senators and Representatives whom I have known. During my time there have been Curtis, Capper, Allen, Reed, Darby, and our present able and distinguished Senators ANDY SCHOEPPEL and FRANK CARLSON, all of whom have added luster to the Senate during their period of service. And I have been proud of the Kansas Republicans with whom I have served in the House of Representatives.

I am not going to quarrel with the people of Kansas for kicking the Republicans out occasionally. Believing as I do in the two-party system, I want to see a strong Democratic Party—and a party has to win once in a while if it is going to hang together. A one-party State makes for poor government, as has been demonstrated in some of the Southern States and elsewhere. But while I want the Democrats to be strong, I don't want them to be too strong.

The first time I ran for Congress I had the pleasure of campaigning for a week with Charlie Curtis, and I learned a lot. It was the best experience in campaigning I ever had. We made a lot of speeches—that was back in the days when people would come out to hear a political speech instead of sitting by the fireside and waiting for the television to come on. And I remember very well what Charles Curtis always said about the Republican candidates. He said, "I have been campaigning with your Republican candidates today. I have talked with people about them, and I know that all of them are worthy and well qualified for the positions which they seek. They are worthy of the vote of every Republican," and then he added, "and if they receive the vote of every Republican, they will be elected."

That is as true now as it was then. Here in Kansas any candidate who receives the votes of every Republican will be elected to State or Federal office, and in most counties that holds true as to county candidates.

That is because the Republican Party in Kansas, on the basis of its record, is trusted by the people. And we must see that it continues to merit this trust and confidence. I want the Republican Party and the Republican candidates to win, but I want them to win because they deserve to do so.

As far as political activity is concerned, we are beginning today the campaign to elect a Republican governor, a Republican legislature, Republican State and county officials, and a solid Republican congressional delegation. If we are wise, we will not let up in that battle until the last vote is cast on election day.

President Eisenhower in his speech at Chicago earlier this month called on the Republicans to get busy and nominate the strongest possible candidates on the Republican ticket. That's sound advice—that's good politics. But nominating strong candidates is only the first step, or more properly the second. The first step is up to the candidates in the primary—that is, the candidates and their friends. How well the winners will run in the general election depends a lot on the nature of the primary campaign. If it is clean and constructive—if it avoids bitterness—if it is conducted on the basis of the merits of each candidate rather than his opponent's alleged faults and deficiencies—we can start the general election campaign from scratch. We will be in a position to get that rock bottom sixty-five to ninety thousand Republican majority which was represented in the vote for supreme court justices in 1956.

But that is not enough. We must write a platform which is not only constructive but one which avoids extremes—one which is neither reactionary nor radical but realistically conservative—by which I mean conserving the advances in government which have been tried and found acceptable, and subjecting new ideas and proposals to the tests of need, soundness, practicability, and timeliness.

But good candidates and good platforms do not win elections automatically. I don't want anything I have said so far to give the impression that there is going to be anything easy about the coming campaign. It is going to require the hardest kind of work on the part of all of us, given in the spirit that government is the biggest and most important business we have in this country and requires the best efforts of all of us.

And finally, to be sure of winning, we have got to conduct the campaign with that mixture of confidence and fear which is known as running scared.

To do this takes leadership, it takes organization, and most of all, it takes interest and hard work on the part of every Republican. But that, my friends, is a small price to pay for good government.

Government Should Postpone Liquidating Surplus War Equipment

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 16, 1958

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the subject of surplus property disposals for the Federal Government. The editorial was published in the Waste Trade Journal on April 12, 1958.

I am confident that the information and ideas set forth in the editorial will be very useful to the Members of this body.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOVERNMENT SHOULD POSTPONE LIQUIDATING SURPLUS WAR EQUIPMENT

There is hardly an industry that has not been hit by the business recession but few

are as depressed as the scrap iron industry. With steel mills operating at less than 50 percent of capacity, the consumption of scrap has fallen off and prices have dropped to so low a level that in some instances it no longer pays to collect, prepare and pay the freight on certain grades of scrap. The simple fact is that scrap is in oversupply at the present time and even more disturbing are the prospects that there is a potential danger that the Government may increase that surplus supply by several hundredfold.

The tremendous supply of implements of war that the Government has been making and accumulating for years has suddenly been made obsolete by the nuclear weapons with which future wars will be fought. Planes and tanks and guns and ships which in years gone by were the standard weapons with which nations sought to destroy each other, have suddenly become obsolete. In this atomic age they have no place as a means of offense or defense. Our Government has billions of dollars worth of such outmoded war equipment on hand and which the War Department is anxious to get rid it. To some nations we will refuse to sell these outmoded weapons and others do not want them. Hence the only solution would be to scrap them, and therein lies the danger not only to the scrap iron industry but to others as well, if they should be thrown on the market during the present demoralized market conditions.

Many industries are very much concerned with the present plan of dumping Government surplus, which would compete with the products that they manufacture. The machine tool industry for example, which is wracked by a serious slump in sales and which finds itself in a depressed state, has already voiced its alarm over the tremendous volume of surplus tool sales by the various military services. Coming at a time when this industry's operations have been greatly curtailed, such sales by the Government are likely to put a still more serious crimp into their business and the industry hasn't forgotten what happened to it after World War II when the Government dumped hundreds of millions of dollars worth of idle military-owned machine tools on the market. It took the industry a long time to recover from that blow. With that sad experience still a vivid memory, the Metalworking Equipment Division in Commerce's Business and Defense Services Administration is reported to be exerting its influence in the proper channels in Washington in an effort to prevent indiscriminate dumping at present of surplus military tools.

We simply cite this as an instance of how some industries are taking precautionary measures now before it is too late to counteract the incalculable harm that might be done by a hasty liquidating program. Government dumping of surplus today would affect machinery, hardware, textiles, and many other industries.

For the scrap-iron industry, the danger of the Government's potential disposal program is infinitely greater. The Government has billions of dollars worth of obsolete military equipment that is stored in United States warehouses and that is piling up in European depots. The easiest way to dispose of it is to sell it for scrap. Under normal business conditions there would be little opposition or objections to such liquidation. But these are not normal times. The market has been unable to absorb the scrap that is being generated by industrial plants, and the scrap that comes form obsolescence and that is collected by dealers. That is why scrap prices are so depressed. That is why so many scrap yards have laid off workers thereby swelling the ranks of the unemployed.

Not only should the Government postpone the liquidation of this potential scrap that is located in the United States, but also the surpluses that are located abroad. The domestic scrap market would be in an even more depressed state were it not for the exports of domestic scrap to foreign countries. The Government could easily saturate the foreign markets with a scrap surplus by a hasty liquidation of its obsolete military equipment and thereby put an end to exports from this side.

There is no doubt that if the Government were to dump its surplus war equipment and sell it for scrap at the present time, that the material could probably be picked up at bargain prices. But in times like these what is best for the greatest number is the right policy to follow, and if that be true, then the Government should continue to hold on to its surplus supplies and equipment until business conditions improve and the time is more opportune for its disposal. The net return to the Government will be greater, and the various industries that produce machinery, steel, metals hardware, textiles as well as the scrap-iron industry will be spared an even worse depression than they are experiencing today.

Some Aspects of the Soviet Economy

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 15, 1958

Mr. CARLSON. Mr. President, last evening the Honorable Gabriel Hauge, special assistant to the President, delivered an address entitled "Some Aspects of the Soviet Economy," before the Economic Club of Worcester, at Worcester, Mass.

Mr. Hauge in this address analyzed the Russian economy on the basis of its technology, its politics, its society, and its economy. It is one of the most complete and informative discussions of the Soviet economy I have read, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

I am informed by the Public Printer that the manuscript is estimated to make 3¼ pages of the RECORD, at a cost of $263.25.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF AN ADDRESS ON SOME ASPECTS OF THE SOVIET ECONOMY DELIVERED BY THE HONORABLE GABRIEL HAUGE, SPECIAL ASSISTANT TO THE PRESIDENT, BEFORE THE ECONOMIC CLUB OF WORCESTER, WORCESTER, MASS., APRIL 14, 1958

The sputniks have brought in their wake a good deal of second-looking at the Soviet Union; its technology, its politics, its society, its economy. Out of this range of topics, I would like to talk economics with you tonight.

My purpose in coming here is neither to bury the Russian economy nor to praise it. Rather, I would like to look at some of its strengths and weaknesses, and to speculate with you a bit on some implications for the Russians, for the newly developing countries of the world, and for the American people. Needless to say, time will necessarily limit us to the broadest brush strokes, with little opportunity for qualifying detail.

I

Since the first 5-year plan of 1928, the Soviet Union has developed rapidly from the predominantly agricultural economy of the czars. Forced-draft industrialization, with its accent on heavy industry, was carried out by Stalin to prevent, as he put it, another beating of backward Russia by the more advanced capitalist countries. This was his justification for brutally holding down living standards to the barebones minimum. Now Khrushchev has announced the goal of catching up and surpassing the United States in production within the shortest possible time.

While the Russian economy was the sixth largest in the world under the last czar, it now ranks second and it continues to grow. Total Soviet output equaled a third of our own in 1950. By 1956, with a population 20 percent larger than ours, Soviet production had increase to about 40 percent of United States gross national product.

In the uneven development of the Soviet economy, industrial production, especially heavy industry and military equipment, has been favored. Overall industrial production in 1956 approximated 40 percent of ours. The distribution of that production among the several industries, of course, differs from our own. Russian output, for example, of automobiles, washing machines, and refrigerators, ranges between 2 and 4 percent of United States production of these goods. By contrast, the Soviets devote a far higher proportion of industrial output than we do to weapons production, which is their most efficient industry. They also concentrate more than we do on the products of heavy industry in general.

The output of some products approaches our own. Though lower for other fuels, Soviet coal output equals about 70 percent of ours. Steel output is about half that in this country. Since annual additions to steel capacity are now running about equal in tonnage in the two countries, the output of steel mill equipment must be about the same. The number of machine tools being produced is about twice that of the United States. Naturally the pattern is not uniform. Soviet output is much lower than ours in many essential industries such as petroleum, copper, aluminum, rubber, most chemicals, and electric power.

In a word, Soviet production has expanded considerably. Although its overall growth rate between 1928 and 1955 was not much higher than our own, the Soviet economy has been growing since 1950 at a rate roughly twice that of the United States. Since 1950 its average growth rate has been 6 to 7 percent. Its industrial production in this period has been expanding at about 10 percent a year. However adjusted to take into account the various qualifications scholars find necessary, the Soviet growth experience is substantial. It is a significant fact of today's world. It is a fact Americans should understand.

II

The Soviets have been able to achieve this expansion by tapping their wealth of natural resources and by ruthlessly shifting more than 25 million peasants out of agriculture between 1926 and 1955. During the same period, the nonagricultural labor force increased by an average of more than a million workers a year. In addition to its own natural and manpower resources, the Russians borrowed advanced Western technology and were aided by Western technical assistance. For example, General Electric built the Dnepropetrovsk power generators, Ford designed the Gorky auto plant, and International Harvester set up the Stalingrad tractor facilities. The results of all of this can be seen in the large amounts of American, as well as British and German,

equipment still used in many Soviet factories.

The key element of their expansion, however, has been purely domestic. It has been a matter of exploiting the people in order to devote every possible ruble of production to investment. This emphasis continues. In 1956 total Soviet investment in industry and public utilities amounted to 80 or 85 percent of plant and equipment expenditures in the United States.

Per capita consumption, on the other hand, is only one-fifth of ours. The mass of the Soviet people, especially the farmers, have been the underprivileged Cinderellas of the Communist community.

Changing patterns and emerging difficulties are somewhat slowing down the growth rate. Consider Soviet agriculture. Stalin sought to control the peasants and force a movement to the factories. These efforts helped make Soviet agriculture an economic flop. Since 1928 farm output per capita in Russia shows very little gain. Soviet agriculture is grossly inefficient. We produce agricultural superabundance with one-tenth of our labor force. Russian agriculture just manages to produce a grain, potato, and cabbage diet for the Russian people. In the process it utilizes about half the Soviet Union's working population.

Nature is somewhat to blame. Much of the sown land is not as rich as ours. The growing season is shorter, and does not allow much room for the vagaries of climate and rainfall. Most observers conclude, however, that much of the blame falls upon the Communist leaders themselves. Soviet peasants bore the brunt of the cruel burden of forced industrialization, especially in its early years. They were squeezed until there was little left to recompense their drudgery. They were overorganized. Their labors were directed by distant planners unfamiliar with local conditions. Investment in fertilizer and equipment until recent years was meager.

Now the Soviet leaders have promised their people a better diet than in 1956, including 40 percent more milk this year and 3½ times more meat by 1961. Khrushchev has announced that Soviet agriculture will overtake American per capita output of milk in 1958 and of meat by 1960 or 1961. That his own economists thought such goals visionary, Khrushchev himself rebukingly disclosed. Maybe the purpose behind the Russian chieftain's boast is to cast the American farmer in the role of Stakhanovist pacemaker to spur his Russian counterpart to greater efforts. Be that as it may, he could have challenged no more formidable American representatives in the game of productivity than our livestock and dairy farmers. I can only hope for the Russian people that in the future, Russian cows produce as much milk in Russian milk pails as they do in Khrushchev's propaganda speeches.

The Kremlin is also under pressure to raise industrial productivity to compensate for the slowing down in additions to the industrial labor force. Over the next 5 years, the movement of war-reduced age groups into jobs will add about 1.1 million workers to the labor force annually. This is about a third fewer than in each of the last 7 years. While the Soviet leaders hope that the flow of farm labor into industry will be resumed before too long, the immediate goal of more food is likely to require increased agricultural labor during the next 5 years.

The slower expansion of the labor force will, to some extent, be offset by increased efficiency. In this vital area, the Soviet managers seek to raise productivity to that of this country where industrial output per worker is between 2 and 3 times greater. Intensive research and development, both Russian and Western, hold the promise of continued or even accelerated general technological advance. In Soviet industry, furthermore, there are many unexploited opportunities for increasing productivity through the application of existing technology. This is true not only in the capital-starved consumer goods and service industries, but in heavy industry as well. The modernization and reequipment of industrial plants, now underway, will certainly raise productivity, but probably by less than the high expectations of the Kremlin.

To increase productivity by another means, great stress has been placed on industrial management. Russian journals frequently complain of bungling, ineptness, and even irrational behavior by managers and planners. To ease the rigidities, there has developed what one observer calls "blat." This is the function of wangling an allocation, an overplan credit or spare tire by give-and-take, tacit bribery, or a friendly pat on the back here and there. A sort of salaried 5-percenter sets up blat for his factory or supply depot. The big-city practitioner, running blat for a whole string of provincial factories, apparently deserves much of the credit for the fact that things do get done. All of this, of course, is not quite according to Marx.

Management and planning must have been deficient, indeed, to justify the wholesale shakeup of Soviet industrial organization announced by Khrushchev last May. The great industrial ministries centered in Moscow were wiped out and the operational supervision of most state enterprises shifted to 102 regional economic councils. Through this decentralization, the Communists hope to mobilize local resources and local initiative more effectively, to free the central planners from detailed operations, and to reduce the bureaucracy.

Perhaps the bureaucracy will be reduced. Some unwritten laws, including Parkinson's suggest it will increase. The prospect of administrators in 102 regions, each with the usual complex of deputies and staff assistants with which a Soviet bureaucrat surrounds himself, points rather to a burgeoning apparatus, not a streamlined administration.

Perhaps the Kremlin may be more successful in gaining greater productivity from local management with local incentives. Moscow is not, however, surrendering its formidable tools for central control, the apparatus of the Communist party, its inspectors, the financial organs and, most importantly, central control over planning.

We can reasonably speculate that the decentralization of Soviet industry may tend to regionalize the pattern of industrial self-sufficiency and development. It may improve efficiency somewhat. It may well complicate administration and planning initially with uncertain ultimate results. Perhaps it will also make the economy more responsive to its consumers.

The Soviet leaders have already come, for various reasons, to place greater emphasis on improved consumption: to stimulate labor productivity through the material incentives of improved living standards, to help remove the stigma of poverty from communism and thus increase its attractiveness at home and abroad, and to help generate more active support among the Soviet population, and to meet the sweeping pledges made by Khrushchev during the Presidium struggle of last year and reiterated when he recently displaced Bulganin as premier.

While the consumer goals set by Malenkov in 1953 were abandoned and have not yet been attained, the Krushchev program is both more ambitious and more specific. It puts special emphasis on lessening the very severe deficiencies in housing and agriculture, which are probably to receive almost a third of the total State investment provided under the proposed 7-year plan.

If Khrushchev's standard-of-living goals are to be reached, the share of resources available for the military or for investment in the expansion of basic industries must be lower than in the past. At the same time, a larger share of industrial investment will have to be devoted to programs with a relatively low payoff of new production. This will be true, for example, of the development of the eastern regions where initial investment requirements are high. It will be true also for the expansion of the fuel and raw materials base. In this area a chronic lag in new construction produced severe shortages in 1956 as the more easily extracted materials approached exhaustion. Obviously, total output will grow less rapidly under such a distribution of investment than when the minerals base was neglected to allow maximum investment in such high payoff sectors as machine building.

Faced with the political necessity of devoting added resources to improving living standards, of supplying economic aid to Communist China and the European satellites as well as to some other countries, of maintaining a huge and costly military establishment, the Kremlin has had to reduce capital investment plans. This fact has meant scaling down previous growth rates of heavy industry. Accordingly, the sixth 5-year plan of 1956 contemplated 25 percent less industrial expansion than claimed for the preceding plan. Even this target is apparently being lowered in the proposed 7-year plan now being designed to replace its defunct predecessor which had to be scrapped last September. This confession of failure recognized that the 1960 goals could not be attained on schedule because the cumulative shortfalls in several basic industries during 1956 were not remedied in 1957. Last year saw other failures to build new capacity planned for coal, iron ore, rolled steel, and electric power.

Nevertheless, the Soviet planners continue to devote a higher portion of their resources to investment than we do. This emphasis will help assure a continuing high rate of growth for the Soviet Union as long as rapid growth remains a major national objective. If Khrushchev's innovations achieve sufficient success to prevent a further decline in the rate of growth, by 1972 the Soviet steel output would double and the energy base would about triple. Also, with no reapportionment of priorities, consumption for the estimated 260 million Soviet citizens at that time would have increased, on a per capita basis, by more than 60 percent under the plan. The diet would be markedly improved and the present 13- by 13-foot living space for the average Russian family of four would be replaced by at least a 2-room apartment with kitchen and bath.

This is the plan. It may or may not come to pass, for, as it has been said, to plan is human; to fulfill, divine—or nearly so.

III

Whether or not these goals are achieved, perhaps an acceleration in the trend of improvement from World War II levels of individual welfare would be enough for the Kremlin's purpose. Without substantial progress toward these goals, however, the damage to worker morale might limit economic growth and weaken popular support for the regime. At the very least, such a failure would undermine the image coveted by Khrushchev of a government dedicated to popular welfare and determined to fulfill its promises to the people.

Perhaps the first major implication of recent developments for the Russian people is this: The Government's freedom of action relative to the population has, to some extent, been diminished. For even a complete dictatorship is inevitably influenced by the atmosphere in which it operates. It is conditioned by the needs and aspirations of its administrators, the society's professionals, and, at least to a limited degree, the popu-

lation at large. The heavier emphasis upon incentives in directing the activities of the Soviet citizen cannot easily be withdrawn. Presumably, Stalinist techniques could be reasserted only at great cost in terms of popular morale and internal stability. Moreover, the steps away from coercion and terror are mutually reinforcing. A reversal in direction, therefore, is becoming increasingly difficult.

Beyond this is a second major implication: The possibility of a spiraling emphasis on the production of consumer goods. Consumer desires may gain a new champion in the local economic officials who, under the decentralization scheme, will be in a position to have a real influence on investment planning. A greater production of consumer goods, moreover, will be required in order to apply existing pay scales to the increasing number of more highly trained workers and professionals. The larger number of scientists, technicians, and other professionals will have to be provided for in a manner befitting their station, even as the members of the Presidium and other high officials are today. This will require enlarged production of consumer goods and especially better housing. There must be something for higher ruble rewards to command. As the Kremlin faces up to the realities of this problem of human nature, its leaders may sense the point in Paul Henri Spaak's remark that it is harder to provide all members of the community with a roof, shoes, and meat than it is to launch an artificial satellite.

Third, the rising technical and professional level could itself profoundly influence the long-run development of the Russian society, both economically and politically. While specific prediction would be unwise, one can at least note several tendencies. There is, for example, the difficult job of running a complex modern industrial state under a totalitarian form of government. The Kremlin needs, in effect, the despised bourgeoisie. Such people, even in Communist Russia, may well be more interested in bettering the lot of their children than in doctrinaire socialism. Moreover, even directed education tends to stimulate some independent curiosity and thought. The skepticism of science, for example, cannot be confined to watertight laboratories. Some of it is bound to flow out. Similarly, the new generation of economic managers and planners who didn't experience czarist Russia or the rigorous discipline of the revolution may be more flexible than their predecessors. These tendencies toward a more liberal outlook on the part of the intellectuals, the managers, and the technicians have probably been reinforced by the trauma of the de-Stalinization campaign together with the constant revisions of Soviet dogma.

Fourth, Communist doctrine is being forced to yield to the impact of history. Soviet leaders have now openly abandoned the notion that the study of capitalistic accomplishment is unnecessary and even unpatriotic. In early 1956, at the 20th party congress, Anastos Mikoyan, now First Deputy Premier, criticized Soviet economists as deficient in the study of the present phase of capitalism. He went on to complain that they frequently limited themselves to picking out isolated facts for propaganda purposes and thus failed to make a real evaluation of economic activity abroad. Even at home, Mikoyan grumbled, Soviet economists frequently only skim the surface, functioning as dogmatists and purveyors of old formulas and old data.

If the Communist Party leaders mean what they seem to be saying, they are opening an even wider area to reexamination. The dogmatists are giving ground to the pragmatists, like Khrushchev, who face facts and adopt new measures. Even formal State ownership was apparently modified by his recent transfer of equipment from state-owned machine tractor stations to the collective farms which are nominally owned by their members, though very closely controlled by the Government.

Although Khrushchev is hailed in the Soviet press as a leader of Marxist theory, he has been the chief sponsor of the recent sweeping modifications of Soviet institutions. We do not know what will be the next move in his search for economic efficiency. It is clear, however, that nearly all of the institutional features and managerial practices of the Soviet economy will be subject to critical review.

Soviet leaders have already scrapped the long-held concept that machinery and equipment become obsolete only in capitalistic economies. In view of the crudeness of their yardsticks for measuring economic efficiency, they might even adopt a pricing system, including interest rates, that reflects both cost and relative scarcity of factors of production. Some Soviet writers almost seem to recommend the market mechanism of hated capitalism for setting prices. In an era of drastic change within the Soviet Union, even this heresy might be accepted.

In noting Khrushchev's pragmatic approach to economics, one is reminded of his remark at the height of the de-Stalinization drive. He said then that if the capitalist West expected Russia to abandon communism, it would have to wait until the shrimp learned to whistle. Some observers of Khrushchev's Russia today think they detect what could be the first faint sound of a shrimp trying to whistle.

Will Soviet economic development and technological advance continue to dilute doctrinaire Marxist ideology? Is it possible that economic growth and scientific development within the Soviet Union will consume the roots of Russian communism? Is it possible that the stubborn facts of economics will help guide its evolution toward a society with peaceful aims?

The speculation is interesting. Such remote possibilities, however, cannot dissolve our immediate concerns.

IV

Aside from its military implications, perhaps our primary concern over the Soviet advance in production lies in the international political arena: the appeal of communism to the developing and uncommitted nations of the world. Soviet bloc production is increasingly available to forge economic and political ties with these countries through expanded trade and aid.

The last few years have seen rapidly growing Russian trade with its satellites, its traditional trading partners of Western Europe, and with the underdeveloped countries. From both the satellites and the industrial West, the Soviet Union imports, on balance, manufactured goods and exports raw materials.

At times its sales affect world prices, as apparently recently happened with tin and aluminum. Their bargain prices could, of course, reflect conscious malice. More likely, the Russians cut prices in order to sell in competition with the established suppliers of western markets. These operations were in all probability designed to supplement their occasional gold sales in financing their external trade. This does not, however, imply a great reliance upon world trade. Autarchy is a long-held Soviet dogma that insists upon avoiding undue dependence upon imports from other countries.

But neither autarchy nor heavy domestic requirements for manufactured goods has prevented the Soviets from expanding substantially their trade with the developing countries. For their policy rests not on the economic benefits of trade but in Communist international politics. Where influence is to be had, where normal trade channels are obstructed, or where market prices are considered low, the Soviet bloc has eagerly stepped in. The Communists will buy anything or sell anything if it feathers their political nest. A ready example is their appearance as a major buyer of fish in Iceland, a land where that product is vitally important in overseas trade.

The Communist bloc has employed a second and related device to influence and penetrate the developing countries: military and economic aid totaling nearly $2 billion since 1954. About one-fourth of this total represents military equipment, for the most part already delivered. The remainder is economic development assistance, mainly in the form of easy credits partially repayable in commodities over a 12-year period.

As part of this aid, the Communists have undertaken substantial technical assistance. During the last half of 1957, for example, about 2,300 Soviet bloc technicians worked for 1 month or longer in 19 developing countries of the free world. Simultaneously, the number of foreign students and technicians studying in bloc countries is increasing.

The hazards of economic and technical dealings with the Communists have not entirely escaped the free countries. Perhaps Syria's recent merger with Egypt received a push from Syrian second thoughts on the dangers of being held too closely within the Russian bear's embrace.

Some countries have been wary of accepting large numbers of Soviet personnel, fearing the risk of subversive activities. Moreover, for a nation to export heavily to the bloc is to withdraw from customary cash markets. If long continued, such withdrawals imply a progressive dependence upon Communist outlets which are governed by political, and therefore unstable, considerations. In addition to these major problems, imports from the bloc are limited in variety, sometimes deficient in quality, and inadequately serviced and repaired. Under the circumstances, producing countries were somewhat distressed when the Communists resold Syrian wheat, Burmese rice, and Egyptian cotton in the world market. By and large, however, we should not overestimate these difficulties.

Both Soviet aid and trade are growing. Though still relatively small in amount, with actual aid expenditures so far amounting only to 10 or 15 percent of commitments, the concentration upon a few sensitive countries magnifies the significance of these endeavors. In aid as well as trade, moreover, the impact lies less in the size of Communist assistance than in the manner of its execution. They emphasize visible and tangible improvements, such as the steel mill in India. They also stress appealing projects, such as nuclear laboratories in Egypt and Yugoslavia and technical institutes in Burma and India. They scatter shotgun offers around the globe, including South America, fully confident that they will not have to make good on all of them. They make agreements rapidly in a blaze of publicity after top-level meetings. They masquerade as the unselfish and disinterested supporter of nationalism and seek to exploit with dramatic malevolence the frictions within the non-Communist world.

By these activities in trade and aid, the Communists seek to influence both the course of development and the international political attitudes of the developing countries. Their economic offensive will probably continue to be directed primarily toward the countries in which the bloc hopes that its political objectives can be advanced. Subversion may be their goal in some cases. Perhaps more frequently, they seek to sway the international policies of these countries, to create ties of economic and political dependency, and to pave the way for the acceptance of communism in the years ahead. Khrushchev has made it clear that the So-

viet Union values trade least for economic reasons.

The Soviet state trading monopoly, controlled propaganda and internal dictatorship comprise effective machinery for pursuing these ends. Increasing production permits the increasing employment of this machinery. The Soviet leaders are no doubt pleased with what they regard as their success with this policy. They will almost certainly intensify their efforts, relentlessly waging the economic cold war. At the same time, they seek to create an image of the Soviet Union as a morally respectable and economically advanced member of the world community.

On the basis of their own development, the Soviets preach the doctrine of communism as the only true way of economic progress. It is in this connection that their propagandists constantly emphasize the recent rise in unemployment in the United States. Khrushchev, in a recent interview with a French journalist, was quoted as saying about the unemployed in our present recession that they can die from need and privation and lead a dismal existence. Needless to say, temporary unemployment is of great concern to all Americans and to their Government. This concern has led to vigorous efforts to minimize its impact and to foster a resurgence of the economy. However, if Khrushchev is concerned about the well-being of the individual American, he should know that the average industrial worker in this country, temporarily out of work, can buy more with his unemployment compensation benefits than the average employed Soviet work can buy with his wages. In human terms, moreover, the substantial underemployment of many Soviet workers means low productivity, low incomes, and thus a low living standard. It would be no trick for us to abolish unemployment in the Soviet fashion by abolishing free enterprise and chaining every worker to a state-controlled job. You don't have to ask free American labor why they reject that solution with the virtual serfdom and accompanying low wages it would entail.

Business ups and downs around a growth curve create problems in a free economy, some of which we are now experiencing. But they do not compare with the political struggles and abrupt party-line changes of a totalitarian economy. Nothing in our experience compares with the economic and social disruptions and human tragedies resulting from the forced collectivization of the Russian peasants. Even the relatively minor shifting of gears of the controlled society doubtless impairs economic efficiency, when, for example, Malenkov assumed power and shifted emphasis to consumer goods, when he was deposed and emphasis shifted once more, and again when Khrushchev's policies took hold. Obviously, dictatorships with their regimented economies have serious problems of their own in trying to achieve stable progress.

The appeal of communism to the underdeveloped countries is heavily grounded in anti-colonialism, which sometimes become anti-capitalism. Moreover, the most modern scientific achievements are linked to the image of the undeveloped Russian economy of 1917. The Communist Party line was fully spelled out at the Afro-Asian Peoples' Solidarity Conference held in Cairo last December. The familiar distortions were all paraded: that Soviet Russia had become a great industrial power in 40 years without any outside help, that history shows the fastest way to industrialize is to nationalize the means of production, and that this course is best for the masses of the people in raising living standards. Let's consider these claims.

First, did Russian development take place without external aid? The Soviet propagandists conveniently forget that they started with the czarist economy which was then the sixth largest in the world with production per capita substantially greater than any of today's underdeveloped countries. The Communists also forget that their subsequent development was helped by vast infusions of foreign technical assistance in the 1930's, by the wealth of machinery and equipment that the West poured in under wartime lend-lease, and by the capital windfalls resulting from the Soviet looting of countries occupied during and after World War II.

As far as economic growth is concerned, it must be remembered that an advanced economy such as our own takes much of its progress in the form of an improved quality and variety of output, more services, and more leisure. Such growth in breadth and depth inevitably shows a lower statistical growth rate than the developing economy's expansion in basic and standardized commodities. During the 40 years, 1880–1920, which some experts consider to be the period most comparable to the 40 years of communism in Russia, the American economy grew as rapidly as has the Soviet economy over its history. But there seems to be a disposition among some in the underdeveloped areas to discount our experience as a special case, now distant in time.

During the 20th century, however, there has been a parallel development in Canada. The comparison of very different economies cannot, of course, be precise, but over the same 40 years which encompass the Soviet experience, Canada grew at least as rapidly as the Russian economy. Indeed, her gross national product from 1920 through 1952 increased at an annual rate of over 7 percent, measured in constant dollars. This growth, moreover, was far better balanced between agriculture and industry than Russia's. One should hesitate, therefore, to find in the Russian experience any clear solution to the economic development problem.

But the cruelest hoax of all is the claim that communism is best for the people and their living standards. Presumably this relates to those basic elements—clothing, food, and shelter. With regard to clothing, there has been a noticeable improvement under communism. The Soviet's own published figures, however, show that the average Soviet diet in 1955 and 1956 could not have been much better, than under the czar in 1913. In both periods, it was the same uninspiring grain and potatoes diet, with very little meat and other quality foods. In the matter of housing, a recent United Nations study showed urban housing standards in the Soviet Union to be the lowest in Europe. Russian city dwellers, after 40 years of sacrifice under communism, have no more living space than they did under the czar. Housing remains the most depressing aspect of pictorial reports from present day Russia.

The Canadian experience, parallel in time, reflects in striking contrast sharply increased living standards for her people with no sacrifice of personal liberties. The Canadians have done this by providing an economic climate in which individual enterprise could flourish. They were thus able to supplement their own development capacity through a massive inflow of private capital from abroad. Our own progress and growth at a comparable stage of development was aided in a similar way from Europe. That was a key to economic development in the United States as well as in Canada.

At the Cairo Afro-Asian Conference, the Russians characterized Soviet history as a lesson in economic development. It is a lesson worth studying, a lesson in wringing capital out of a regimented people. Rapid industrial growth can be achieved under communism, but only by sacrificing the economic interests of the people. At the risk of some oversimplification which does no violence to the facts, we can say that 40 years of communism have given the average Russian citizen one more shirt in return for his sacrifices. The loss of liberty, the liquidation of friends and relatives, the long hours of labor, the terrible famines, all have been paid for with a few yards of cloth and a handful of social services. This is the true lesson of the history of Soviet economic development. It is a lesson that the developing nations should carefully read.

V

This review of some aspects of the Soviet economy will be useful if it helps us see a few things more clearly.

First, the Soviet rulers, at great cost to the Russian people, have created an industrial machine of considerable strength. They have done so, however, not by slavishly following Communist theory but by steadily modifying its original doctrinaire concepts. They have abandoned egalitarianism and have built a society of great and growing inequalities and discrimination. But the Soviet economy is a fact today. We should nurture no illusions about it. We should know its strengths and its weaknesses and its capacity to change regardless of doctrine.

Second, fostering rapid and healthy economic growth in our own country must continue to be a major goal of private and public policy. We prize economic growth, not for its own sake, but for the well-being it is capable of bringing to the individual. To allow a competition with the Soviets motive to overshadow the sound reasons for what we have long been doing would demean the will and intelligence of this Nation. It might do more. It might produce efforts toward an unhealthy, inflationary puffing up of our economy in the name of growth. It might lead to aping the forced-draft methods of the Soviets with all the damage that could produce in our kind of society. It might jeopardize the future of America's plenty in freedom.

Third, we must recognize the fact that Soviet economic expansion provides the Communist bloc with new resources for economic penetration among new and developing nations of the world. Our resolute response should be a vigorous support of reciprocal trade, adequate and imaginative economic and technical cooperation among friendly nations, practical reemphasis on spurring an increased flow of private investment. It means, too, telling the true story of the economy of the American people—what it is and what it has produced for us and for others. In the unforgettable language of the Declaration of Independence, "Let facts be submitted to a candid world."

The economy of the American people has served this Nation and others well. It has brought a material complement to the dignity inherent in freemen. It has provided the essential strength for the defense of our way of life and for those who share it. It lies within the power of this generation and those that will follow after to renew constantly this lifegiving strength. That we can do by the imaginative and vigorous practice of freedom. And in so doing, we can hasten the day when the whole world becomes a neighborhood of nations.

Agatha Kelly

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. MANSFIELD. Mr. President, Butte and Montana have lost one of

their most capable teachers, in the person of Miss Agatha Kelly, who passed away a few weeks ago.

I ask unanimous consent that a fine tribute to Miss Kelly, which indicates the esteem in which she is held by her colleagues, be printed in the Appendix of the RECORD. The editorial was published in the Montana Standard on March 24.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AGATHA KELLY

This community lost a first-class citizen in the death last week of Agatha Kelly who had been a teacher in its public schools for more than 40 years. Miss Kelly was a teacher of the old school. She left a lasting impression on the minds of thousands of students who had passed through her classrooms.

In her devotion to her profession she had attended summer school during 27 seasons, and at the time of her death was near the achievement of a doctorate in education at the University of Wisconsin. She knew 8 or 9 languages intimately and had traveled in Europe during 2 summers in the interest of extending her knowledge.

Miss Kelly's memory is enshrined in the hearts and minds of her countless students not only as an excellent teacher but as a kind and generous person and a sympathetic and understanding friend.

She was also held in the highest esteem by the members of her profession, 68 of whom signed a glowing tribute to her after she was stricken by what proved to be her fatal illness. Because it reveals the nobility of character of Miss Kelly we are herewith reproducing the document which was signed by "Your Loving Friends and Colleagues":

"There are certain lessons that we have learned from our long and treasured association with you, not the least being that in the midst of the excessively active life of a high-school teacher it is possible for one to be a saintly scholar. It is natural that we should think of you as a true and faithful friend. How can we help but be grateful for your kindness through the years spent in your stimulating company when we were so often aware of your quick and keen mind and of the astonishing combination of your learning and of your lightness! How well we know the hallmarks of your character, your honesty, your diligence, your integrity. Blessed with a clear insight you were perfectly straightforward and transparently truthful in your lines of thought and action.

"Your versatility amazed us. So graciously you shared your musical accomplishments in piano, organ, and voice. The same was true with dancing, skating, swimming.

"Your charity has been an inspiration to us. God's unfortunate children know well the generosity in your heart. You never turned from the needy. You sought occasions to give your service and to share your worldly goods.

"Noble is the name for you, Agatha. Every action of your life mirrors your own beautiful appellations of 'Love of God.'

"A teacher in the Butte schools for years, you are best known, of course, for your expert and cultural knowledge of classical, oriental, and romance languages. In your teaching particularly we have observed your loving interest in encouraging your students. How fortunate were those who benefited from your shining example of total dedication.

"Many of us also recall other phases of your teaching career when your early experience in the elementary schools was recognized by appointments as music supervisor and as principal of the junior high school. You achieved excellence in every endeavor.

"Teaching, of course, was your life. For it was a full-time occupation. If you paid the penalty of excluding other attractions and pursuits in order to mature as a scholar and conscientiously to discharge your duties as a teacher, you acted wisely. The fulfillment of your gifts could have been realized only in the career you chose; for your work of imbuing immortal minds with the just fear of God and love of fellowman has engraved something which will brighten to all eternity."

We can add nothing to this except to say that it was most fortunate that Miss Kelly knew during her lifetime the kindly sentiments of her associates and friends.

Address by Hon. Karl E. Mundt, of South Dakota, Before Kansas Convention of Young Republicans

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. SCHOEPPEL. Mr. President, on December 7 of last year, my distinguished colleague, the Senator from South Dakota [Mr. MUNDT], delivered a speech before the young Republicans of my State, at Topeka, Kans. I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR KARL E. MUNDT OF SOUTH DAKOTA, BEFORE STATE YOUNG REPUBLICAN CONVENTION, TOPEKA, KANS., DECEMBER 7, 1957

Thank you very much indeed, BILL AVERY, for that very generous introduction. I'm mighty glad that you stopped when you did or I wouldn't have recognized myself sufficiently to have gotten up at all. At least part of what you said is correct. I am a Member of the United States Senate. Beyond that, you were on your own.

But, former Governor Hall, Congressman Ed Rees, Congressman Bill Avery, and distinguished guests at the head table, leaders of young Republicanism here in Congress and nationally, and ladies and gentlemen of the Republican persuasion, it's good to be back in Kansas and good to be back here on another occasion of Kansas Republicanism.

I remember very vividly my experiences a few years ago talking there on Kansas Day, the fine turnout of very hard working Republicans who attended that meeting, and it's thrilling to stand here and see this great aggregation gathered together on a football Saturday, looking around for something to do to help save America. I'm just as much of a football fan as you are, and I'm glad that there aren't many games left, although I am going to have some fun driving back north this afternoon listening to the Notre Dame-SMU game, I'm sure, and I suspect I like football for the same reasons you like it.

I am delighted to see in this Republican company such a fine gathering of young women, such a fine gathering of Republican women of every age and of every era, because I have a prevailing conviction that the safety of this country is going to be protected ultimately by the sound judgment and the good sense and the hard work of the women of America who work in politics. I'm just glad to see so many of you here.

You know, if I didn't already know what wonderful folks Kansans are and what wonderful Republicans you are, I could sort of express myself, I suppose, by perverting a toast which I one time heard that goes something like this: "Its easy enough to smile, with a girl and a glass and a song. But the man worthwhile is the guy who can smile, when he's brought the old woman along." As far as I'm concerned, there isn't an old woman in the crowd, you're all young. The poet said there is no such thing as an old or ugly woman. I think he's exactly right. And I agree with another thing the poet said. The poet said that women are the masterpiece of the Creator, the edition is unlimited, and no man should be without his copy. That adds it up pretty well. Like a lot of you, I agree that the Roosevelt boys tried to carry that to excess, however, in trying to accumulate a whole library.

Kansas and South Dakota, you know, are a great deal alike in a great many ways and one of them is politically. I know your fine Republican Congressmen, I have worked with most of them in the House and in the Senate. I have worked long and hard and in teamwork with your 2 fine and illustrious Senators, FRANK CARLSON and ANDY SCHOEPPEL, 2 of the best Senators of the United States to work as a team and strike together, who are a credit to any State, and both of whom are doing a terrific job, and I know that Kansas and South Dakota are part of this great Republican Cherokee strip that starts at the Canadian line and runs down as far as Oklahoma and then stops. But here is a totem pole of freedom; here is a Republican Cherokee strip, and come good times or bad, we refuse to be bought or bribed or bullied. We're just too independent to sell out to the other side.

I can remember in 1952 when I was serving as chairman of the speakers bureau for the Eisenhower-Nixon campaign, and a great Kansan was doing a terrific job managing the campaign, Wes Roberts. Wes and I made a minor wager as to whether Kansas or South Dakota would carry the greatest percentage of Republican victory for Ike. We both knew Ike was going to win, we knew our States were going to come in right, but we made a minor wager, and I bet, of course, on South Dakota; he bet on Kansas, and we had to carry it out to the fifth decimal point in order to determine who won. It was that close. I'm glad to tell you South Dakota won. But it was pretty close. And we've both slipped a little bit since then, I'm sorry to say. You've elected a Democratic Congressman, we've elected a Democratic Congressman; we've done a little better than you, we've kept a Republican governor, but we're both slipped a little. And believe me, we're going to both work hard together to pick up that slip come 1958.

I thought I would ask and answer four questions in the course of my discussion about republicanism with you fine coworkers here this noon, and I've got enough notes here so I'm going to try to remember to say something that I told the press I would say. But I want to talk to you pretty much from the heart and off the cuff.

I want to ask and answer these four questions: No. 1, what does it mean to be a Republican in 1957? No. 2, what are our current responsibilities as Republicans in 1957? No. 3, what is our record? What's the story that we have to tell? And No. 4, why should we win in 1958 and 1960?

We're here as people interested in the business of good government. You're here because you expect to do something to help bring about the kind of decisions that you want to have happen in 1958 and 1960. And I think its good on occasion for us to reflect

a little bit as to what it means to be a Republican. Why are we Republicans? There is another party. Or, you could be an independent. Why are we Republicans? I think its a good mental exercise sometimes to take a sheet of paper and write down the reasons why we believe in the Republican cause.

I had a most interesting discussion early in the campaign of 1952 with then Gen. Dwight D. Eisenhower, now the President of the United States. In the course of the conversation, I said to him, "Tell me, Ike, how do you happen to be a Republican?" He said, "Let me tell you something. While I was in charge of NATO, and starting about in 1950, delegations started coming to Paris from both of the political parties urging me to run for President. I didn't take any of them very seriously for a while. I didn't have any intention of becoming a politician. I was looking forward to retirement. But when they continued to come and continued to present arguments why they believed that there was a service I could render as President of the United States, or at least as a candidate for the President of the United States, I started giving it some serious reflection, and the first thing I had to do was this: I had to ask myself if I agreed to become a candidate for President, on which party would I run? Because I had been in the military services so long, I had not been identified actively with the Republican Party or the Democratic Party, so I had to decide for myself, if I'm going to get interested in this thing, obviously I'll either have to let my name be submitted as a Democrat or as a Republican. So I sat down in my office at NATO there in Paris with a sheet of paper and I wrote down on one side of the sheet of paper the Republican principles and the Republican personalities that I knew something about. On the other side I wrote Democrat, New Deal, or Fair Deal (or call it what you want) and listed the principles and the personalities of the other party that I knew." And, Ike said, "I knew a lot of good people in both parties. I knew something about what had been going on, because I had been in and out of Washington in my official capacity a great many times. When I had put down the best analysis I could on those pieces of paper, I concluded that I felt more at home with Republicans; that I found myself in agreement with more things that Republicans stood for than I could agree with from the people on the other party. I believed that those Republican concepts, those principles, and those personalities were better for America and the world than those on the other side. So I said to Mamie, 'If by any chance I agree to run for President, it's going to be as a Republican, because that's the party in which I believe. That's the party which holds the most hope for America.'"

I kind of like that approach, because this business of deciding what party you belong to isn't all black or all white. It isn't just a matter of geographical environment or hereditary conviction. It's a mental exercise and we can't expect ourselves to be in 100 percent agreement with every other Republican or with every concept and every principle and every policy that any Republican convention, State or National, may happen to adopt. It's a question of relativity. It's a question of keeping things in their proper perspective.

It's a question of looking at the situation in balance, because we wouldn't have just two parties in America of importance if each of us were going to follow the inclination of his own nose. We'd have a half a hundred parties, because Republicans disagree with each other on various aspects of the farm program, various aspects of foreign policy, various aspects as far as reciprocal trade treaties are concerned. Why not? We're Americans—we should be disagreeing. The question is, on balance, where are you the happiest? On balance, where do you feel the most comfortable? On balance, which set of principles, which set of people do you think are best for America? And I'm sure every man and woman in this room, if he would do that, or if she would do that, would come up, as Ike came up, with an honest answer to the effect that you feel more at home with Republicans. That there are more things that you believe in that are Republican and that you uphold. And that there are fewer things you agree with which are found on the other party's piece of paper or on the other political team, so you can't find yourself happy with a very great many of them.

Let me suggest just a few. To me, what does it mean to be a Republican? Why am I a Republican? In the first place, I think that Republicans are dedicated to individual freedom, just a little bit more than the other team. I'm not trying to say the other team believes in communism or tyranny or totalitarianism, but on balance, I think you can prove demonstratively the Republican Party believes more definitely in individual freedom than the other side. Take for example our attitude toward private property, toward private ownership. We just don't believe in national socialism. We don't believe in communizing or socializing or nationalizing any of the great industries of this country. The other people do. Sometimes they want to nationalize the doctors. Sometimes it's the bankers. Presently it's the private power companies. But they are always trying to put the clammy hand of Washington and of the Federal Government on some particular private ownership enterprise in this country. As Republicans, we resist that. We believe in opportunity for the individual as against the other fellow believing in opportunity for the state. So that helps make me a Republican.

We believe in expanding individual opportunities. We support the chance for a young man to get ahead. We believe in security, too, but we don't make that a fetish. We're not happy when everybody has the security of a cow in a barn or a hog in a pigpen. We're not happy when people have warmth, clothing, food, shelter, and nothing more. We're happy only when people have an opportunity to forge ahead as far as they can go respectably without interfering with the liberties or opportunities of other people. Our appeal is to the people. The other party appeals primarily to the politicians. I'm proud as a Republican to be living in an era when we haven't got a single big political boss working in the Republican Party. If you're talking about political machines, if you're talking about political bossism, you've got to talk about Hudson County in New Jersey; you've got to talk about Tammany Hall; you've got to talk about the Kelly-Nash machine and the people that ran and run Chicago; you've got to talk about what Crump did down in Memphis. The big politicians, the big political machines, are all Democratic in this country. The Republican Party believes in the people, and we make our appeal to them. I think from Abe to Ike we have stayed pretty consistent in our concept by supporting the idea that the Federal Government should do only those things which need to be done and which the individual State and the individual people cannot so well do, or cannot do at all, for themselves. So that also helps me be a Republican. That doesn't mean that there aren't any Democrats who believe in those things, but by and large on the record—this is as easy to prove mathematically as 2 times 2 equals 4—you find more people, and you find more policies supporting individual opportunity when you talk about Republicans than you do when you talk about New Dealers or Fair Dealers. It is one of the characteristic qualities of Republicanism.

Why else am I a Republican? Republicans by and large believe a little bit more in constitutional Americanism than does the other party. I am not saying that the other party is un-American. I am not saying that they don't believe in American concepts; but I am saying that on the historic record, the Republican records, the Republican personalities, the Republican policies are more faithfully dedicated to our constitutional concepts than are those of the other party. Let me prove it to you. We believe, by and large, by the separation of powers, maintaining that constitutional concept of checks and balances. On the record, the other team, for 20 years, exalted and magnified and expanded the powers of the Executive, and made a rubber stamp out of the American Congress. On the record, the other side wanted to break down the independent stature of the Supreme Court and tried to pack it with political hacks. The Congress of the United States, with some fine help by Southern Democrats and with the leadership of Republicans, stopped that Supreme Court purge.

We Republicans believe in decentralization of government. We don't believe in gathering up in the Capitol of our country all of the authority, all of the power, all of the economic prowess of the people. We believe in keeping those great bastions of freedom out in the hands of the people. The Republican Party, much more than the other party, believes in the most significant of the 10 amendments called our Bill of Rights. We believe in the 10th amendment, the keystone to the whole business. That one that says that those powers not specifically granted to the Federal Government shall be retained by the States and by the people. The 10th amendment is uniquely and exclusively an American contribution to the concept of self-government. There isn't any other country in the world that has that amendment. A lot of other countries have free speech, have freedom of the press, have trial by jury. But you search futilely to find any other country that has established a commonwealth of 48 States, each with its own legislature, each with its own court system, each with its own governor, each with its own built-in sovereignties and rights. Forty-eight great bastions protecting the freedoms of us all. We believe in that as Republicans. For 20 years the other party led a studied and steady attack on the 10th amendment and on the rights of individuals, and on the individual rights of States. On December 15 we commemorate as Americans the 166th birthday of the Bill of Rights. When Virginia ratified it on December 15, 1791, it became part of the Constitution. It became part of this great body of law, constitutional law, we call our charter of freedom—our American Constitution. As a Republican, I am glad that my party, to a greater degree than the other party, remains faithful to the constitutional American concepts.

Third, I'm happy to be a Republican because I think my party is dedicated to economic, efficient government to a greater degree than the other party. I think that's easy to prove. In the history of the American economy you can make some pretty strong and startling statements. The superlatives are so great, you're almost afraid to utter them. Actually, a lot of Republicans haven't even whispered them to a Democratic neighbor for a long time. But we should be shouting them from the house tops. Look at the record. All of the important reductions of income taxes in the history of America have been made by your party and mine. By the Republican Party. And all of the big increases in public spending, all of the big, new ideas when the hand of government reaches into the pocketbooks

of individual citizens and takes out a bigger bundle of bills, those have been made by the other party. Obviously, we must believe more in efficient and effective and economical government to have established a record like that. All of the important steps in the direction of debt reductions by the Federal Government have been made by your party and mine. The other party talks about it a whole lot. They talk about what they would do about cutting down taxes. They talk about what they would do about cutting down debts. They don't even know. They've never had an experience in it. They've been building them up all the time. You can turn the pancake either side up. All of the important increases in expenditures by the Federal Government have been done by the other party. All of the important reductions by ours. I think we ought to tell that to our fellow Americans. It makes me proud to be a Republican. Obviously we have to believe more in economic government than the other party, because we practice it. Sometimes the other party doesn't even preach it. It doesn't practice it, that is certain. All of the important payroll decreases in government have taken place under Republican leadership. It makes me proud to be a Republican, because I think that record stands for good government. I think it is an important demonstration of Republican soundness.

I think you could add one more distinction. What does it mean to be a Republican in 1957? It means that if you belong to the Republican Party, you belong to the party of peace. That doesn't mean that the other party is the war party. But in politics you can't escape an examination of the records, and you can't get any place campaigning for office if you try always to compare your party with par, or with perfection. You don't deserve to call yourself a political worker unless you're realistic enough to know that you have to compare what your party has done with what the other party has done. You can never get anyplace comparing your record with the other fellow's promises. Promises are too elastic. They're too ethereal. But the record is there for man to read for all time. I'm proud of the Republican record in the field of peace. I'm proud of the fact that no war in the 20th century has been started under Republican leadership. I think Americans, who crave peace now, who worry about sputniks, who worry about satellites, who worry about the growing menace of the Communist threat (and anybody who's wide-awake these days must worry about that); Americans, by the tens of millions are ready to be told that what the Republicans have done in the past they will do in the future, and that is to exert their best and their successful efforts for the maintenance of peace. That record is something we should all be proud to talk about.

Now, I won't discuss what it means to be a Democrat. Even the Democrats don't know the answer to that question; why should I get into that? I can't even tell you the answer to the question, "Why they should be Democrats?" to say nothing of what it means to be a Democrat. I'll leave that up to them. But as a Republican I think we ought to be telling the world what it means to be a Republican and go out and invite other people to join up with our party. This is our faith, this is our creed, this is our club. Out there in radioland, let me say to all who are listening, if you like what we've done, if you like what we stand for, we need recruits. We welcome you to come over to our side. We don't even have to rebaptize you. We'll take you where you are and put you to work. We won't ask you any embarrassing questions about why it took you 20 years to get to be a Republican, or 30 years, or why you wasted half your life in the Democratic Party. Come on over. We're glad to have you join if you believe in the book of accomplishments and the book of principles that identifies you as a Republican.

Now, what are our current responsibilities as we face up to 1958 and 1960? I think primarily our current responsibilities are to tell the story of Republicanism across the length and breadth of America. I think that we ought to quit dividing ourselves over minor irritations. I'm not concerned whether a fellow is a McKinley Republican or an Abraham Lincoln Republican or an Eisenhower Republican or a Tom Dewey Republican, or a Taft Republican. I don't care whether he's a modern Republican, or a souped-up sputnik Republican, or whether he's an old-fashioned hoop-skirt Republican. I can only say this—that I like Republicans.

I expect Republicans to disagree. I wouldn't want to belong to a party that operated like an iron lung where nobody could move and nobody could differentiate and nobody could deviate. I think it's wonderful that we've got different ideas about Republicans, but we ought to quit trying to pin labels on each other. I think the time is long past when we should take off the road the Republican quiz show and quit asking each other what kind of Republican we are. If you believe in the basic concepts we've been discussing, let's get united. Let's work as a team to tell our story. You don't expect everybody on a football team to be the quarterback, or a halfback, or a guard, or a tackle. Each has a little different concept of the game, and you ought to have that in the Republican Party. There is, in this great catalog of our creed, enough things with which all of us can agree certainly to make us good and active Republicans, and so I think one of our current responsibilities is to unite. To become a team. To recognize the right to disagree a little bit within the family. But to unite on the basic principles that have motivated Republicans for 100 years, from Abe to Ike, and to recognize what would happen if the other side should come back in authority. If we do that, I'm convinced that we're going to be successful.

What is our Republican record? What is our story? What do we have to tell to the American people? Here we haven't any choice but to look at the record of accomplishment of our party in 5 years, and compare it with the record of accomplishment that the other party made in the preceding 20 years. That's honest, that's fair, that's courageous, and there isn't any other basis on which we deserve to win except by comparing the record, and trying to convince our fellow citizens that our record is better for them than the other. And what a record it is when you look at the facts. What a wonderful theme of success we Republicans can play, once we stop trying to play the music on the basis of the flyspecks on the sheet music and start looking at the notes and sharps again. Then we look at what really was written on there as a symphony. Now let me give you another superlative. I believe that the 5 Republican years of the Eisenhower-Nixon era, of your Republican era and mine, can probably be identified as the most fabulous and productive 5 years in American history. Now that's putting it high enough. That's inviting comparison. That's challenging the other fellow to put up or shut up. I believe that our 5 years, the past 5 years starting in January of 1953, are the most productive and the most fabulous half decade in the history of the United States.

Let's take a look at our record. Is that political hyperbole? Is that something the Democrats can disprove? If it is, let them try. Let them pick out any 5 years that the Democrats have ever had. Let them pick out any 5 Democratic years of consecutive peace if they can find them, or let them select their years of war. Let them come up against the stern reality of some hard-boiled statistics. Let me point out that so many Americans have become accustomed in the last 5 years to peace and to plenty and to prosperity under our Republican administration that they fail to remember the wars, the chaos, the deficit spending, the corruption, and the communistic infiltration that took place just before we came into power in 1953. Lots of us have been guilty of magnifying the things on which we disagree and forgetting to point out the great achievements which have taken place in this Republican era of today.

Let's look at the statistics in this connection. Let's look at the facts. No. 1, never in the history of America have so many people been so profitably employed for so long in an era of peace as in these last 5 Republican years. If that's wrong, defy the Democrats to disprove it. Never have so many Americans for so long earned so much and kept so much for themselves as in the past 5 years of American history. Government spending in this era has been reduced despite the need to continue high costs in the areas of foreign relations and national security. In spite of that we have reduced the Truman rate of spending which was $78 billion a year by at least $6 billion a year, even including the money we have to spend for scientific weapons and supersonic weapons and all the other responsibilities of reluctantly becoming the leader; the acknowledged leader of the free world.

Taxes have been substantially reduced during these 5 years. About $25 billion have been saved the American taxpayer since the Republican Congress under the Republican administration in 1953 cut the taxes down by a rate of $7½ billion a year. Sixty-eight percent of the cut went to the people. Thirty-two percent of the cut went to the corporations. For the first time in a quarter of a century the Federal Government is operating for the third year with a balanced budget.

Strikes and work stoppages have been sharply reduced while union membership is at an alltime high. Certainly the members of labor, organized and unorganized, as they look at their records and paychecks, can find nothing but praise for the Republican record if they look at it objectively and not as the captives of some particular labor boss who's trying to tell them how to vote.

Next, the Federal payroll in the last 5 years has been decreased by more than 200,000 employees. Next, the Republican Party has stopped socialism cold in America. More than 700 business enterprises which 5 years ago were operated by politicians in the Communist-Socialist pattern have either been entirely liquidated or sold back to private owners and operators.

Next, scandals and corruption have disappeared from the Federal Government to such an extent that you don't even hear it discussed in the headlines of the papers anymore. Not a single instance has developed of an Eisenhower appointee who has been shown to be in the service of the Communist cause. What a contrast with the snake's nest of disloyal agents we had to force out of Government with the FBI and with committee investigations during the preceding 20 years. What a wonderful record for you and me to talk about to our people. What abundant cause to make us proud to be Republicans.

And above all, there hasn't been a single wartime casualty under our Republican administration since our Republican President and Secretary of State brought an end to the war in Korea, which we inherited from Harry Truman's Democratic administration. What a contrast this is with the record of preceding administrations of the Fair Deal and the New Deal. What a record of achievement during 5 short years. What a demonstration to the people of America about what we might have been able to do were it not for the fact that in 3 of those

5 years we had to work against the opposition of a Congress controlled by the other party. We didn't even have a Congress on our side. Both Houses controlled by the other party. In addition, the administration inherited a great army of Fair Deal and New Deal appointees in Federal positions which are protected under the law by civil service regulations. Consequently men sympathetic with Republican ideals could not be put in to replace them.

I want to be fair and say to some of these partisan holdovers, some of these New Dealers and Fair Dealers who were put in by politicians and nominated by precinct committeemen, cleared by political clearance committees, put in the Federal payroll, and then after they were in they changed the law to make them civil service—I want to be fair and say that some of them have served the country well. Some of them have put public policy above partisan advantage. Some of them have caught the vision of good government under the leadership of the Republicans. But I think it's equally true to point out that some of them have served as roadblocks in the path of Republican progress. Some have dragged their heels. Some of them have stopped and prevented and bored from within to keep necessary reforms and revisions from taking place. And of that particular group of holdovers, of which there are many of that particular group, I think we might well compare them with yesterday's unfortunate experience with our Vanguard and our satellite. It could be said of both they will not work and it's impossible to fire them.

Even the deadly threat of inflation—even the threat of inflation has been successfully attacked by our Republican Party. Throughout American history the other party has always had a habit of tinkering with the currency, tampering with the dollar, playing with inflation. Economist after economist in this country has written objectively, most recently Henry Hazelitt in Newsweek, that the Democratic Party should be called the party of inflationists. Well, while our critics cry out against existing interest rates and say they're too high, and complain about the cost of living and say it continues to go up, the mathematical facts bear testimony to the situation that the Democratic Party of today continues to preach doctrines that would provide inflation.

As always in American history, the Republican Party is the party of the honest dollar. And we can prove that. Under the Truman administration the cost of living increased by 34 percent in the first 4½ years. Under Harry Truman's entire administration the cost of living increased 50 percent prior to 1953, and the value of the American dollar was reduced from a hundred cents to the dollar to 52 cents on the dollar. Under the Eisenhower administration there has been an increase of only 6 percent in the cost of living in the nearly 5 years that we have been in power. In addition to that, this constant sneaking up of the cost of living which is so detrimental to the elderly citizens of our country, so detrimental to everybody on a salary or with a fixed income, this increase in the cost of living has virtually been brought to a succesaful stop because of the wise fiscal policies and the budget balancing of the Republican Party. I'm proud to belong to a party that is mature enough and has courage enough to do something about inflation, and we've had a tremendous degree of success considering the momentum behind the whole 20-year New Deal drive toward decreasing the purchasing power of the dollar and inflating the living costs of the people.

Now what more can you ask of an administration? What more can you ask, than that it restores peace when you're at war; that it replaces corruption with honest government; that it reduces your taxes; that it provides more jobs for more people with greater take-home pay than ever before in American history? What more can you ask? What can your neighbors ask? What can anybody ask? What do they expect from government? Well, if they want more, we can give them more. The record provides more. We have evidence that more has been achieved. As I've said, we've quit tinkering with the currency of the people, we've stopped decreasing the value of the dollar, we've put a complete end to national socialism, we've provided the leadership which gave this country its first great advance in civil rights in 82 years—all Republican achievements. We've replaced the Reconstruction Finance Corporation which, operated by the Democrats, operated exclusively for the financing and assistance of big corporations and big-business men. These Democrats shed big crocodile tears for the little fellow, and increased the size of the checks earned by the big fellows. We replaced the Reconstruction Finance Corporation with which they were playing favoritism and helping big corporations. We abolished it and put in the Small Business Administration instead, which is exclusively interested in financing and assisting small-business men in this country. What's more, in our short 5 years we launched and have well along the road to initiation and construction the world's largest highway construction program, and we did that during a period when much of the time we had to induce a Democratic majority in Congress to bring our bills out of committee. When we did have a Republican Congress it moved much more rapidly. And it was then that we gave the country the world's largest cut in income taxes. Even with this record of achievement there is much that time does not permit me to mention. But even so short an examination of the record, in my opinion, pretty clearly demonstrates the nature of your responsibility and mine for 1958 and 1960. We must tell America what we have done. We must start answering the slanders. We must start reciting the record. We must reiterate the facts. We must invite comparison with the record of the other party on any level, at any time, and we challenge them to come up with 5 years anywhere that can compare with your 5 years and mine as Republican. We challenge them to compare the records.

I have a sneaking feeling that, for the first time in a quarter of a century, in 1960 the American voters will have a new experience. I think it's the first time in the memory of many of you, the first time in a quarter of a century, that the American voter is going to have an opportunity to vote for a President on the basis of issues and principles, instead of the comparison of individuals and personalities. Think back. Since the early 1930's voters in the main have been called upon to vote for or against a dominant or an attractive personality, rather than deciding between governmental policies and principles. However, in 1960 neither party, ours or the other fellows', neither party can come up with a dominant figure, a great majestic figure of a man with a tremendous personality. Neither party can come up with a man like F. D. R. or like Ike Eisenhower. Neither will even come up with a candidate with all the supporters and critics to the extent that Harry Truman had, and divided the country in 1948. People didn't vote for or against what Harry Truman stood for; they voted for him or against him because they liked him or they didn't like him. Both parties in 1960, I'm sure, will nominate vigorous, able candidates, but neither is going to be able to trust his cause and his claim for victory this time to the strength of the popular or compelling personality of its nominee. We're not going to be able to come up, on our side, with another great household word and a national hero, and a wonderful, humble, personal individual like Dwight D. Eisenhower. We're not going to get another candidate called Ike. And they're not going to come up with a fellow who is able, almost, to hypnotize the populace on the radio, who can say one thing and do the other thing, and still make people like it, as was the phenomenal career of F. D. R. This time, for the first time in a quarter of a century, people are going to ask each other and themselves, "What kind of government do I want?" instead of asking the question, "Who is the man I want for President?"

As a Republican, I welcome that. I think it's long overdue. I think in the long run if self-determination and self-government are going to work, you've got to make it work by dividing voters up according to principles, and policies, and concepts, and not by a great popularity contest between different individuals. And I'm glad to belong to a team that knows where it stands, that's united on the basic tenets and the basic concepts, and I'm glad that in 1960 we're not going to have the issues clouded up by these great personalities, by deep-seated passions, and sharp prejudices. I think we ought to welcome the opportunity to ask the American people to compare our record with the other fellows'. I'm glad we're going to have a chance once again to tell the world what GOP stands for, because it is proved by the record that GOP stands for government of the people, as against the other fellows' program of government of the politicians. Republicanism stands for the opportunity state, and I think Americans generally believe in an opportunity state, and will vote to protect and expand it.

Now, there's one other question I promised to answer. Why should we win? Why should we win in 1958 and 1960? We ought to win in 1958 because that's the preliminary of a contest for President which in 1960 is pretty well going to determine the direction America takes for the next half a century. And the direction that America takes in 1960 is going to determine the fate of the world. Because if we start slipping back into the abyss of national socialism again, as we inevitably will if the other party wins, its going to pull down the fluttering flags of freedom from the mastheads of every country in the world. We have become the sole remaining strong, spectacularly successful practitioner of individual freedoms and private ownership. If we start tampering with the economy by taking first this segment, and then the next segment and socializing it or crippling it or directing it, we're going to be in serious difficulty. I think we should win in the interests of good government. I think we should win because I think the people of America are going to feel a little better about individual opportunities under Republicans than under the other party. I think we should win because the people of America are going to feel a little better about the opportunity of getting good government at low cost, and with reduced taxes, with Republicans in authority rather than with the other fellow in control. I think we should win because Republicans are going to provide for a continuation of constitutionalism in America.

I think we should win because there's a better chance to produce and sustain an honest dollar under Republicans. And without an honest dollar all our alleged economic successes can disappear and be dissipated. I think we should win because there is obviously a much better chance to sustain and hold the peace under patient, persuasive, farsighted, able Republican leadership than under the capricious, temperamental, impetuous kind of leadership which under Democrats three times in the 20th century has failed to hold the peace they had when they took over the White House and the State Department.

So I think we've got a story to tell. Your job and mine, as I see it, let me say in conclusion, is to get on the offensive; it's to organize together as a team; and start talking about what we've done, and quit quarreling about the little differences we have among ourselves. Quit worrying about the fact that we haven't produced a panacea in 5 years. The record is so amazing when you look at what Republicans have achieved, that in my opinion we deserve to win by a landslide if, as, and when we tell John American and Mary American on every farm lot and in every household the full true story about what Republicanism stands for and what it means. Let's back the attack with facts from the records. Let's familiarize ourselves with the documentation of achievements which are ours. And among other things, let's once and for all nail down for the lie that it is, the slander that the Republican Party is the party of privilege and vested interests. Let's prove from the record that the Republican Party, that the GOP is government of the people; that we're not a party pushed around by politicians, or one beholden to political bosses or pressure groups. In our party, the people are the politicians. We don't have any big machines, we don't have bosses. Ideas spring up from the grassroots in our Republican Party.

Let's put an end to the Democratic double-talk and let's answer their slander like you'd answer an attack on your individual honesty or on your personal honor. We invite comparison as Republicans. If they insist, let's call the roll of the Democratic presidential hopefuls, and ask them where they find anybody there indicating that theirs is a party of the people. Averell Harriman, who inherited untold millions of dollars from his ancestors, wants to be the Democratic president. My colleague, Senator KENNEDY, nice fellow that he is, inherited millions of dollars from his father and his family is among the richest families in the country. But neither Harriman or KENNEDY ever had to work for a living. Is this what we mean by government of the people? Soapy Williams, the recipietn of inherited millions from the soap factories owned by his predecessors and his ancestors. I submit to you that no racing stable in American history ever had a card of millionaire entries such as the Democrats have as candidates for President. The only average American they offer in their whole stable is my old friend, ESTES KEFAUVER. They push him around, and kick him around, and build him up till he gets close, and then tear him down at their conventions because he doesn't have a hundred million dollars. It's about time you and I began answering these slanders when they call us the party of the privileged, the party of the rich. I don't know who's going to be the Republican candidate for President, but I'm pretty sure he's going to be somebody who's built himself up in the American way. A fellow who's got an American background of hard work and of having achieved success by his own efforts—a man whose sole claim to prominence is not the fact that his father had a few hundred million dollars. I submit that you and I have a responsibility to compare our Republican team with these solid gold Cadillac candidates that the other side is bringing up.

So I say in conclusion, its wonderful to be a Republican. What a record. What a background. What a present series of achievements we're able to produce. And what fine, wonderful candidates available to us. We invite comparison. We challenge the other party to look at the records and compare them. And if we will just get smart enough to use arithmetic and comparison, and not let ourselves be frightened away by the adjectives thrown at us by the other party, we'll begin to recognize our responsibilities and our opportunities, and what it means to be a Republican. I'm convinced if we do that, we'll deserve to win. I am sure you can win in Kansas in 1958, because people will be proud to be Republicans. You'll have a loyalty to the party, which people should have, as they have a loyalty to their family, to their church, and to their God and their country. You should be loyal to your party. Let us invite in other people who want to loyally subscribe to these principles and concepts, and make them feel welcome as Republicans. In that way, we can win in 1958 and we can win in 1960, because we shall deserve the victory which is ours. Good luck to our common cause.

Self-Restraint in the Use of Power

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. ROBERTSON. Mr. President, on March 31 last Mr. Justice Frankfurter, in a dissenting opinion concurred in by Justices Burton, Clark, and Harlan, made this encouraging gesture to those who believe in maintaining the constitutional division of powers among the executive, the judicial and the legislative branches of the Government:

Self-restraint is of the essence in the observance of the judicial oath, for the Constitution has not authorized the Judges to sit in judgment on the wisdom of what Congress and the executive branch do.

That same self-restraint applies, of course, to Members of Congress who have taken the same oath, and is just as vital to the perpetuity of a constitutional democracy, such as ours, as is self-restraint on the part of the judiciary.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the Richmond News Leader entitled "Self-Restraint and the Court."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SELF-RESTRAINT AND THE COURT

On March 31, the Supreme Court of the United States handed down opinions in five cases. Two of these dealt with the law of criminal contempt; three dealth with the power of Congress to take away the citizenship of native-born Americans.

Two points stand out. The first goes to the division on the Court itself. The second goes to the woeful inconsistency of the justices, and especially of Mr. Justice Frankfurter, in their views of the Court's responsibility.

With these opinions, the critical division within the Court becomes apparent for all the world to see. That amiable spirit of unanimity which Mr. Warren was able to induce when he first joined the Court in 1953 has banished utterly. Members of the Court are now quarreling openly, publicly, and they are not quarreling on matters of petty detail; they are quarreling on fundamentals. Plainly, the bloc led by Frankfurter and Harlan is increasingly disturbed and concerned at the Court's tendency to upset long-established law and to act as a super-legislature.

Mr. Justice Frankfurter made this dispute eloquently clear in 3 of his opinions here under review. In the day's first case, the Court upheld the 3-year prison terms imposed by a New York district judge upon 2 convicted Communists charged with criminal contempt. The crux of the issue rested in the defendants' insistence that they were entitled to jury trials. The Supreme Court denied this.

Speaking for the 5-man majority, Mr. Justice Harlan reviewed at great length the law of criminal contempt. He concluded that "a long and unbroken line" of Supreme Court decisions had established beyond peradventure that criminal contempts are not subject to jury trial as a matter of constitutional right. This principle, he said, "is firmly rooted in our traditions." It was not for the Court to toss it aside.

Frankfurter buttressed Harlan's argument in a concurring opinion.

The first of the day's nationalization cases found Mr. Justice Frankfurter again upholding established precedent and again defending the powers of Congress. Here the questions were whether Congress has the broad power to deprive any citizen of his citizenship; and, if so, whether an American national's action in voting in a foreign election is a reasonable ground on which to revoke it. Frankfurter said the first question had been disposed of as far back as 1913, in *Mackenzie* v. *Hare;* the second question, he felt, was answered in the fact that Congress has power to regulate all foreign affairs: "To deny the power of Congress to enact the legislation challenged here would be to disregard the constitutional allocation of governmental functions that it is this Court's solemn duty to guard."

But the expression by Mr. Justice Frankfurter that struck closest to the South's position came in his dissenting opinion in the case of a soldier, born in Ohio, whose citizenship had been revoked upon his conviction for desertion. A majority of the Court, led by Warren, held that such punishment was cruel and unusual. They then voided a section of the Nationality Act. Frankfurter read his colleagues a lecture on judicial restraint:

All power is, in Madison's phrase, "of an encroaching nature." Judicial power is not immune against this human weakness. It also must be on guard against encroaching beyond its proper bounds, and not the less so since the only restraint upon it is self-restraint.

Rigorous observance of the difference between limits of power and wise exercise of power—between questions of authority and questions of prudence—requires the most alert appreciation of this decisive but subtle relationship of two concepts that too easily coalesce. No less does it require a disciplined will to adhere to the difference. It is not easy to stand aloof and allow want of wisdom to prevail, to disregard one's own strongly held view of what is wise in the conduct of affairs. But it is not the business of this Court to pronounce policy. It must observe a fastidious regard for limitations on its own power, and this precludes the Court's giving effect to its own notions of what is wise or politic. That self-restraint is of the essence in the observance of the judicial oath, for the Constitution has not authorized the judges to sit in judgment on the wisdom of what Congress and the executive branch do.

And amazingly enough, Justices Burton, Clark, and Harlan joined in that expression by Frankfurter.

It is amazing, because three of these judges—Frankfurter, Burton, and Clark—signed the Court's school segregation decision of May 17, 1954, and all four of them joined in the second school decision of May 31, 1955. How is it possible, one inquires in bewilderment, for presumptively intelligent men not to recognize that they accepted in

the school decisions precisely what they denounced in the paragraphs quoted above?

In the school cases, the Supreme Court did pronounce policy. The judges did, in fact, give effect to their own notions of what is wise or politic. Abandoning all self-restraint, they did indeed sit in judgment on the wisdom of what the States had agreed to in 1868. Beginning in 1870, a host of judges had launched a long unbroken line of opinions asserting that the States had not been prohibited by the 14th amendment from operating separate schools, but this mass of precedent did not matter to the Court on May 17, 1954. What price consistency? And what price self-restraint?

The South may draw some faint, feeble hope from the pronouncements that split the High Court on March 31. If 4 or 5 members of the Court have begun to think some hard thoughts on the Court's abuse of power, they may yet reconsider their flagrant usurpation of authority in the school cases and seek to undo the monstrous damage they have done.

Centennial of Oregon Statehood

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. NEUBERGER. Mr. President, 1959 will mark the 100th anniversary of the admission of Oregon to the Union. As a part of the preparation for our centennial celebration, which 8 million people from the 48 States will enjoy, a special supplement to the New York Times of April 6, 1958, entitled "Oregon Welcomes Tourists and Industry," was prepared by the Oregon State Department of Planning and Development. Realizing how fortunate they are to live in a State so richly endowed with nature's blessings, the people of Oregon want their neighbors across our land to visit their centennial celebration and to share their zest for life in a land for "real" living.

The New York Times supplement introduces its reader not only to a vacation land abundant with streams, mountains, and forests, but also to a land of opportunity. A rich agricultural economy, with rural families enjoying comfortable and dependable lives and incomes, and a timber crop of 30 million acres which, by the way, makes Oregon first in the Nation in the production of timber, provide stable foundations for rapidly expanding manufacturing. A population which has increased 40 percent since 1940, and the present and potential sources for inexpensive power have drawn the attention of America's leading industrial lists.

Yet nature's gifts have not implanted a spirit of smug satisfaction in the people of my State, but instead have endowed them with the necessary spirit to be a part of an expanding area of our Nation. Illustrating this is our supplement, which indicates the unique atmosphere of cooperation which exists between the State of Oregon and business, industry, and labor. Combining their resources to describe the industrial opportunities and vocational attractions of the State of Oregon, they have produced an informative advertising section which is a real credit to the State of Oregon. Recognizing the need for a healthy industrial climate, labor leadership took an active part in establishing the Oregon Development and Planning Department and is presently represented on the department's advisory council.

Just as labor and industry are able to cooperate in the promotion of Oregon, trade unions also have made a record in favorable relations with management which speaks for itself. In 1956, time lost from strike idleness in Oregon was two one-hundredths of 1 percent of the total estimated work time as compared with a higher national average of twenty-nine one-hundredths of 1 percent.

A message from the Governor of Oregon, Robert D. Holmes, introduces the special New York Times section, which I feel will be of particular interest to my colleagues with whom I hope to share our scenic attractions during the Oregon centennial celebration. Therefore, I ask unanimous consent that Governor Holmes' invitation on behalf of the people of Oregon be printed in the Appendix of the RECORD.

I also ask unanimous consent that a list of the public-spirited advertisers who have made the Oregon rotogravure section possible, and who share my faith in our State, be printed in the RECORD. It is significant that these advertisers include not only leading private industries and business, but also the Oregon State Labor Council of the AFL–CIO, as well as many chambers of commerce and port commissions.

There being no objection, the invitation and list were ordered to be printed in the RECORD, as follows:

A century ago, Americans with pioneer imagination and courage turned their eyes and their wagon wheels toward the Oregon country. There they found a land of great resource: Rich soil for their plowshares, giant timber for their saws, abundant waterpower for their mills, scenic beauty for their souls.

Today, on the eve of Oregon's 100th anniversary as a State, men with the same imagination and courage are again turning their eyes toward the great Northwest. The great resources still remain; the soil enriched by new agricultural processes, great stand of timber for the leading industry, pure water for power and processing, scenery and recreational facilities to contribute to the inner spirits of a happy and energetic people.

This describes a majestic section of our great Nation * * * an area won by the vision of men like Thomas Jefferson, Lewis and Clark, and all the venturers who rolled over the Oregon Trail in wagon trains, or braved the long sea voyage "round the Horn." In the years that followed new pioneers in trains and automobiles took the trail to Oregon with the same spirit.

In recent months we have seen a rebirth of the bold, pioneer spirit and energy here in Oregon. In these months we have watched the mighty Columbia's first surge over newly completed dams; we have stood on the rim of the dramatic canyon of the Snake and realized its great potential of waterpower and storage; we have watched harvesters sweep through fields of wheat and peas in the Umatilla country, and watched the fruit harvests in our green, clean valleys; we have watched the giant fir trees on their way to the mills to become lumber and plywood; and we saw the beginnings of new plants for processing uranium, lime, zirconium, woodpulp, electronic devices, frozen foods, and aluminum.

Oregonians realize that it takes pioneering yet to give greater education to its resource of people, to protect and preserve its resources of power and timber and mineral and scenery, and to pass new laws extending the rights of all men. Oregonians realize as well the advantages of labor and management working in friendly cooperation; the advantages of a shared prosperity and the reasonable hope for better things to come; the advantages of hundreds of miles of public beaches, of millions of acres of public-owned recreation areas, of accessible fishing streams and hunting grounds; the advantages of leadership in literacy and the advantages of unsegregated schools and busses and homes.

These are some of our assets. We face the happy prospects of sharing them in the years to come, and of having them multiply like the loaves and the fishes to feed the multitudes. This is our invitation to share them with you.

ROBERT O. HOLMES,
Governor of Oregon.

Postal Rates

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. JOHNSTON of South Carolina. Mr. President, two more newspapers in South Carolina have come out with editorials supporting my position regarding postal rate increases and have highly criticized the Postmaster General for his attempts to tie the 5-cent stamp and new post-office buildings together.

The Orangeburg Times and Democrat, in an editorial entitled "Summerfield's Curve," calls the Postmaster General's hand for his attempt to buy off support for a 5-cent stamp with empty promises of new post-office buildings.

The Orangeburg newspaper says in forceful terms that Mr. Summerfield has thrown Congress a curve and in an expert manner has brought to light the underlying fact that the Post Office Department and the postal service is a service and is not a business.

The Times and Democrat also brings out the extravagance of our overseas propaganda and giveaway programs and states that if we can afford these programs for foreign countries then "we can certainly afford to provide taxpaying citizens with low-cost mailing of newspapers, news magazines, and books."

I agree thoroughly with the Orangeburg Times and Democrat and ask that its editorial be printed in the Appendix of the RECORD for the benefit of all Members of the Senate and House.

In an editorial entitled "Lure May Have Failed," the State points out that Mr. Summerfield's proposal is simply a "rob Peter to pay Paul" scheme and should be junked.

The State appropriately labels Mr. Summerfield's proposal as being "simply another form of indirect taxation" and concludes its criticism of the Postmaster General by saying "Americans have never been particularly fond of stamp taxes." A stamp tax is just what Mr. Summerfield has proposed.

I ask that the editorials be printed in the Appendix of the RECORD. I am happy to say that practically all the leading newspapers in South Carolina have seen through Mr. Summerfield's trap and support me in this matter.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Orangeburg Times and Democrat of April 10, 1958]

SUMMERFIELD'S CURVE

Postmaster General Arthur Summerfield has thrown a curve at the United States public. Summerfield recently announced that if Congress voted a 5-cent postage rate for first-class mail (out-of-town mail), the prospect for new post offices in more than 300 cities in the United States would be very good.

In brief, Summerfield was attempting to stir sentiment in these communities, and create enthusiasm among citizens in general, for the 5-cent stamp.

We agree with Senate Post Office Committee Chairman OLIN JOHNSTON, Democrat, of South Carolina, who replied immediately that construction of any post office or any Federal building has no connection with the 5-cent stamp. That is true because all the money taken in by the post office goes into the general Government Treasury. Add to that the fact that every penny spent by the Post Office Department must be appropriated by Congress, and you can readily see JOHNSTON'S position.

Chairman JOHNSTON does not favor the 5-cent first-class stamp, nor do we. It is not because we oppose the 5-cent first-class stamp that we are critical of Summerfield's promotion, or propaganda campaign. Such a campaign on the part of a Cabinet officer is certainly a highly questionable approach to the situation.

If every Cabinet officer adopted the procedure of promising the public plums in the form of public construction, and new buildings, in an effort to build up pressure on Congress to vote more money for his department, then the results would certainly be undesirable. As we see it, Congress has the responsibility to decide on the expenditures of the Post Office Department, and while the Postmaster General may disagree with Congress, and while he may testify to anything he wishes, we do not think it is exactly cricket for him to conduct a public appropriations campaign of his own.

We are as much in favor of new post offices as anyone else. The basic question of whether the Post Office Department should be a profit-making department, should pay its own way, or should be subsidized, is the real question involved. As long as we are going to have postal rates which enable the great majority of Americans to receive books and newspapers at a very low rate, then we think the post office must expect a deficit and Congress must expect to appropriate funds for that purpose. However, we do not think that these special rates should necessarily apply to entertainment magazines.

News magazines, newspapers, and all books (which can hardly be accurately classified) have, and should, enjoy preferential mailing privileges. They disseminate news, education, and information, and produce a better informed electorate, and therefore a better government.

As long as we are appropriating money to send flute players and jazz bands over the world, for the benefit of this country, we can certainly afford to provide tax-paying citizens with low-cost mailing of newspapers, news magazines, and books, even if a deficit is incurred.

[From the State, Columbia, S. C., of April 14, 1958]

LURE MAY HAVE FAILED

By attempting to induce Congressmen to vote for the 5-cent letter rate by posing the possibility of 365 new post office buildings, Postmaster General Summerfield may have killed the bill.

Its future was uncertain at best, but the only sound argument for such a proposal was that the post office has been operating at a sizable deficit. If the increased postage rates are merely to rob Peter to pay Paul, then the 5-cent letter measure should be sent back to the source—with a 3-cent stamp.

Five-cent stamps on letters may be desirable from one point of view, but it might not bring in any more revenue. There is such a thing as pricing a product or service out of the market—which is one explanation for some developments in the present so-called recession.

Actually, the Post Office Department cannot live up to the trade suggested by Mr. Summerfield. Congress appropriates the money for operation of the post offices, and would have to authorize construction of the new post office buildings.

However, if construction of new buildings is dependent on the jump in letter rates, then the 5-cent stamp act will become simply another form of indirect taxation. Americans have never been particularly fond of stamp taxes.

Lawmaking Isn't the Supreme Court's Job

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. JENNER. Mr. President, I take pleasure in asking unanimous consent to have printed in the Appendix of the RECORD an editorial from the Saturday Evening Post of April 19, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAWMAKING ISN'T THE SUPREME COURT'S JOB

Senator HENNINGS, of Missouri, was doubtless right in feeling that Congress ought to do a lot of thinking before adopting anything like Senator WILLIAM JENNER'S bill to restrict the jurisdiction of the Supreme Court over certain selected matters. However, it ought not to require too much study to convince Congress that some action is necessary if it is to retain its position as a supposedly equal partner in our tripartite Federal system. The reason why congressional action to curb the Court is even mentioned is that the Court is setting itself up as a sort of third legislative chamber, and, as such, has felt free to impose its ideas upon the other branches of the Government.

Judge Learned Hand, formerly of the United States court of appeals, in his recent lectures at Harvard, declared that "If we do need a third chamber is should appear for what it is, and not as the interpreter of inscrutable principles." He added that for him "it would be most irksome to be ruled by a bevy of platonic guardians, even if I knew how to select them, which I assuredly do not. If they were in charge I should miss the stimulus of living in a society where I have, at least theoretically, some part in the direction of public affairs."

The platonic guardians have attempted to tell a committee of Congress how it may not interrogate a witness, a ruling which has seriously hampered necessary investigatory procedure. They have decreed that a State may not pass a law to deal with subversives because the Federal Government is presumed to have a monopoly in the field. According to them, a State must admit to the practice of law an applicant who refuses to tell the bar examiners whether or not he is or has been a member of a Communist conspiracy. And they have turned loose convicted Reds on narrow technical grounds.

Surely the legislature is bound to consider how to restore balance to the Federal system of checks and balances. For, as Abraham Lincoln warned in his first inaugural address, "If the policy of the Government upon vital questions affecting the whole people is to be irrevocably fixed by decisions of the Supreme Court * * * the people will have ceased to be their own rulers."

To limit the Court's jurisdiction may not be the way to restore Congress to its rightful and constitutional authority, but there can be no doubt of the right of Congress to do so if it pleases. The late Justice Owen Roberts many years ago raised the question: "What is there to prevent Congress taking away, bit by bit, all the appellate jurisdiction of the Supreme Court of the United States? I can see nothing * * * in view of the language of the third article of the Constitution."

The third article of the Constitution defines the jurisdiction of the Court, both original and appellate, and adds this very important qualification: "With such exceptions and under such regulations as the Congress shall make." If any branch of the Government yearns for the role of platonic guardian, the Constitution says it should be Congress.

This is a constitutional question which should—but probably won't—be debated without reference to one's feelings about investigations or civil rights. Judge Hand hesitates to prescribe a remedy for the trouble. He rightly dreads the confusion that would arise if a final decision on the constitutionality of statutes could not be made by anybody. But the learned judge, who might well be on the Higher Court himself, plainly regards the errors of lawmakers and of the people as less menacing than the rise of judicial dictatorship, however benign. So should we all."

Foreign Language Training in the Armed Services

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. JAVITS. Mr. President, the President, in his January 27 education

message to the Congress, rightly stressed the importance of knowledge of foreign languages in the light of our free world leadership responsibilities and to our national security and noted a deficiency in the knowledge of languages, particularly those of the emerging nations in Asia, Africa, and the Near East. It has often been stated that American servicemen and their families abroad are our country's best ambassadors; it is needless to add that these men and women can be better ambassadors if they are fluent in the language of the people to whom they are addressing our Nation's message of friendship and freedom. In response to a recent inquiry which I made, the Department of Defense has advised me of the language training opportunities offered servicemen and their families.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the letter on foreign language training available to the Armed Forces of the United States, which I think is extremeley important, because I believe we have to come to the point where we should have a bilingual approach in all our schools. We are world leaders. It is high time our young people began to speak foreign languages and to learn them from the ground up, beginning in the lowest grades in primary school, as is done in many countries abroad.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ASSISTANT SECRETARY OF DEFENSE,
Washington, D. C., March 13, 1958.

Hon. JACOB K. JAVITS,
United States Senate.

DEAR SENATOR JAVITS: Reference is made to your letter of January 8, 1958, to the Secretary of Defense requesting information about language courses open to service personnel and their families stationed abroad, and to the interim reply made by Brig. Gen. S. F. Giffin, Director, Office of Armed Forces Information and Education, dated January 24, 1958. I am now in a position to offer a definitive reply to your query.

While there is variation from service to service and among different commands of each service in the language opportunities available, there are nevertheless generalizations which can be safely made about these opportunities. The most important, I believe, is that virtually every serviceman has foreign language instruction available in some form. In most cases, foreign language insiruction is also available to his dependents if they are with him overseas.

Foreign language courses are generally taught in group study classes conducted during off-duty time for military personnel overseas, and for dependents on a space-available basis. The language emphasized is that of the host country, but other languages are frequently available, too. The languages most often taught in Europe are French, German, Spanish, Italian, and Russian. In the Far East, Korean, Chinese, and Japanese are offered. Participation in on-duty classes is mandatory in some commands.

The United States Armed Forces Institute (USAFI) offers instruction by correspondence (supplemented by phonograph records) in 21 languages. All military personnel are eligible to take these courses.

Language courses are offered through civilian college classes—for example, by the University of Maryland in Europe and the Far East—on a tuition-fee basis. Assistance in paying tuition is given to military personnel.

Foreign language courses are available to all high-school students and many elementary school students in the dependents' schools. In Europe, for example, 65 percent of all Air Force dependents in high school take French and German, and 35 percent of the elementary students take these courses. The languages most frequently offered are French, Spanish and German, in conformance with United States civilian educational policies.

In only one instance has there been a reduction in language programs attributable to a lack of funds. Educational activities are financed from the operation and maintenance funds which are allotted to commanders for the performance of their missions. Faced with a general reduction of such funds last year, the commander of the United States Air Force in Europe elected to curtail certain programs, which in the language field consisted of a 30-hour mandatory language program for military personnel and mandatory instruction for pupils in the dependents' schools. At the same time, greater tuition assistance was continued for members of that command taking college courses than in other commands. This reduction did not result in denying language instruction to anyone who wanted it.

All of the Armed Forces recognize the importance of instruction in foreign languages and place great emphasis upon it. Your interest in this worthwhile activity is indeed appreciated.

Sincerely yours,
STEPHEN S. JACKSON,
Deputy Assistant Secretary.

Grain Terminal Association Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an unusually interesting report of the Farmers Union Grain Terminal Association, St. Paul, Minn.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF APRIL 10, 1958

Many big city newspapers and magazines, when they are at a loss to explain inflation and high prices, try to lay the blame on farmers and agriculture. They are teeing off now on the jump that farm prices took in mid-March. That climb was 4 percent, and now farmers are receiving 87 percent of parity, mainly because of a temporary livestock shortage and freezes in fruit and vegetable areas. That compares with 100 percent of parity that farmers were getting when the present administration moved to Washington in late 1952.

Some publications have gone so far as blaming the business recession on food prices. They point out that when people have to spend so much on food, they have less money for cars and freezers and hi-fi sets. Of course, there are people in other parts of the world who are spending much less for food, because they can't get it, and they are hungry all the time.

But here's an example of what we mean. Newsweek magazine, in its latest issue, comments that "Never before in United States history has the American family spent so much of its income for food." And we might add that never before has the American farmer received a smaller share of what the consumer spends. The United States food bill is about $75 billion a year, and farm net income is only about $12 billion. Who gets the other $63 billion? Newsweek says the American family now spends 26 percent of its income for food, compared with 25 percent a month ago. This 1 percent difference, it claims, costs consumers more than $3 billion a year—money no longer available for clothes, cars, and refrigerators.

Here's another word-for-word quote from Newsweek: "As the harassed United States housewife saw it, the family couldn't go without food, whatever it cost, but they could cut down on other things. Many experts saw the record high food prices as a big factor in the recession."

Is there merit in this argument? Perhaps a little—but not very much. The fact is that consumers want luxury on their dinner tables, and as long as they are willing to pay for it, they'll get it. Pretty packages cost money, and supermarket shelves are lined with expensive pretty packages full of the same old basic foods that are low priced when they leave the farm. Heat-and-serve goodies, up to and including the entire meals, are outright luxuries, yet consumers are gobbling them up at luxury prices.

But this is the new way of life—the push-button and can-opener age, and we don't think it is going to change short of a brutal depression that forces people to eat crusts where they used to eat cake. Not a one of us truly wants that to happen. Here are two facts all consumers ought to consider:

No. 1: Food prices have not climbed as rapidly as other prices. The official United States consumer price charts show food prices going up far slower than rents and transportation and medical care and personal services—to name a few.

No. 2: Farmers are still getting low prices for most of their products, despite recent price rises in meats and fruits and vegetables. President Eisenhower himself recently said that farmers have outpaced all other industries in efficiency of production. Retail food price increases are rightly laid at the doors of processors, handlers, and distributors, and that is where more efficiency is needed.

These are some facts that newspapers and magazines all over the Nation should be pointing out to consumers, instead of blindly directing the finger of blame at farmers. The thousands of grain farmers who make this program possible thank you for listening to GTA, the co-op way.

Ireland and the Hospitality of the Irish People

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. BRIDGES. Mr. President, recently one of New Hampshire's outstanding reporters, Mr. James P. Lynch, of the Exeter News Letter, traveled to Great Britain and Europe to cover some of the overseas activities of our Strategic Air Command.

While on this trip, he had the opportunity to visit in Ireland and to learn something of the attitude of the people of Ireland toward our country and its representatives stationed there. Returning, he wrote a column covering these impressions, which I ask unanimous consent to have printed in the Appendix of the RECORD.

I hope that each Member of the Senate will take the time to read this fine article, for Mr. Lynch has recorded the results of his rather searching inquiries of the Irish people toward our present Ambassador, Scott McLeod.

All of us will recall, I am sure, the extended and penetrating interrogation of Scott McLeod by some members of the Senate Foreign Relations Committee when he was nominated by the White House. We can remember, too, the lengthy debate when his nomination was before the Senate. I considered it a privilege then to endorse him for this important post, and I am happy to report today that my confidence in him and that of the majority of the Members of the United States Senate was well placed.

Ambassador McLeod is representing the United States in Ireland with distinction. His selection was indeed a wise one and it has brought great credit to this administration and the Department of State.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOWN IN OUR CORNER

(By James P. Lynch)

You're never a stranger in Ireland. For regardless of how far away from home you are the people of that nation make you feel as if you belong in the Emerald Isle. No matter what your nationality, creed, or color, in Ireland you are always welcomed as a friend.

Perhaps this explains why people all over the world will be celebrating St. Patrick's Day next week. The good will and good nature of these people have spread everywhere and the world has been made richer in a moral sense by this contribution.

Talk to an Irishman this weekend and he is sympathetic. He will tell you there are only two kinds of people. Those who are Irish, and those who wish they were Irish.

With a twinkle in his eye he will proceed to trace your ancestors back to some beautiful county of Erin and, by heavens, he will try to assure you he is right. This unsolicited contribution is made not to convince himself but rather to save you from disappointment.

UNTOUCHED BEAUTY

The greatness of the Irish people has spread throughout the world but the beauty of the nation is confined within Ireland itself. Its manmade structures cannot compare with those in many other countries but Ireland stands out in glamour with its richly carved mountains and lakes. These God-given possessions never lose their splendor regardless of the hardships suffered down through the centuries by the people of this nation.

The grass of the land of St. Patrick goes unchallenged in its claim of green radiance even during the cold winter months. No artist can depict the brilliancy of this natural beauty.

All this is matched by the good nature of the people of that country. If ever a nation was deserving of the title, "A Land of Philosophers," then Ireland is the claimant.

GREAT HOSPITALITY

The hospitality of the people is immeasurable. Willingness to be helpful is not an effort but a desire. They feel proud that you came to visit them and they want you to enjoy your stay.

Perhaps you never met these people before. That doesn't matter for no one is a stranger in Ireland.

We sensed this friendship as soon as our plane was in the sky. It was an Aer Lingus Viscount. Within a few minutes we were served a light meal by one of the three colleens who are serving as stewardesses. The passengers began to talk about Ireland. Many of them had only been in London for a few weeks, others had been away for a long period.

At the air terminal, Paddy Keays turned out to be a self-appointed guide. Paddy was in his fifties but he ran around the place like a track star. He was more than helpful. His yarns sounded rather fantastic and when we started to ask questions he began to tell us more. You could listen all night to Paddy and enjoy every moment for he is a true Irishman who wants everyone to feel at home.

Like many more, Paddy has great respect for the United States. Paddy did his utmost to try and convince us that President Eisenhower's ancestors came from Ireland but we refused to accept that tale.

SCOTTY'S IRISH

Paddy didn't argue, instead he admitted that he got the names upset. It was the ambassador to Ireland who was Irish. Paddy by now had a real gleam in his eye but we weren't accepting these shenanigans for we happened to know something about Scott McLeod.

Even Scotty would have appreciated hearing about his "Irish" ancestors from these people who admire him so much. Indeed, much of Ambassador McLeod's success in the Emerald Isle can be attributed to the great faith the people of that nation have for the former aid to Senator STYLES BRIDGES.

People of Ireland pray and they pray fervently. Scott McLeod can be certain they pray for him too for America can be proud of the lasting impression Scotty has made on the people of Erin.

ADMIRED BY ALL

The name Scott McLeod is not limited to certain circles within the great capital city of Dublin. Throughout Ireland Scotty McLeod is admired and respected by all the people.

On the way down from Dublin to Cork we talked to some Irishmen on the train about Ireland and the people. Many of them were interested in the United States. All of them praised the Ambassador.

When Scott McLeod was first mentioned as the possible ambassador there was some opposition, but fortunately Scotty won the appointment. Fortunately, too, for this Nation as he instilled a friendly feeling between both countries.

Scott McLeod was not a stranger to Ireland for the people of that nation were well aware of Scotty's continuous fight for justice. They knew of his respect for the late Senator Joe McCarthy.

VIGOROUS LEADERSHIP

The Ambassador's background reflects the qualities of leadership. The people of Ireland do not know of his contribution toward the creation of Pease Air Force Base. During the early days of planning Scott was administrative assistant to Senator STYLES BRIDGES and fought hard with his former boss to secure this installation for New Hampshire.

Frequently the Ambassador is called upon to address leading organisations in Ireland. The impression he makes is lasting.

At dinner in Dublin's leading hotel we were discussing world conditions with an Irishman who has traveled extensively. He mentioned several leading politicial figures throughout the world. He felt the United States was extremely fortunate in having many capable leaders including Ambassador McLeod.

Those who can't claim Irish blood, even though it may be centuries away, will be tolerant this week, and perhaps not envious, for they will share in the spirit of St. Patrick's Day.

Undoubtedly they would be even more tolerant if they were able to visit that country and see how the people of Ireland treat those from the United States. For in Ireland you are no stranger.

And if you stay long they will convince you that your family tree started in Ireland. They are rather convincing, although they didn't have any trouble here.

New Post Offices To Fight Slump

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 16, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "New Post Offices To Fight Slump," written by Gould Lincoln and published in the Washington Evening Star of April 15, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW POST OFFICES TO FIGHT SLUMP

(By Gould Lincoln)

In the midst of debate over tax reductions and big Federal spending for various kinds of public works, the Post Office Department, under its so-called leasing program, is continuing to make jobs for many industries and manufacturers, particularly the building and related industries, when jobs are needed to fight the economic recession. The leasing program, in operation now for five years, derives from the Lease-Purchase Act. Postmaster General Arthur E. Summerfield reported last week that 918 new post office buildings have already been started or will be under construction by fall, costing an estimated $49,245,000. The program has been used to provide nearly 2,200 new postal buildings. It is also the basis of President Eisenhower's recently proposed $2 billion post office construction program—with $1.5 billion provided by private investors. It is the kind of building program which will not require great sums of money raised by taxation. It is also the kind of program which will pay off in better service to the public.

Thirteen of the new buildings to be constructed, costing $9,100,000, will be bought by the Government, which will pay for them over a period of years, as a private citizen pays for a home under the Federal housing regulations. The 905 other postal structures will be built by private investors according to the department's specifications and leased by the Government for a period of years. These leased buildings are uniformly small in size, serving many communities. The funds needed to equip these buildings already are available in appropriations authorized for the department by Congress.

BETTER SERVICE TO RESULT

The value of the building and leasing programs of the Department will be found in greatly improved postal service, Mr. Summerfield insists. "These 905 new leased post office buildings," he said, "represent less than 10 percent of the Department's need for new facilities. The big bottlenecks to faster mail service is in the larger post offices where mail

is still sorted and distributed by essentially the same slow and costly hand methods used in Ben Franklin's day."

Obviously, if the President's new proposal for a $2 billion lease-purchase program goes through, it would serve the twofold purpose of stimulating private industry and providing great improvements in the handling of the public's mail. Postmaster General Summerfield has pointed to the benefits which will derive under the present program. Much, he says, is bound up in the fate of the postal rate bill, now pending before Congress and expected to pass during the present session. If it goes through without amendment, the extra 1 cent of the proposed temporary 5-cent rate for out-of-town letters will provide $175 million a year for a 3-year period to buy new equipment for thousands of badly needed new post office buildings and for modernizing presently occupied Federal buildings. Other rate increases carried in the bill—the increase from 3 cents to 4 cents on letter mail, and an approximate increase of 50 percent on second-class mail (magazines and newspapers) and third-class mail (advertising circulars) will bring in about $525 million a year. This will be used to reduce the current huge postal deficit, which now exceeds $2 million each working day.

PLACES TO GET BUILDINGS

Among the 13 new post offices which the Government will obtain under the Lease-Purchase Act are buildings to be erected in Denver, Colo.; Newark, N. J.; Brooklyn, N. Y.; and Scranton, Pa. Bids for these buildings are now being solicited. The 905 buildings which will be constructed under the Department's leasing program are scattered through the States, the District of Columbia, and the Territories. The District of Columbia buildings will be for the Connecticut Avenue station and the Benning station. North Dakota, among the States, will get 5 of these new buildings, estimated to cost $105,000—at Fessenden, Grand Forks (University Station), Parshall, Rola, and Walhalla. Another example is Ohio, which will get 41 of these new buildings, to cost $1,778,000. New branch stations will be constructed in Cincinnati, Cleveland, and Dayton. A third State, Massachusetts, also gets 41 buildings, including 8 in the Boston area, estimated to cost $1,820,000.

Not only does the post-office program provide jobs without an immediate great outlay of capital by the Federal Government, but it aids local communities, pays local real-estate taxes on new buildings, and gives investors safe opportunities. Also, it helps to keep the mail service in step with the rapid growth of the country.

Exploring the Secrets of the Universe—The New Astronomic Telescope at the University of Wisconsin

---

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 16, 1958

Mr. WILEY. Mr. President, as a member of the Special Senate Committee on Space and Astronautics I have, naturally, been especially deeply interested in American scientific leadership in exploring the mysteries of the sky, of the worlds beyond the reach of our most high-powered telescopes.

Stargazing used to be thought of as an interesting scientific hobby; but no more than that. Today the astronomer, like the physicist with whom he works, especially in the person of the astrophysicist, has become a key man in America's defenses—yes, in America's very survival.

It is important, therefore, that there come from the universities of the land increasing numbers of scientists who are skilled in unraveling the secrets far beyond the Milky Way, invisible to the naked eye. Accordingly, I am most pleased that there will soon be in operation, at the University of Wisconsin, a new telescope which will gather over 20,000 times as much light as the unaided eye.

I may recall, incidentally, that one of the most memorable experiences in my lifetime was a visit to Mount Palomar, in your State of California, Mr. Vice President, where I had the privilege of gazing at the mammoth 200-inch telescope which has played so prominent a part in new discoveries in the cosmos.

It is essential that there be an intensified effort to advance American astronomy.

It is essential that every possible encouragement be given to the scientists in the various observatories and laboratories, the masters of the telescope, the camera, and the spectograph, and all of the other optical and related instruments, who will provide indispensable information toward that day in the not-too-distant future when a manned missile will head for the moon, and possibly beyond.

From the astronomers of this land, and from their professional associates in related skills, we need the most expert suggestions on ways and means by which the legislative and executive branches can give them the tools and the impetus to meet the challenges which are theirs.

Of this we can be certain: The U. S. S. R. will spare no effort in its race to reach the moon. But man will not reach the moon until man knows far more than he now knows about cosmic rays, and a thousand other phenomena, which still pose so much of a problem.

Toward the solution of this and other problems, I know that the Department of Astronomy, of the College of Letters and Science, of the University of Wisconsin, will play its role.

I congratulate Prof. Charles M. Huffer, Professor Emeritus Joel Stebbins, and Chairman Albert Whitford, and all those associated in the development of the new telescope at Pine Bluff, west of Madison, in my State.

I ask unanimous consent that an article from the Sunday, March 9, issue of the Milwaukee Journal be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASTRONOMERS AT UNIVERSITY OF WISCONSIN PREPARING NEW ASSAULT ON SKY MYSTERIES

(By Harry S. Pease)

PINE BLUFF, WIS.—From the top of a rugged knob in this fringe of country the glacier missed, University of Wisconsin astronomers will shortly begin a new assault on the mysteries of the sky.

Their tool will be a new, $200,000 telescope whose principal mirror is 36 inches across. It will enable them to study stars only a millionth as bright as the pole star. Its purpose is gathering light—over 20,000 times as much light as the unaided eye—but magnification is a byproduct. The moon's image in this instrument would be as big as a saucer.

By comparison with such giants as the 200-inch telescope at Mount Palomar and the 120-inch at Lick Observatory near San Francisco, the new Wisconsin instrument at Pine Bluff, west of Madison in Dane County, is modest. But the special use to which it will be put will make it a highly significant research implement.

HOW MUCH OF WHAT?

The colors which form starlight can be fanned out into a rainbow by an instrument called a spectrograph. By examining the resulting bands of color, specialists can determine what materials are emitting energy from the star, what temperature they sustain, whether they are moving or rotating, and a variety of other basic informtaion.

Such a spectograph, which weighs about 300 pounds, is to be mounted on the Wisconsin telescope. Behind it—and this is the feature which makes the assembly a rarity—will be mounted electronic equipment to measure the brightness of narrow bands of color in the starlight.

Where other methods have answered the question, "What's up there?" the UW machine will answer, "How much of what?" It will also supply new information about pairs and trios of stars which revolve as systems, eclipsing one another at intervals.

A MARVEL OF PRECISION

The new telescope will carry forward a project which Prof. C. M. Huffer has pursued for years. He and his associates have been handicapped by limited equipment and by Madison's growth, which has spread more and more smoke, haze, and light in the sky above Washburn observatory on the Madison campus.

The old 16-inch telescope there had a pretty limited grasp of light, but with it the means of photoelectronic measurement were worked out. Much of the equipment will be moved from the old observatory to the new.

The new instrument is a marvel of precision. It weighs as much as a buildozer, but has controls more delicate than those of a microscope. Its moving parts alone weigh as much as a station wagon, but are so finely balanced that a 1 pound weight will set the telescope turning.

The electric motor which turns it to follow stars from rising to setting develops one-fiftieth of a horsepower, about one-third of the power needed for a sewing machine.

FORTY INCHES ACROSS

The main driving gear is 40 inches in diameter, but its great teeth are polished so exactly that no set of three depart enough from perfection to total one ten-thousandth of an inch of error.

The main mirror of the telescope is a 492-pound lump of glass polished to a shallow spherical curve. Its biggest irregularity is somewhat less than a millionth of an inch high.

The optical system, known to astronomers as a Cassegrainian, folds light back and forth in an openwork cage to give the effect of a 40-foot-long instrument within a 10-foot length. Starlight strikes the main mirror's aluminized surface, rebounds to an eliptical convex mirror at the skyward end of the telescope, and bounces again through an eight-inch hole in the main mirror to the observing point.

What can you see with the telescope? Well, if the bird watchers took it over, they could tell the difference between a sparrow and a robin at 100 miles.

Senators Hit Criticism of High Court

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a story by Willard Edwards, from the Chicago Tribune of April 10, 1958.

This story deals with appendix IV of part 2 of the hearings on S. 2646, before the Senate Internal Security Subcommittee.

This report was printed at the request of the organization, as is the usual practice in committee hearings. It was printed as a separate appendix, because it contained a map, and to print it with the rest of the hearings would have meant delaying publication of the entire record.

There being no objection, the news article was ordered to be printed in the RECORD, as follows:

SENATORS HIT CRITICISM OF HIGH COURT—REPORT CALLS TRIBUNAL RED INSTRUMENT

(By Willard Edwards)

WASHINGTON, April 9.—The Senate Judiciary Committee was torn by dissension today over the printing of a report attacking the Supreme Court as an instrument of Communist global conquest.

The attack on the High Court was issued as an appendix to hearings conducted by the Senate Internal Security Subcommittee on a bill by Senator WILLIAM E. JENNER (Republican, of Indiana), to limit the Court's appellate jurisdiction.

An organization known as SPX Research Associates, composed of former military intelligence officers who had contact with Russian officers during World War II, sent the Court study to the subcommittee which was ordered by the Judiciary Committee to hold hearings on the Jenner bill.

FORMER EDITOR HEADS GROUP

Head of the organization is Thomas R. Hutton, an Air Force reserve colonel of Stanwood, Wash., formerly an editor of the Binghamton, N. Y., Press. He said "SPX" stands for "Soviet principle 10th," which he described as a Soviet plan to break the enemy's resistance without resort to war.

"Since 1943, we've been documenting Russia's application of this principle," he said. "Some of the Supreme Court report has been in preparation for 12 years. I sent it to Senator JAMES O. EASTLAND (Democrat of Mississippi), chairman of the Internal Security Subcommittee, when we received notice of the hearings."

The report declared that "in the paralytic effect of its pro-Communist decisions on State and Federal agencies of internal security, the United States Supreme Court is the most colorful and potentially determinative instrument of the Communist global conquest by paralysis."

CHARGE AID TO ENEMY

The report also said that the Supreme Court's recent decisions "assumed a pattern of aid and comfort to the enemy."

The ire of Senator THOMAS C. HENNINGS, JR. (Democrat of Missouri), leading foe of the Jenner bill, was aroused when he learned that the "SPX" report had been printed as a separate document and attached to the volume of hearings as an appendix.

"This separate printing highlights this one item of the hearings," he said in a statement. "It would permit separate distribution and might make possible the printing of a large number of copies which would give the impression that the Senate was placing its seal of approval on a document which attempts to paint the Supreme court as a tool of communism."

SUGGEST MONEY PROBE

HENNINGS noted that the organization's letter head states that it has offices in New York, Berlin, and Hong Kong.

"Colonel Hutton says that it is not endowed and does not solicit funds but it must spend a considerable amount of money to have offices in three cities scattered around the world," HENNINGS declared. "I think we should find out where the money comes from."

Subcommittee spokesman said the report was printed separately because it came in at the last moment and could not be included in the main body of the hearings. The hearings contain a great volume of testimony and statements for and against the Jenner bill.

The Judiciary Committee is reported split down the middle on the Jenner measure, now substantially amended in a version offered by Senator JOHN M. BUTLER (Republican, Maryland). The storm over the SPX report indicates the intensity of feeling on the legislation. A vote is scheduled for April 21.

The Tennessee Press Slogan

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Editors of Many Lands Pass on TPA's Slogan to Readers," published in the Tennessee Press of April 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDITORS OF MANY LANDS PASS ON TPA'S SLOGAN TO READERS

The Tennessee Press Association slogan, "What the people don't know will hurt them," is being translated throughout the world—but not without some trouble.

In fact, according to an international news letter of the United States Information Service, the editor of a Spanish language publication insists that as a means of clearing things up for the translator the slogan should first be written:

"What the people do not know will hurt the people."

In the language of the Spanish editor, Carlos Camins of Zamboanga's "Del Sur," the slogan would thus read, "Lo que gente no sabe, les danara."

In Korean, according to Han ki uk, of Radio Seoul, the slogan is "Kuk min num, mo ru nun de so, hae rul, bat nun da."

The USIS news letter, National Conference Weekly Newspaper Editors, is edited by Dr. Howard R. Long, whose foreign address is Taiwan. Mr. Long is head of the journalism department of the University of Illinois but is on leave with the USIS.

"Am gripped by a growing preoccupation with the Tennessee Press Association slogan * * *," Dr. Long wrote. "I find my enthusiasm shared by editors who write in many languages."

He reported these other translations:

In Tagalog, according to G. P. Eustaquio, editor of the Zamboanga City Inquirer, the wording is "Ang makakasakit sa tao ay ang hindi nila, nalalaman."

H. P. Tseng, director of the Central News Agency of China, and Milton Shieh, publisher of the Hsin Sheng Pao, say this is the version in Mandarin: "Pu chih che, pu an."

In Pangasinan dialect, according to Hugo S. Estrada, editor of Pangasinan Courier, the slogan reads "Say Ag-Amtag Karaklan Panirapan."

Dr. Long also showed what the slogan looks like in Korean and Mandarin characters—but the printer of the Tennessee Press refused to try to copy them.

Oregon Beef Candy

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. NEUBERGER. Mr. President, Joe Bianco, agriculture editor of the Portland Oregonian, tells a story of interest to my colleagues in the April 1, 1958, issue of that newspaper. It reports the ingenuity and enterprise of Mr. and Mrs. Ed Coles of Prineville, Oreg., in developing the delicious beef candy, boxes of which were recently presented to each Senate office.

Mr. Coles, who is secretary-treasurer of the Oregon Cattlemen's Association and is devoted to his work, enlisted his wife's able assistance to make wider use of the incomparable Oregon beef his members produce. This news story tells the details of their success in developing a high-protein confection known as beef-sweet steaks.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Oregonian of April 1, 1958]

RANCHER TURNS DRIED BEEF TO SWEETS AS HIGH PROTEIN SNACK FOR CHILDREN

(By Joe Bianco)

An idea, several old washing machines, some used car parts, a dilapidated oil heater and high choice Oregon beef have been used to create a revolutionary product in the candy industry.

The product is beef candy, developed by Mr. and Mrs. Ed Coles, of Prineville.

The candy doesn't look like beef, smell like beef or taste like beef. It has an honest-to-goodness candy flavor, said Cole.

The difference between beef candy and other candy, according to its manufacturer, is that it contains animal protein.

SOLON MAKES TEST

Last month Senator RICHARD L. NEUBERGER sponsored the distribution of beef candy to his colleagues in the Senate dining room.

It was also reported that the Army Quartermaster Corps is interested in the candy and has in fact made some suggestions on ingredients and formulations for its improvement.

Cole said a search for new uses for beef led to the candy.

"As beef supplies are put on the market the beef is all consumed, but many times at a price that leaves the producer little if any return for the labor and capital he has invested," explained Cole. "Large supplies of beef that have been forced onto the market the past few years have caused economic distress to many cattle producers."

NEW MARKET SOUGHT

Cole, who is secretary-treasurer of the Oregon Cattlemen's Association, said he set out to develop a new market for surplus beef.

After months of study he decided that the only way to reduce the surplus was to preserve beef through dehydration.

But then Cole was faced with the problem of what to do with dried (dehydrated) beef. At one time dried beef was used by explorers, hunters, trappers, and others who had to have concentrated foods, light in weight and which would keep. But, today, there is no longer a demand for such foods, he said.

"So, we were right back where we started. It would be useless to dry beef unless there could be developed some new method of using it," said Cole.

CHILDREN LACK PROTEINS

One day, while leafing through some material on foods, Cole said he read an article which revealed that teen-aged children today were undernourished from the standpoint that their diet lacked sufficient proteins. The children, he added, were reported eating an average of 15 to 20 pounds of candy per year.

Why not make it convenient for children to get beef the same way they do candy—through a vending machine, thought Cole.

"Well, the problem now was how to keep beef refrigerated in a vending machine," added Cole. "We did not want to dry it, because children would not eat it. Then, we got the idea of mixing it with candy."

For weeks, the Coles worked in their kitchen attempting to mix dried beef with marshmallow. Result—horrible.

Night after night, new and varied ideas and mixtures were tried in their kitchen—all horrible, he said.

FIRM ACCEPTS CANDY

Finally, they tried mixing the dehydrated beef with chocolate. Success. The product was introduced to the Brown & Haley Candy Manufacturers at Tacoma, Wash. It was accepted.

Today, with a makeshift dehydrator made from old washing machines, used car parts, and an oil heater, the Coles are drying beef for candy. The prepared beef is shipped to Tacoma, where it is made into candy.

In a year, the Coles have used more than 3 tons of beef and sold their product to stores in 22 States.

Assisting in the promotion of beef candy is the auxiliary organization of the cattlemen's group, the Cow Belles.

Plans to enlarge their Prineville operations are under way.

Cole said they included new ideas, modern equipment, but no old washing machines, used car parts, or oil heaters.

Government Responsibility in the Current Recession

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. PROXMIRE. Mr. President, there seems to be a real difference of opinion between the two sides in the Senate, and between the majority in the Congress and the President of the United States, as to how serious the current recession is, and how much responsibility the Government of the United States has for stopping it, and when action should be taken, if at all.

The reason I am sure that the problem is serious, and the responsibility of the Government is great, and the time to act is now, is that every time I talk with the people of my State about our economic plight, in person or by letter, they tell me so. They are not bothered about theories as to how the economy ought to work. They just know, in the most urgent and firsthand way possible, what is happening to them.

I have a letter from Mr. George W. Herbst, secretary-treasurer of the Herbst Shoe Manufacturing Co., of Milwaukee, which is a case in point. Mr. Herbst's letter is conservative, constructive, and responsible. But it makes clear what is happening to business after business in this country as purchasing power declines and the philosophy of fear gains ground. It makes clear that the time to act is now.

Mr. President, I ask unanimous consent to have Mr. Herbst's letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HERBST SHOE MANUFACTURING CO.,
Milwaukee, Wis., April 4, 1958.

The Honorable WILLIAM PROXMIRE,
United States Senator, Madison, Wis.

DEAR SIR: We are a medium size company engaged in the manufacture of juvenile shoes. Our products are sold on a national basis directly to the retailer. Because we are making a consumer product used by a high percentage of families, we must direct all of our efforts to keeping in touch with the American family—to know their buying habits, what styles appeal to them, what price range they can afford, etc., etc.

Therefore, we are taking the privilege of passing on to you, our observations on the present buying power of our customers. We have just finished up the Easter season, a period in which the juvenile shoe business usually reaches 1 of the 2 sales peaks during the year. However, our dealers and salesmen have reported to us that people are more cautious, more inclined to hold back and see what's going to happen. We are not trying to convey the impression of being alarmists but the trend seems to be getting stronger in this direction.

It is not necessary to remind you that sometimes a fear philosophy can develop to serious proportions. People are waiting for something reassuring to happen—perhaps a reduction on the individual income tax is one answer. Immediate action on such a step might give the consumer the impetus he needs to get back into a more normal buying routine.

Technological progress in new manufacturing equipment has been considerable, yet the purchase of this equipment has been hampered by the present depreciation structure. Immediate attention to the revision of these may provide a secondary source of creating employment, etc.

We have presented the above comments with the thought in mind that you might find them of some value in appraising current economic needs.

Respectfully yours,

GEORGE W. HERBST,
Secretary-Treasurer.

The Truth About the Indian Claims Commission

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. EDMONDSON. Mr. Speaker, many friends of the American Indian were both shocked and disappointed by an article which appeared in the March issue of Reader's Digest, on the subject of Indian claims now being considered by an agency of our Government, the Indian Claims Commission.

While the article contained some factual information and made brief mention of the background and reasons for the Indian Claims Commission Act, it also contained a great many half-truths, inaccuracies, and exaggerations.

The effect of the article was not only to hold up the majority of Indian claims to ridicule, but also to undermine a justified American pride in a piece of legislation which is one of the brightest and most honorable pages in our Nation's history.

The Indian Claims Commission Act was a statutory recognition by the Congress of a long and sordid series of broken treaties, contracts, and agreements with the Indian people of the Nation—a chronicle of mistreatment, misrepresentation, and misfeasance of which every right-thinking American is properly ashamed.

In 1946, under this act, we set out to right this sorry record, to the best of our ability.

Obviously, it was not possible to set things right with many of the Indians who were the victims of our Government's broken promises; the bones of many of them have long been mouldering in their graves. Whenever possible, however, we resolved under this new law to set things right with the children, grandchildren, and other descendants

of the victims of injustice, and to this end the act suspended all limitations upon time for redress and provided as follows:

The Commission shall hear and determine the following claims against the United States on behalf of any Indian tribe, band, or other identifiable group of American Indians residing within the territorial limits of the United States or Alaska: (1) claims in law or equity arising under the Constitution, laws, treaties of the United States, and Executive orders of the President; (2) all other claims in law or equity, including those sounding in tort, with respect to which the claimant would have been entitled to sue in a court of the United States if the United States was subject to suit; (3) claims which would result if the treaties, contracts and agreements between the claimant and the United States were revised on the ground of fraud, duress, unconscionable consideration, mutual or unilateral mistake, whether of law or fact, or any other ground cognizable by a court of equity; (4) claims arising from the taking by the United States, whether as the result of a treaty of cession or otherwise, of lands owned or occupied by the claimant without the payment for such lands of compensation agreed to by the claimant; and (5) claims based upon fair and honorable dealings that are not recognized by any existing rule of law or equity. No claim accruing after August 13, 1946, shall be considered by the Commission.

The jurisdiction conferred upon the three Commissioners appointed by the President to hear these claims is undoubtedly unique—and it is doubtful if the annals of any nation's history contain a more genuine and honest attempt by a legislative body to establish a forum and a procedure to do justice toward a mistreated people within the nation's borders.

With unique procedures, and unique jurisdiction, it is small wonder that some unique and surprising claims have been filed.

In the first place, it should be noted that attorneys and legal forms are not required in the filing of claims: "any claim within the provisions of this chapter may be presented to the Commission by any member of an Indian tribe, band or other identifiable group of Indians."

One of the claims ridiculed in the Digest article was the claim for Manhattan Island, filed for the Kent Tribe. Commission records show that this claim was filed by an individual, without an attorney. The Government's motion to dismiss is on the legal grounds that the island was ceded to the Dutch by the tribe, thereafter transferred to the British, and thereafter transferred by the British to the United States—therefore avoiding any liability.

Had these facts been set forth in the magazine article, a fairer picture of both the claim and its prospects would have been presented—but such a policy would probably not sell so many magazines.

A great deal of fuss was made in the article about the Otoe and Missouria claim—which originally sought compensation for 14,599,908 acres of land. Five of the seven causes of action brought by the Otoes and Missourias were dismissed by the Commission, and the award of approximately $1,156,000 was made on 1,879,892 acres of land.

This award was appealed to the Court of Claims, which affirmed the award and dismissed causes 2, 5, and 7, but remanded cause 1, which is still pending.

Inaccurately, the article states that the Kaw Indians asked compensation for Kansas lands and the Government, on the basis of the Otoe and Missouria judgment, "bought back" the Kansas lands for $2,493,688. Actually, the Kaw award of $2,398,220 (after offsets of $95,468) was made on September 17, 1951—a year and a half before the so-called precedent of the Otoe and Missouria award. Furthermore, to set the Kaw record completely straight, a further Kaw claim for 18,314,240 acres claimed under Indian title was dismissed by the Commission.

Let the record also be set straight with regard to the Quapaw claim, mentioned in the Digest article. This claim sought compensation for 44,703,892 acres of land, invoking the Treaty of August 24, 1818, in which the Quapaw Reservation was set aside as a permanent home by the Government.

An award based upon only 1,163,004 acres was allowed by the Commission, which denied the claim as to 43,520,889 acres. After offsets, the Quapaw judgment amounted to $927,668—which does not make very sensational reading.

The plain fact is that the Indian Claims Commission, in its tedious and difficult job of weeding out the good claims from the bad, has dismissed a great many more cases than it has satisfied with awards.

Many cases have been withdrawn, and most cases in which awards have been made have been for amounts much, much smaller than claimed.

Of the 131 cases completed before the Commission, by final action of award, dismissal or withdrawal, the total amount awarded to this date is $34,199,912—of which more than half is subject to some offsets in varying amounts, not all yet determined.

While more than $34 million is a lot of money—it is less than 4 percent of the total amount claimed in these cases, which amounted to more than $926 million.

That does not indicate that the Indian Claims Commission is being reckless in its decisions, or with Uncle Sam's money.

On the contrary, the evidence supports the view that this Commission is doing a good job in a very difficult and unprecedented mission, which was assigned to it by the Congress, and which has turned out to be a much bigger job than was anticipated.

Because of widespread interest in this subject, and to complete the record to the best of my ability, I am submitting for the RECORD the most recent compilation of claims filed with the Indian Claims Commission, as provided very recently, showing not only the amount claimed, but action taken as of March 20, 1958. The list follows:

Claims filed with Indian Claims Commission

[Figures in parentheses show number of claims in status given. *Indicates any offsets ascertained will be deducted]

Docket No.	Claimant	Claims	Principal claimed	Filed	Action (as of Mar. 20, 1958)
1	Loyal Creeks	1	$690,000	Dec. 30, 1947	Oct. 19, 1951, award $600,000.
2	Western and Eastern Cherokees	1	14,675,000	Feb. 3, 1948	Feb. 19, 1952, dismissed.
3	Western Cherokees	1	348,502	Jan. 27, 1948	Nov. 15, 1948, dismissed.
4	Michigan Ottawas and Chippewas	1	(1)	Apr. 29, 1947	Mar. 25, 1949, withdrawn.
5	Eastern Cherokees	1	2,653,996	Jan. 23, 1948	Nov. 15, 1948, dismissed.
6	Henry Jackson et al (Canadian Pottawtomies)	1	1,517,227	May 15, 1947	Feb. 15, 1949, withdrawn.
7	Minnesota Chippewas	1	5,194,328	May 22, 1947	Jan. 24, 1949, Withdrawn.
8	Fond du Lac and other Chippewas	1	143,786	....do....	Jan. 14, 1949, withdrawn.
9	Osage Nation	1	3,480,627	July 16, 1947	Mar. 1, 1955, award $864,107.55.
10	Pawnee Tribe	8	30,503,697	Aug. 5, 1947	Feb. 3, 1953, award $297.45 (3); June 17, 1957, liability (5) amount not fixed.

Byelorussian Independence Day, March 25, 1958

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 16, 1958

Mr. DOUGLAS. Mr. President, I ask unanimous consent that a statement I have prepared in regard to Byelorussian Independence Day be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR DOUGLAS

The year 1958 marks the 40th anniversary of 2 significant events in the history of mankind, both occurring with the breakup of the Russian Czarist Empire.

One of those events has been widely heralded, with all the fanfare possible through the media of mass communication. That is the 40th anniversary of the Bolshevik seizure of power in Russia and the establishment of the Russian Federated Soviet Socialist Republic. Last October leaders of the international Commmunist movement from most of the countries of the world gathered in Moscow to commemorate that unhappy event.

All during this year the people of the free world will be reminded of this anniversary through the vast propaganda machine the Kremlin has built up to advertise the devious and misleading wares of communism. As usual, this propaganda campaign will seek to hide the tragic stories which lie behind the establishment of the Union of Soviet Socialist Republics while presenting a distorted version of history as seen through the eyes of the new elite class who are the aristocracy of communism.

Unfortunately, large segments of the people of the free world will not be told the full story of the origin of Communist power. I say this because the free world in general, and the United States in particular, has not mastered the art of using the potent weapon of truth to combat the big lie of the Communists.

The second of these events marks an historic epic in human freedom, a period when the spirit of national independence and individual liberty burst forth from the ruins of the Russian Czarist Empire. It was during the period 1917–18 that no less than 12 nations, once a part of the Russian Empire, threw off the chains of imperialism, declared their national independence, established representative forms of government, and sought admission to the family of free nations. Most of these newly independent governments patterned their constitutions after that of the United States and many of them carried word for word excerpts from our own Declaration of Independence and Bill of Rights. Seldom in history has the United States enjoyed such prestige and emulation in world affairs as that which attended the breakup of the old European empires.

It was during this historic epic that the Byelorussian nation officially declared its national independence on March 25, 1958.

This action was taken by the Rada, a provisional but representative body which had been established on December 5, 1917. It is significant to note in this connection that the Rada had representation of all the Byelorussian political parties, including the two Jewish parties, Poalej Syon and Bund; the Polish Socialist Party; the Russian Constitutional Democrats (Radets); and the Russian Socialist Revolutionists (Essers). The only votes cast against the declaration of independence which established the Byelorussian National Republic came from the Russian Constitutional Democrats and the Russian Socialist Revolutionists, who, though representing a very small minority of the population of the country, insisted upon a maintenance of the authority of the Russian Empire.

After the overwhelming majority vote by the Rada, the representatives of the two small dissenting parties withdrew and then engaged in activities calculated to destroy the newly won independence of the Byelorussian nation.

The Byelorussian Government lost no time in giving leadership to all phases of national life except the military. This phase of national life was denied them by the German army which then held military control over the country. Nevertheless the newly established government made significant progress in the fields of education, advancement of native culture, laws to protect the rights of the individual and social security.

It gained de jure recognition from Czechoslovakia, Austria, Estonia, Finland, Latvia, Lithuania, Poland, Ukraine and Georgia. De facto recognition of the status of this newly independent nation was extended by France, Denmark, Bulgaria and Yugoslavia.

After the signing of the Treaty of Brest-Litovsk, an act which signaled the defeat of the Russian Tzarist Empire, the Germany army began its withdrawal from Byelorussia. By November 1918, the German army had withdrawn all its forces from the newly independent country.

Immediately thereafter the Red army under the command of Commisar Trotsky, who had acted as Russian signatory to the Treaty of Brest-Litovsk, invaded Byelorussia with the intention of destroying the newly independent government. From that date until March 18, 1921, Byelorussia was the theater of war between the Red army and the military forces of Poland. Thereafter the historic lands of Byelorussia were occupied by the Russian Communists, with the exception of that period during World War II when the armies of Hitler marched to the gates of Moscow and Stalingrad.

But during this period of 40 years, marked by war and foreign occupation, the Byelorussian people have not lost their hope, their faith in human freedom or their aspirations for national independence. The programs of mass deportation, economic depression, cultural spoliation and oppression of indi-

vidual liberties since carried on by the Russian Communists stand as an undeniable tribute to the Byelorussian people in their aspirations to be free and independent.

As we commemorate this 40th anniversary of Byelorussian national independence we remind the people of the world, including the Russian Communists, that the American people have not forgotten and shall not forget the heroic efforts of the people of Byelorussia to gain their rightful place among the free nations of the world.

It would be fitting on this historic occasion that the Voice of America reestablish a regular broadcasting program in the Byelorussian language, carrying the message of hope from the hearts of the American people that this once free and independent nation will soon be released from the chains of Communist imperialism.

This, in a very practical sense, is the best answer we, as a Nation, can give to the torrent of false propaganda which the Russian Communists are offering the world as they celebrate the 40th anniversary of their seizure of power in Russia.

I would, therefore, appeal to the President of the United States to take such action as may be necessary to reinstate a regular Voice of America broadcast program to Byelorussia which has unfortunately been discontinued during the tenure of his administration. The hopes of freedom should surely be kept alive for the Byelorussians, as well as for the other captive peoples.

Money Matters and World Affairs

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a talk by Allan Sproul, former president of the Federal Reserve Bank of New York, before the World Affairs Council of Northern California on February 5, 1958:

MONEY MATTERS AND WORLD AFFAIRS

I come to you with no news or views on travel in outer space, no word of missiles of any range or power, and no committee estimates of the strength of our national defenses nor of what we must do to improve our military posture. This naturally leads to a feeling of inferiority when appearing on a public platform today. My first impulse, in the face of this depressing fact, was to try to lift my morale and attract your attention with some high blown language to cover the relative dullness of my subject. At that point, however, I remembered the advice of a teacher of English: "Read over your composition, and whenever you meet with a passage you think is particularly fine, strike it out." That advice seemed good, and I decided to pursue my subject at a walk rather than a gallop.

The topic I have chosen, with the help of your president, however, leaves me with a pretty big field in which to exercise my talents. I could not cover all aspects of the subject, even if I had the time and you had the patience. And so I have decided to sketch in a little background, touch on some current events and, perhaps, suggest a few conclusions, all within the realm and span of my own experience. This will necessarily mean that much of what I have to say will relate particularly to the United States and Western Europe, although it has a wider application. Money problems are not peculiar to the older nations of the world. The new nations, with their driving urge toward too rapid industrial development, have already enmeshed themselves in financial difficulties.

It is close enough to accuracy, for our purposes, to say that the United States backed into international monetary affairs, and backed in reluctantly. Before World War I we were content to allow Western Europe, in general, and Great Britain, in particular, to act as bankers for the world and to dominate international financial dealings. They had the machinery and the experience, and their markets were used to investing abroad as well as at home. The balance of payments between countries and the stability of currency units were kept in line, fairly well, by the underlying trade position and by the international gold standard, which centered on London and the pound sterling, and with which our connection was more passive than active.

The First World War precipitated an abrupt change in this situation, although it was some time before we really woke up to what had happened. At the end of that war we had a large part of the monetary gold stock of the world, we were the only principal trading Nation which had stayed on the gold standard, we were a net creditor of other nations after years of having been a net debtor. And, if investment at home did not seem too attractive, we might have some funds for investment abroad.

There was a tremendous job of monetary reconstruction to be done in the world and, since the task was complicated by the existence of a tangled skein of war debts, and of disrupted trading relations, it might have commanded a great deal of Government attention. Our Government, however, had little interest at that time in the role of financial leadership which was being thrust upon it. It and other governments were still clinging, more or less, to the idea that money should manage itself. The people who picked up the loose ball were the central bankers and, particularly, the Governor of the Bank of England, Montague Norman, and the Governor of the Federal Reserve Bank of New York, Benjamin Strong.

These two men embarked on a program of international central bank cooperation, which had as its primary objectives the rehabilitation of the principal national currencies weakened by war, and the restoration of fixed exchange rates based on an international gold standard. They considered the achievement of these objectives to be necessary to the resumption of international trade on a multilateral basis, to the free flow of capital from the more developed industrial countries to the less developed raw material countries, and to the existence of commercial and financial relations between countries which would ease rather than create or accentuate friction and tension. They labored with enormous energy, great skill, and brilliant invention to reach their goals, and they were successful in the short run. No matter what happened later, it can be said of both of them, as was said in a recent biography of Lord Norman: "He was a man of such stamp and stature that any country may deem itself fortunate if it is served by more than one in the course of a single generation."

Unfortunately for their work, new forces within the body politic and economic were to provide new goals of national economic and monetary endeavor, which eventually helped to destroy most of the structure they had restored in the years between 1919 and 1929. With the onset of the great depression of the thirties, the international gold standard went into a decline, fixed and stable exchange rates gave way to managed currencies and exchange controls, multilateral trade was cross-hatched with special bilateral arrangements, the flow of capital between countries tended to dry up, and liquid funds moved over national borders driven by speculation and fear rather than being drawn by the relative attractiveness of money rates and by the needs of trade.

The difficulties of this situation were heightened greatly by the dislocations of World War II. This time, however, there were new people in government and new concepts of economic and financial policy, and of the role of governments in the formulation of such policies. Central bankers were pretty much relegated to the bench, and spent a lot of their time watching the play. At Washington we had an administration suspicious of New York, of Wall Street, and of bankers. In Great Britain we had a government which increasingly was finding economic and monetary guidance in the views of that brilliant economist, Maynard Keynes. And the Western European countries were pretty much willing to follow the lead of the leaders.

There was a great surge of enthusiasm for formal international financial organization. Problems which had proved to be thorny or intractable, when left to private initiative or the informal cooperative efforts of central bankers, were expected to succumb to the ministrations of complex international bodies controlled by governments. In order to temper the discipline of the international gold standard, while promoting stable exchange rates, the International Monetary Fund was created. And, as an afterthought, the International Bank for Reconstruction and Development was organized to catalyze the flow of capital between nations and to increase the volume of that flow.

In this country, one of the most concentrated public-relations campaigns ever organized was set in motion to sell the idea of the International Monetary Fund to the public and to the Congress. No group or gathering was too small, nor too remote from knowledge of what was involved, to have its sympathies played upon and its support solicited. International organization was to be the cure of our ills, and I had the dubious distinction of being one of the few who opposed the creation of the fund immediately after World War II. I also had the negative satisfaction of watching it wallow in impotence for several years, largely because it was not designed to function in the immediate postwar world. It is only recently that it has begun to find much actual business to do, and then only in ways considerably removed from the original blueprint. This may hold promise of desirable evolution. The World Bank, on the other hand, has had a successful career almost from the start, because of the quality of its management and because it had a job to do which was not inconsistent with the tattered postwar world of trade and finance.

These are cold ashes, however, and I apologize for raking them over, except to point the moral that an international organization is not necessarily a solvent of international problems; it does not make obsolete negotiations, in private, by negotiators more intent on reaching agreement than on audience reaction.

For our present purposes the most important economic development following World War II was the crystallization and general acceptance of the politico-economic idea, which was given statutory form in this country by the Employment Act of 1946. It became national policy in most industrial countries to promote maximum production, employment, and income, with stability of the purchasing power of the currency unit, and balance in foreign trade and finance, as secondary objectives, to the extent that they remained as objectives. No longer were the nations willing to endure the purges of an automatic gold standard, which might subject the economy to a period of substan-

tially reduced production and employment, in order to cleanse the economic blood stream of impurities generated by overblown prosperity.

It has been the difficulty of combining a full employment policy, as it has come to be known, with stability of the purchasing power of national currency units, and with balance in foreign economic relations, which has caused many of the economic headaches of the postwar years. In this country the international implications of the problem have been muted, because the strength of our international economic position has allowed us to pursue domestic goals without too much regard for the state of our monetary reserves or the fluctuations in our balance of payments. We have become increasingly argumentative about the alleged virtues and the patent dangers of creeping inflation, but we haven't been plagued with international financial crises. Most foreign treasuries and central banks, on the other hand, must have before them at all times—on their desks every morningt—the state of their balance of payments and of their monetary reserves. They cannot ignore the all too visible evidence, often found there, of domestic policies which are at odds with their international position.

In this sphere the trials and tribulations of Great Britain and France, particularly, have hovered around all of our postwar international political and military arrangements, as well as delaying, from year to year, the hoped for achievement of freely convertible currencies and complete renunciation of the more serious obstacles to free moving multilateral trade. Great Britain has suffered a series of currency crises during the past decade, each one weakening her international position and affecting her ability to participate in the military and economic defense of the free world. France has had to have massive support from us, through grants, loans and military aid funds, while pursuing a wobbly course toward currency debacle, and international economic weakness.

As the inheritors of some of the disciplinary functions of the international gold standard, the monetary authorities of these and other countries might have been expected to cope, more actively than they did, with problems of national and international monetary stability. But monetary management was under restraint, particularly in combating the inflationary pressures which dominated most of the period, and the area of operations of monetary controls had been changed and circumscribed since the good old days.

Monetary management was under restraint because the corrective measures it is supposed to use in checking domestic inflationary pressures, and foreign payments imbalance, have come to be associated with the reduced production, increased unemployment, and widespread human distress of the thirties. To be effective in the role of Jack, the Inflation Killer, monetary measures were supposed to involve, or to risk, a repetition of these troubled times, and there was understandable reluctance to run the risk. The area of operations of monetary controls was changed and circumscribed by the increasing role of government in economic affairs and the increased proportion of the national product taken by the tax collector. If monetary policy could not, or would not, reach through to government budgets and government expenditures, or if monetary and fiscal policy could not be coordinated, the chances of success in promoting economic stability, through monetary measures, was lessened and limited. And overlaying all other considerations was the continued drain of military expenditures on the economic resources of the world, which made nice monetary calculations particularly hazardous.

There are lights and shadows in the picture of monetary developments during the postwar period, of course. In 1948 a comprehensive monetary reform program in West Germany helped to bring about a sharp economic upturn in that country, and gave a boost to confidence in monetary measures as a means to economic health. In 1949, because of persisting currency and trade imbalances, 31 countries accounting for more than two-thirds of the world's trade, devalued their currencies, and established what it was hoped would be a more realistic basis for currency stability than had previously existed. In 1951 and 1952, and since, this country and many other countries have participated in a renaissance of flexible monetary policy, which has shown that monetary action can be important, even under present conditions, in restraining the twin evils of inflation and deflation.

It is clear, nevertheless, as recent developments in Great Britain and France have emphasized, and as recent experience in this country has intimated, that we have not yet found a way to overcome monetary difficulties as a recurring cause of world unsettlement. We have not yet found the point of equilibrium between continuous high-level production and employment and currency stability; we have not yet found the optimum mixture of fiscal and credit policy for use in a period of enormous military expenditure and increasing social outlays by governments.

During the early fall of 1957, Great Britain faced the latest in its series of postwar financial crises. The pound sterling was under severe pressure, partly because of imbalances in the trade of the sterling area rather than in the trade of Britain itself, partly because of speculative movements of funds (movements which fed on actual weakness as well as rumors of changes in currency parities), and partly because Britain had not been able to gain control of inflation and budgetary deficits in an economy of overfull employment. Early in September 1957, in order to stem the tide which had reduced Britain's gold and dollar assets below the theoretical danger point—$2 billion—the British Treasury and the Bank of England took several steps to increase the cost and availability of sterling credits, and to curtail public and private expenditures. The then Chancellor of the Exchequer, Mr. Peter Thorneycroft, buttressed these actions with a statement that the British Government intended to maintain the existing value of the pound. He went on to say that: "So long as it is generally believed that the Government is prepared to see the necessary finance produced to match the upward spiral of costs, inflation will continue and prices will go up. What is needed to bring it to a halt is for the Government to be prepared to deny the extra cash, whatever other painful consequences may follow. Thus we have put ourselves in a position effectively to restrict the money supply over a wide field. Against this background, if an attempt were made to take out of the system in money income more than is put in by new effort and production, the only result would be a reduction in activity and the employment of fewer men."

This was the first open avowal by a major country that monetary stability, at times, could take first place in government thinking. It was an assertion, also, of what should be the obvious fact that no people have a right to live beyond their means indefinitely. It gave confidence that, at last, Great Britain was going to face up, sternly, to the weaknesses in her economic situation.

The measures taken and the statements made last September achieved an immediate success, but it was recognized that the testing time would come this year when the new British budget was presented and new wage demands of British workers were considered. It has now become evident that the principle enunciated by Mr. Thorneycroft last September is being questioned in the light of political, economic, and fiscal problems facing the government in power in London. During the first week of 1958 all three of the treasury ministers in the government resigned, an almost unprecedented happening in British politics. Chancellor Thorneycroft said he resigned because he was not prepared to approve estimates for higher government expenditures during the next fiscal year than during the past fiscal year, something which the government, last September, had pledged would not happen. Mr. Birch, 1 of the 2 ministers of the treasury who resigned, said: "The treasury ministers were out to win the battle against inflation, and the other ministers were not. We were fighting to win and they were not."

It remains to be seen whether this split was the result of a clash of personalities or whether there had been a real weakening of resolve to curb inflation and defend the pound sterling at all costs. The new chancellor, Mr. Heathcoat Amory says that "the strengthening of sterling and a stable internal price level are the dominating aims of the government's economic policies, and nothing whatever will take precedence over them." We shall see. If there has been a weakening of resolve, the position of the pound will again become precarious.

Great Britain has been trying to do too much with too little. She has been trying to act as banker for a large part of the world and to carry on a large part of the trade of the world in her currency, without adequate reserves. At least her reserves have proved to be inadequate in the face of something less than full confidence in sterling. Therefore, she has had to borrow abroad from time to time to supplement her reserves, while invoking clauses in previous loan agreements which permit her to postpone payments of principal and interest on earlier loans. As a consequence of such financial weakness, she has been continuously hampered in fulfilling her role as one of the principals in a political, military, and economic alliance.

The French, with less reason perhaps, are in an even worse state than the British at the moment. Their government continues to walk the tightrope of uncertain coalition, although there are signs that younger and more vigorous men are coming to power. Their substance is being wasted in an indecisive war in Algeria, as it was earlier in Indochina. There has been a high level of domestic investment, employment, and income, but the pace of development has exceeded her available capital resources. The franc was long overvalued and distrusted, and inflationary pressures were in the ascendant. Last November the country's available international reserves hit bottom. In fact they went through the bottom.

This latest crisis was no sudden development. An extended investment boom in France, aided by deficit financing largely through the central bank, had pushed up costs and prices. This defective situation undermined the currency but, until last year, it did not result in a worsening of the French international reserve position, largely because of the dollars made available to France by American aid, loans, and military disbursements in French territory. When this support was sharply reduced in 1956 the French quickly ran through their free reserves and, late in 1957, these reserves were exhausted. France had to have help from the International Monetary Fund, and had to tap some unusual sources of foreign exchange * * * now the French have sought and obtained new loans from the Fund, and the Export-Import Bank, a further credit from the European Payments Union and a moratorium on payments of some earlier loans. Premier Gaillard has said that France is on the razor's edge between economic recovery and insolvency. It is, because short of insolvency there is only one way to go,

and that is up. If that is to be the outcome of the present crisis, the French will have to do a better job of putting their fiscal affairs in order, than they have heretofore been able to do * * * they will have to stop using credit for capital purposes. They will have to take stiffer measures than they have found possible in the past to defeat or restrain those groups of citizens who have stymied political and economic reform for so long.

The outcome will determine whether France will be able to assume her proper place in the European common market, on which so many high hopes have been built for the economic and political well-being of Western Europe. It will determine whether France will be able to play her proper part in the North Atlantic community of nations on which so much of her security has been staked. It will determine whether there will be reasonable balance between France and Germany at the center of Western Europe. A country which has to go begging from door to door for financial help, disgusts itself and disturbs its friends, particularly when it is a country so well endowed as France.

In our own case, the relations between money matters and world affairs have recently become more clear than they sometimes are. The repercussions of new and public evidence of Russian advances in the field of rocketry and missiles, and of Russian guile in economic competition, have shaken our financial calculations. A Federal budget which was supposed to be in surplus in fiscal 1958, ending June 30, has already gone into deficit. The budget for fiscal 1959, beginning July 1, will probably be born in red ink, despite present prayers that increased military expenditures may be offset by a decrease in expenditures for civilian purposes. Administration hopes of a tax cut in fiscal 1959, within a balanced budget, have given way to the suggestion that a budgetary deficit will be accepted, rather than an increase in taxes to keep the budget in balance. And those outside as well as inside government, who have been alarmed by the sharpness of the present business recession, have begun arguing for a tax cut, now, to increase consumer purchasing power. In their lexicon, we can have new model autos and missiles, too, and balancing the budget will take care of itself.

We have been spared immediate conflicts between world events and credit policy because recent developments abroad have taken place at a time of recession in production and employment at home, which had already brought about a move toward credit ease. We are usually spared the cruder manifestations of balance of payment and reserve difficulties, because we are so well heeled. We are, perhaps, the least sensitive of the nations which live under a system of democratic capitalism, to the interrelations between money matters and world affairs, but we are not immune.

I might try to broaden this presentation of my subject by reviewing other phases of the problem, but it would only serve to reinforce what I have already said. Let us see, therefore, if a few conclusions may be drawn from this selective excursion into some aspects of the relations between money matters and world affairs.

1. I think we can say that although money troubles are, as often as not, a symptom of deeper rooted political and economic imbalance, laxness in monetary and fiscal affairs can have a causative effect in undermining economic health which, in turn, affects political and military power. Those who argue for a balance between military spending and fiscal probity and monetary discipline have a real case, even though the emotional advantages are on the other side. In time of war the role of money may be to get out of the way of production. In the longer night of a cold war, no such easy decision is possible.

2. The rise of the theory that the first responsibility of government in economic affairs is to foster and promote high level employment and maximum production and purchasing ower at all times, has made it difficult to gain and hold support for measures which have as their purpose the maintenance of stability of currency units and international economic solvency. Yet neglect of this part of a complex problem may undermine the power and influence of nations and of groups of nations. We must find a way to strike a balance between these sometime conflicting objectives, or a way to remove the conflicts, if we and our friends are to stay strong.

3. In this country we shall have to be vigilantly alert in opposing those who would use the admitted difficulties of composing our fiscal and monetary troubles, and maintaining our military power, to sabotage our trade program. We have had a policy of promoting reciprocal trade, and we have been seeking to participate in the development of an administrative organism which will further promote the functioning of the General Agreement on Trade and Tariffs. If this great Nation now backtracks on the efforts it has made to accommodate its trading practices to its creditor position, and to strengthen the economies of the free world through multilateral trade, it would be a serious blow to our prestige, to our friends abroad, and to our own best interests. The fiscal and monetary difficulties of our allies and friends demand much of them, but they also demand a trading world in which the rule of comparative advantage in production holds reasonable sway.

4. In our absorption with the power of the physical sciences in our world, and in our attempts to develop further our scientific resources, we should not lose sight of the fact that our knowledge of the social sciences is something less than perfect. We should stiffen our educational standards and improve access to educational opportunities in this area also. The free nations cannot hope to pursue advantageous fiscal and monetary policies unless practitioners in these fields are numerous and well trained and unless public understanding of their importance is greatly increased.

5. In submitting ourselves to the disciplines of a money economy, we of the free nations must pursue different and, perhaps, more difficult ways of achieving our world goals than those which are open to a Communist society in which repudiation of government debts is an accepted practice, the currency unit has little meaning, and barter is a way to international trading and political advantage. But we should not abandon the field by chopping out our programs of aid to uncommitted and underdeveloped countries.

Undoubtedly, there are other conclusions which you could draw from these remarks of mine, or from a more thorough examination of the many facets of the problem I have been discussing. These will suffice, however, to underline the importance of money matters in world affairs. If we cannot take literally the biblical statement 'Wine maketh merry; but money answereth all things," we can at least give money its due.

Integration

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 16, 1958

Mr. DOUGLAS. Mr. President, in the crucial national debate over how best to carry out the constitutional principles of equal protection of the laws, as declared by the Supreme Court in its historic desegregation decisions, the quiet eloquence of Mr. Roy Wilkins, able and responsible executive secretary of the National Association for the Advancement of Colored People, in his article entitled "Integration Must Move" in the March issue of the Atlantic Monthly deserves the widest possible reading. The calm reasonableness and determination of the appeal he makes for positive action in public school desegregation contrast markedly with the charges often hurled at the NAACP by its opponents.

I ask unanimous consent that this thought-provoking article be printed in the Appendix of the RECORD.

There being no objections, the article was ordered to be printed in the RECORD, as follows:

INTEGRATION MUST MOVE

(By Roy Wilkins)

(Executive secretary of the National Association for the Advancement of Colored People, Roy Wilkins, who graduated from the University of Minnesota, was for 15 years editor of the Crisis and prior to that, from 1923 to 1931, managing editor of the Call, the Negro weekly of Kansas City. In this article he carries forth the discusison initiated by Agnes Meyer in her January article, Race and the Schools.)

A good deal of nonsense has been written and spoken upon the public school desegregation question. With some notable exceptions, we have exhibited little honesty, ingenuity, common sense, and courage in approaching it. The Atlantic recognized the significance of the problem by featuring the sincere article, Race and the Schools, by Agnes E. Meyer, in its January issue. Yet Mrs. Meyer, for all her knowledge of and devotion to the public-school system and her sincerity as an American liberal, has repeated some of the interpretations that have placed the situation on dead center and kept it there.

Hardly anyone sits down to a typewriter on this question without cautioning the Negro to abjure haste. William Faulkner used the columns of a multimillion-circulation weekly magazine to shout "Go slow" to the NAACP. As the final caution Mrs. Meyer in the January Atlantic counsels, "Make haste slowly."

Those who read and run might gather from all this that Negroes had been knocking down school doors, browbeating administrators and boards of education, or throwing picket lines around the schools from which they are barred. Nothing could be further from the truth. The majority of Negroes are mild and forebearing, much to the irritation of a growing number among them who wish for a program of more action.

There has been no pellmell rush toward desegregation, no demand for instantaneous change. Certainly the NAACP has not advocated overnight alteration of school patterns. However, both the NAACP and Negro citizens generally have insisted that school boards come to grips with the question and that beginnings in good faith be made. Five days after the 1954 decision of the Supreme Court, Dr. Channing H. Tobias, NAACP board chairman, set the tone for the organization's procedure in a message to its southern leaders meeting in Atlanta:

"It is important that calm reasonableness prevail, that the difficulties of adjustment be realized, and that, without any sacrifice of basic principles, the spirit of give and take characterize the discussions. Let it not be said of us that we took advantage of a sweeping victory to drive hard bargains or impose unnecessary hardships upon those respon-

sible for working out the details of adjustment."

Here was the calm deliberation which since then has been urged so insistently upon Negro citizens. Here was consideration for school administrators and others upon whom would fall the burden of planning desegregation. But here, also, was quiet determination upon basic principles, upon change in the old order, upon access to light and opportunity after 57 years in the semidarkness of the separate-but-never-equal doctrine.

It is this determination that the opponents of the Negro's aspiration are trying to break with their repeated cries of "Slow down." They are shadowboxing over speed; the real target is any change at all.

The handwriting regarding segregated schools was on the wall as early as 1935, when Donald Gaines Murray won his way, via the Maryland Supreme Court, into the Law School of the University of Maryland. The picture became clearer through United States Supreme Court decisions in 1938, 1948, and 1950, together with other Federal court decisions in this period forbidding a racial differential in teachers' salaries.

With the principle unmistakably stated in the University of Texas case in 1950, it was only a matter of time before a challenge on the elementary and secondary levels would be before the courts. No governor, or attorney general, or State board of education, or mayor, or local school board, or responsible school administrator, can claim today that the 1954 decision on public schools was sudden. All of them had had a maximum notice of 19 years and a minimum one of 4 years (from the Texas case). That they understood what was foreshadowed is demonstrated by the frantic building programs for Negro schools into which the Southern States plunged from 1949 to 1954 in a desperate effort to stave off the inevitable.

No, the Negro is not "pushing too fast"; he spent nearly two decades making his moves in a slow, orderly manner through the courts. Today he is proceeding with moderation and behaving with dignity under an intense fire of falsehood, intimidation, and persecution. Politically shackled and economically harassed, he has endured the persecution of State governments in which he has no voice and the ruthlessness of power structures in which he has no influence.

While he does not rant, he remains determined. A Gallup poll last December revealed that 69 percent of southern Negroes want the Supreme Court decision enforced, as against 53 percent nearly 2 years before. Only 13 percent were recorded as opposed. A survey published in the Catholic Digest in August 1957, showed that 93 percent of the southern Negroes supported the policies of the NAACP.

All this would indicate that the Negro American is neither wild-eyed and obstreperous nor divided on this issue. He believes that the way to begin is to begin. He cannot be expected to cheer a beginning such as that in Winston-Salem, N. C., where 1 Negro child has been integrated in the entire city system, nor that in Little Rock, where 9 Negroes are distributed among 1,991 whites in Central High School. If he greets these and similar efforts with something less than enthusiasm, it does not mean that he wants to go too fast; it means merely that he does not want to stand still.

Another favorite myth is that the Negro by insisting on some movement in good faith toward desegration is seeking to destroy the public school system and the standards of public education. Governor Luther Hodges of North Carolina used this as a theme in a statewide radio and television talk in 1956.

The only people who have threatened to destroy the public schools in certain States are white people, mostly politicians in high and low offices. The Negro wants more and better schools, not fewer.

Nor does the Negro seek to lower educational standards. Who knows better than he on how great a scale his children have been cheated of a decent education over all these years? He knows that a frightening number of them are lagging behind whites at certain levels. But he does not follow the "logic" which says that the way to cure this condition is to maintain the segregation which produced it.

Allowing for the 350,000 Negro children who have been integrated since 1954, there are still slightly more than 2 million Negroes remaining in segregated schools. Some commentators seek comfort by concentrating on the 350,000, but most Negroes and fair-minded whites, while welcoming this beginning, keep their sights on the present immobile 2 million. Negroes know that not all these 2 million children are below par, that some of them can equal or surpass their grade levels in any test. They know, too, that still more could pass easily if given brief, intensive, and sympathetic remedial attention.

Assuming that a mere 10 percent of the 2 million could pass their tests tomorrow, would their integration ruin public education standards? Obviously not, and the integration total would jump more than 50 percent. If those who can quickly be brought to standard were added, the total would be still more satisfying—and no white child would be retarded thereby.

And, speaking of retardation, what of the present plight of average and superior children now attending all-white schools in company with a not negligible number of children who are below average, even poor? Recent figures from a Texas city purport to show that 59 percent of whites in the fourth grade were at or above their grade level as compared with only 13.5 percent of Negroes. But, aside from the contrast with Negroes, this survey reveals that more than 40 percent of the white children are below average. Excluding a few experts, is anyone complaining that the presence of of this two-fifths is ruining the education of the three-fifths?

If this argument is valid with respect to Negroes, it is valid with respect to the substantial number of substandard white children. It becomes, therefore, a problem of education rather than one of race.

As the Negro views the present situation, there would seem to be certain requisites to a beginning toward reducing tensions and getting on with desegregation. The segregation problem is not the same in the North as it is in the South. The difference is apparent to even a casual observer of trolleys, buses, city halls, State legislatures, parks, theaters, restaurants, hotels, factories, and white-collar employment. As for schools, despite defacto segregation there are Negro teachers and students in mixed situations, with Negro honor students, class presidents, and athletes. In New York City the desegregation principle has been recognized, the Supreme Court respected, proposals drawn up, and debate encouraged. There is movement. The same cannot be said for Richmond, Savannah, Jacksonville, Mobile, Shreveport, or Hattiesburg.

Further, the segregationists must face, sooner or later, the fact that the soothing doubletalk handed to Aunt Mandy and Uncle Jim falls on the deaf and scornful ears of today's Tom, Dick, and Harry. These latter have traveled far from the home county; tens of thousands have been off to war and seen far places; thousands more have gone to school under the GI bill; they have radios and television sets; they read newspapers, magazines, and books. That is why the Montgomery bus protest lasted 1 year instead of 5 days, as predicted by local whites who knew "their" Negroes. That is why the time-tested formula of dividing the good Negroes from the radical ones has failed on the school desegregation issue.

Next, there should be, among those genuinely desirous of getting something done, an end to the characterization of court action and political pressure as force. This perversion reduces legal action in accordance with a decree of the Nation's highest Court to the same level as mob action stirred by a John Kasper. The same reasoning lumps together as extremists the NAACP, which supports the Supreme Court, and the white citizens' councils, organized specifically to defy the Court. Inveighing against the employment of political action by Negro citizens is asking them to forgo an instrument which is the very backbone of a democratic society, one that is used for everything from cutting a curbstone to, say, fixing the rate for interstate natural gas. They cannot be expected to acquiesce.

Equally pointless are the running references to the era of good feeling that is alleged to have existed in the years prior to the 1954 decision of the Court. It is true that southern whites experienced few racial tensions, for they found that a segregated society, rigidly controlled through political disfranchisement, economic ceilings, and social customs, was comfortable and relaxing. But for the Negro it was an era of frustration.

While we were making the world safe for democracy in one war and destroying Hitler's master race theory in another, the Negro rode in the back of the bus, lived in a ghetto across the railroad tracks, sent his children to Jim Crow schools, worked at restricted jobs, enjoyed either inferior or no public recreation, endured daily humiliation and insult, received uneven justice in the courts, and was the victim of violence. He is not overcome with nostalgia for the pre-1954 days; he has bid them a grim and tearless good-by.

The Negro wants to be a partner in this great social change. He has offered his cooperation from the very beginning, but his peaceful petitions offering aid in drawing up desegregation plans were rejected, filed away, or turned over to local segregationists so that the signers could be fired from their jobs. The Negro is still deeply interested in building better schools for all children. He believes segregated schools have hurt white children as he knows full well they have hurt his. But partnership implies mutual respect and consultation, leading to cooperative movement. Where these necessary conditions have been met, he has been a willing collaborator.

If Mrs. Meyer's admonition, "The chief responsibility for leadership is still that of the white population," is to be meaningful in the light of present-day urgencies, there must be the sharing of responsibility for plans and results which is inherent in the partnership concept.

Hungary and the Revival of Europe

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the text of an article entitled "Hungary and the

Revival of Europe." This article, which appeared in the September 1957 issue of The Link magazine, was written by Stuart L. Hannon, deputy program director of Radio Free Europe.

The article follows:

HUNGARY AND THE REVIVAL OF EUROPE

(By Stuart L. Hannon)

The Hungarian revolution will live again this month, not on the barricades but on the conscience of the free world. For with the emergence of the U. N. Special Hungarian Report, already well circulated, on the stage of the General Assembly, all men—free, bond and criminal—will be confronted with the reenactment of a three act tragedy which is in many ways without parallel in modern history. And if the live drama itself was a startling depiction of unofficial heroism and official failure, the reenactment must not be permitted to fail. It must become a tocsin, a beacon, a continuing fourth act which will regenerate the sources of human fellowship, courage and principled determination, as have been woefully lacking in western man since the Soviet aggressors first began striking him in June 1953. "What is needed," wrote Thomas Mann before he died, "is a militant humanism."

As the fourth act begins, let us review the first three. In act I, the entire Hungarian people, united as never before in their history, rose up against the misery and domination of Soviet-Hungarian communism and AVH bestiality. Certainly the rising was Homeric, one of the purest examples of classic revolution in history, a jubilant levee en masse which was determined, in Actonian revolutionary pattern, to shake off the past and rescue the world from the reign of the dead. Act II, let us say, began with the pronouncements of Hungarian revolutionary leadership, calling for withdrawal from the Warsaw Pact, neutrality for Hungary, free elections, recognition by the United Nations and negotiations with Russia for withdrawal of all Soviet troops. This act ended with another example of that practiced Russian treachery, about which Kossuth wrote so precisely in his time, followed by the unprecedented brutality of Soviet mechanized hordes, which engulfed and ground out all resistance. Act III began and ended with an incredible pantomime of pusillanimity among western nations. All founded upon and dedicated—more or less—to historic concepts of freedom, to the preservation of the dignity of man, to the support of world organizations and governments supposedly in charge of implementing or protecting these great ideals, to the recitation of millions of words about freedom and liberation for mankind from all tyranny—these nations could arouse themselves to little more than words of consternation, commiseration, admiration and fatalism. Gradually, as the paralysis wore off, the sparse initiative took the form of mutual recrimination, a spasmodic search for scapegoats and even a conscience stricken suggestion that the U. S. S. R. had legitimate rights under the Warsaw Pact. Finally, there was a comfortable conversion of the greatest political issue of our time into a humanitarian issue, in which the West salved its conscience and felt rather noble about admitting substantial numbers of Magyar stock into its free society.

But let us now be grateful for U. N. report of small nations[1] which thrusts the case of Hungary, like a flaming faggot, into our camp again. We of Europe and the Atlantic community have a second chance. It must not fail. The Hungarian revolution is not dead and it was not a failure. On the contrary it was a success which grows each day in stature to haunt the Soviets, for it was an act full of faith and honor, of heroic dimensions, of proof to a western body politic, terrorized and bullied by Soviet communism, that in one of its veins, the Magyar vein, there was still a fresh flow of courage. Out of the quivering ranks of western peoples a Hungarian David stepped forth to challenge the Russian Goliath. But more like Samson he shook the pagan edifice severely and the tremors continue. Milovan Djilas, most eloquent apostate of communism and now in a Yugoslav prison, wrote prophetically, "The Hungarian revolution means the beginning of the end of communism."

The question before the free world today is no longer the whimpering or defensively belligerent demand, what could have been done? The fact is that many things could have been done. Some actions would have left for history, without any risk to Western comfort and security, a more charitable picture of democratic convictions and courage. Others might have redeemed the situation with just as much probability as they might have led to the risk of war. Far greater calculated risks have been taken since 1936. But these issues are dead now and will only be usefully revived by intelligent historians who will not be honorbound to prove that failure is success, or that foreign policy, wisdom, and morality are always identical.

The question today is what can be done, now.

The message to Europeans, adopted at the close of the Hague Congress in May 1948, suggests an attitude worthy of free men and outraged humanity. "The hour has come," according to the message, "to take action commensurate with the danger."

What can be done? No European should be less sanguine, certainly, than Mr. Nehru in his recommendation that the Russians should best leave Hungary. Minoo Masani, the founder and joint secretary of the All-India Congress Socialist Party, is even more outspoken. "Soviet communism," he writes, "has today turned its back on every single generous and progressive impulse of the October revolution," and its expansion would be "the worst of all possible inflictions on humanity." (In fact, so long as Soviet troops remain in Hungary, West Europeans should consider the potentialities of an all-European boycott of the 40th anniversary as a grotesque and meaningless puppet play for the retarded.)

The near 400-page U. N. report is a crushing indictment of the Soviet Government, all the more so for the restraint of cold narration. It came to the conclusions, inter alia, that the revolution was spontaneous, nationwide, and unplanned, led by students, workers, intelligentsia, and soldiers, many of them Communists. While the revolution was not planned, evidence found that the Soviets had taken steps prior to the outbreak to make armed intervention possible. (This fact gave support to the belief that the uprising was deliberately provoked as the least costly way to reduce pressure in an explosive Soviet orbit, but above all to make Hungary an example to discourage Poland.) The report also established conclusively that the peaceful demonstrators of October 23 carried no weapons; and that by the Soviet's own definition of aggression, they stand accused. And while it showed clearly that Imre Nagy threw in his lot with the insurgents, no evidence was available to show any popular support for Kadar. Regarding inhuman torture, especially by the AVH, the report observed: "The verbatim record of the committee's meetings contain appalling descriptions which the committee would have hesitated to publish in their entirety" under any circumstances.

The chronology of events in Hungary since the end of the revolution has been marked by prosecution and deportation, suppression, and execution. The workers' councils were first stripped of their political power, then outlawed. Strikes and any real opposition have been made subject to the death penalty. Young girls have been executed. Meanwhile, in Moscow (where international youth festivals and diplomatic garden parties are also held) Kadar found occasion to praise the historic Soviet troop action in Hungary, and Bulganin in turn found it faithful and heroic. The Kallay ministry early in August announced a total campaign to break intellectual resistance in Hungary, to annihilate all counter-revolutionary remnants and to liquidate bourgeois views. Compulsory courses in the Russian language and Marx-Leninism are back again.

Europe and the free world must face the fact that whatever the Communists call freedom—intellectual deviation, opportunism, factionalism, bourgeois liberalism, thought anarchism or nationalist bias, ad infinitum—they are determined on its destruction in Hungary, particularly as an object lesson to the West. The essential conflict is unchanged, and remains the struggle of humanism versus Leninism, man as an end versus mass as means, individual choice versus class will. Ultimately, it is Soviet hegemony versus national sovereignty. One may, if he wishes, discount the antics and threats of a Krushchev, but the Red army in Hungary gave a somber emphasis to the admonition "we will bury you." Jean-Paul Sartre might still cherish the queer notion that the cult of humanism leads to fascism. But he can never claim that the cult of communism leads to humanism.

Madariaga has stated somewhere the moral point that if we want peace with the people of Russia, we cannot at the same time make peace agreements with their Soviet masters. Still less, one must add, can we make such arrangements when they are in open contradiction and opposition to the independence of peoples having nothing to do with Russia. This is the sort of immorality which M. Spaak once properly charged as effecting "the very authority of the Assembly." And last October, just a few days before the Hungarian tragedy, the distinguished Belgian statesman, Paul van Zeeland, addressed the Congress of European-American Associations in Vienna. Commenting on the implications of the rule of law in society, he cautioned against inaction in the face of "brutal infringements on well-established rights in the world." Then he added "We do not have the right to tolerate them and to let events take their course as if they were in conformity to the rule." This is a moral position which must be inviolate. Retreat from this position has hurt the West grievously during the past 20 years, and has advanced the course of despotism significantly.

A distinguished group of men and women drew up for the CEAA Vienna meeting a Declaration on Western Civilization. It was a good human document, the kind of humanist credo which comes out frequently in the Western World. Among other restatements, it said that "liberty and justice are inseparable," that "the right to political opposition and respect for political opponents" is basic to western progress and freedom; and that "the citizen's physical liberty must be protected, if necessary against government itself." The letter and spirit of this declaration has been hideously violated. What shall be done about it?

Soviet diplomats and intellectuals are now endeavoring to expand cultural and other exchanges with countries in the free world. This confronts us all with a new test of integrity and casuistry, for between us and any legitimate "coexistence" stands not only Hungary—her dead, her slave deported, her

[1] The special committee on Hungary was composed of representatives of Australia, Ceylon, Denmark, Tunisia, and Uruguay and established January 10, 1957, by the General Assembly of the United Nations.

homeless exiles—but all other captive nations. The late Karl Jaspers once wrote that "Liberty exists to the extent that communication is profound and honest." We might apply this measurement to our relations with the Soviet Union and the suppressed peoples. And whenever the Soviets or their Pavlovian creations chant "peace," the response of all freemen should be "freedom."

What can be done? Every civilized institution should express its moral position, as did the University of Zurich, on Soviet aggression in Hungary, the continued occupation, the ban on free elections. Every intellectual should activate himself as a committee of one, as well as in company with his confreres, to exert whatever influence he can for the cause of Hungary. He need not die for freedom as many Hungarians did. He need not suffer imprisonment. He need not even run the risks of an Emile Zola or the Seven of Göttingen. He need only summon his thoughts, his initiative and communicate with the forces involved, on both sides of the frontier which divides freedom and tyranny. Let him pay homage to the opportunity to speak freely and to assemble which is the foundation of freedom. Let him confront Soviet students with the new meaning of this opportunity which, we know from many sources, they are beginning to explore. They are concerned about Hungary and not so content merely to repeat, as Silone has accused Amissomov, "the scandalous thesis of your government."

The Soviet Union and unregenerate Communists everywhere will resort to every diversion, every blandishment, every petition, and countercharge, to kill the divided interest and responsibility of the United Nations regarding Hungary. Not only must they fail in their invidious efforts, but the West must use this historic document as a fighting banner under which to join the crusade for freedom which the Hungarian patriots, in desperation, began last October.

Radio Free Europe will do all in its power to support and publicize the U. N. report on Hungary. And assaults on this organization will be appropriately intensified. Few organizations, governments or individuals have been so vigorously and consistently attacked by the Soviet Union and Communists as Radio Free Europe. During the Hungarian crisis and afterward, as was to be expected, Radio Free Europe also was attacked by certain elements in the West, some irresponsible, some ignorant and others simply malicious. The record has been long since corrected by responsible Europeans. It is well to remember that whole Radio Free Europe is an American enterprise, financed by millions of Americans, it is composed in vast majority of Europeans working for the benefit of a reunited and wiser Europe. By keeping contact with 70 million east Europeans when the Iron Curtain came down, Radio Free Europe helped considerably to offset the imbalance of power which otherwise would have tipped in Russia's favor. There are times when real power does not rest in weapons but in moral action. Our collective duty is to work for a moment when all weapons, actions and words may be able to serve, decisively, the same united purpose.

With the gigantic strides in western European integration—economically, politically, scientifically—with the solution of old contentions such as the Saar, Europe is on the march to repair the ravages of internecine warfare over the past 40 years. During these years of dissension, unfortunately, Soviet imperialism together with atheistic communism * * * "Christian heresy" according to Toynbee, have caused much suffering, corruption and confusion. It is time now to cut down the alien corn so that the ideals of western civilization may again have a chance to grow and flourish. There are many places to begin the recovery, for Europe is divided in many places. One such is the separation of Hungary from her European genre.

There are two specters haunting Europe today. One is in Eastern Europe, the specter of freedom. Under its obsession, the Communist leaders dance to the torments of uncertainty; threatening, denouncing, purging, pleading, and cajoling. They whistle loudly as they walk through the graveyards, listening fearfully at intervals for Khrushchev's shrimp. They are in deep trouble. In Western Europe the specter is still the ghost of Hamlet, and all its conflicting agonies of conscience and resolution, intellect and action. The dilemma of which Paul Valéry wrote 30 years ago still exists: "Today the European Hamlet stares at millions of ghosts * * * but he is an intellectual Hamlet. He meditates on the life and death of truths. He wavers between one abyss and the other, for two dangers still threaten the world: order and disorder." Valéry carried the analogy much further, but for our time the dilemma is carried far enough. The respective dangers are no longer so delicately balanced and far greater tragedies have been played out—outside the theater. Both literature and death have been given deep and ample reverence. It is time to show a new and deeper reverence for liberty and life. The Hungarian people, all people who have suffered and who have been denied, are waiting for humanity to joint in this action.

Comment by Edward P. Morgan on Current Conditions

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 16, 1958

Mr. DOUGLAS. Mr. President, we all know that the strength of our free society is enhanced by those citizens who accept responsibilities individually and in countless voluntary groups to work for the solution of our most complex and pressing problems.

Not only because he calls attention to one such effective group in Chicago, the Illinois division of the American Civil Liberties Union, and another in Washington, the National Civil Liberties Clearing House, but also because he reminds us all of our opportunities and duties wherever we are to work for freedom and the rights of the individual, I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Edward P. Morgan's comment on the news given on the American Broadcasting Network, March 10, 1958.

There being no objection, the comment was ordered to be printed in the RECORD, as follows:

Sometimes, even when spring is whispering a teasing promise just around the corner of the calendar, it is easy to become discouraged about the state of the Nation.

People are nervous about the recession. People are disheartened or bored, or both, by tensions on the international scene. Citizens of good will become depressed and frustrated by the vast number of things that badly need fixing here at home, and which seem to respond so slowly to treatment. The attitude of extremists, especially but not entirely in the South, is hardening against the country's legal and moral commitment to put an end to second-class citizenship for Negroes. Senator JENNER doesn't like certain decisions of the Supreme Court and so he is pushing a bill that would simply not let it review cases in certain fields such as congressional investigation of security risks and State laws against subversion.

The list of discouraging developments is long and, especially here in Washington, the feeling grows that government at the top level is still not providing the leadership needed to summon our best efforts to define and grapple with the problems. But there is, I think, in this anxiety, the danger of selling the resilient strength and intelligent concern of Americans short.

We can make ourselves look callow as a cream puff or outrageously silly but there is a steady devotion to the country's welfare on the part of countless citizens which never makes a news item. I had to fly to Chicago last week and on the way up Cicero Avenue from the airport to the center of town I encountered a phenomenon that still has me somewhat baffled: a drive-in movie in operation with the temperature registering 33 degrees. Maybe it was a torrid film—I only got a fleeting glimpse of the technicolor screen—but it struck me as a shivering example of the extremes to which some Americans are willing to go in the pursuit of pleasure or in the flight from monotony or care. Still, a day later, several hundred Chicagoans sacrificed their Saturday of leisure to hold a meeting about some of the major problems besetting their community and their country. All afternoon the Illinois division of the American Civil Liberties Union held seminars and workshops on such items as what segregation patterns persist in the schools and why; what are a person's rights when he gets arrested? Where do we put the limits on police interrogation of suspects in a criminal case? And so forth.

And last week in Washington a whole galaxy of civic groups, labor unions, veterans organizations and church councils participated in the 10th annual conference of the National Civil Liberties Clearing House. Why all this emphasis on civil rights and civil liberties? Aren't these the things the Communists have taken advantage of, making it so exasperating for the rest of us that we should consider permanent curbs on them? People who embrace this thoughtless argument have lost sight of the core of the struggle, or so it seems to me The basis of our whole system is supposed to be the rights of the individual and his liberty, within the flexible framework of a free society, to enjoy those rights.

There are people all over the country—like these Civil Liberties members in Chicago—who believe deeply in these things, deeply enough to assert themselves even without the stimulus of dynamic leadership from Washington. There are people who are vastly concerned about the position of the United States, not just in terms of how many satellites we are juggling in outer space, or how many missile-launching platforms we will be able to build on friendly territory, but in terms of the very fabric of the American civilization: is it really strong and tightly knit or it is showing dangerous signs of fraying and pulling loose at the seams?

There is no census to show the number of these dedicated citizens. It is reassuring to know, as a look beyond the Washington horizon now and then will show, that they are there. It would be more reassuring if they and their good works—the incessant vigilance needed in a democracy—got the recognition and support they deserve.

This is Edward Morgan, saying good night from Washington.

The Supreme Court of the United States

EXTENSION OF REMARKS
OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1958

Mr. CANNON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a salient and timely dissertation by Hon. Ross A. Collins appearing in the March edition of the Mississippi Law Journal.

Mr. Collins was for many years a Member of the House and was one of the ablest and most brilliant men ever to sit in this body. He is an outstanding member of the Mississippi Bar, and the accompanying article is a transcript of a speech delivered by him to the student body of the Mississippi School of Law on May 9, 1957:

THE SUPREME COURT OF THE UNITED STATES

(By Ross A. Collins)

A speech on the Supreme Court of the United States is a subject so all-encompassing that it must be left to the one making it to decide his approach to its discussion.

The Court has been in existence more than 165 years and nearly 100 men have served as its judges, and these men have written thousand of opinions on practically every subject about which the Nation, the States and their people have ben concerned from the foundation of this country to the present time.

Since my remarks must be limited, the ideas that I will present to you will fall within two categories—both of which I consider political:

First, the Supreme Court of the United States is a policymaking body.

Second, how does this fact influence us, or how should it influence us, in deciding the type of men best qualified to be Justices of the Court, and how they should be chosen for that Court. The approach here will include a brief analysis of the careers of several of the outstanding Justices.

I. THE SUPREME COURT IS A POLICYMAKING BODY

Unfortunately, most Americans have little knowledge of the Court—the mixed reasons for and against its creation, its far-reaching powers both given and assumed, its decisions as divergent as the thinking of the citizens of the Republic, the individuals who have been its members, their political and economic views, their qualifications, their spites and prejudices, and the other qualities that are found in men occupying high public office.

Their opinions give us a clue to them as individuals or as to their thinking. But they are not generally read, for they are thought to be technical, legalistic, and difficult of understanding. Furthermore, the Court's opinions are printed not for general distribution but largely for lawyers; hence are not within the reach of the average citizen. Most people are too busy earning their daily bread to read them, and they do not have the time or the inclination to search out and read decisions of our highest court on questions they consider remote from their own lives.

Most Americans feel a slight responsibility for the election of the President and our Senators and Representatives in Congress. They participate in the selection of them. Members of the Supreme Court, however, are appointed by the President and the people feel no responsibility for their selection. They keep up with the acts of Congress and the work of the Chief Executive but not with the business of the highest court in the land. Even the bar of the country is not too much concerned with the decisions of our highest court, for its decisions are of a policymaking nature. The average lawyer is never employed to appear before that Court. His chief concern with that Court is to be admitted to practice before it so that he may frame and hang on the walls of his office his certificate of admission.

The Supreme Court of the United States truly is and always has been a policymaking branch of the Government. Its Justices are public officers in a democracy. They are selected because of their political faiths, and their decisions usually reflect the slant of their political thinking.

Some may believe that the Court decides the same class of cases and controversies as are considered in other courts, or the same character of litigation as is considered by the State supreme courts. That is not true now, nor has it been true for more than a hundred years. Its decisions are on the most important cases—the significant, the far-reaching, the momentous ones. These decisions may go unnoticed by the general public, even by lawyers, but they affect the rights and liberties of every citizen. Even the less important cases are far from routine. All deserve the careful attention and considered judgment not only of lawyers but of historians, political scientists, and other thinking men and women, for they affect not only the welfare of the Republic but the rights and privileges of its citizens. The Court's findings are of equal or greater import than are acts of Congress, for their decisions are the supreme law of the land.

Justices of our highest court are men just like the rest of us and they have political and economic convictions; and their opinions, from the founding of the Government to date, very clearly reflect the predilections of the Justices of that Court. Some Justices are liberal in their thinking while others are conservative. Their decisions are often by divided votes—a practice to be encouraged—and those in the minority have no hesitancy in stating plainly their disagreement with the majority. The reasoning of each reflects his liberalism or his conservatism.

The functions of the Court in policy areas extend—

1. To the interpretation of the meaning of the Constitution of the United States.
2. It interprets and construes the Acts of Congress.
3. It polices the relationships between the Federal and State Governments.
4. It polices the relationships between the States.
5. It is its own judge of its limitations.
6. And it has provided itself with the power to enforce its decrees.

The mere enumeration of these policymaking powers shows only too clearly that the functions of the Supreme Court of the United States are far different from the functions of a State supreme court or any other court or group of courts in the Nation, and causes one to ask if the qualifications for appointment to justice of that court should be determined by the same standards as those for other judges, both State and national.

To understand the men who have been Justices on the Supreme Court of the United States and their individual philosophies it is necessary to consider not only the judges' political background but their individual judicial opinions as well. It is not necessary to review the entire history of the Court for an appreciation of the worth of individual members of the Court and their basic philosophies. A reference to the decisions of any selected year or any one term will suffice. The cases decided in any one term and the various opinions of the Justices will show that liberalism and conservatism are not without meaning when applied to our highest court and any one term will reflect this meaning as well as another.

At the 1946 term,[1] there were 142 cases decided; 8 were of the highest political and legal importance. Twenty-nine of the other cases, while less important, were far from routine. They deserve the careful attention not only of lawyers but of economists, historians, and political scientists. The other 105 cases were those which were of less importance or which admitted of only one likely decision, even though a contrary decision would have made the cases of great public interest. One would be blind indeed to deny greatest importance to this field of policy decisions; they are the final findings on the questions decided.

The subject matter considered by the Court during the 1946 term embraced civil liberties, search and seizure, aspects of a fair trial, freedom of speech, regulation of labor, suits against the Government, conservation of our natural resources, torts, issuance of patents, right-to-work laws, power to tax, monopoly and free enterprise, 15 civil-rights cases, the right to counsel, Federal jurisdiction and procedure, religious liberty, and cases involving various constitutional questions.

Of the 15 civil-rights cases decided only 3 were unanimously decided; the rest were by divided opinions and both majority and minority opinions expressed the divergent political views of the Justices. The civil-rights cases involved unreasonable search and seizure, the right to counsel, and kindred well-known rights of individuals, and generally the rights claimed were denied on the facts.

By 1946 the Court's public law decisions had either stopped moving or were drifting to the right. The New Deal spirit in jurisprudence reached its peak about 1942 and was in recession in 1946. Scarcely a case decided during the 1945 term marked any material advance over anything gone before. In the field of civil rights,[2] antitrust, trade regulation, the taxing power—the march had halted. Indeed one might go farther. The Court has concluded 20 years since President Roosevelt made his first appointment. The Court as a whole had become a more conservative body than the Court which convened in October 1937. The Vinson Court—sometimes referred to as the Truman Court (although Truman's appointees did not express the liberalism of Truman)—became the Court's majority and, strangely, the conservative Justices.

The part the Court plays in the way the Nation is run can be seen in its decisions affecting the Constitution. The nature of that document is such that, as basic laws of limited size, the Supreme Court of the United States makes policy in interpreting its meanings. A decision affecting any section of the Constitution represents the majority opinions of the Justices and their opinions reflect their political and economic concepts. The Court's history proves this to be true; also, that when the Court changes personnel, the opinions of the Court change, often to the extent of overruling their former opinions. Even the nature of the Court's business shifted from the 19th to the 20th century—from private law to a public law docket.

A democracy is constantly changing and in recent years ours has traveled in many directions and rather suddenly; so has the Court, and its decisions formulate new policy

---

[1] Frank, "The United States Supreme Court 1946–47" (15 U. Chi. L. Rev. 1 (1947)).

[2] Civil rights as here used includes freedom of speech, press, public assemblage, liberty of religious worship, and so forth.

and these decisions reflect the changing policy of the Nation.

In periods of repressions, the rights of individuals as guaranteed by the Bill of Rights are pounced upon and restrictive laws usually follow, and our Highest Court has given but infrequent relief in stemming the repression. It becomes apparent that in the Highest Court, the law—whether it be the Constitution or the acts of Congress—is necessarily what the justices of our Highest Court say it is, and basic changes of its personnel inevitably bring changes of doctrine and decision.

Justices are appointed by the President and as Presidents change, Justices change as vacancies arise. Usually, but not always, the Justices share the views of the appointing President. As Mr. Dooley, a humorist of long ago, said: "The Supreme Court follows the election returns." More recently another author noted that this happens "10 or 12 years later." The truth is that Justices are human beings and have ideas and beliefs as do other public men, and their ideas and beliefs are written into their opinions. Charles Hughes, before he became Chief Justice of the United States Supreme Court, was quoted as saying: "We are under a Constitution, but the Constitution is what the judges say it is."

In a free-speech case decided by the Court in 1951, the St. Louis Post Dispatch of June 5, 1951, commenting upon the majority opinion of the Supreme Court in that case under the heading, "Six Men Amend the Constitution," said that "never before has such a restriction been placed on the right to hold opinions and to express them."

"The public policy of a State or Nation must be determined by its Constitution, laws, and judicial decisions, not by the varying opinions of laymen, lawyers, or judges as to the demands of the interests of the public."[3] The sources of policy must come from these sources. But the last and final word is with the Court. Woodrow Wilson once said that the Supreme Court of the United States was "in fact a permanent constitutional convention." An early Member of the House of Representatives in similar vein, but more bluntly, was quoted as saying: "No office John Marshall holds will be insignificant long."

Congress makes and interprets traditions, fundamental values, and social trends of our society within the general framework of enacting laws. The Supreme Court of the United States, although at this time sympathetic toward the enactments of Congress, however, does assume the power to strike down acts of Congress. Its attitude in the past has not been so friendly.

II. QUALIFICATIONS AND SELECTION OF JUSTICES

Although the Constitution provides that Justices of the Supreme Court shall be appointed by the President, by and with the advice and consent of the Senate, etc., in practice the President makes the appointment and the Senate meekly approves the appointment.

Only one Justice was ever impeached and he was not convicted.

President George Washington, during his two terms, made the first 11 appointments to the Court, so he might be said to be the only President who ever "stacked the Court."

In the early days the Court had little to do and for long periods of time didn't even meet. Only a few cases trickled into the Supreme Court and they were of little importance. The early Justices concerned themselves with their work as circuit judges and traveled over their various circuits—usually alone.

All of the men appointed to the highest Court were lawyers, although legal training is not a qualification prescribed by the Constitution. Likewise, all appointments were political and they became Justices because they were political friends of the appointing President. If politically sterile, they would not have been named. Once installed, they generally voted according to their political beliefs, as do Members of the Senate, the House, city councils, or any other group of individuals.

In the light of history the vast majority of our Presidents have, all too often, made disappointing appointments to the Court and somehow these appointees did not grow in stature with their service; those that did grow were men already of great natural ability.

The Justices of our highest Court were all kinds of lawyers: students and idlers, the alert and the dull, the learned and the unlearned. All were politically minded. Thirty-eight out of ninety-one of them had no prior court experience; 10 had 2 years or less; 23 had between 5 and 10 years; and 20 had 10 or more years on the bench. Of those that had prior court service only eight came from the Federal bench. Those that had prior court experience sat on courts of varying grades and significance and those courts dealt almost exclusively with private, not public, law cases.

These facts, together with the record that the justices with prior law-court experience made on the Supreme Court, will cause one to ask if such judicial experience is of such aid as would cause the President to select the judge-lawyer over the busy general practitioner, the lawyer-teacher, the political economist, the historian, and other qualified men of letters.

The historians of the Court have catalogued about a dozen justices of our highest court as being great judges—those whose works have shed luster upon that institution. Always heading the list is Marshall—not only because he was a great justice and influenced as has no other man the history of the country, but because he was likewise the first truly great judge. A short statement about Marshall and others should be made in order to give some insight into the reasons for their greatness. Their names symbolize the great historical issues with which they individually have been involved.

A. John Marshall

Born in Virginia, he was untaught save for the instruction his parents gave him and three short periods of schooling from a clergyman who stayed at the home of his parents. He read Blackstone's Commentaries in his youth.

He fought through the long years of the Revolutionary War with distinction and afterward began his preparation for the bar at William and Mary College, the only public seminary of learning in the State of Virginia at that time. He attended lectures there for perhaps six weeks. He was admitted to the bar in August, 1780, and argued 113 cases before the Court of Appeals in Virginia in the period 1790 to 1799.

Elected to Congress in 1799, but prior thereto, 1797, was Minister to France on appointment by President Adams; later Secretary of State under Adams until named Chief Justice.

Marshall was but slightly equipped as a lawyer and informed himself largely from the knowledge displayed by his adversaries. After he became Chief Justice and throughout his long and epochal occupancy of this high place he showed this same peculiarity. He didn't cite many authorities, and it seems certain he would not have relied upon "learning of the law" in any event, for later when precedents were abundant and accessible, he still ignored them.

On January 20, 1801, just before Jefferson was sworn in as President, Marshall was nominated as Chief Justice of the United States. And the battle between him and Jefferson began.

If ever a figure in our history embodied in his career clear proof that ours is a government of men, not of laws, that figure is John Marshall, the great Chief Justice.

He established the supremacy of the judiciary over the rest of the Federal Government and was delighted in doing it. Since the *Marbury* v. *Madison* case, which was rooted in politics not in law, the Court has followed Marshall's concept of the superiority of the Court over both the Congress and the Executive. This only the ignorant would deny.

He did more than any other one man to centralize power in the Federal Government and weaken the rights and authority of the States. The influence of his opinions is still generally accepted by the Court. And he wrote 519 opinions out of a total of 1,106 during his tenure of office—and there were only 74 dissenting opinions.

B. Roger B. Taney

Taney came from Maryland. He was ugly in appearance, a brilliant lawyer, he knew good English and how to use it, and he was a shrewd politician.

He was a defender of the people against flagrant financial exploitation, and he championed the rights of separate States—States' rights against national power.

Charles Warren, the historian, said of Taney that "it seemed evident that Taney would approach a case from the human standpoint."

Under Taney's chiefship the Court upset temporarily many of Marshall's pronouncements, but not for long.

Taney's work made his enduring imprint on the Nation and its law. It has been stated that had he died 8 years before he did, he might have gone down in history; one-half deservedly, one-half by happenstance, as the most liberal Chief Justice of them all. And further, it has been stated there was no Chief Justice for almost 50 years who could hold a candle to him.

C. Samuel F. Miller

History has given him but slight praise but many worthwhile and forthright authors he was said to be one of the Court's ablest justices. Chief Justice Chase said of him that "beyond question he is the dominant personality on the bench."

D. John Marshall Harlan

Harlan is another who is worthy to talk about. Appointed out of political gratitude. Like Marshall, he had little legal education; was an unsuccessful office seeker in Kentucky. He was a Democrat that turned Republican. He was, nevertheless, an outstanding justice.

E. Oliver Wendell Holmes

Holmes was appointed by President Theodore Roosevelt at the age of 61 years. Wise, witty and intellectual, he was one of the truly great men of all time.

He had been for 20 years on the supreme court of Massachusetts.

He left his imprint upon the minds and hearts of men as did Thomas Jefferson, John Marshall and Abraham Lincoln.

He had an abundance of commonsense and also knew the law and its humbuggery and did much to expose judicial, legalistic shams, and legerdemain. Generally in the minority, and known as the great dissenter, his opinions expressed the hopes and aspirations of enlightened men. His two cronies on the bench were Justices Brandeis and Stone.

He outlasted seven Chief Justices, including Taft, and finally left the Court in 1932 at the age of 91.

F. Charles Evans Hughes

Hughes was a studiously inclined lawyer with ability. He became Governor of New

[3] *Hartford Fire Insurance Co.* v. *Chicago, M. & St. P. Ry. Co.* (70 Fed. 201 (8th Cir. 1895)).

York and was a member of the United States Supreme Court during Holmes' tenure for 6 years. He became a candidate for President in 1916 and lost the presidency by only about 4,000 votes. He then returned to New York City and built up a lucrative practice. He later became Secretary of State under both Harding and Coolidge and once more returned to New York and his law practice; later President Hoover appointed him Chief Justice of the Court.

He was a well-groomed and impressive-appearing Justice, and I have always regarded him as an outstanding Chief Justice. This opinion is shared generally by those who have written the histories of the Court. Unfortunately for his reputation as a great jurist and Chief Justice, he sat with Holmes, Brandeis, Stone, and Cardozo, all noted for their vision and wisdom.

G. Benjamin Cardozo

His ancestors came to America from Portugal in 1654. He was an appointee of President Franklin D. Roosevelt. He had been Chief Justice on New York's highest court. His appointment to the Supreme Court of the United States was opposed by Justice McReynolds, Van Devanter, and Butler. His ancestors were ardent patriots when the British occupied New York. One of them acted as rabbi at the inauguration of George Washington and another was the first Jew to be made a trustee of Columbia University. He was not only a lawyer and a judge but a bookish man and spent his leisure in study and contemplation. He was known as the hermit philosopher. It is said by those who knew him that they never heard from him an off-color story or a word of innuendo against female virtue nor would one of them dare indulge in the mildest form of ribaldry in his presence. He was one of the most liberal men on the Supreme Bench.

In addition to his service on the bench he was professor of law at Columbia.

H. Harlan Stone

Stone was an appointee on the Court in 1925 after serving a year as United States Attorney General. There he appointed J. Edgar Hoover as head of the FBI and instituted noteworthy antitrust litigation. He was a product of New England and graduated from Amherst in 1895; he was president of his class, right guard on a famous football team and a Phi Beta Kappa. He graduated from Columbia Law School in 1898, and later he became a member of the Wall Street law firm of Sullivan and Cromwell. He was dean of the law school at Columbia, and was loved and revered by his students more than any other professor of that day. He authored the minority opinion in the well-known AAA case and it was one of the most significant opinions ever written. He said "courts are not the only agency of Government that must be assumed to have the capacity to govern," and "the only check upon our own exercise of power is our own sense of self-restraint." He was one of the less than a dozen great men to sit as a justice of the Supreme Court of the United States. Because of his unusual intellectual attainments and his knowledge of law and the culture and tradition of the times, he was the bulwark of the liberal minority, and a shrewd and canny fighter. No military leader ever planned his moves more carefully than Justice Stone mapped his legal strategy.

I. Louis D. Brandeis

Although born in Kentucky, he was a product of Boston where he had attended Harvard Law School and was attracted by the atmosphere of that great school. He had a lucrative practice and, although a good businessman, he gave his services as counsel without remuneration to people's causes, and as counsel in these cases appeared before the Supreme Court of the United States. His elevation to the Court was resisted by reactionary forces, including President Lowell of Harvard, William Howard Taft, and many others who followed the ultra-conservative line.

Justice Holmes and he were warm friends but entirely unlike one another in personality and attitudes. Justice Brandeis was a crusader while Holmes was a philosopher. He recognized the position of the Court in the affairs of the Republic and sought to write his liberal economic ideas into the law. He did not believe that the Court possessed the right to interrupt human progress and believed that "to stay experimentation in things social and economic is a grave responsibility. Denial of the right to experiment may be fraught with serious consequences to the Nation. This Court has the power to prevent an experiment, but in the exercise of this high power, we must be ever on our guard lest we erect our prejudices in the legal principles. If we would guide by the light of reason, we must let our minds be bold."[4]

He retired in February 1939, an old man who had wisely served his people and the citizens of his country, an Isaiah whose fervor had no need of vehemence.

J. Hugo Black

I hesitate to do more than call the names of the Justices of more recent years who have been rated by the many authors whose articles and books about the Court I have recently read; however, Justice Black has been given high rank by many of them.

CONCLUSION

Much valuable information can be gathered by observing the variety of background of these 10 men. Eight had no prior judicial experience; only Holmes, Cardozo, and Black had prior judicial work, and Black's covered about 18 months, and on a minor court, in his early years of practice.

Of those Justices named, Holmes, Stone, Cardozo, and Hughes had been teachers of the law. Holmes and Cardozo had been teacher-judges, while Stone and Hughes had been teacher-lawyers. All four possessed great talent and the eminence of our highest Court was enhanced by their presence on it.

All agree that it is imperative that worthy and capable men be selected for positions on the Court. What qualifications, therefore, are necessary? Certainly the history of the Court teaches that past judicial experience alone is not the answer; also that the general practitioner with certain experience in public office has made at least an equal, or perhaps better, record, while the law teacher-judge and the teacher-lawyer have done an excellent job on the Court.

Under the appointing system, the President of the United States is as well qualified to make appointments to the Court as anyone, for he has at his beck and call the considered judgment of his advisers in and out of the Government; and certainly he should be able to secure the services of superior men for the bench.

The system of electing judges, however, should not be dismissed, for under it State-elected courts have had many excellent men as judges, and a disinterested study by those seeking only the truth will prove this.

We are not so much concerned over the method used in selecting our judges; we are anxious to secure the services of forward-thinking men of honor and intelligence as judges for our courts, and especially is this true—and imperative—for the Supreme Court of the United States.

There is much that has been done by the Court in the past that we admire—and much, too, that we deplore. Nevertheless, all admit that our court of last resort still enjoys tremendous prestige. Maybe someday a majority of the Justices of the Supreme Court of the United States will recognize that Court's excesses, and suggest ways that it may divest itself of its judicial supremacy over the Congress and the Executive. Maybe out of the combined wisdom of the leaders of American democracy a better and a finer way can be found to keep the administration of justice in step with the march of progress.

Unemployment in Chronically Distressed Communities

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the latest fact sheet on unemployment in chronically distressed communities, as issued by Mr. Solomon Barkin, secretary-treasurer of the Area Employment Expansion Committee, 99 University Place, New York, N. Y.

UNEMPLOYMENT IN CHRONICALLY DISTRESSED COMMUNITIES

The rate of unemployment is very high in the chronically distressed communities likely to be eligible for assistance under the Douglas area redevelopment bill. Moreover, unemployment conditions in them are becoming more serious as the depression becomes intensified throughout the country. These communities are likely to be the last to improve their conditions should there be a general lift in the economy.

A survey of 24 major and 62 smaller areas of substantial and chronic labor surplus indicates unemployment rates of high severity.

In the major areas, the rate of unemployment for January 1958, which is the latest date for such data, ranges from a low of 6.5 percent in Kenosha, Wis., to a high of 17.1 percent in Atlantic City, N. J. The rates of unemployment in other major labor markets are as follows:

Unemployment rate in January 1958
(percent)

	Number of labor markets
6– 6.9	1
8– 8.9	3
9– 9.9	1
10–10.9	4
11–11.9	6
12–12.9	2
13–13.9	3
14–14.9	1
15–15.9	1
16–16.9	1
17–17.9	1

The rates of unemployment as measured by the number of insured unemployed increased in 15 of these communities, rising in the case of Kenosha by 58.9 percent. In 6 labor markets, the number declined, but it is likely that a considerable part of the reduction was due to the exhaustion of benefits so that the actual rate of unemployment rose in these communities.

Unemployment rates in the smaller areas are reported for the latest available dates. Only 24 of these are for January or February 1958. In any event, these are chronic labor surplus markets where unemployment continues to be very high. The highest rate

of unemployment is in Uniontown-Connellsville, Pa., with a rate of 23.4, followed by Herrin-Murphysboro and West Frankfort, Ill., with a rate of 21.7 percent; Biddeford-Sanford, Maine, with a rate of 19.9 percent; Sunbury-Shamokin, Mt. Carmel, Pa., with 18.1 percent; North Adams, Mass., with 16.5 percent; Welch, W. Va., with 16 percent; Cumberland, Md., with 14.9 percent; Logan, W. Va., with 14.4 percent; Vincennes, Ind., with 13.8 percent; and Litchfield, Ill., with a rate of 13.4 percent.

Attached are lists of the unemployment rates for selected distressed majbr and smaller labor markets.

TABLE I.—*Unemployment and unemployment rate,[1] selected areas of substantial labor surplus, January 1958[2]—Major areas*

State and area	Unemployment, January 1958		Percent change insured unemployment, January 1958–March 1958	State and area	Unemployment, January 1958		Percent change insured unemployment, January 1958–March 1958
	Number	Percent of labor force			Number	Percent of labor force	
Indiana:				Pennsylvania:			
Evansville	8,700	10.1	+6.9	Altoona	7,200	13.4	−11.7

"It Was the 18th of April in '75"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. LANE. Mr. Speaker, it was near midnight, and a cold moon was ghosting the countryside when Paul Revere started his famous ride.

To warn the patriot leaders and the minutemen, that the oppressors were coming.

Paul Revere eluded one patrol of Redcoats, was ambushed by another, his horse was taken from him, he was released, but he managed to get the warning to Lexington in time.

The ride he began that night inspired the farmers and the artisans to fight for their freedom.

It was a ride that has never ended.

Up through the years, in peace and in war, it has summoned the courage and integrity of every real American to be vigilant and determined that freedom shall be defended and extended.

That ride is a part of the American heritage.

Animating the Paul Reveres of today, the men and women whose love of country awakens us from the slumber of indifference. Calling upon us to stand up against those forces that would deprive us of the liberties that were won for us by others, through the greatness of their heart and spirit.

In order to perpetuate the memory of

the man who alerted the farmers and the villagers to the approach of tyranny, Postmaster General Arthur E. Summerfield has announced that a special 25-cent Paul Revere stamp will be first placed on sale at Boston, Mass., on the anniversary of the epochal ride that sparked the war for American independence.

Stamp collectors will be advised by any postmaster concerning the procedure to follow so that they may secure first-day cancellations of these historic stamps that are certain to become items of beauty, and sentiment, and value.

"On the 18th of April in '58."

How Does the Housing Situation Look to Leaders in Congress?—An Interview With Representative Albert Rains

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Journal of Homebuilding for March 1958. It is an interview with my very distinguished and able colleague, Representative ALBERT RAINS, chairman of the House Banking and Currency Subcommittee on Housing, conducted late in January of this year by a group consisting of 2 builders, both of them national officers of the National Association of Home Builders, and 6 specialists from the NAHB staff.

The interview follows:

AN INTERVIEW WITH REPRESENTATIVE RAINS

(How does the housing situation look to leaders in Congress? What do they think about the problems affecting the industry? What sort of legislation can the industry look forward to this year? In an effort to bring you closer to the legislative scene, the Journal publishes this exclusive interview with one of the most knowledgeable men in Congress on the subject of housing, Representative ALBERT RAINS, Democrat, of Alabama, chairman of the House Banking and Currency Subcommittee on Housing. Mr. RAINS was interviewed at the National Housing Center late in January by a group consisting of 2 builders, both of them NAHB national officers, and 6 specialists from the NAHB staff. The interviewers included NAHB President Nels G. Severin; NAHB Second Vice President Martin L. Bartling; NAHB Executive Director John M. Dickerman; National Housing Center Director Neal Hardy; Legislative Director Joseph B. McGrath; Economics Department Director Nathaniel H. Rogg; Public Relations Director Robert F. Loftus; moderator: Journal Editor Stanley Baitz.)

Question. Mr. Congressman, the home building industry believes that its impact upon the economy is basic to the healthy functioning of the economy generally. At the same time, we do not believe that home building by itself can cure an ailing economy. Also we object to being treated as a kind of economic safety valve to be turned on and off depending upon the opinion of Government officials or advisers as to the general trend of business.

Would you care to give us your own views, Mr. RAINS, on the economic impact of housing on the Nation, and how this might better be treated within the executive branch?

Answer. Well, first of all, let me say that I am delighted to be here and to attempt to answer some of the questions that are so pertinent to the home building industry and to the people in America who need and want to purchase homes.

In answer to your question I would say this, that I agree that home building is one of the basic industries in America and that it should not be used at any time merely as a pump priming device. It plays a very important part in the economy of our Nation. But there are many in the administration who in my judgment have been slow to realize that we are not meeting the housing need in America because of the smallness of some of our programs at the Government level. I hope that they will open their eyes to the need of keeping a live and growing home building industry now that we are faced with a recession.

I agree with your thesis completely, though, that it should not be regarded as an on-and-off program, to be used only to stem recessionary tides. We need to get year in and year out a much greater volume of good homes built in America than we have been able to get in the past. That is my firm belief.

THE TIME FACTOR IN HOME BUILDING

Question. Do you think, Congressman, that the officials concerned with the problem really realize what confronts the home builders today in getting back into a production that will have a real effect upon the economy? I mean the lead time involved in a home builder's program, between when he gets the idea that a particular piece of land, for instance, might be a good place to build a group of houses, and the time that he can actually produce them. Too many people, it seems to me, today are depending upon us now to bring the economy back up, and that is of real concern to us.

Answer. Well, I stated in my speech before your great convention in Chicago, you will remember, that the home building industry is one of the areas which is in need of greater impetus by the Government in order to meet what I regard as a recessionary trend. I did not mean to say, however, that I would relegate the home building industry to the role of economic pump primer only. I regard the home building business, certainly, as an important part of our economy, and if it were not, you would not be entitled to the serious concentrated thinking that I and those like me in the Congress are attempting to give your problems. The basic thing, though, is that we want homes for the American people, and the administration ought to understand that you cannot use it as a stopgap measure, off-again and on-again.

ONE MILLION FOUR HUNDRED THOUSAND UNITS A YEAR

Question. Mr. RAINS, I noticed in your speech in Chicago, which you just mentioned, that you pointed especially to something with which we agree wholeheartedly, that the basic problem in housing is not a decline in housing demand but one which reflects primarily financing difficulties in the absence of a true, low downpayment plan. I wonder if you might elaborate, perhaps, on your thinking as to those two points.

Answer. It has always been clear to me over the years as chairman of the Subcommittee on Housing, as I have traveled around the Nation, through the cities of the country, that while there may be certain times in certain areas that demand may be met for a few months, there is no place where, with a little more time, more houses will not be needed in the growing economy in which we live.

It is my belief that the demand for housing is truly great today. In fact, more people write me letters today as a Member of Congress inquiring as to why they cannot get a house, or what can be done so they can get a house, than ever before. I think the people in the administration and the people generally ought to understand that the housing demand has not been met, and there is still a great market and likely will be.

In fact, I think that all of the prognostications for the future show that we will need more houses as the years go by. So I have said many times, and I believe this sincerely, we ought to have at least 1,400,000 units a year of new construction, and another 600,000 should be provided for by reconditioning and rehabilitation of existing housing. Now, that is a much larger program than is envisioned by the President's message to Congress, but it is one that I think is not a crash program at all, but is just meeting the daily needs of the people generally.

I hope that we will be able to fashion in the Congress housing legislation for this year which will aid materially in helping the home builders to arrive at least at that goal next year.

Question. In connection with that, Mr. RAINS, as you well know, last year the Congress helped increase housing demand considerably by lowering the FHA-required down payment. What is your opinion as to the attitude Congress will take toward the possibility of approving an additional lowering of the FHA down-payment schedule?

Answer. Well, you put your finger on what I think is the greatest need in the FHA program. You know, I share your opinion that the thing we need most is the lowering of the required FHA down payment. As to what I think Congress will do, I have to admit that is a rather tough one. Since I personally favor it, I entertain the hope that we will be able to convince other Members of Congress, sufficient numbers both on our committee and in the Congress, that it is needed.

We will run into opposition from other groups, as you know, and there will be the contention that equity in a house should be even more as we face what might be a recession, but it is my honest belief that we will be able to write legislation—I will stick my neck out—which will lower the down payments considerably.

Question. Do you feel that Congress will take any action to continue the VA World War II home loan guaranty program, and if so, is there any likelihood that the interest rate will be increased? Thirdly, do you think the VA direct loan program will be continued?

PRESIDENT'S ATTITUDE UNCERTAIN

Answer. I will take those questions in reverse from the order in which you asked them. I believe the Congress will act to extend the direct loan program, but I do not know what will be the attitude of the President. As you know, he vetoed it last year. I also feel reasonably sure that the Congress will continue for at least 1 year, and possibly 2 years, the loan guaranty program of the VA. Now, was there another question?

Question. Yes, will the interest rate be increased on VA loans?

Answer. Well, at a time when interest rates are generally beginning to come down, I can say very sincerely that Congress will be very unlikely to increase the VA rate.

Question. Do you believe that that would be the case in view of the demonstrated inability of the builders to secure financing—almost complete inability to secure the financing needed under a 4½-percent rate for the GI program?

Answer. I am aware that over the months past it was almost impossible to get it.

There is some hope that you may be able to do some financing at that rate if things turn out as expected in the mortgage field this year. I do not, however, entertain too much hope there will be a great flow of money at 4½ percent. But speaking to you from the standpoint of practical reality on the Hill, I must say that Congress will never agree to raise interest rates this year.

Question. Mr. RAINS, in line with that, what do you think of the administration's proposal that all limitations or ceilings on interest rates be reviewed and that authority be given to vary rates in line with market conditions?

Answer. I am personally very much opposed to that proposal. I might also add that I can find no sentiment in favor of it in the Congress. I believe that the overwhelming majority of the Members of Congress agree with me that in such Government-insured programs as the FHA, which are virtually riskless to the lender, that the Congress has a right and duty to establish a maximum interest rate to protect the consumer.

Question. There is a great deal of sentiment, as you are well aware, sir, among a number of members of the lending fraternity, and as a matter of fact, at the meeting of the American Economic Association this past December, for freeing the interest rate completely, as they call it, and for allowing the interest rate, even on the FHA and the VA programs, to be a matter of bargaining between the lender and borrower. I assume you are satisfied in your own mind that the Congress will not take such action this year.

Answer. I am absolutely certain that Congress will not take such action this year or any year in the foreseeable future.

Question. That, of course, came up to the Congress as an idea in the President's budget and economic messages. I wonder, Mr. Rains, what you thought generally of the President's budget message so far as it affected housing and urban renewal?

Answer. Generally, I would say that I felt that the President's budget failed to recognize the truly important place that the housing industry holds in the American economy for two reasons. First of all, the need and the primary want of the average American family is a home. I believe the home is the bedrock of our American democracy. Therefore, housing should have received more attention. Secondly, and I say this sincerely, I think he failed to recognize in his message how important it is to have a thriving home building economy in this year of recessionary influences of various types.

Question. Mr. RAINS, speaking of the budget, we all know that the President's budget is based upon a continuation of present tax rates. Do you think there is any likelihood of a tax cut during this coming year?

Answer. Yes. Of course, I realize that future events may make this prediction of mine look completely out of line, but as one who stays in close contact with the Members of Congress and the problems affecting our economy, by virtue of my service on the Banking and Currency Committee, I am convinced that the Congress will pass a tax reduction bill sometime after the Easter recess, toward the end of the session.

The reasons for it are beginning to show and are clearly evident to me. In the first place, the economy, in spite of all that some people have to say, is truly lagging. I think that February figures will show possibly 5 million unemployed and, frankly, men in both parties who are looking at it seriously expect that figure to grow until possibly 6 million by April.

It is my considered judgment that when the Members of Congress go home at Easter and they get the feeling at the grassroots back home and find out how many are unemployed and how business is declining, they are going to want to do something to reduce the tax burden in the hope that it will revive consumer purchasing power. That will be one reason. In the second place, I am frank to say that you must always remember that this is an election year, and it never hurts the Members of Congress to cut taxes in an election year.

Question. I would like to explore this a little bit with you, if I may, Congressman. From what I read of the reports of the administration and the Members of Congress, too, they are looking to home building to be an important force for recovery from the recession to which you referred, and I have little doubt that a tax cut might be one thing that could encourage people to again consider the purchase of a house.

But how generally is it realized by the Members of Congress that people across the country today are reluctant to buy because they feel a sense of insecurity in their income, and what can Congress and the Government do to make it possible for us to find the buyers of the houses that we know we should build?

Answer. You asked a really hard question. Of course, you actually open up for me one of my pet gripes, and that is that the administration money managers have acted on the assumption that you could stop high prices and inflation by a hard-money policy. The simple truth has been that it did not cut the cost of living, it did not stop inflation in the slightest. Instead, what it actually did was to make it difficult for home builders, home buyers, farmers, small-business men, and others to get credit. This in turn brought on the present recession.

WHAT THE GOVERNMENT CAN DO

Now as to what the Government can do to correct the present situation. First, the Federal Reserve Board should vigorously pursue an easy money policy by further lowering the rediscount rate, strongly support the Government bond market by engaging in open-market transactions, and very probably by reducing bond reserve requirements.

I believe a tax cut would be the greatest help. A $3 billion tax cut would create a vast reservoir of consumer purchasing power. Such a cut would, if given quickly enough, in my judgment, reverse the present economic downtrend. I frankly do not believe the military spending program will be any immediate help because of the time lag. And if all these things fail, we should step in fast with a public-works program.

So, in order to give the economy an immediate shot in the arm, I think Congress will finally come around to the idea, along toward the end of the session, that we had better give a tax cut.

Question. That is a very interesting and fruitful prospect, Mr. RAINS, and I guess you would say that it remains to be seen whether or not we are going to be able to stave off a depression.

Answer. I do not believe at all that we are about to go into a depression. I do not feel that at all, even though in my own hometown employment is down, big steel mills and big rubber mills, and all of those basic industries; but I do say this, that it is absolutely urgent that the flow of money become easier, and that the people get a little better sense of security and more purchasing power, or we could find ourselves in a very serious recession.

Question. Mr. Congressman, in the event that we could get Congress to face up to the fact that there just plainly is no money available for the GI program at a 4½ percent rate, and they would raise the rate to the point that the home builders would be able to secure the funds that they need, do you not believe that that would have a terrific effect upon the ability of the home builders across the Nation to produce housing that would tend to overcome this reluctance that presently exists in the minds of people who buy?

Answer. Well, last year when the question was up—of course, you realize that this particular issue you are talking about is handled by a committee other than mine, which is the Veterans' Affairs Committee, chaired by my good friend, "TIGER" TEAGUE of Texas—I appeared before his committee and presented as best I could what I thought was the need. When it became clear that the GI program was not going to be revived, I attempted, very frankly, to broaden the FHA with a veterans' preference. The FHA insurance premium would have been waived for veterans and they would have received other privileges. Unfortunately, that part of the housing bill was stricken out on the floor of the House.

I never have said that I would not personally favor some increase in the GI loan rate. I am simply saying now that it is impossible, in a year of falling interest rates, to expect the Congress to look with favor on raising it. So, as a matter of fact, I do not think it will be raised. I think instead that you will see lower downpayments in the FHA, and possibly a reduction in the insurance premium to make FHA even more usable to the people who would like to go in the CI program.

It is also my judgment that before the end of the year, if things continue to roll as they are, there will be some money at 4½ percent for the GI loan program.

THE URBAN RENEWAL PROGRAM

Question. If I may, Mr. Rains, may I ask you a question about the urban renewal program? There has been a good deal of discussion lately about the administration's proposal to reduce gradually the Federal Government's share in the cost of acquisition and clearance of slum sites. May we ask for your views on this proposal?

Answer. My subcommittee has just concluded 3 days of hearings—in fact, we began them the day after Congress met—on slum clearance and urban renewal.

As to the President's message, I disagree with his proposal completely. In the first place, I do not think his program will provide enough funds to make a dent in getting rid of the slums; and, second, instead of reducing the Federal share of the cost, I think we should be realistic and recognize the fact that cities are up to their eyes already in financial problems, and that we should probably raise the Federal share of the cost. That was borne out by the witnesses at this hearing, and they were among the leaders of the municipalities of the Nation, who said that they had gone about as far as they could.

Question. A moment ago you were referring to some of the procedures being used by the administrative branch in monetary matters. We have had no major overhaul of our monetary system in 50 years, since the establishment of the Federal Reserve. Has there been any discussion, or is there going to be any in this coming Congress, with respect to the powers of the Federal Reserve or any other governmental agencies in these fields?

Answer. There is no proposal for any immediate legislation to do a general overhaul. Among a great many Members of Congress—I am not one of them—the Federal Reserve System Board is almost sacrosanct, and I have to confess that many of us do not quite understand all of its working. There is presently pending before our committee a bill entitled "the Financial Institutions Act," on which we are now holding hearings, which provides for a recodification of the banking laws, but it does not go to the heart of our monetary and credit problems. I am one who thinks that the Banking and Currency Committees of the Congress should undertake a study of our monetary system. You will remember that about a year ago Representative PATMAN had a resolution in

to do it but it was defeated. But some time or other Congress is going to have to look into it to see if the Federal Reserve System meets present-day needs.

Question. In your recent investigation, what were some of the principal abuses you found pertaining to second mortgages, and what could be done toward eliminating them?

DANGEROUS SITUATIONS SEEN

Answer. I know that is a subject in which you gentlemen are vitally interested, because you are generally caught with them, and I am sure don't like it. The truth is, we found in certain sections of the country—and we just issued a long factual report on it without any comment—rather fantastic and what I think are truly dangerous situations existing.

In a great many places we found in use the vicious, balloon-type second mortgage which, as you so well know, comes due all at one time. The purchaser lives in a fool's paradise, paying small payments, and all at once the whole thing comes due. That is prevalent in many sections of the country.

You ask me what can be done about it. We are still in the process of studying this matter and we have not come up with anything like a final answer. I do believe, however, that we may be able to devise some type of legislation controlling abuses of the second mortgage in connection with first mortgages which are made by federally chartered or federally insured lending institutions. Just what form this control might take I don't believe I am prepared to say at this time.

I do feel very strongly, though, that we must find some method of ending this vicious practice. It is certainly not criminal, but it is economically most unsound, and you will recall, gentlemen, that second mortgages made in the 20's were a major contribution to the great depression of the 1930's. I might also add we can help eliminate second mortgages by making the FHA program more attractive and by making sure that there is an adequate supply of mortgage money available for FHA loans.

Question. Mr. RAINS, there has been some discussion within the industry about possible lowering of the FHA insurance premiums. Would you favor such a move, and do you feel that the FHA reserves are in a strong enough position to warrant a reduction or, alternatively, would you agreed that if FHA does not reduce its premium, it should take a risk commensurate to the premium that it is now getting?

BELIEVES RATE CAN BE CUT

Answer. It is my firm belief that in the light of the small losses over the years that have occurred in the FHA-insured loans—and that record is one that we can all be proud about—that the FHA insurance rate could possibly be cut in half. I am told by men who have made a careful and serious study that the reserve is even ample to weather another depression like the 1930's. I am further told, and I think I mentioned this in my speech at your convention, that under a similar program such as this in Canada, their premium is less than FHA's, so I think it could be cut, in my honest opinion, with all safety, and that the reserves would be ample.

Question. The growth of our metropolitan areas has created many problems in the general field, in its community facilities, such as additional sewerage and water plants, for example. Now, there has been talk—no specific proposals—of a special Federal-type insurance to assist in obtaining private loans for such plans. What would be your attitude toward it? Do you believe that the problem has become so broad that Congress would approve a program?

Answer. It hits at two points: First, the cities are hardly able to bear the burden. Secondly, if the homebuilders must bear the burden, anyone knows that the cost must be included in the price of the home. There ought to be some way worked out, and it needs to be done immediately if we are to help bring down the cost of housing in the metropolitan areas, and also to enable cities to meet their just obligations, whereby neither the city nor the builder would be compelled to carry the whole load.

The present community facilities program is not meeting the needs, of course, and I hope that our Housing Committee before the end of the year will be able to bring forth some kind of recommendation in connection with the community facilities program which will be helpful.

Question. May I, Mr. Congressman, ask your viewpoint on the FHA premium on section 203 in particular, which is presently one-half of 1 percent. In view of their demonstrated very low loss ratio, rather than the consideration of cutting the premium presently charged, would you look favorably upon FHA assuming the greater risk, so that more people would qualify?

Answer. Well, of course, (many) people are now excluded by virtue of the regulations of FHA which set up credit rating requirements. I think the FHA is often too retrictive but I do not see how legislation could change that.

Question. I do not ask for legislation. You proposed that legislation might reduce the premium, and I wanted your views on maybe approaching it from the other point of view, leaving the premium the way it is and assuming a little greater risk as an insuring agency than they presently do.

Answer. I think both could be done. We could reduce the premium and they still could be more liberal than they are. It is not true in every office, perhaps, but it is true in some offices that they are too stringent on the credit ratings of some of the people.

DISCOUNT CONTROLS A PROBLEM

Question. Now, may I ask your views on this: the administration, and certainly the real estate and home building industries, regard as one of the major points the removal of discount controls on FHA and VA loans. I come from a part of the country where it is of real concern, and in line with your comments on second mortgages, I think very definitely is responsible to a large measure for the growth of the second mortgage. Now, what would you expect Congress might do this year on removal of discount controls?

Answer. I would first say that second mortgages were certainly in evidence everywhere prior to discount control, and I cannot agree that discount control is the cause of second mortgages, because the record would show the reverse. Secondly, I don't think that discount control carries with it all of the implications of harm that some people seem to ascribe to it.

The people who are truly dismayed with it are the people in the administrative agencies who do not like to fool with it. They say it is difficult to administer, and I am sure it is, but I have no sympathy for the answer, very frankly, because that is what they are paid for, to administer it.

Next, there are many people in Congress who think that discounts are stealing, that they are sinful. They do not understand that a reasonable discount is a part and parcel of the trade. I understand that it is and I know you cannot outlaw discounts completely, and I do not favor that. There are others who think you should set it at a given percentage, and I do not favor that because I know that would create an unreasonable situation. In some areas, like mine in the South, naturally discounts must be higher than they would be in New York or New England.

But not all Members of Congress agree with that. In fact, the majority of them did not seem to last year, so we in the committee, those of us who were trying to draft the legislation, battled for what we thought was a fair compromise; namely, a reasonable limit on discounts. We did not say they should be set at 1 percent, 2 percent, or 10 percent, or what; we said they must be reasonable.

The administrative officials do not like that kind of decision to make, but somebody has to make it—you cannot write into a law what it should be. You must depend on fair and reasonable administration.

I do not think—and this is my considered judgment—that discount control written as it is in the law is unreasonable. It keeps the administration alert to the fact that they must not allow unconscionable discounts, which would put the whole housing program in jeopardy. I do not believe that the Congress will ever agree to completely remove any type of discount control.

Question. Mr. RAINS, I would like to pose a problem here that has worried all of us at NAHB. We sincerely have tried to figure out some solution to the lower cost housing problem for the people who need it. As you know, we have had the question raised that we are leaving our market, we are not taking care of it, and so on. Many people in NAHB have seriously tried to figure out the solutions to it, and we find the impediments to low-cost housing sometimes almost intolerable. Some of them are that the agencies laying down the specifications for housing, and so forth, have raised unrealistic standards. Even more serious, in a way, than that is the fact that money from the life insurance companies, the conventional sources for low-cost housing, is almost unobtainable. You try to get money from any of the major life insurance companies for low-cost housing projects and you just do not get it.

You know, last year we suggested that $2 billion of special assistance be provided in Fannie Mae. This has not come up this year, as I understand it, but in our talks on some way to solve this money problem, which is really serious, I wonder if some thought should not be given this year to providing special assistance under Fannie Mae, or some type of moral pressure be applied to the life insurance companies?

Answer. I share NAHB's opinion that we need in the Fannie May special assistance fund a large sum for the specific purpose of helping the home builders of the country to meet adequately the demand of the people for housing in the low-cost bracket. Frankly, I know of no other way to do the job.

I think that if we are to have special assistance for other programs, including apartment houses, that we ought to recognize—and when I say "we," I mean the Congress—should recognize the need to help you meet the demand in the low-cost field, because that is where the most urgent need is today. I am hopeful that we will be able to put legislation through that will provide a large sum in the special assistance fund just for that very purpose.

Question. I am glad to hear you say that, because I think it is a real tragedy that people who really need housing have to pay the dearest price for the commodity. That is actually what the situation is.

I was going to ask, Mr. RAINS, if this had come to your attention: There has been a problem, at any rate over the past year, regarding some selectivity by the Federal National Mortgage Association, which has worked to the disadvantage in a number of cases of lower cost homes which did not meet with the approval of Fannie Mae and homes which had previously been insured or guaranteed by the FHA or VA.

Now, we are not anxious to open up Fannie Mae for the purchase of all housing in America, but in its help to new construction we are hopeful that it will not in any way discriminate against lower cost housing.

Answer. I think Fannie Mae, as I have said so many times, is not staying within the

law itself when they use the extreme selectivity which they do with reference to the purchases of mortgages.

Fannie Mae seems to feel that it should be operated on the theory of a bank, to make a profit. That is not the concept of Fannie Mae as I hold it at all, and I do not think Fannie Mae is entitled to reject, just of its own desire and its own will, certain mortagages and select others. Time after time we have tried to make it clear in reports of my committee that, in our judgment, that is not the way it should be operated. I think they should be required to buy all properly insured FHA and VA mortgages.

Question. Mr. Congressman, do you think that it might be possible for the Congress to consider the revision of the law to the extent that Fannie Mae might be permitted to accept FHA and VA mortgages as pledges for loans to their mortgages, providing them thereby a different service than is presently provided, so that they—

Answer. This proposal has come up before and it may well have merit as a means of making FNMA a more truly secondary market. We certainly will study it.

HOUSING FOR THE AGED

Question. Mr. Congressman, there has been a great deal of interest, the past 2 or 3 years particularly, and a growing interest both in and out of Government about the problem of appropriate housing for our aged. In fact, I understand that the President has recommended that section 207 of FHA be separated so that there will be an independent rental housing program for elderly persons. May I ask whether you would favor such an action and whether you believe there is enough need for a specific Federal program to justify special legislation in this field?

Answer. To put it rather bluntly, I think—and I have said so in the hearings—that the administration's proposals on housing for the elderly are just mere window dressing. Rents are too high. Under the present proposal the mortgages are not long enough. Several years ago I submitted in a bill, which unfortunately did not get through the Congress, a proposal that would provide for long-term, low-interest loans to nonprofit corporations for the building of homes for the elderly, somewhat along the line of the college housing program.

Actually, that is the only way that we are ever going to get rents the elderly will be able to pay out of their social security and various other retirement income. I think that housing for the elderly, because of the ever-increasing number of elderly people, is one of our very urgent problems, and I think we are going to have to approach it with much more realism than has been done by the administration.

Question. You have indicated your concern about the current state of the economy and probable growing unemployment. Would you care to comment on your views about the long-range future of American economy?

Answer. I am always an optimist on the long-range future of the American economy. I expect the economy to turn up considerably before the end of this year if the proper steps are taken by the present administration to combat the recession. In the long range, with the ever-growing demand and the ability to produce that we have in America, and with the great increase in population that we are witnessing, and the technological advances that we are sure to make, I think we are headed for prosperity in the days to come.

Question. Do you believe that any action will be taken by the Congress at this session on any of the several proposals for partial insurance of conventional loans?

Answer. Yes; there likely will be some action on those proposals. There are, of course, several different types of proposals. I doubt if any of them are enacted in the form in which they are now proposed, but there will very likely be worked out some legislation along that line which will be incorporated in the general housing bill.

Question. One final question—with all of your experience in the field of housing, Mr. RAINS, what do you regard as the largest unsolved housing problem?

Answer. It is my judgment that the largest unsolved housing problem is the one you mentioned a moment ago, the inability of the Federal programs, we will say, to reach the low-income group. I really mean that group that is sometimes referred to as the lower half of the middle-income group. It has been the inability of our programs to reach that group that I regard as the greatest unsolved problem we have.

MORE MORTGAGE CREDIT VITAL

Question. What do you think is the major measure or the major remedy that could be used to solve that problem?

Answer. The only answer is to make available more mortgage credit in that particular field, and in that I am sure the Government—because of the inability of the people to pay high rents based on high mortgages—is going to have to take a hand to help.

Question. I wonder, as we close, if Congressman RAINS might tell us what he thinks time-wise, might happen to the housing legislation in the session this year?

Answer. You all have been around here a long time. The truth is that the housing bill has a habit of being studied all year long [laughter], and then finally being passed in the long, hot, closing hours of the last days of the session. [Laughter.]

I judge that it will follow its usual course. However, the Senate hearings, as I understand it, are going to start sometime in March. We have held some hearings. We plan some other hearings on specific items, and the legislative mills affecting housing are beginning to grind.

I would like to say sincerely that those of us in housing on the Hill, my associates on the committee, and my good staff members, feel that you have given us a great deal of help and assistance, and that while we do not always agree, we are certainly able to work together, and that the end and aim of your great organization, as the end and aim of our efforts, is to get more and better housing for the American people. I want to congratulate your great organization.

Analysis of Administration's Attempt To Cut Down REA

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mrs. KNUTSON. Mr. Speaker, all those who are aware of the inestimable value of REA to rural America continue to be astounded at the administration's open efforts to end its usefulness, if not actually destroy REA. The latest proposal would triple financing costs for all rural electrics, and I need not comment as to the effects of these increased costs.

The National Rural Electric Cooperative Association has been doing an excellent job of showing up the administration's moves against REA for what they are. Under permission heretofore granted me to do so, I insert in the RECORD the NRECA's analysis of the latest administration REA bills:

ANALYSIS OF ADMINISTRATION REA BILLS

The administration has asked Congress to pass two anti-REA bills which would put Hoover Commission recommendations into effect. The Capehart-Hiestand bill would triple financing costs for all rural electrics. The administration's new Wall Street proposal would provide for Wall Street private financing.

Here are some important features you should know about:

1. The proposal sets up an alleged revolving fund. But this revolving fund is not a fund, and it cannot revolve. Congress would still have to authorize money, as now, to keep this deceptive fund alive.

2. A so-called loan-insurance scheme is set up, but you would still have to find the money you need; your lender would get the insurance.

3. The Secretary of Agriculture could subordinate your present mortgage in order to give your Wall Street lender a higher lien.

4. The Secretary could sell your mortgage to your enemies.

5. No leniency is provided—if you fall behind you would be foreclosed.

6. No refinancing is provided—once you're on the hook, you're stuck, even if refinancing might reduce your interest costs.

7. Partial advances are out—you would pay full interest on your full loan right from the start.

8. No procedure is set up for deciding who is to get 2 percent money, if any, or 6 percent money.

9. The REA Administrator is, in effect, abolished—he isn't even mentioned in what would be the new parts of the law.

10. The Secretary of Agriculture is the specified official, but by controlling financing and rates, the Secretary of the Treasury could still dominate all REA policies.

In a nutshell, this proposal insures nothing but bankruptcy for you. It revolves nothing but your system.

THE REA WALL STREET FINANCING BILL

On February 17, 1958, Under Secretary of Agriculture True Morse transmitted to committees of the Congress, for Mr. Benson and Mr. Eisenhower, a proposed bill "to amend the Rural Electrification Act to encourage private participation in financing the loan programs."

This proposed bill calls for the addition of two new titles to the present REA Act—"Title III, Revolving Fund," and "Title IV, Insured Loans." The insured-loans section was described at the Dallas meeting.[1] The revolving-fund section has been added by the administration since then.

The revolving fund

By adding title III to the present REA Act, the proposed legislation would establish what is deceptively called a revolving fund. Examination reveals that it is neither a "fund" in the usual meaning of that word nor does it revolve in the manner of a traditional revolving fund. Title III is obviously misnamed to make it more palatable.

Under the proposed legislation, the fund is supposed to contain the following items: Loans currently outstanding, collections from borrowers, any new congressional authorizations, and proceeds from private financing operations. The proceeds from private financing operations cannot be more than 50 percent of the total of the other items.

At least two items in the fund are highly deceptive: (a) The loans currently outstanding and (b) the collections from borrowers. Neither of these can be available for new loans.

Loans outstanding obviously can't be loaned. What is even more significant is

[1] See printed report of Clyde T. Ellis, general manager of NRECA, entitled "Stand Your Ground," February 4, 1958.

this: As soon as a repayment on an outstanding loan is made these collections must be sent immediately to the United States Treasury. They are never available for new REA loans.

So, to say collections from borrowers are part of the fund is like teasing a child by putting money in his piggy bank to get him to go to bed; then taking it out again as soon as he's asleep.

Part of this sleight of hand is revealed in the order of priority in which assets of the fund must be used.

According to the proposal, the fund must be used in the following order of priority:

First, private lenders must be paid their interest and principal.

Second, the United States Treasury must be paid principal and interest due it.

Third, the Secretary of Agriculture must discharge other liabilities he had incurred under the act, such as losses in connection with loans and his costs of operation.

Finally, there could be new loans to rural electric and telephone systems. Funds for these new loans would have to come from private lenders and/or from any further congressional authorizations.

By the administration's own reasoning the fund would revolve to an ever-decreasing amount as the systems repaid their loans via the fund to the Treasury—unless the Congress, as now, would continue to authorize new money for REA. Organized confusion.

Other provisions

But there are also other and more far-reaching detrimental provisions. For instance, the Secretary of Agriculture, as managing trustee of the fund, would have authority to use any borrowers' notes which are considered as assets in the fund to pay off liabilities such as would develop if a borrower defaulted. In other words, the Secretary could sell these notes to a private lender; the private lender, in turn, could sell the paper to a power company or its owners interested in holding a rural electric's mortgage. Thus, a co-op that defaulted could effectively end up in the hands of a power company.

There is no provision for extending payments for delinquent borrowers. Foreclosure is the only course.

There is no provision for refunding or refinancing. Therefore, a borrower would be prevented from taking advantage of any drop in inteerst rates that might occur in the future.

There is no provision permitting a borrower to draw down partial amounts of a loan. This means money would be advanced as loaned and would draw interest from that date.

If the REA Wall Street bill is passed and the Capehart-Hiestand interest-increase bill is not passed, then loans from the revolving fund would carry different rates of interest depending upon the source of the money. Any loans from new funds appropriated by Congress would still be made at the present 2-percent rate. Any loans made from private sources would be made at the higher rates of interest that the private financiers are expected to demand—plus the service charge.

The proposed legislation does not outline the procedure to be used for selecting those borrowers who would be entitled to the 2-percent money, if any. It could be a selective process, subject to discriminations, or it could be prorated among borrowers as such money may or may not be available at a given time.

And, in keeping with the powers contained in the Reorganization Act of 1953, this bill also removes all effective authority and responsibility from the REA Administrator, and places it in the hands of the Secretary of Agriculture, who, incidentally, is not bound by the nonpolitical requirements of the REA Act.

Bonds and debentures

In order to bring private money directly into the fund the Secretary of Agriculture would be authorized to issue notes, bonds, debentures or other obligations in the name of the fund—up to the amount Congress would specify for any given year, but never more in the aggregate than 50 percent of the amount to which the fund might be diminished. Assuming all the systems paid off their loans, this could be 50 percent of zero.

And the Secretary of Agriculture could not act without approval of the Secretary of the Treasury. Thus, the Secretary of the Treasury has responsibility for approving: (a) when bonds, etc. shall be sold, (b) the amounts to be sold, (c) how long they shall run, and (d) what rate of interest they shall bear.

Since the proposed bill says the obligations are in no manner guaranteed by the Government, the interest rates would normally run considerably higher than the usual Government obligations. Obviously, administration and other costs would be added, also.

Under terms of the proposal, congressional authorization would still be necessary each year as now, to increase the Federal money in the fund—or even to keep it from diminishing—and congressional action would also be required to specify how much of the borrowed private money may be used in any one fiscal year.

Insured loans

Title IV would establish a program of Federal Government insured loans from funds made available by private lenders.

Under this proposal, a rural electric or telephone system needing a loan would have to find a moneylender willing to make the loan. If and when the borrower finds a willing lender, he would then apply to the Secretary of Agriculture who is authorized—but not directed—to insure the loan if it qualified under such rules and regulations as he himself deems appropriate.

To be eligible for insurance, a loan must bear interest at a rate approved by the Secretary of the Treasury plus a service charge of at least one percent. The loan is also subject to such other terms and conditions as the Secretary of Agriculture may determine will encourage participation by private lenders. Nothing is said about encouraging rural electrification. As the REA Administrator has stated, without trying to guess the interest rates, interest will fluctuate and vary by regions.

By agreement in the insurance contract, the Secretary of Agriculture will service the insured loans. Thus, the banker takes no risk and does not even have to worry about loan servicing.

The insurance service charge will be set by the Secretary to cover administrative expenses and create a reserve for probable losses. This is an open-end affair. It has a floor but no ceiling. The charge, says the proposal, shall be "an annual charge at a rate equal to at least 1 percent of the outstanding princip l obligations of the loan."

The Secretary will put these insurance charges along with other specified receipts into a rural electrification and telephone loan insurance fund.

Subordination

The proposal to give the Secretary of Agriculture power to subordinate present REA mortgages now totaling about $3 billion in order to give private moneylenders a first mortgage is a part of title IV.

The Secretary is prohibited from subordinating liens in connection with the insured loan program. Except for this limitation he may use his authority when he finds that (a) the private money may be obtained at reasonable rates and terms, (b) the security is reasonably adequate, and (c) the loans will be repaid within a reasonable time.

INTEREST INCREASE BILL WOULD TRIPLE FINANCING COSTS

Legislation to at least triple the REA interest rate was sent to the Congress last July by the President's Director of the Budget Percival Brundage who said that raising the interest rate will encourage substantiation of private financing. Senator CAPEHART of Indiana introduced this bill in the Senate (S. 2427) and Congressman HIESTAND of California, in the House (H. R. 8714).

The Capehart-Hiestand interest increase bill proposes to give the Secretary of the Treasury the power and responsibility to set the minimum rate on loans. He is instructed to fix the rate taking into consideration the current average market yields of outstanding marketable obligations of the United States having maturities comparable to the loans made by the department or agency.

The bill provides that the agency may charge more than this minimum set by the Secretary of the Treasury, but not less.

The bill also provides that an additional amount shall be added to the interest rate adequate to cover REA administrative expenses and probable losses.

By using long-term maturities as a yard stick for fixing the interest rate, the bill selects the highest priced of the Government paper as the guide. The Treasury's long-term bonds always pay a higher interest than short-term borrowings which account for most of the Government's debt. As of June 30, 1957, only 1 percent of the total Federal debt was in the form of securities with a maturity of 35 years or more.

To tie REA interest rates to the long-term cost of money would be downright dishonest. Government does not finance that way. Moreover, if the administration and Congress are going to insist on regarding REA loans as expenditures out of income (with which we don't agree) then it could be argued just as logically that, with a balanced budget, there is no interest cost at all to the Government.

GENERAL CONCLUSIONS

The administration proposals would emasculate one of the most successful social and economic programs ever initiated by the Federal Government. In 2 decades this program has succeeded in bringing rural America out of darkness. Now, President Eisenhower would subordinate the welfare and living standards of rural America to the financial welfare of Wall Street—a small group of monopoly interests who, since the beginning of the REA program, have done everything in their power to destroy the rural electric co-ops and power districts.

For example, the revolving fund is a fraud. To call it a fund or to say that it revolves is outright deception. There will be no more revolving fund under this proposal than we now have. At present, repayments of principal and interest are transferred by REA to the Treasury and this will still be the case under the proposed legislation. Only Congress could make funds available again—just as it does now. So, the only really new feature in this fictitious revolving fund idea is to permit the Secretary to borrow some money from his Wall Street friends.

The cost of financing the rural electric and telephone programs, assuming that private funds would be available—an optimistic assumption, at best—would conservatively be three times what it is today.

Following are some of the initial effects on the rural electrification program which would be created by President Eisenhower's proposed amendments:

(1) The financial destruction of most rural electric cooperatives, for they would be unable to absorb the increased interest costs or to pass the interest costs on to their consumers, if they could find a source of money;

(2) Much higher electric rates for the rural electric consumers on systems financially able to survive, thus subjecting to power-company sellout attacks;

(3) Added drain on local purchasing power in rural areas as more money would be sent out of the community to Washington and Wall Street.

(4) The death of rural electric generation and transmission cooperatives, thus destroying the effective yardstick bargaining weapon of the systems;

(5) Forcing the REA's squarely into the realm of politics because the bills would (a) sidetrack the REA Administrator who is appointed for a 10-year term and who is subject to no politics provision of the original RE Act, and (b) in line with the Agriculture Reorganization Act of 1953, pass control of REA to the Secretary of Agriculture, who, by law, and by practice, is more politically motivated and free to do as he pleases.

(6) Vest in the Secretary of the Treasury, not the Congress, final authority over rates of interest and the sale of bonds, and provide him power to dominate REA policies, even though he is likely to know little or nothing about REA.

What Is the Tax Climate Doing to Michigan?

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the text of an article by K. C. Tiffany, vice president of the Burroughs Corp., which appeared in the April 1958 issue of Inside Michigan magazine. This article is condensed from an address delivered before the Detroit Rotary Club on February 5, 1958, and is entitled "What Is the Tax Climate Doing to Michigan?"

The article follows:

WHAT IS THE TAX CLIMATE DOING TO MICHIGAN?

(By K. C. Tiffany, vice president, Burroughs Corp.)

There are many factors which make a State a good place in which to do business and earn a living. The tax structure is one of the major factors. Other factors are productivity per man-hour, availability of labor, labor relations, industrial sites, utilities, transportation facilities and last but not least governmental atmosphere favorable to business and industry.

The January 1957 labor market reports of the Michigan Employment Security Commission state that employment in manufacturing industries in the State of Michigan totaled 1,230,000 in 1953.

According to the January 1958 market report manufacturing employment dropped to 1,022,000 as of December 15, 1957. This is a decrease of 208,000 jobs from 1953 to date. Analysis of these reports reveals that every class of durable goods manufacturing industry had fewer employees on December 15, 1957, than in 1953.

A review of United States Department of Labor, Bureau of Labor Statistics, reports reveal that total employment in manufacturing increased 12.25 percent from 1950 through 1956. Manufacturing jobs in 1950 totaled 15,003,000 and in 1956 increased to 16,841,000, a gain of 1,838,000.

Every State in the Union—except Michigan and Rhode Island, and the District of Columbia, shared in this job increase. Michigan had 1,800 fewer jobs in manufacturing in 1956 than in 1950—Rhode Island lost 18,600 jobs, and the District of Columbia lost 500 jobs. Percentage gains ranged from 130.32 in Arizona to 0.39 in West Virginia.

All Great Lakes States, except Michigan, gained in manufacturing employment. Percentage gains were: Ohio, 13.53; Minnesota, 12; Illinois, 9.08; Wisconsin, 8.44; and Indiana, 6.72. Michigan decreased 0.17 percent.

It is only in recent years that Michigan is at a disadvantage taxwise in luring new industry, expansion of industry, and retaining of existing industry. Ten years ago, taxwise, it was advantageous to do business in Michigan. But since 1948 two taxes imposed solely on business have increased more than 1200 percent.

In the fiscal year ended June 30, 1948, business taxes amounted to $8½ million. Due to an increase by normal economic growth, two increases in rate, and elimination of the $50,000 maximum, the yield of the franchise tax alone has increased to over $47 million. In addition, the business activity tax, amounting to about $65 million annually, has been imposed on business. This kind of atmosphere is unfavorable to industrial expansion.

At a time when States are competitively bidding for industrial development, we find our own State severely handicapped by high State and local taxes, threat of new and higher taxes, and a hostile atmosphere toward industry. The State of Pennsylvania, once considered a high tax State, has taken definite steps to improve its tax climate. We in Michigan must take similar steps if we are to retain our present payroll and encourage expansion and new plants in Michigan.

The Chamber of Commerce of the United States estimated recently that 100 new manufacturing jobs in a community meant 174 new jobs, when the additional shopkeepers and doctors and television repairmen were included. The chamber estimated that the same 100 jobs meant an increase of $360,000 annually in retail sales of $590,000 in personal income.

In 1957 the governor proposed to solve the State's financial problems by imposing a 6 percent corporate income tax. He conveyed the impression that a 6 percent rate compared with New York's 5½ percent, Pennsylvania's 6 percent, and California's 4 percent.

In reality a 6 percent corporate income tax when coupled with the business activities tax, would amount to an income tax rate in excess of 11 percent. In addition to State taxes corporations in Michigan pay $100 to $125 million annually in personal property taxes. New York does not levy a personal property tax.

I cannot agree with the thinking that further increases in State taxes will solve the State's financial problems. In spite of enormous increases in both State and local taxes since 1948, we are again this year facing a deficit in the State general fund of about 30 million.

In 1952 and again in 1953 the legislature appointed a legislative interim committee to study finances. This legislative committee appointed a citizens advisory group. Princeton surveys were engaged by the committee to study the Michigan tax picture. This study revealed that Michigan's problem was not insufficient taxes, but rather its State-aid policy.

The Princeton survey study showed that the legislature had lost effective control over the financial policies of the State of Michigan. This loss of control was due to constitutional mandate as well as to political restraints. These provisions compel the distribution of enormous sums of money to counties, cities, villages, townships, and school districts each year.

The study also showed that all local governments combined receive more in State aid than they levied in property taxes; and only 26 percent of the total receipts of the State were subject to the discretionary control of the legislature. The reason for the failure of State aid to achieve the desired results was due to two main reasons:

1. Too much money was distributed to too many local units and schools under self-service provisions without regard to the need of either local governments or the State itself.

2. There was too little self help due to gross underassessment of real estate, which is destined to have a fatal effect on local financial independence wherever there is a real estate tax limitation. There were differences as great as 50 percent to 100 percent in the State aid payments to counties of similar wealth.

One city reported State aid exceeding 50 percent of its total receipts exclusive of utility finances, whereas three cities reported State aid of less than 10 percent. This condition is substantially the same today. This is the reason why we are again in financial difficulties. This condition will continue to exist until our policy of State aid is corrected.

I believe that time and experience has proved to us that increased taxes is not the solution to our fiscal problem. Increasing taxes only prolongs the day of reckoning. We must correct the basic cause—State aid policies—which encourage wasteful spending. Michigan spending and taxes must be adjusted so that Michigan industry will again be competitive with industry in other States.

The Governor has stated that the State of Michigan is not facing its responsibilities with elementary and secondary schools, colleges, health and welfare and other State services. Let's look at the facts.

The biggest item by far is the cost of elementary and secondary education.

State government finances prepared and published by the Bureau of Census shows that for the period from 1951 through 1956 inclusive, Michigan with an average population of less than 7 million paid out in State aid to school districts, $1,186,000,000 compared to $649 million in Ohio with an average population of 8.3 million and Illinois $531 million with an average population of 9 million.

In other words, Michigan paid out to local school districts in State aid more than the States of Ohio and Illinois combined which populationwise compare: Michigan 7 million; Illinois and Ohio, 17.2 million. Only two States exceeded Michigan on State aid to schools. New York with $1,986,000,000 with an average population of 15.4 million and California $2,482,000,000 with an average population of 11.3 million.

In 1948, there were 984,576 students in the public schools of Michigan. In 1957, there were 1,454,000 children. This is an increase of 47.7 percent. In 1948 the schools received $82.8 million in local taxes and $108.3 million in State aid or a total of $191.1 million. In 1956 Michigan school districts received $244.7 million from local taxes and $248.7 million in State aid, or a total of $493.4 million, or an increase of 158.2 percent.

Here is the story on higher education. The Governor claims the State is not doing its share. Here are the comparative figures for all the State institutions of higher education, except Wayne University.

	1948	1956	Percentage increase
Student enrollment	48,000	68,000	41.7
State funds	$18,000,000	$70,000,000	288.3
Student fees and tuition	$15,000,000	$16,500,000	10.0

Here is part of the answer why no amount of taxes will ever be sufficient for the State of Michigan. Nationally 45 percent of the students attend private colleges and 55 percent public colleges. In Michigan 82 percent attend public colleges and 18 percent private colleges. The reason for this disparity can be attributed to lower subsidized tuition in public colleges.

In State institutions in Michigan the student pays between 15 percent and 20 percent of the cost of operation. In private colleges the student pays between 50 percent and 55 percent of the cost of operation. The average tuition in private colleges is $374 as against about $225 in State colleges. If this trend continues, the worst is yet to come. If the State colleges continue to take students from the private colleges and force them to close, the taxpayers will have to take care of approximately 16,000 additional students who are now in private colleges at a cost of approximately $8,000 per student for operation and capital improvements.

Another major factor contributing to our financial troubles is health and welfare. The State of Michigan through State aid pays about 80 percent of the total cost of welfare. The program for mentally diseased persons alone costs the State approximately $60 million a year. This item alone could be considerably reduced. Since the State bears the total expense, except for the first year of commitment, the probate courts in most counties are lax on commitments.

In this program alone, the State could save approximately $30 million by requiring the county of commitment to pay 50 percent of the cost. It has been indicated that there are many elderly people in State institutions who are not mentally diseased and should not be there. If the requirements for admittance in a State institution and the collection procedures were strengthened, and the county required to pay 50 percent of the cost, this needed program could be carried on with considerable saving both to the State and the county.

We will never solve our financial problems in Michigan until we tackle our wasteful State-aid policy. Whenever a community can spend a dollar knowing that less than 50 cents is coming out of its own pocket, the result will be more spending. This is the result in about three-fourths of the school districts, most townships, and almost half of the villages in Michigan.

Our school problems will never be solved until we have a complete reorganization of school districts.

Michigan should not have more than 300 school districts. At the present time it has about 3,000. The ideal school district should have sufficient number of pupils to run a complete school from kindergarten through grade 12. Properly planned, each school district would have such facilities and would have an adequate tax base.

Higher education should require more contribution from the students in the way of higher tuition and fees. I cannot agree with the philosophy that the State owes each citizen a college education. We recognize that student fees and tuitions cannot cover the total cost. But, certainly the students should pay more than 15 percent or 20 percent of the cost of a college education.

If we continue our present policies, more taxes are inevitable. Business in Michigan cannot stand any more new taxes or increase in business taxes. Industry is already moving out or staying away from Michigan. If we continue this trend and we lose job-giving industry, our economy will decline and present taxes will yield less.

Michigan must reverse the present trend of losing payrolls. We cannot reverse this trend so long as business taxes are higher than surrounding States, or business is threatened with higher taxes and governmental atmosphere unfavorable to business and industry.

Michigan business is not looking for a tax subsidy. Michigan business wants to pay its share.

An equitable tax policy that guarantees that business and industry will be asked to assume no more than its fair share of the costs of Government will insure industrial expansion with the resultant job opportunities and economic growth.

The Omnibus Education Act of 1958, H. R. 11960

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mrs. KNUTSON. Mr. Speaker, on March 10, I addressed the House for 1 hour on the need for a realistic Paul Bunyan plan for education. Today I am introducing the Omnibus Education Act of 1958, H. R. 11960, which I originally proposed on March 10.

I shall not make a statement at this time but should like to refer you to pages 3261–3272 of the CONGRESSIONAL RECORD of March 10.

H. R. 11960 provides for the following amounts of money to be expended:

Grants-in-aid and payments to individuals and institutions	Loans-in-aid and advances	Description of aid
$2,500,000,000	----------	Elementary and secondary school construction and equipment.
----------	$500,000,000	Local school board purchase fund (a revolving fund).
----------	10,000,000,000	Advances to reserve funds (credit assistance to State school financing agencies).
3,000,000,000	----------	Operation of public elementary and secondary schools (increase of teacher salaries, building operation and maintenance, pupil transportation, expansion of curriculums).
1,000,000,000	----------	Guidance and counseling (institutes; aid to State agencies).
500,000,000	----------	Undergraduate scholarships.
----------	10,000,000,000	National student loan fund (a revolving fund).
500,000,000	----------	Summer-school and extension courses for teachers.
500,000,000	----------	Graduate fellowships.
500,000,000	----------	New educational mediums (research, experimentation, equipment—radio, television, and motion pictures).
400,000,000	----------	Special education for exceptional children.
200,000,000	----------	School health services and research in child health.
100,000,000	----------	Adult education.
700,000,000	----------	Vocational education below college grades (agriculture, including onfarm training; home economics; trade and industry; and distributive occupations).
100,000,000	----------	School lunches.

Tribute to Hon. Edith Nourse Rogers

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a very wonderful, eloquent, and richly deserved tribute to our able, distinguished colleague, the Honorable EDITH NOURSE ROGERS, outstanding Member of the House, delivered by my valued friend, Gen. William J. Blake, for many years able, efficient, and devoted manager of the Veterans' Administration regional office at Boston.

This fine tribute was rendered at the 5th annual good government dinner of the Crosscup-Pishon Post, No. 281, American Legion, of Boston, and every member of the House will acknowledge its appropriateness in bringing attention to Mrs. ROGERS' great, unselfish contributions to the cause of the veteran:

TRIBUTE TO CONGRESSWOMAN EDITH NOURSE ROGERS

Reverend clergy, comrade commander, comrades of the Legion, my friends, it is to be my pleasure and privilege to do very inadequately, in the next few minutes, what it has been my earnest desire to do for over 35 years.

What I wish to do is essentially simple. It is to thank EDITH NOURSE ROGERS for what she has done for over a quarter of a century—to thank her for what she has represented during this long period of years.

It is not impossible that I have had the inestimable privilege of working closer with her during this long span of years than has anyone else in the service of our Government. During those years, it has been my solemn responsibility to care for the welfare of the men and women of Massachusetts who served with the colors in all wars and who now reside within the area under the jurisdiction of the Boston regional office of the Veterans' Administration.

When I assumed office, there were on our rolls many veterans of the Spanish-American War and a few lingering survivors of the Civil War. The bulk of our responsibility concerned the veterans of the First World War—that war which was fought to save democracy and to end war. Beyond was the undreamed of holocaust of the Second World War and the savage toll of the Korean conflict.

This span of years extends in retrospect to Gettysburg and to Chancellorsville. It views in prospect beyond the 20th century to the year 2,000 and the years beyond.

America has a solemn responsibility and a solemn trust where the veterans of the 19th and 20th century are concerned.

If that lasting peace for which we all pray shall come to pass, it is these men and women who have made it possible. By that high standard must their worth be measured.

When the history of the Veterans' Administration is written, there will be in it no more honorable passage than the one that recounts the extraordinary service of EDITH NOURSE ROGERS and her untiring devotion to the welfare of our American veterans.

It is no slight on other Members of Congress also devoted to his welfare to say that no one, in or out of Congress, has ever done so much for the veteran as this lady from our own beloved Massachusetts.

To call the roster of bills which she has introduced for the care of veterans, which she has worked with might and main to see made into law and made effective in that great cause, would be virtually to retell the entire story of veterans' legislation.

Most of the Bills for the care of the blind and the parapiegics, for the special hospitalization of women veterans, for the rehabilitation of those for whom the light of hope still flickers, and the abiding care of those for whom that light has dimned forever on earth have been her work. Where veterans are concerned, she is not the Congressman from Massachusetts. She is the all-American Congressman.

The man or woman who has served and suffered in defense of our great country is her constituent, whether he be northerner or southerner, Republican or Democrat, Christian or Jew, white, Negro, Indian, or oriental. To her compassion there is no barrier, and she recognizes no barrier to making that compassion effective.

Abraham Lincoln in his Second Inaugural Address said in part, "We here dedicate ourselves to bind up the Nation's wounds, to care for him who has borne the brunt of battle, and his widow and orphans."

Mrs. ROGERS is a woman dedicated in the same spirit to that same noble cause. She dedicated herself to it in 1925 when she succeeded her husband in the Halls of Congress. She has never wavered in her dedication in the 33 intervening years. When her day in Congress is done (and may that day be long deferred), she can look back upon the vista of the years and see one solemn dedication prevailing through them all.

She has bound up the Nation's wounds.

She has cared for him who bore the brunt of battle.

She has had compassion on his widow and his orphans.

It has been a noble dedication nobly fulfilled.

Only a noble and divinely inspired soul could have accepted that dedication and carried it to fulfillment.

I thank you, Comrade Commander, and the men of this gallant post of the Legion, for the honor you have paid me tonight by allowing me to pay homage to that noble and dedicated spirit—to our own beloved and courageous EDITH NOURSE ROGERS—Congressman from Massachusetts.

A Name To Remember

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an editorial from the April 9, 1958, issue of the Pittsburgh Sun-Telegraph concerning Joseph Yablonski, newly appointed president of United Mine Workers, Pittsburgh District, No. 5.

"Jock," as he is known to all of his friends, resides in Clarksville, Pa., in my congressional district. I have known him and his family for a number of years and have watched his career with interest. His father, Stephen, came to this country from the coal mines of Poland and first arrived in Pittsburgh in 1905. The family later settled in California, Pa. Jock is an excellent example of the familiar occurrence—the son of a non-English speaking immigrant rising to a position of importance in America.

Jock went to work in the coal mine when he was just 14 years of age. At 23 he became president of the UMWA local at California and in 1942 he became a member of the international board. He has a fine background of the mining industry and knows the problems of the miners and their families.

While Jock's duties as board member and president of Pittsburgh District No. 5 keep him quite busy, he still finds time to devote to his hobby—writing. His wife, Margaret, enjoys the same hobby and they collaborated in writing and producing a comedy, Shorty, based on the lives of miners. It had a month's run in the Playhouse at Pittsburgh. Jock has also written articles for magazines and his recognition as a writer reached new heights when he had an article published in Esquire.

Jock has rendered the enthusiastic prediction that the coal industry "will bounce back in the years ahead." This optimistic view is encouraging and gives new hope to all who are concerned with the coal industry and the great part it plays in our economy. On behalf of all Jock's friends, and the miners and their families, I want to extend to him best wishes for continued success in the years ahead.

The editorial follows:

A NAME TO REMEMBER

The presidency of district 5 of the United Mine Workers of America is an important office—an office which confers distinction on its holder, whoever he may be.

The presidents of district 5 usually serve over a long period of years and their names become household words in every coal-mining community.

Patrick T. Fagan, now city councilman, was president of district 5. He was followed by John P. Busarello, who retired the other day at 70.

Mr. Busarello is being succeeded by Joseph Yablonski. That is a name to remember, for the president of district 5 is an influential citizen.

The district takes in all of Allegheny and Washington Counties and parts of Fayette, Beaver and Westmoreland Counties. Not many years ago the UMWA had a membership of 31,000 in district 5. It has dwindled to 7,300, but if coal comes back to the extent expected the district's membership will mount again, notwithstanding the continued introduction of labor-saving machines.

However, it is not with the coal industry that we are concerned here but with the personalities of the presidents of district 5. Their stories are inspiring.

Like his predecessors, Mr. Yablonsky went to work in the mines when he was very young. That was the time when miners were ill paid and the work was much more dangerous than now. If they struck for better conditions they were terrorized by the notorious coal and iron police, now happily a thing of the past.

One might suppose that men who began their careers in such an environment would turn out to be rough uncouth fellows. But that would be an erroneous supposition.

The presidents of district 5 always have been hard fighters for what they believed to be right, but they were not lacking in refinement. Mr. Yablonski has written magazine articles for important publications. He and Mrs. Yablonski, a graduate of California (Pa.) State Teachers College, collaborated in writing a comedy, "Shorty," based on the lives of miners. It ran for a month at the Playhouse.

Mr. Yablonski is another example of what has now become a familiar phenomenon—the son of a non-English-speaking immigrant rising to a position of importance in America. Mr. Yablonski's father came to Pittsburgh from Poland and the president of district 5 was born in the strip.

And this directs attention to another recent development of importance in the Pittsburgh district:

The Sun-Telegraph commented the other day on the introduction of the teaching of French into 93 grade schools and a few kindergartens in Pittsburgh.

Now it is announced that Clairton has gone Pittsburgh one better by arranging to establish in the Clairton High School next year courses in the Russian and German languages, in addition to French, Spanish and Latin.

The noteworthy feature in this is the decision to teach Russian. French, German and Spanish have been taught in some of our public schools for many years, but the important Slavonic languages, spoken by so large a segment of the human race and the mother tongues of so many people in the Pittsburgh district, have been completely neglected.

With the introduction of a course in the Russian language in the Clairton High School it is to be hoped the way has been paved for the development of greater interest in all the major Slavonic tongues.

Dr. Karl Bohren, superintendent of Clairton schools, and Principal Bruce Birch of the high school give some good advice in this connection. They are asking their pupils who have foreign-born parents to encourage the use of their native languages in the home, Dr. Bohren says:

"We are reversing the way we used to think. In the past it was 'un-American' to speak anything but English and young people were ashamed of their native tongues. Now it is an asset."

With its many thousands of inhabitants from eastern and southern Europe, the Pittsburgh district is in excellent position to foster and encourage interest in the Slavonic and other foreign languages.

Experiments by Teen-Age Rocketeers

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. DORN of New York. Mr. Speaker, I should like to call the attention of my colleagues to the first of a series of articles written by George Allen on the danger to public safety posed by clandestine experiments by teen-age rocketeers, and the consequent possible loss to the Nation of a large pool of scientific talent through the attempted suppression of their activities. I understand the program proposed by Captain Brinley, and outlined in the body of the article, is under consideration by appropriate officials in the Defense Department. This article appeared in the April 15, 1958, edition of the New York World-Telegram:

AGENCIES CONDEMN EXPERIMENTS

(First of a series by George N. Allen)

In this frontier-smashing age of space exploration, the zooming amount of audience

participation by small fry is posing a threat to public tranquility.

In this zeal to pace the rocketmen at Cape Canaveral and White Sands, the spaceage Tom Swifts have been blowing off fingers and hands with deadly regularity. The lives of many are threatened every time one of their homemade Explorers blasts off its backyard launching pad.

Agencies like the board of education, the American Rocket Society and the National Safety Council have condemned teenage experiments with live rockets.

MANY UNAWARE OF LAW

The best the adult world has come up with to date is a few pious hopes that boys will experiment with explosive only under adequate supervision. Meanwhile, the basement rocketeers, with Ben Franklin and Henry Ford in mind, continue to handle dangerous fuels without supervision or assistance.

Many boys—and their parents and science teachers—are not aware that their activities are against the law. Section 1894 of the New York State penal law forbids the keeping, mixing or transporting of explosives except by those who get a permit. Injuring the person or property of another with explosives is a felony. The keeping of explosives in homes by anyone is expressly prohibited. If a science teacher wants to keep rocket fuel in his laboratory, he must get permission from the fire department and other city agencies.

Since January 1 the police department's bomb squad has investigated seven explosions caused by teenage rocketeers. One boy lost a finger, another had his legs ripped by rocket fragments, a third had first- and second-degree burns on his face.

The toll has been similar throughout the metropolitan area. In February, a 22-year-old Long Island youth lost part of his thumb, his index finger and the tips of other fingers on his left hand when his rocket exploded. His jaw was fractured and 100 stitches taken in his face.

An 8-year-old boy's skull was fractured in Newark when two teen-agers attempted to fire a rocket near where he was playing. A Vineland, N. J., teen-ager lost a thumb and two fingertips in a rocket explosion.

ONE MAN HAS DATA

Only one man has an idea how many amateur rocketeers there are in the metropolitan area and where they are. He is Capt. Bertrand R. Brinley, chief of the First Army's news desk, the only adult actively trying to bring junior-grade space exploration out of metropolitan area attics and cellars and into supervised experimental clubs and areas.

He estimates that more than 500 rockets have been fired from rooftops and vacant lots in this area in the last 5 months. He has direct evidence of 1,215 junior astronauts within 20 miles of Manhattan and estimates that there are three times that number. There will be about 5,000 teen-age experimenters in the metropolitan area by summer, he warns.

LETTERS SPARKED INTEREST

Captain Brinley won't attempt even an estimate on the quantity of explosives the boys have squirreled away in bedrooms, basements and garages.

Captain Brinley became interested when letters to the First Army from teen-agers requesting technical information on rockets reached flood proportions. Through the press he issued a general appeal to the boys to let him know what they were doing.

The results both appalled and heartened him. Boys throughout New England, New York, and New Jersey wrote casually about hair-raising experiments with lethal quantities of explosive fuels. The letters showed that 70 percent of the experimenters are under 15. Virtually none are aware of the danger to other people in a misfire or an erratic trajectory. Very few groups have any kind of sponsorship or supervision.

A check with some of the rocket clubs in the city showed the captain that many boys were amazingly advanced in the theory and practice of space exploration. A high percentage of the boys intend to be space scientists.

GOT ARMY'S OK

Impressed, Captain Brinley got Army permission to spend full time on devising a program to help them. He told the World-Telegram and Sun:

"The program is designed to help the boys who have advanced beyond the stages of candle-stick rocketry. Some of them have long surpassed their science teachers in their knowledge of astronautics and instrumentation. I wouldn't be surprised if, given enough money, a dozen of the best were able to orbit a satellite in a year to 18 months."

A Man's Fight for His Reputation

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. ASHLEY. Mr. Speaker, once again I call attention to one of the sorriest stories of injustice ever to fall within my experience. It is a shameful story but it is a true one. I commend it to the Members of the House of Representatives because this body is responsible for the Commission which deliberately perpetrated the injustice and which now steadfastly refuses to right its wrong.

If this body sees fit to scrutinize the grisly procedures and arbitrary actions of the Foreign Claims Settlement Commission, it will find that an American citizen, a former Korean prisoner of war who won decorations for bravery in action, has been denied compensation to which he is entitled, and stripped of his reputation without the opportunity of defending himself.

Mr. Speaker, the strength of a free nation is seriously weakened when government rides roughshod over the rights of individual citizens. I hope and pray that the following article, which appeared in the April issue of Redbook magazine, will prompt this body to take steps to correct the wrong which the Foreign Claims Settlement Commission has committed and, by so doing, to protect the fundamental strength of our democratic form of government:

A MAN'S FIGHT FOR HIS REPUTATION

(By William Peters)

(The story of Joseph Hammond, as reported here, has two parts: his experience as a prisoner of war in Korea and his experience with the Foreign Claims Settlement Commission in this country. All we can report of what happened in Korea is what Hammond and his fellow prisoners of war say happened there. The authorities who rejected Hammond's story have offered no evidence to contradict it; the Chairman of the Commission has rejected a request for detailed comment on this article. Joseph Hammond's story presents a vivid firsthand account of life as a prisoner of the Chinese Communists, but this is not the primary reason for presenting it. The actions of an official Government body in this case, we feel, constitute a serious abuse of individual rights and demonstrate the need for safeguards against the kind of procedure by which Joseph Hammond was deprived both of the compensation due him as an American prisoner of war, and of his good reputation.—THE EDITORS.)

When Joseph Hammond came home to Toledo, Ohio, in the fall of 1953, he brought with him an honorable discharge from the Army, a Bronze Star for heroism in combat and an assortment of scars. On his right wrist was the mark of a bullet wound received the day he was captured by Chinese Communist troops in North Korea. On both wrists were signs of the sharp-edged Chinese handcuffs which had been screwed down tightly at various times during his 33 months as a prisoner of war. On his left wrist were the faint remains of a self-inflicted wound—an attempt at suicide after 27 days in a wooden box.

Hammond had survived beatings, brutality, solitary confinement, near-starvation diets, disease, two trials by Chinese courts-martial and incessant attempts at Communist indoctrination. He had seen fellow prisoners die for lack of food, warmth and medical care; had helped prisoners to escape, only to see them recaptured; had escaped himself, only to be retaken.

But with all the physical and mental scars of his experience, Joseph Hammond made a good start toward adjustment as a civilian. In March 1954, he married Colleen Priniski, a girl he had known for years. That spring, while receiving a 40-percent disability pension awarded him by the Veterans' Administration, they moved to Detroit, where Hammond enrolled at an electronics school under the VA's rehabilitation program. In January 1955, they returned to Toledo to undertake a more ambitious program: Hammond, bent on a degree in electrical engineering, entered the University of Toledo and found full-time night employment as a die-cast machine operator.

Then, on October 27, 1955, began an experience which was to upset the young couple's plans completely. The Foreign Claims Settlement Commission (FCSC) denied Hammond's claim for compensation as a prisoner of war in Korea. The law provides payment of $2.50 for each day that a POW's captors fail to live up to the food, labor and treatment provisions of the Geneva Convention. In Hammond's case, this would have amounted to about $2,500. The law specifically denies compensation to prisoners who "at any time, voluntarily, knowingly and without duress, gave aid to or collaborated with or in any manner served" the enemy. While proof of eligibility rests with the claimant, the FCSC has adopted the presumption that the North Korean and Chinese forces did in fact fail to meet Geneva Convention standards. The only question in Hammond's case, then, was that of willing aid to the enemy.

The FCSC's letter denying his claim said simply that "after due consideration of the claimant's application and all the evidence of record in this matter, including a summary of information from the Department of Defense, the Commission finds that the claimant has failed to sustain the burden of proof as to his eligibility * * *." He was, the letter continued, entitled to a hearing. Hammond wrote at once, requesting one.

Weeks went by without response, and Hammond went to an attorney. On December 9, the FCSC wrote the attorney that a hearing had been set for December 19, in Washington, D. C., and that Hammond had been sent a summary of information about his case. He had, however, received no such summary. A telephone call to Washington brought word that the summary had been

returned undelivered to the commission and that he could pick it up when he got there. Hammond drove to Washington, arriving on Friday, December 16.

"I picked up the summary of information at the FCSC" he recalls. "Knowing I had only 2 days to prepare for the hearing, I was stunned when I read it."

Here is what he read:

"The Commission is authorized to state that it has certain information before it which tends to show that while a prisoner of war in Korea you:

"A. Assisted the Communist propaganda program by:

"1. Writing and circulating peace petitions promoting Communist causes.

"2. Writing and publishing articles containing information adverse and inimical to the interest of the United States.

"3. Drawing cartoons which promoted communism and reflected adversely on the United States.

"4. Participating in the preparation and dissemination of front-line surrender leaflets.

"5. Attempting to influence prisoners of war to accept communism.

"6. Participating in the publication called New Life.

"7. Actively participating in a group called yen-so-yen (workers), whose apparent mission was to interrogate and indoctrinate newly captured prisoners of war.

"8. Serving as chairman of the camp peace committee.

"B. Received the following preferential treatment from the hostile forces:

"1. Better medical care than the other prisoners of war.

"2. Better food and better clothing.

"3 Easier jobs.

"C. Cultivated the friendship of and were overly friendly with the hostile forces.

"D. Frequently visited the Chinese officials of the prisoner of war camp by invitation and voluntarily both by day and at night.

"E. Were selected and approved by the hostile forces for special jobs such as squad leader and chairman of the peace appeal committee."

To Hammond this list was tantamount to an accusation of treason. "I knew that the charges must have originated with the Army, but I couldn't understand why. If they felt I was guilty of such things, why hadn't they made me stand trial before a general court-martial instead of giving me an honorable discharge?"

Joe Hammond's question was never answered during his hearing. Forbidden to examine the evidence against him, to have specific information as to names, dates, and places, or to cross-examine the witnesses on whose anonymous testimony the broad charges were based, he was allowed only to disprove the charges, if he could.

Before the hearing, Hammond sought help from the national rehabilitation commission of the American Legion. He learned that the law required the commission to complete action on his claim within a year of the date it was filed. That meant that a final decision would have to be made within 3 days after the hearing. "The whole affair was being compressed into a total of 6 days," Hammond says, "2 days in which to prepare for my hearing, 1 day to be heard, and 3 days for the commission to decide whether or not I was a traitor."

With a promise that two Legion officials would represent him at the hearing, Hammond telephoned Salvatore R. Conte, of Brooklyn, N. Y., a fellow prisoner-of-war who he felt might be able to testify for him on such short notice. Conte had not only been captured with him but was one of the few American soldiers actually decorated by the Army for his activities as a prisoner. Conte agreed immediately to come to Washington.

In the hours between Friday afternoon and Monday morning, Joe Hammond had plenty of time to think about the charges against him.

His introduction to military life had come early. In November 1942, 16-year-old Joe Hammond quit his vocational high school and, falsifying his age, joined the Coast Guard. A year later, still under age, he was discharged as "unfit for military duty." He immediately went to New York and became an ordinary seaman in the merchant marine. For 5 years he sailed all over the world.

In November 1948, he went home to Toledo to help his mother while his stepfather recovered from a broken back. Less than a year later, when his stepfather was well again, he enlisted in the Army. When the Korean war broke out in June 1950, he volunteered for a company alerted for overseas shipment and was sent first to Japan and then, in September, to participate in the Inchon landing.

In November there were rumors that the Chinese Communists had put a division of troops across the Yalu River into North Korea. The Army newspaper Stars and Stripes reported that Americans captured in skirmishes with the Chinese had been given propaganda material, told they had been duped into fighting in Korea, and then released through the front lines. While Hammond and his comrades pondered these strange tactics, hundreds of thousands of Chinese troops poured across the Yalu, driving a deep wedge into the U. N. lines.

Early on the morning of December 3, Joe Hammond volunteered for the assignment which resulted in his capture. With Sal Conte, he set out in a jeep to try to make contact with a lost infantry company. "Joe and I had been together since Edgewood, Md.," Conte recalls. "He was a great reader, obviously well educated, and I was amazed when I learned that he hadn't finished high school. In Korea, Joe proved to be a good soldier. He was older than most of us; he knew his weapons, and he understood tactics. He was always volunteering for dangerous details."

The detail that bitterly cold morning was indeed dangerous—to drive 8 miles beyond the last Marine-held roadblock with a sealed message for a company presumed to have been cut off by Chinese troops. Along the desolate, winding road, they picked up a straggler from the lost company. A little farther on they heard small-arms fire and, assuming it was the company in a fight with guerrilla forces, hurried ahead.

Topping a final rise, they emerged on a large, exposed plateau. Within minutes, the jeep was under fire from hills on both sides. Hammond drove recklessly, looking for a spot to turn around. Then the jeep was hit, and the three men dove out. In a dash for the protection of some abandoned trucks, Hammond was wounded in the wrist and the straggler was separated from them. Lying in the freezing water of a ditch, Hammond and Conte ate the sealed message and then, looking up suddenly, found themselves covered by enemy soldiers with submachine-guns.

"At the top of a hill," Hammond says, "they took our personal belongings, food, cigarettes and coats and then began beating us with pistols. Beside a large ditch, they forced me to kneel. One aimed a Mauser at my forehead, and I closed my eyes. When I opened them, he was laughing and putting the pistol away."

That night, with six other prisoners, Hammond and Conte began a 16-day forced march, joined, from time to time, by other groups of prisoners. "The temperature was about 30 below zero," Conte says. "We ate twice a day—black, rotten, frozen potatoes dug from the fields, boiled in their dirt. For water, we ate snow. With frequent changes of guard, we marched sometimes for 36 hours without stopping. When we did stop in unheated Korean houses, it was too cold to sleep. We huddled together and rubbed our feet to keep from freezing. A Filipino who'd been in the Bataan death march said it was a picnic compared to this. On the 11th day, we got our first medical attention. They picked off our scabs and applied gauze. Then we started off again."

Twice during the march, Hammond and Conte were interrogated by English-speaking Chinese. They gave only their name, rank, and serial number, along with a phony unit they had agreed upon. The Chinese insisted that they were not prisoners but friends liberated from an aggressor army, that they would be sent north to universities to learn the truth, and then be released.

By the end of the march, there were about 300 survivors. "We were more dead than alive," Conte says. "I was skin and bones, my feet and legs were ruined, and I was doubled over with cramps. Joe was in even worse shape. He had a raging fever, and his right arm was swollen to twice its normal size. The camp was just some Korean houses near Kanggye, about 5 miles south of the Yalu River. The group was split up into squads of 8 to 12 men who lived together in a room of a Korean house. Joe and I were separated."

Food at the camp consisted of a small ball of sorghum seed, cooked as rice, twice a day. Bad as it was, it was far better than they had been getting. "It was at Kanggye," Hammond says, "that I became a squad leader. One member of each squad was chosen by the Chinese. Though the squads were rigorously segregated from each other, we found ways to communicate when we sent men out for food. As the Chinese talk about school increased, word was passed throughout the camp to pretend to go along. The officers, in a unit by themselves, let us know that this was the policy we should follow—pretend to be indoctrinated in order to be released."

Indoctrination consisted of lectures in a large barn for the whole camp every third day. Though the Chinese called the program voluntary, even the sick and badly wounded were forced at bayonet point to attend. On nonlecture days, the Chinese instructors passed out pencils, paper, and written questions, requiring from each prisoner written, signed answers. Recalcitrant prisoners were called to Chinese headquarters for all-night interrogations, and not allowed to sleep in the daytime until they gave in. Even so, efforts were made by the men to keep their answers ambiguous.

During the 6-week indoctrination period, the Chinese published a camp newspaper called New Life. Signed contributions came partly from these written answers, partly from articles and autobiographies demanded from all prisoners as tests of their sincerity. Again, refusal meant all-night interrogations and threats of punishment or even death. Since food rations had been gradually increased, a threat to send a prisoner from the "university" to a regular POW camp was, in effect, a threat to return him to the conditions of the forced march. To the prisoners that meant death.

Joe Hammond's sole article for New Life was, he maintains, a piece of irony. Back home, he had read a booklet called Communism and Its Aims, published by a committee of Congress. It had impressed him, and he remembered much of it. As accurately as memory permitted, he says, he reproduced it, substituting the word "capitalism" wherever "communism" had been. The result was so distorted that he felt sure the Chinese would catch on, but when it appeared in an edited form over his name he knew he had miscalculated. The other prisoners missed its irony completely.

Ordered to write another article, he says he refused. "When I saw the dangers of writing, I drew cartoons instead. I did three, all calculated to raise prisoner morale.

The first two were published. The third was rejected. Taken to an unheated interrogation shed at 35° below zero, I was told I must put politics into my cartoons. They wanted a picture of an armed revolution in front of the White House. I refused.

"They reminded me they didn't report the names of prisoners, that no one knew I was alive. It would be easy, they said, to dispose of me. After 6 hours in the shed, they sent me back to my squad to reconsider. My squad members urged me to draw something. I finally drew a cartoon strip in which a soldier was captured and released; he returned home and handed a petition to a man at a desk. He said: 'Now that the warmongers have been punished, the people can live in peace.' Nothing in the drawing identified either the soldier's nationality or the 'warmongers.' But when the cartoon was published, the Chinese had changed the quotation to: 'Now that Truman, Dulles, and MacArthur have paid for their crimes, the people can live in peace.' That was the last cartoon I drew."

It was at one of the early indoctrination meetings that Sgt. William H. Olson, an American prisoner, proposed a peace appeal to the United Nations. "We had all agreed to pretend to go along with the indoctrination," Hammond says, "but many of us were shocked at this suggestion. I argued against it, with the result that I had 3 continuous weeks of all-night interrogations. When word was finally passed by the senior American officer not to resist the appeal, I gave up and went along."

In the fifth week of indoctrination, Hammond recalls, two men from each squad met to elect a central committee to draft the appeal, which the Chinese were promoting as a "final examination." Hammond was elected to the committee. At the committee's insistence the senior American officer served as an adviser. The group met only twice. When the Chinese demanded the election of a chairman, each member nominated the man on his right; then each nominee withdrew in order. Hammond, nominated last, withdrew last; but the Chinese insisted he serve.

The appeal was drawn up from suggestions of the committee and the Chinese officers, with the committee trying to keep its language as ambiguous as possible. Two marines took down the suggestions and drew up the final statement. "Then," Hammond says, "it was read to all the prisoners and adopted unanimously. Meanwhile, though, the United Nations had branded the Chinese Communists aggressors in Korea, and the Chinese insisted that a protest against this be included, as well as a reference to the Stockholm peace petition then being circulated throughout the world. I was told that Sergeant Olson made the final changes."

The appeal itself was never signed, although separate, blank sheets of paper were signed by all the prisoners. Even here, they resorted to subterfuge, trading names so that each signature was actually a forgery. Then, having passed their "final examination," the 298 prisoners were jammed into boxcars and taken south to Pyongyang, presumably to be released. In the end, 60 were selected for release; the rest were sent back north, supposedly to organize universities for other prisoners. "There was no apparent basis for the selection of the 60," Conte says. "Joe was among them; I wasn't."

The 60 men were marched for 8 days to a point near Wonsan, where the group was split in half. "Thirty were to be released immediately," Hammond says, "and twenty-nine—one had died on the march—later. I was among the 29. The 30 left in trucks, returning the next day with news that artillery had prevented their release. Nine of my group, including myself, were seriously ill and were taken to a valley, where, for 3 weeks, we got better food and some medical care to build us up for release. Then we rejoined the others at a camp where 300 new prisoners were being held."

At the new camp, Hammond found that members of his old group of 60 had been designated "yen-so-yen," or workers, and assigned the task of interrogating and indoctrinating the new POW's. "We refused flatly," he says, "though they threatened to shoot us. Eventually, we agreed to hand the prisoners blank questionnaires, though we were careful to tell them it was up to them whether or not they filled them out. The third day I was there, 17 of our group of 60 were taken away and released through the lines. The next day, the new prisoners were sent north, and the rest of us were marched to the front, cleaned up and prepared for release. Something went wrong. The day after, we were marched under heavy guard away from the front. I felt then that we'd never be released, and my whole attitude about even pretending to go along with indoctrination changed abruptly."

Two days later, Joe Hammond escaped from his guards, and for 36 hours made his way south. Recaptured, he spent 18 days imprisoned in a flooded air-raid shelter, before being marched barefoot for 5 days to a mining camp being used for prisoners. Within weeks he was in trouble with the Chinese. Refusing to be a squad leader, cursing the Chinese officers, aiding POW's to sell personal belongings to North Korean civilians in exchange for food, he was tried by a Chinese court-martial, found guilty and sentenced to 6 months at hard labor.

In November, 1951, the prisoners were marched to POW Camp No. 1, near Changsong, on the Yalu River. Hammond, with 6 or 7 others, was in the criminal squad, still under sentence. When the sentence was lifted, he led a protest against the soupy sorghum seed, the only food at the new camp. The Chinese listened, made a mild improvement in the food and locked Hammond up as an agitator. Three weeks later, he was placed in the camp's "reactionary squad," a group of 21 particularly intractable prisoners.

"I was in the reactionary squad when Joe joined us." Conte says, "and for 2 months we were kept away from the other prisoners. Then, in December, when some agreement had been reached in the armistice negotiations at Panmunjom, we were split up into several squads and put back with the others. Joe and I managed to stay together, and I was appointed squad leader. Again, we were forced to attend lectures, but our answers to the written questions were not what they wanted. We wrote what we honestly believed."

Meanwhile, Joe Hammond had teamed up with a group of prisoners bent on escape. Knowing something of celestial navigation from his years at sea, he taught it to the others. When maps were needed, he stole one from Chinese headquarters and made copies. Too weak himself to attempt an escape, his feet badly swollen by beriberi, he worked at helping others make the attempt. Several did, but all were recaptured.

In April, forced indoctrinating ended, and only a handful of prisoners continued to attend lectures. On May Day, Conte's squad, led by Conte, Hammond, and another prisoner, were ordered to parade under Red flags and refused. Their example led to the refusal of others and eventually of the whole camp. The march was made without flags. That night at a celebration in the public square the men, emboldened by the open mocking of Mao Tse-tung by a British prisoner, came close to rioting. Arrests of suspected instigators began the next day.

Joe Hammond, ordered to headquarters on the pretext of illegal possession of a piece of rope, maintained it was his. To the Chinese officer's contention that all property belonged to the people, Hammond responded with a string of oaths. When the officer insisted that even his clothing belonged to the Chinese People's Volunteers, Hammond stripped to his undershorts. "I don't want anything from you bastards!" he shouted. "I can survive without your stinking clothes!" Conte, who witnessed this scene, adds: "They marched him off to jail in his shorts. For almost 6 months, he had nothing else to wear."

For 3 weeks Hammond was kept in solitary confinement under constant pressure to confess his crimes and implicate others. "After 2 weeks," he says, "I wrote a confession admitting stealing the map and making copies, aiding POW's to escape, committing sabotage, being insincere and failing to repent my mistakes—all the things I was accused of. I refused to name anyone else, though, and that infuriated the Chinese. They claimed that Conte and I were counterintelligence officers who had deliberately become prisoners to disrupt their program. It was flattering, but I refused to 'confess' that."

Eventually, he was taken to a room lined with wooden boxes. "The boxes were 2 feet wide, 3 feet high, and about 5 feet long, with a barred gate in front. Locked in one, you sat cross-legged, without leaning, for 16 hours a day. If you moved, you were beaten with long poles pushed through the bars. Once a day, if the guards felt like it, you were allowed 30 seconds in the latrine. Otherwise, you ate, slept—lived—in that box. Sal Conte spent almost 6 months in one."

Hammond's membership in what its inmates called the Kennel Club lasted 27 days. Sick, very thin, in constant pain from the tight handcuffs, he broke his metal dogtag in half and slashed his wrist with the sharp edge. "When the guards discovered it they dragged me out, demanding the dogtag at gunpoint. I told them to go ahead and shoot me. Several of them jumped me and took it. Then, for what seemed hours, they beat me with rifle butts. Tired, they screwed my handcuffs down as tight as they'd go and locked me in an abandoned outhouse. Every other day for the next 6 weeks, they took me out to beat me. I was in the outhouse, covered with open sores, still dressed only in shorts, and literally eaten alive by giant, filthy blowflies for 4 months."

Hammond's confinement ended with his second Chinese court-martial in December 1952. Sentenced to 1 year's imprisonment "for his education and benefit," he and 15 others, including Sal Conte, were moved to an isolated valley and put in the first enclosed stockade they had seen in North Korea. All were under court-martial sentences for crimes against the Chinese. Most were still there in August 1953, when they were finally moved to Panmunjom for repatriation.

This was the story Joseph Hammond and Salvatore Conte attempted to tell at Hammond's hearing before the Foreign Claims Settlement Commission. If it lacked coherence, this was perhaps due to their uncertainty as to what, precisely, the hearing officer, Charles Colish, wanted to know. At Colish's suggestion, Hammond, in sworn testimony, answered each of the items on the summary of information. He flatly denied 10 of them and explained the circumstances of duress involved in the others. Conte then began corroborating his story under oath.

"Conte was still testifying," reports American Legion representative Charles W. Stevens, "when Mr. Colish, in an aside to me, said: 'There is enough in the record now.' This does not appear in the transcript of the hearing for the simple reason that the stenographer was taking Conte's testimony at the time. My next remark, however, does appear. Interrupting Conte, I said: 'Apparently enough has been said for the record to make their decision. Just tell briefly, Salvatore, what you know about Joe's being in solitary.' A few minutes later the hear-

ing was over, and Hammond, Conte, Mr. Marsh (another Legion representative) and I, all having heard Mr. Colish's remark, left with the feeling we had satisfied him with our refutation of the charges."

Three days after Hammond's hearing, and 1 year to the day after he had originally submitted his claim, the 3 FCSC Commissioners, none of whom was present at his hearing, rendered their final decision. In a document signed by all three before a transcript of the hearing had ever been typed, Hammond was informed that "* * * the Commission hereby affirms the disallowance." Hammond had lost.

In frustration and anger, he turned to Congressman THOMAS LUDLOW ASHLEY, of Toledo, for help. ASHLEY told a press conference: "From what I can gather, there has been flagrant abuse in Mr. Hammond's case of the time-honored right of the accused to face his accuser." Over the next 6 months, ASHLEY conducted a lengthy exchange of letters with FCSC Chairman Whitney Gilliliand; addressed the House of Representatives on the subject of "the dangerous development of a new kind of criminal law wherein American citizens are tried and convicted by administrative star chamber bodies"; and sponsored a bill which, among other things would make decisions of the FCSC reviewable in the courts.

Meanwhile, Joseph L. Rauh, Jr., a prominent Washington attorney, had agreed to take Hammond's case without fee. He immediately applied for a rehearing, but was denied on the ground that after 1 year the Commission no longer had jurisdiction over claims. Later, possibly because of the pressure of Representative ASHLEY and others, the Commission decided it did have jurisdiction beyond the 1-year deadline. Rauh again applied for a rehearing. This time he was denied because, in Chairman Gillililand's words "* * * our rules do not provide for rehearings * * *."

In testimony before a House subcommittee when the POW war claims law was under consideration, Chairman Gillililand had been questioned closely about the right to a rehearing. His response then: "Under our present regulations there are a whole series of rehearings and reviews before the Commission itself * * * so that within the agency itself there are all kinds of chances to get another bite at the apple * * *." What had happened since June 7, 1954, when this reassuring statement was made, that prevented Joe Hammond from getting even another nibble at the apple, Mr. Gillililand has not explained.

On December 12, 1955, FCSC General Counsel Andrew T. McGuire advised the Commissioners: "It is suggested that in the disallowance of claims * * * in which collaboration is an issue, the decision be based upon the finding that the evidence is insufficient to warrant the conclusion that the claimant while imprisoned was not fed or treated as provided in the Geneva Convention * * *."

This policy, which relieves the Commission of any need to prove that a prisoner of war actually collaborated, blends oddly with its presumption that the Chinese did, in fact, fail to meet Geneva Convention standards. The Commission is, in effect, maintaining not that Hammond collaborated with the enemy, but rather that he failed to refute information showing that he had been treated by the Chinese in accordance with Geneva Convention standards. The Commission has never disclosed such information to Joe Hammond or asked him to refute it.

Among those veterans whose claims have been denied by the Commission on this basis are, in Mr. Gilliliand's words, "a few who may have undertaken to ingratiate themselves with the Communists to further an escape plot or to gain information which might subsequently prove useful to our own forces." It was revealed at congressional hearings on Representative ASHLEY's bill to amend the POW war claims law that men honorably discharged and receiving benefits as disabled veterans (like Joe Hammond) had been denied compensation, while men convicted of aiding the enemy had been awarded their claims.

While Chairman Gilliliand denies that pressure from congressional hearings had anything to do with it, it is a fact that by June 1956, all but 55 of the 252 veterans whose claims had originally been denied were paid in full. By October 1957, the number of claims denied had dwindled to 24. Joe Hammond was one of them.

With the failure of Representative ASHLEY's and similar bills to pass the 84th Congress, it seems that Joe Hammond's battle has reached a dead end. Representative ASHLEY has promised to introduce a new bill in the current Congress, but the chances of its passage are not good.

So Joe Hammond has lost his case. It would have been easier for him not to fight it openly, rather than risk the notoriety to which he and his family have now been exposed. This is his personal tragedy, but it is a far greater tragedy—and one which affects us all—that he was not given a fair opportunity to defend himself against broad and extremely serious charges levied by unnamed accusers.

Support for H. R. 607

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. WESTLAND. Mr. Speaker, I know there is no group of citizens who are more seriously affected by inflation and the high cost of existence today than our senior citizens who must look to their retirement payments for their major income. It is for this reason that I introduced legislation to increase the annuities of retired civil-service personnel.

This body has passed a compromise bill which calls for a 10-percent increase for some 310,000 retirees and survivors. This will help to take care of those medical bills, those groceries, those rent payments, and those replacements for clothing that confront all of us. As I see it, it may not be enough.

However, it is better to do something than to do nothing. I do think it is a good idea for the Civil Service Commission to make a study and an analysis of the annuity structure and of the methods of adjusting annuities and to report its recommendations.

While this study is being made, H. R. 607 will allow some measure of relief to these former civil-service employees who come under the authority of this bill. This is why I have supported this legislation.

It is good some adjustment is being made for retired civil-service personnel, who, I might add, represent only a small number of older citizens. On the other hand, there are a great many more people on social security. These perhaps suffer more than others because of inflation and the rising cost of living. Something must be done for them.

We must certainly watch the inflationary trend which has reduced the value of dollars received through social-security checks each month, and do all we can to prevent further devaluation. Also, there should be some kind of correction for this injustice in the form of the readjustment of social-security benefits.

I am sure, Mr. Speaker, this body is aware of its obligation to fulfill the needs, not only of retired civil-service employees, but also of that larger group, the elderly people who must live on their sometimes pitifully small social-security benefits.

Adm. George J. Dufek

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. SAYLOR. Mr. Speaker, during my Naval Reserve training duty last fall, I had the honor and privilege of knowing Adm. George J. Dufek, his wife, and family. I admired the admiral for his ability, courage, leadership, and good fellowship.

Admiral Dufek is doing a tremendous job for our country both in his command of Task Force 43, supporting and supplying forces in Antarctica, and in his public relations with the people of New Zealand, where our forces have their main supply base.

The New Zealand Free Lance, a weekly pictorial paper, had one of its staff writers interview the admiral, and under leave to extend my remarks, I include the interview.

PEN PORTRAIT OF GEORGE DUFEK, LEADER, ALL-ROUNDER AND PERFECTIONIST

Across the executive-type desk on the second floor at Operation Deep Freeze headquarters in Christchurch Rear Adm. George J. Dufek, Antarctic projects officer, Commander United States Naval Support Force Antarctica, Commander, Task Force 43, smoked a cigarette thoughtfully in the late-morning sunlight. The desk, shipshape in Navy fashion rather than clinically clean, displayed a plain, varnished nameboard that has travelled far. "George Dufek, Rear Admiral, U. S. N.," it said.

George Dufek, overall boss of a 4,000-man enterprise, described what he looks for in his officers, the qualities of leadership he seeks. He couldn't have etched a more perfect vignette of himself. All the characteristics are his.

Landing at Wigram from the United States in the Skymaster that took him back to Antarctica a while ago, Rear Admiral Dufek received the compliment of a guard of honour from the R. N. Z. A. F. station. It was a day of top brass for Viscount Cobham had flown in half an hour earlier. Rapid inspection over, the admiral enjoyed the delighted salutations of Mrs. Dufek and sons George (going on 10) and David (just 8). Nearby, in two ranks, his officers stood at the salute.

Grinning broadly, striding across, Rear Admiral Dufek described a half-circle with his right hand as exuberant boys do, called a delighted, "Hiya, fellas!" and launched into a round of handshakes and back-pattings. The Dufek handshake, seemingly like everything else about him, is something

he means. It's a grand grip. A few steps away Rear Adm. J. E. H. McBeath, C. B., D. S. O., D. S. C, chief of Naval Staff, smiled warmly.

ON HIS OWN

Dufek's a man on his own. "I'd go anywhere with him—and twice on Sundays." Lt. Cmdr. John Mirabito, his chief meteorological man, told me. "The admiral is a dynamic individual with leadership qualities. Even the way he walks about just spurs people on. I know. I've seen it happen so much down there on the ice."

Comdr. Merle MacBain, chief public information officer of the outfit and formerly chief public relations officer for Adm. R. B. Carney, United States Chief of Naval Operations, confirmed the impression. "He doesn't do it by rule," he affirmed. "He's a natural. There's no explaining what that quality is, but whatever it is he's got it."

The Admiral appears invariably good-natured, as when he received a 12-year-old girl, keen to have the Dufek's 2 lads join the Salvation Army cub pack, gave her a signed photograph, a donation for the self-denial appeal and a promise to talk it over with Mrs. Dufek.

"That's right," said MacBain. "But being good-natured and being pushed around are two things. You don't see anybody pushing George Dufek around."

When he's in Christchurch, Admiral Dufek begins his day at 7, then in his crocus-colored rental car he's driven off by John Czerwinsky from his rented residence at Fendalton with the two boys. After dropping them off at St. Andrew's College he is at his office by 8:15 or 8:30. At 10:30 there's a staff conference with principal officers from the headquarters staff—about 40 of them—when he gets reports on ship and plane movements, weather prospects, and general progress.

"I just keep going till lunch time, when someone says, 'Come on, I'll take you out for lunch'," the Admiral explained. "Round about 2 I'm back to go through dispatches, deal with correspondence, and maybe have some individual conferences. Round about 4:45 I pack up and go home."

Having his home in Christchurch rates high with the Deep Freeze commander. No one who saw the family reunion at Wigram could doubt the rich bonds that bind the Dufeks together. His book, "Operation Deep Freeze," he dedicated "to my wife, Muriel, and to our children, who waited steadfastly during my many long absences—and who filled my life with happiness when I was home from the sea."

He places on record that "a Navy career may sound very romantic and interesting, but it is a little rugged on a family. * * * During the Korean war, when I commanded the aircraft carrier *Antietam*, I was absent from my family for most of a year. One day David asked his mother, 'What is Daddy—a man or a ship?'"

Evenings at home in Christchurch mean a family meal, reading books (Admiral's choice, biographies: "What men accomplished, and how and why they did it"), playing records (a prime favorite, "Warsaw Concerto"), helping "the kids" with their homework (the Admiral's proud of the schoolboys, laughingly told press men the day they started at St. Andrew's: "I hope they don't come home with bloody noses"—they didn't), or maybe entertaining a few friends. "There's never a dull moment," he sums it up. By 10:30 or 11 p. m. it's bedtime.

Rear Adm. George Dufek, direct-eyed, composed, gray-haired, immaculate, spontaneously friendly, soft-spoken, ingenuous and immensely likable, belongs to European stock. His father, Frank Dufek, was born in Prague when it was in Bohemia and Czechoslovakia hadn't yet been delivered by statesman midwives. Reaching America by way of Germany, France, and England, he became in turn a railroader, farmer, lumberman, gold prospector. In Wisconsin he met Mary Wachuta, born of Bohemian parents on a farm near Prairie du Chien. They married and George Dufek, born February 10, 1903, was the third of their 4 children.

Young George, early interested in a military career, entered the United States Academy at Annapolis in 1921. He earned honors and an uncommon distinction. He became a triple-threat naval officer and today he's entitled to wear the dolphins of a submariner (he served in the first *Nautilus*—far from an atomic craft), he has his wings and, of course, he's a thoroughly qualified orthodox seagoing officer. For 30 years he led a full and adventurous life, from pole to pole.

"Yet," says Dufek with simple directness, "I had begun to feel there was something missing in my life, that I had failed to leave any positive and concrete work behind me. * * * Men in other professions and trades often have a * * * feeling of accomplishment in a creative enterprise. I felt that if I could use the knowledge gained over the past 30 years in the handling of ships, planes and men in the construction of bases at the bottom of the world for the use of scientists I, too, could gain that sense of accomplishment, of contribution to useful purposes.

DISCOVERED THE TOUGH WAY

There, in a nutshell, is the whole story of Dufek's current command, the reason for the risks he takes, the thrust behind the leadership.

First as Adm. R. E. Byrd's offsider, now as head serang, George Dufek (who in 1939 first went south as a volunteer) discovered the tough way how well equipped a man must be to winter over in Antarctica or to serve there at all. Those who do spend a winter must have passed a submariner's medical, they must be psychologically suited, they must be able "to get along" as well as do their particular jobs.

True, things are different from 1939. Now, the admiral pointed out, they have innerspring mattresses, electric light, clothes washers and driers, movies with current films, good libraries, plenty of hi-fi recordings.

"But there's still the isolation," he reminded. "Yet most of them want to stay 2 years. The commander of the Navy unit at the South Pole station, Lt. John Tuck, at 24, a fine leader, is spending his second winter down there. He was first at Little America, then he came out, and when I talked to him he told me he preferred to winter over a second time, so we gave him this job at the Pole."

In his role of Antarctic projects officer, Rear Admiral Dufek back home meets committees of Congress and other top politicos in the interests of polar exploration. In New Zealand he's about the best non-career diplomat the United States has ever had. The "house-full' sign goes up when he addresses Christ Church groups and displays a film of the expedition's work '"People, especially the ladies, enjoy the movie; they can actually see what we are doing"). In Wellington he lunched with Viscount and Lady Cobham at Government House ("a very great honor"). Everywhere his versatility shines.

There's Dufek the author. Entertaining and informative. "Operation Deep Freeze," published in the United States but not yet in England, though it is being translated into foreign languages, was begun as a time-filler in February, 1956, aboard the Eastwind off the Antarctic coast. When she had propeller trouble, the admiral transferred his flag and infant manuscript to the Glacier. Eventually he got home and took the manuscript with him. The concluding episodes, including the simply-told story of his own landing at the South Pole—the first American to set foot there—he sent back to the United States by "ham" radio.

Now he has an Antarctic book for 12-year-olds ready for publication and awaiting final choice of a title.

There's Dufek the outdoor man with 3 principal activities: Fishing (that's No. 1), hunting (ducks, quail, pheasants, deer) and swimming ("I want to know when you start swimming here again"). The admiral, whose love of fishing came from his father, delighted to spin me this yarn.

"Last time I was here I went fishing at the Rangitata," he related. "I fished for 2 days and a half, just beating that beach, but I never got a strike. Finally, I got a little disgusted and sat down and lit a cigarette.

"Presently the runholder came up. 'I've been watching you fishing here these 2 days or so,' he said. 'How do you do it—how do you catch 'em?'

A BITE RIGHT AWAY

"'There's nothing to it,' I said, taking the rod and making a cast. Bang. A bite right away, and there it was, a beautiful fish. And I hadn't had a bite for two days and a half, remember.

"'Do it again,' the runholder said. 'Right,' I said and made another cast. Bang. Another bite, the same as the other. There were two beautiful fish—the first I'd caught in 2 days and a half.

"'Do it again,' said the runholder. But I didn't want my luck to run out. 'No,' I told him. 'I've got enough fish to do me for the present'."

Admiral Dufek was flying south to McMurdo, 2,500 miles off, when this fishing season opened. But he'd promised himself to be back in time to try to improve on last season's performance and he's back.

In Washington, between phase II and phase III of Operation Deep Freeze, Rear Admiral Dufek received at the hands of Vice President R. M. NIXON the distinguished service medal to add to a vast store of awards. It came for exceptionally meritorious service, and the citation paid a compliment to his sound judgment, resourcefulness and inspiring devotion. The officer who prefers loyalty down to loyalty up accepted it as being "awarded to one man for what many men did." That's a typical Dufek touch.

Equally sincere, I feel, are the closing sentences of his book:

"I think often of my visit to the Scott Polar Research Institute at Cambridge, England," he says. "There on the lawn stands a statue to Capt. Robert Falcon Scott, the last man to reach the Pole before us. An inscription—now carved in our own chapel at McMurdo Sound—bears these words: 'In seeking to unveil the Pole they found the hidden things of God.' Perhaps God has hidden so that men might discover."

While Muriel Dufek continues to wait steadfastly George Dufek still leads his team of discoverers.

Results of Questionnaire in the Second Congressional District of Nebraska

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include the results of a questionnaire I recently sent to the voters in my district. I was amazed to re-

ceive a 25 percent return on this questionnaire, which shows the great interest of Nebraskans in national and world affairs.

The returns were grouped into seven classes. Several of these are self-explanatory. The classification "Other rural" includes all nonfarmers in the five counties I represent who are not Omaha residents. "Businessmen" includes both small and large business owners plus executives and plants and company managers.

"Professions" includes teachers, ministers, and accountants as well as doctors, lawyers, and dentists. "Other" includes unsigned questionnaires, retired persons, a few students, and any others that could not be easily classified into one of the other groups.

One question prompted quite a few qualifying comments. That is No. 1, which asks about a summit meeting. Many persons gave a qualified yes and these were counted as yes. These people, however, favored a summit meeting only if the terms set out by President Eisenhower and Secretary of State Dulles were met first.

Here are the detailed replies by percentage:

1. Do you favor a summit meeting between the President and Soviet leaders on current East-West differences?

	Yes	No	No opinion
Farmers	62	32	6
Other rural	57	41	2
Businessmen	58	39	3
Professions	53	42	5
Employees	47	47	6
Housewives	41	53	6
Other	48	44	8
All	53	43	4

2. Do you believe foreign aid should be: maintained at present rate (or) substantially reduced (or) terminated altogether?.

	Same	Less	None	No opinion
Farmers	12	67	19	2
Other rural	13	70	15	2
Businessmen	14	67	16	3

All	52	10	38

13. What are you most concerned about at present?

Farmers: Farm prices, Government spending, honesty in government, Communist influence in United States, unemployment.

Other rural: Government spending, honesty in government, national defense, farm prices, Federal taxes.

Businessmen: Government spending, Federal taxes, honesty in government, national defense, labor-management relations.

Professional: Government spending, honesty in government, Federal taxes, national defense, national debt.

Employees: Government spending, honesty in government, national defense, unemployment, Communist influence in United States.

Housewives: Honesty in government, Government spending, Communist influence in United States, national defense, Federal taxes.

Other: Government spending, honesty in government, national defense, Communist influence in United States, Federal taxes.

All: Government spending, honesty in government, national defense Federal taxes, Communist influence in United States.

Statement by Congresswoman Sullivan, Before House Agriculture Subcommittee Opening Hearings on Food Stamp Plan

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mrs. SULLIVAN. Mr. Speaker, those Members of the House who know how long I have been working to enact a food stamp plan as an intelligent substitute for the unsatisfactory surplus distribution program now in effect will understand my feeling of gratification in the fact that new hearings began on this subject today before the Consumer Study Subcommittee of the House Committee on Agriculure.

I appreciate the courtesy of subcommittee chairman ANFUSO in allowing me to appear as the opening witness at these hearings to discuss the provisions and the background of my bill, H. R. 949, which is the prototype for most of the food stamp bills now before the subcommittee.

It may not be modest perhaps to say so—most Members in testifying before committees on their own bills usually insist they do not have pride of authorship in the actual language of a particular bill—but as I told the subcommittee, on the question of food stamp legislation, I have a very strong sense of personal pride for the work which went into the drafting of the original bill which I introduced in February 1954.

It was therefore with a great deal of pleasure this morning that I made my statement as the first witness at the hearings. My statement was as follows:

A FOOD STAMP PROGRAM TO OUTLAW HUNGER IN THE UNITED STATES—TESTIMONY BY CONGRESSWOMAN LEONOR K. SULLIVAN, DEMOCRAT, OF MISSOURI, ON H. R. 949 BY MRS. SULLIVAN, AND OTHER BILLS TO ESTABLISH A FOOD STAMP PROGRAM FOR DISTRIBUTION OF SURPLUS AGRICULTURAL COMMODITIES TO NEEDY PERSONS—PREPARED FOR DELIVERY BEFORE THE CONSUMERS STUDY SUBCOMMITTEE, HOUSE COMMITTEE ON AGRICULTURE, APRIL 16, 1958

Chairman ANFUSO and Members of the subcommittee:

First, I want to express my appreciation to this subcommittee, and also to Chairman COOLEY of the Committee on Agriculture, for arranging these hearings under circumstances which lead me to be most optimistic about the prospects for action in the near future on a food stamp bill. As you know, I have been urging such a program for more than 4 years. Twice during that period—in both the 83d and 84th Congresses—hearings were conducted on this proposal by the Committee on Agriculture, but unfortunately nothing further happened on it in either Congress. I hope and trust that this time the hearings will be fruitful.

In any event, as a result of the committee's failure to act in previous years, I attempted the direct approach last year of seeking to amend the Agricultural Trade Development and Assistance Act by offering my food stamp bill as an amendment to it from the House floor. The bill we were considering dealt primarily with extending for another year the provisions of Public Law 480 having to do with disposal of surplus commodities abroad, but since Public Law 480 also contains provisions covering domestic donation of surpluses, my amendment was relevant, and, I think, advisable.

RECESSION SUFFERING COULD HAVE BEEN REDUCED

If my amendment had been accepted last year and made part of Public Law 480, I sincerely believe a lot fewer Americans would be suffering hunger today. I sincerely believe our agricultural surplus disposal mess would have been corrected. I sincerely believe the machinery which would have been established a year ago under that amendment would by now be operating so effectively that it could have served as a valuable weapon in fighting this current recession.

Although I lost the battle last year to write my food stamp plan into law through the means of an amendment from the House floor to another bill, I feel my purpose was nevertheless accomplished in some measure at least by reason of these facts:

First, many, if not most of the Members who voted against my amendment in the House last year insisted they were not voting against the proposal itself or against the idea of a food stamp plan but rather against having it incorporated in or tacked onto Public Law 480. They urged that the same proposal come before the House in the regular manner—that is, on recommendation of the Committee on Agriculture. I assume, therefore, we can count this time on the support of many of the same House Members who voted against the proposal last year when it was offered as an amendment to Public Law 480. So far, so good.

Secondly, out of the fight which occurred over this idea on the House floor last year, I obtained the promise of Chairman COOLEY that the committee would take up the food stamp proposal separately this year and that he personally would support it. These hearings, then, and the action which I anticipate will stem from your hearings, represent to me the fulfillment of that promise of last year made during the heat of the House debate on my amendment to the Agricultural Trade Development and Assistance Act. As you can readily understand, I am most grateful now for this followup.

NEED FOR BETTER DISTRIBUTION SYSTEM NOW OBVIOUS

It is my intention today to discuss primarily the means of setting up and operating a food stamp plan rather than the need for a better plan of distribution of our surplus agricultural commodities to our needy throughout the country. The question of need seemed to be the main issue in the previous hearings, in 1954 and 1955. Several Members of the committee on agriculture expressed sincere doubt in those hearings about the need for a food stamp plan or the advisability of one. The Department of Agriculture witnesses who testified insisted it was completely unnecessary to adopt such a plan—that their program then in effect (and still in effect) met all of the needs of disposing of surplus food in a satisfactory manner to our needy citizens.

That may still be the position of the Department's policy makers. I assume it is. I have in my possession one of their recent official publications on surplus distribution, and it insists the present disposal and distribution program for helping the needy is just jim-dandy and couldn't be better.

That has been their position all of these years during which I have been urging adoption of the food stamp plan. At least, no one could accuse the present leadership of the Department of Agriculture of being inconsistent; good or bad, any policy stays on and on and on. But I certainly do not have to point that out to a subcommittee of the committee on agriculture of the House of Representatives.

Therefore, Mr. Chairman, with your permission and the permission of the subcommittee, I am not going to waste your time or mine in discussing the Department's ostrich-like position on this issue. You will no doubt have witnesses from the Department appearing before you to give that side of it, and I would merely suggest that you ask if they still hold to the sentiment expressed for them by Assistant Secretary McLain in 1956, after we wrote a food stamp plank into the 1956 Democratic platform to aid the needy, when he said, and I quote:

"People like to buy their food. They don't like to have it given to them. It's an insult to offer an able-bodied person a handout."

Mr. Chairman, who can argue intelligently with that kind of viewpoint? Food stamps are intended for hungry people, not chiselers and loafers. I think Assistant Secretary McLain has summed up the Department's position on this whole issue concisely if not necessarily admirably.

PRESENT PROGRAM A FRAUD ON NEEDY

The reason you are holding these hearings is that you all know as well as I do that the present system for distributing surplus food to the needy is a monstrous fraud upon the needy and upon our cities and States participating in the chaotic and, to them, extremely costly program.

In desperation over our great unemployment, we in St. Louis have just recently come in under the existing program. While I was at home over the Easter recess, I made an on-the-spot investigation of how it is supposed to operate. I was heartsick. It is not our city's fault. It is the whole blind concept behind the present disposal and distribution system. It is an organized system for dumping a few surplus items on our States and cities for warehousing and distribution in a manner which inevitably reminds one of Winston Churchill's famous phrase about so many owing so much to so few. In this instance, however, it is a case of so many getting so little for so much effort and expense.

A warehouse depot in the center or outskirts of a large city may be a simple method of distribution from an engineering or logistics standpoint. But consider the case of a needy family sending someone across a major city by bus, or street car, or perhaps by foot, to pick up a heavy, bulky package of flour, corn meal, dry skim milk, some cheese—intended to be enough for a family for perhaps a month—and dragging it home that long way when, under an intelligent system of distribution, these things—and a whole lot more—could easily be made available in the corner grocery in exchange for a stamp or stamps which came regularly in the mail along with say, the public assistance check. The cost of the present, haphazard, ineffectual program, meanwhile, is out of all proportion to its benefits and is burdensome to the point of no return to our States and cities.

WHY LEGISLATION MUST BE ENACTED

Our job is to overcome the stubborn inertia and resistance of Mr. Benson's team and force them to use the admitted talents of operating people in the Department to install the kind of program which can work and which can do some real good. I mean good for the needy and good, too, for the farmer—

particularly the small farmer who gets no help at all out of the present hit-and-miss program of dumping surpluses.

Of course, no legislation is needed to install a food-stamp plan. We know that. The same broad, general legislative authority which enabled President Franklin D. Roosevelt 20 years or so ago to establish a very elaborate food-stamp program in depression days—a program much more elaborate and complex than the one I am now proposing—that same broad legislative authority, I repeat, is still on the books and still available to Mr. Benson if he wants to use it. He doesn't want to use it. He refuses to use it.

Then why pass the kind of bill I urge? The answer is that Mr. Benson and his Department leadership take the position that, if Congress wants a food-stamp plan, it must enact one directing the Department to operate it and they will then put it into effect; but without such a specific legislative directive declaring they should do it, they just won't do it. Therefore, it is up to us to build a hot fire under the Department of Agriculture. Our economic situation is much too serious to permit further passing of the buck from Congress to Agriculture and from Agriculture back to Congress. The challenge has been drawn for us to force Mr. Benson to act—in effect he dares us to do so.

So, let us then get on with it.

HISTORY OF H. R. 949

The mechanics for such a program are outlined in the various bills now before you. May I briefly give you the history of my own bill—H. R. 949—which is the prototype for most of those now before you for consideration.

Late in 1953 and early in 1954, when we were already in a recession, even though the Government reports and statistics on unemployment hadn't confirmed it yet, I became deeply concerned by the accounts of undernourishment among many schoolchildren and others in St. Louis at about the same time the main concern on agricultural matters here in Washington seemed to be the unmanageable surpluses of food. The more I thought about this contradiction, the more indignant I became.

I was rapidly getting to the position where I wanted to vote against every single farm aid proposal to come before the Congress. Of course I did not do that. My research into the problem showed me that conditions which ruin the farmer, and particularly the small farmer, do not help the consumer a bit, and actually hurt our workers in every industry. Consequently, I have remained on the side of helping agriculture to combat disastrously low farm prices and high farm costs.

But I felt there had to be a solution to this glaring contradiction of hunger and amid such plenty, of children going to bed without supper while Government warehouses were bulging to the bursting point with the accumulating surpluses of our farms acquired under the price support and other surplus removal programs.

Several States with large numbers of unemployed coal miners, notably Pennsylvania and West Virginia, had begun to seek some of the surplus food for free distribution in mining areas. There was not too much available in usable form—flour and other items were shipped into the States in bulk and had to be repackaged and it was an expensive and far from satisfactory program.

I knew from many conversations with Congresswoman KEE and with the late Congresswoman BUCHANAN and other Members from these areas, the problems they were having in distributing even these few items. Obvously, there had to be a better solution, just as there has to be one now when, with only moderate changes, we are still conducting much the same kind of surplus disposal operation as in early 1954.

FOOD STAMP PLAN OF THIRTIES HELPED FARMERS AND LOW-INCOME CONSUMERS

Consequently, I thought of the food stamp idea and drafted my first bill on it which I introduced in February 1954. Of course the idea itself was not original; as I mentioned earlier, we had a very elaborate food-stamp program in effect in the late thirties when perhaps a third of our people were living under economic conditions which made them eligible for this type of program.

It was a program tremendous in scope. It included all types of food in surplus—fresh fruits, vegetables, eggs, citrus, meat, milk, even—I understand—fresh strawberries during one period when they were in surplus. The food-stamp program in effect prior to World War II helped to supplement the diets of millions of Americans of low income and was a valuable contribution toward our Nation's economic recovery as well, benefiting farmers in every part of the country. After World War II began, however, and everyone who could work even part time could readily find employment, the need for the program became less urgent. And the surpluses themselves, of course, rapidly disappeared under the unprecedented food needs of global war.

New Deal ideas of the thirties which proved so effective under conditions then in effect do not necessarily provide a sure guide as to the policies we should follow today under altogether different circumstances. But the thing which made the New Deal so dramatically successful in so many ways in meeting such terribly serious problems was a spirit of imagination and pioneering in Government policy. New ideas were not discarded merely because they were new. Many of those new ideas, as we know, filled basic needs so effectively that we are all united today in approving them as permanent reforms in our national life. And time after time, we find now that ideas tried even temporarily in those days have new applicability today, but usually with necessary modifications. The food-stamp plan is such an idea.

SIMPLE, NATIONWIDE PROGRAM NEEDED

My bill grew out of a conviction that we do not normally need the kind of elaborate program which was successful in the thirties as we gradually pulled out of the worst depression in history. Instead, I felt a simple program could be worked out covering automatically all of those in every county of ever State on any form of public assistance, plus those jobless who had no income but were ineligible for relief because of legal technicalities of one sort of another in many jurisdictions. During normal times, the latter group would be relatively small. In late 1954, however, and at present, it is a very large group and the families in that group are in desperate circumstances. Public assistance is denied them; the private charities are broke from trying to help too many with too little; and this is the tragedy of the industrial areas of our country.

If we had set up a program before this, intended to provide additional nourishing food for those on public assistance and the relatively few other families which would qualify in normal times, that machinery, as I said, would have been available to us now to help meet this overwhelming problem of hunger amidst plenty.

NEED EXISTS EVEN IN PROSPEROUS TIMES

But I want to emphasize a very important aspect of this problem of helping the needy with supplementary food through a food stamp plan. Right now, we have vast unemployment. But in good times as well as bad—in boom as well as recession—we have at least 6 million persons as a minimum who are not getting sufficient quantities of the right kind of food for decent minimum nourishment. In recession, the number soars, but there is this probably irreducible minimum of about 6 million who are on various forms of public assistance, the disabled, the aged indigent, the families which qualify for aid to dependent children, and so on.

And at the same time we have these vast stores of surplus agricultural commodities—expensive to store, expensive even to give away abroad.

I have no intention of attacking the idea of sharing our surplus with less fortunate nations, or of donating vast quantities directly and through CARE to our church organizations to help feed the hungry overseas. Our surpluses can be effective instruments in the search for world peace. A hungry child anywhere in the world is a charge on our conscience when we enjoy so much.

But to look at our surpluses only from the standpoint of helping people abroad—or only from the standpoint of getting the surpluses out of the country for fear they might depress farm prices here—is too shortsighted a view.

Why not make it possible for our own needy, too, to share on an intelligent efficient, effective, regular basis in these vast surpluses? Certainly we can continue to send much of it abroad—and even continue to pay the ocean freight where that appears desirable. But we can also afford, and must afford, to show at least equal effort and equal concern in getting surplus food to those anywhere in our country who, through no fault of their own, are unable to afford a decent minimum diet. The number of such Americans is tragically high today because of the recession. But even in good times it is high—that fact must be kept in mind.

MECHANICS OF A FOOD STAMP PLAN

The Subcommittee can, if it chooses, find a bewildering variety of means and methods for setting up an elaborate program, but it seems to me that the simpler the program the better it will work. It does not have to be complex. It does not have to anticipate every significant operating problem and write the answer into law. The Department of Agriculture has experts who, if given the green light, can do an outstanding job of carrying out this idea.

My bill has, I feel, the virtue of simplicity. It is customary, or at least common, for Members in testifying before Committees on their own bills to insist they have no pride of authorship and are not wedded to any particular approach in solving a problem through legislation. In this instance, I have to admit to pride of authorship—the bill was drafted only after long study and weighing of alternatives. I am pleased that it has been introduced by quite a number of Members in this and preceding Congresses.

It provides that the Secretary of Agriculture decide each month what foods are in surplus and what quantities of them are available for distribution through his Department as a result of acquisitions under the various price support and purchase programs. He then issues an appropriate stamp for each such item and the stamps go to the provably needy—to all those on any form of public assistance; and to all families certified by State or local welfare agencies as requiring welfare asisstance but not eligible for it because of legal technicalities.

This is the framework of a workable plan. The stamps would be redeemable in such places and under such regulations as the Secretary shall determine—but fundamentally the idea is to have them redeemed in the regular stores. It will be noted that my bill does not actually require that; it is up to the Secretary. The reason is this: if, in a particular area, the stores refuse to go along with this plan for any reason, the needy would not be foreclosed from this help. I don't want to see a narrow restriction written into law which might in some way boomerang to stymie the program. There is no doubt the stores would be the most logical

place for distribution of these surplus items in a manner sufficiently profitable to them to at least cover all of their costs. I assume the Secretary would follow through in that manner. But I wouldn't like to see the program enacted on so narrow a basis that the stores could veto it in a particular area and prevent extra food coming in to the needy.

BROADENING SCOPE OF THE PROGRAM

H.R. 949, in addition to setting up the basic eligibility standards for food stamp recipients, calls upon the Secretary of Agriculture, the Secretary of Labor, and the Secretary of Health, Education and Welfare to consult together and advise Congress in six months on the advisability of extending the program's scope to additional groups; for instance, to those on unemployment compensation, old age and survivors insurance, etc. Some bills which have been introduced as modifications of my bill would include such groups at the very beginning. I had a reason for leaving them out of the initial program, and not because I am not aware that many such persons do need extra help.

But my feeling was this: A corporation president can be fired after a proxy battle and be eligible for unemployment compensation, or go on social security. But he is not necessarily a needy person. To put him down on the list automatically for food stamps would make a farce and a mockery out of the whole program. We would hear about this or that retired tycoon driving to the store in his Cadillac, or pulling up to the wharf in his cabin cruiser, to get his food stamps exchanged for some free food. How that would set tongues wagging! Our program would be discredited at the very start.

We know—there is no doubt about it—that every person on public assistance of any kind is a needy person (or a chiseler inviting prosecution). We know that in all of our cities and in rural areas, too, there are many, many persons not eligible for public assistance but in real and desperate need. Those are the ones who deserve this help the most. Those are the ones to reach immediately in any program of this kind.

But if the Secretaries of the three Cabinet Departments I cited can come forward later with a sensible program for extending this kind of help to additional categories of citizens deemed to need this help, and if reasonable standards can then be worked out to cover them, the program can be quickly expanded to include them, too. As a matter of fact, many families now on social security would already qualify under my bill for immediate inclusion.

WHAT FOODS CAN BE INCLUDED

As a subcommittee on the committee on agriculture, you are undoubtedly interested in knowing not only how this program can help the needy but also how it can help the average farmer.

May I say that I am aware of the fact that distributing some corn meal and wheat flour and dry skim milk and an occasional pound of butter or block of cheese to our needy does not by any means solve the problem of farm depression. The basic price support commodities which pile up and accumulate under the support programs do not lend themselves too well to the task of rounding out the diets of the poor, because a family can use efficiently and beneficially only a certain amount of wheat flour and corn meal and so on without having a very lopsided diet and thus an unhealthy one. But why must a food stamp program be restricted only to some of the storable price support commodities?

The average farmer in a year's time grows a variety of crops which take turns being in surplus. Often, the more he grows of a desirable fruit or vegetable, the less he makes. You members of this subcommittee know that better than I.

The fact is, however, that we have on the statute books now a provision, timidly and only partly used by Mr. Benson, for Government purchase of various perishables (fruits, meat, vegetables, etc.) when surpluses get to the point of seriously depressing farm income. As you know, 30 percent of our customs receipts are supposed to be used for this purpose, under section 32 of the Agricultural Act of 1935. This comes to more than $200 million a year. In addition, the Department can carry over from 1 year to the next up to $300 million of unused section 32 funds to be used when the Secretary sees fit.

SECTION 32 FUNDS

Mr. Benson has not seen fit to make much use of his section 32 funds. Because he has been carrying over from year to year the full $300 million permitted by law, he forfeits back to the Treasury each year any money he does not use out of current section 32 income. This year, he plans to let $65 million of this money go unused for removing surplus perishables. Next year, he plans to forfeit $78 million out of the $230 million he expects to receive from customs receipts.

He could, as we know, use more than $500 million of this money in the next 12 months to aid the small farmer by buying up perishables in surplus, to use them in the school-lunch program and to aid the needy. A food-stamp program would perhaps give him more incentive to make wider use of the funds and authority he already has to help the small farmer, since there would be a ready-made market for these perishables—our needy families. If we had a national food-stamp plan in operation, public attention would so center on the paucity of the items now being distributed that Mr. Benson—even Mr. Benson—might be stimulated by public opinion into providing a more rounded variety of foods for stamp redemption.

I think that would be a much more intelligent manner of helping to meet the farm problem than a multi-million-dollar Soil Bank plan for curtailing production—particularly when so many Americans are not getting enough to eat.

I am not arguing for purchase of artichokes or strawberries out of season to give away free to the needy. But what's wrong with an occasional Texas grapefruit going to a needy family when the grapefruit harvest is big and the farm price low? Why not some fresh peas or asparagus or corn or tomatoes or apples to help provide a decent diet for an undernourished family if those perishables are just rotting in the fields or selling at disastrously low wholesale prices on the farm? Why not fresh whole milk, rather than just dry skim milk?

CONSUMERS DON'T BENEFIT FROM LOW FARM PRICES

We in this room know that low prices on the farm don't mean low prices to the consumer. Not usually. Not in recent years, in any event. As farm prices sink, consumer prices continue to soar. It is a tragic situation both for our farmers and for our low-income consumers.

So let it not be said that this idea for greater use of section 32 funds to help feed the needy as part of a food stamp plan is intended to raise prices to consumers, or would have that effect. I am sure it would not. But it would help the small farmer and it would also help our needy. And it's about time we did a little more of both things.

Mr. Chairman, I don't want to impose on your time by reading a lot of statistics but I have developed a set of facts on the number of public assistance cases in each State as compared with the number now getting dribs and drabs of this surplus food. The figures are startling. I will supply them for the record. They show in many States that while as many as several hundred thousand may be on public assistance, a mere handful comparatively gets any of this free food now. It is an eye-opener as to the lack of effectiveness of this present program. And most of the people who are the human beings behind these statistics go to bed hungry at night, and go hungrily through the day almost each day. (The statistical report referred to appears at the end of this statement as exhibit A.)

A DISGRACE TO OUR COUNTRY

Even the Communists in their complete disdain for human values would, I believe, be too smart to allow that sort of thing to happen if they, instead of we, were the ones blessed with these abundances of food.

Mr. Khrushchev says Russia will soon outstrip us not only in food production but in per capita consumption. We shall see about that. But at least they are trying to increase food production to provide their people with more food and better diets while here in this country, surrounded by the fantastic riches of our harvests, our national leadership can think only of the embarrassment to its political promises of these surpluses; and cannot understand how they can be used effectively and intelligently to outlaw hunger here in the United States. Instead, their goal is merely to curtail production.

The fact is, we do have hunger in this country. It is not a myth; it exists. I have seen it in St. Louis. You have all seen it in your own districts. It is tragic. And it is absolutely unnecessary amidst such great blessings of abundance of food.

Congress is not to blame. But Congress will merit blame if it does not face up to the problem. The problem is to force a reluctant, unfeeling bureaucracy to move off dead center and get food to the hungry. Mr. Benson must stop apologizing for our abundance and instead be pushed into seeing to it that more of it goes to those who need help, and need it desperately.

GOD'S BLESSINGS DESECRATED

I have said that a hungry child anywhere is a charge on our conscience. Mr. Chairman, a hungry child here in America—hungry as a daily experience—going to bed night after night without feeling he has eaten a good meal—staying home from school because he hasn't the energy to study or learn because he hasn't eaten enough to build energy—such a child represents in our country more than a charge on our conscience. The existence of such a situation in this rich land is a shameful blot on our national honor—on our flag. And, unfortunately for our ability to sleep at night, there are many, many such children today in our country. I would say that several million American childen experience that gnawing feeling of not getting enough of the right foods because their families cannot provide them.

Mr. Chairman, I am perhaps emotional about this problem. I do not apologize for that. Hard, commonsense should have told us long ago we needed a better program for distributing our surpluses to our needy. But the need still goes unmet. I do not apologize for being emotional about it now.

Farm failures, ruinous surpluses, bulging warehouses, billions of Federal funds going for agricultural mustard plasters, but millions of Americans still hungry. The abundance lavished upon us by a merciful God—abundance of food in a world where too many starve—this abundance is actually cursed by some who cannot see His purpose. Let us use this food as God intended—to feed those who hunger. Let us outlaw hunger—if not in the world, at least in our America.

EXHIBIT A

MOST PERSONS ON PUBLIC ASSISTANCE (77 PERCENT) NOT RECEIVING SURPLUS FOOD UNDER PRESENT DEPARTMENT OF AGRICULTURE DISTRIBUTION PROGRAM

Statistical tabulation compiled by Congresswoman LEONOR K. SULLIVAN, of Missouri, from reports of Department of Agriculture on surplus food distribution program and Department of Health, Education, and Welfare on estimated numbers of persons on various forms of public assistance. Reports from both departments cover similar December-January period.

State or Territory	Number of persons receiving surplus food	Number of persons receiving surplus food who are on public assistance	Estimated total number of persons receiving public assistance
Alabama	111,798	42,997	205,703

Calamity Howlers

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 13, 1958

Mr. WHARTON. Mr. Speaker, there are many who believe that the country can talk itself into a real depression. Whether actuated by political motives or otherwise the plight of the automobile industry at the present time seems to be a step in the right direction and its self-inspired proposal to eliminate taxes exclusively on its own product is certainly having an interesting effect on the economy.

A good rugged strike, of the Kohler variety, this spring, could really improve the importation of foreign cars and tend to cripple one of our industries that has heretofore enjoyed outstanding world leadership. Is it not about time to display some commonsense all along the line?

On the subject of taxes and inflation I submit an excellent editorial from the Chatham Courier entitled "The Dangers of Inflation":

There has been a great deal of agitation lately in and out of Congress to have income taxes reduced in order that the Nation might get out of the present recession.

The proponents of the idea hold that if income taxes were lowered there would be more money available to spend and, with an upsurge in consumer buying, the country would again be in a state of great prosperity.

This all sounds very fine and probably has a strong appeal to those who believe that Congress or the administration in power in Washington can reestablish so-called prosperity by just passing a law or a bunch of laws.

Well, suppose this did happen and our next income tax bill was, say, 10- or 20-percent lower than the 1 we paid this year, despite the fact that our income remains the same. From the taxpayers' standpoint that is fine but what about the Government itself?

Each year the Congress adopts a budget and then proceeds to levy taxes in order to meet it. The present budget as recommended by President Eisenhower is the biggest in the Nation's peacetime history and most of it goes for defense.

Lowered income taxes while this obligation still faces us means that in order to pay the bills to run and defend the country we have only two recourses—borrow or else start the printing presses up making phony money. Either of these courses will result in financial ruin and the utter dissolution of the value of the dollar.

In times such as these, and they are not really as bad as some calamity howlers would have us believe, it is necessary to think soundly and act wisely. Bernard Baruch recently stated—and no man knows Government finance better than he does—that the Government did not get us into the recession and the Government cannot get us out of it.

The answer to the situation as he sees it rests with the people as a whole and no magician's wand or fooling with economic facts is going to help. As Mr. Baruch went on to say, there is more danger in inflation right now than deflation and with that we are in thorough agreement.

A Good Place To Live

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the February 20, 1958, edition of the Roseburg (Oreg.) News-Review. Author Bruce Elmgren is planning coordinator for the Douglas County Planning Commission, and he is familiar with the county and its opportunities. I should like to call his remarks to the attention of this House and to invite each of you to visit this part of our country:

QUIET LIVING FOUND IN DOUGLAS—INVITATION IS EXTENDED TO RETIRED PEOPLE TO MAKE HOMES HERE

(By Bruce Elmgren, county planning coordinator)

Douglas County is the largest county in western Oregon, and is larger than the State of Connecticut. It is reportedly the only county in the United States having an entire river drainage within its borders, and this river, the Umpqua, is no ordinary river, since it is unsurpassed in beauty and known throughout the country for its fishing. This sparkling stream flows swiftly through the Cascade Mountains, then meanders past sleepy valley farms until it cuts through the coast range to the sea for a total distance of nearly 200 miles.

According to the United States Forest Service, Douglas County contains more standing timber than any county in the Nation, and more than half of the county's area is under Government ownership. This means we are surrounded by a vast public park of more than a million acres. Only the hunter and fisherman must invest a small fee for the use of this wonderland.

Crater Lake, 1 of the 7 wonders of the world, adjoins Douglas County, and this lake is one of the highlights of a beautiful weekend trip which is commonly taken by the local residents.

The trip begins at Roseburg, follows the North Umpqua River to its headwaters, then to Diamond Lake, down the famous Rogue River, over the divide to the South Umpqua River and back to Roseburg. Since most of the towns are located very near to the North or South Umpqua River, this trip can be taken as easily from any of these towns.

Another scenic attraction is the Oregon Coast Highway, which is considered the most beautiful coastal highway in the country. This coastal area can be reached within 2 or 3 hours from all towns in the county, and the city of Reedsport, on Umpqua River tidewater, is located amid this beauty.

For the out-of-State readers, it should be mentioned that what is said about any coastal town would apply to all coastal towns, just as a description of any particular valley town would apply to other valley towns. The climate and appearance of all Douglas County coastal areas are similar, and the interior valley areas are also similar in this respect.

TRANQUIL LANDSCAPES

Upon reading the foregoing, it would appear that Douglas County is an untamed wilderness, which is far from the truth.

The valleys are well populated and have been settled for several generations. New residents from the hilly eastern States can feel at home, since the valley farms have a settled look of maturity about them, and the deciduous trees bordering the streams and covering the low hills surrounding the valleys are similar to those trees so common to their native States. Sheep grazing the oak-covered hillsides add to the tranquillity of the landscape.

There is more than ample high quality farmland for those people who are interested in obtaining small acreages. Some of the better lands will raise anything that can be raised on eastern farms, together with a few tender crops that cannot withstand the rigorous eastern winters.

The interior valley section of Douglas County is known as the area that has a greater variety of trees than any other area of the State, which would seem to indicate

that the climate is agreeable to the growing habits of a greater variety of plants. This, of course, makes this area a gardener's paradise, which should be of interest to those people who have leisure time and the desire to garden.

SEMITROPIC VEGETATION

Even a few semitropical trees can be found in the valley areas throughout the county. Fig trees grow very well in all of the interior valleys, and palm trees can be found in such unlikely spots as Roseburg and Gardiner. It is true that fig trees of smaller size can be found in the Willamette Valley, but winter freezes damage the trees and the fruit will only partially mature before cool weather in the fall prevents ripening. These tender trees have no economic value in Douglas County, but they do indicate the winter mildness more clearly than incomplete weather records.

Pleasant weather, friendly neighbors and "elbow room" are perhaps the prime essentials to senior citizens who are interested in breaking away from their familiar haunts. Leaving any loaction that has been home for half a century is difficult, to say the least.

People leaving large eastern cities will gain all of these benefits, while those leaving their small towns and farms will gain only the pleasant weather, since they already possess friendly neighbors and sufficient space in which to putter.

SMALL TOWN CONVENIENT

Another very important factor unknown to the average city dweller, is the convenience of a small town. An elderly person in New York or Chicago is virtually a prisoner, since he is unable to cope with the traffic and crowded businesses. So he becomes useless long before he becomes immobile and must depend on others for favors. This is intolerable to any person with an ounce of independence, regardless of age.

Here in Douglas County, no one reaches an age where he needs assistance of this kind, since even the major highways are uncluttered and all business can be transacted within a "stone's throw" of your car.

Perhaps the above picture appears a little too good to be true, so it might be well to add a few facts concerning the cost of living. Upon inquiry into food prices, it appears that they are generally comparable to those found in the larger cities along the coast, and this is said to be brought about through considerable competition in the area.

RENTAL PRICES NORMAL

During the timber boom, rentals were high, but only because of a temporary housing shortage caused by the opening up of large tracts of timber. This is unlikely to occur in the future since the timber cut has surpassed the timber growth and the possibility of another boom based on timber is highly unlikely. With conditions back to normal, prices also are back to normal.

Much has been said concerning the weather of Douglas County, but nothing is more reassuring to the wary than to quote a few weather statistics that can be verified easily by contacting the Weather Bureau.

The following information was taken from a climatic summary of western Oregon beginning at the time the various stations were established and ending in 1930. From this summary and similar information from Washington and California, one can conclude that the interior valleys of western Oregon, Douglas County are milder than all interior valleys to the north of the Sacramento Valley.

WINTER SEASON MILDER

The average winter temperatures are higher and the wind velocities are lower. The growing season is similar to many Willamette Valley stations, though the populated valley of Douglas County receives less snow than any valley north of the Sacramento.

Sunshine records are not extensive enough to mean much, though comparisons between Portland and Roseburg indicate that Roseburg gets 10 percent more sunshine than Portland, though there are many areas in Douglas County that get even more sunshine than Roseburg, and it is necessary to drive only a few miles from the center of the city to be free of the valley fogs that usually vanish by mid-morning.

Another important consideration in evaluating weather data is to know the number of days that precipitation falls. For example: Glendale, a small town in Douglas County, receives approximately the same rainfall as Eugene, yet this rain is distributed over 93 days in Glendale, while it is distributed over 148 days in Eugene.

Astoria and Gardiner on the Oregon coast each have the same yearly rainfall, though Astoria has 187 rainy days per year, while Gardiner, in Douglas County, has only 144.

AIR POLLUTION NIL

The very low wind velocities prevalent to Roseburg and many other towns in this area might bring up the question of possible air pollution. Yet, the Oregon State Air Pollution Authority in its 1956 study found that Roseburg has less air pollution than any large town in the State. This means the air is very pure when one considers that air pollution in Oregon has not yet become a real problem, such as it has become in many other States.

After reading this short description of Douglas County, the reader may be convinced that the Umpqua Valley and coastal section is a very fine part of the country in which we live, but can't one classify California similarly?

If this is true, why do we have so many former Californians living in Douglas County? Employment opportunities are as good or better in California and everyone is aware of the well-known California climate.

The above statement concerning a number of Californians coming to this area for other than work opportunities is undoubtedly a revelation to easterners, though it is a well-known fact to the people of southwestern Oregon.

One must first consider that California has about every conceivable climate known to man and that only the coastal area south of San Francisco is considered ideal. Thin-blooded easterners have filled these once-pleasant coastal cities to capacity so that they are no longer pleasant but have become teeming cities with nothing more to offer than a nice climate.

If people are only interested in climate and are not concerned with adequate space, they would do just as well to remain where they are and include a sunlamp with their central heating.

From the foregoing, it must be concluded that climate is not enough to sell people on the merits of an area. The pleasant climate must be supplemented with sufficient elbow room to make the goal of relaxed living a reality.

Patriarch Marks His 100th Year by Dancing the Hora at Family Party

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. ZELENKO. Mr. Speaker, the New York Times of April 14, 1958, carried a most happy item. This article depicted the 100th birthday celebration of one of my respected constituents, and it is my pleasure to have it placed into the RECORD.

The article follows:

PATRIARCH MARKS HIS 100TH YEAR BY DANCING THE HORA AT FAMILY PARTY

(By Lawrence O'Kane)

Ellcum Moishe Levin, a wispy patriarch, danced the hora yesterday, doled candy from his pockets to his great-grandchildren and even tasted a Manhattan. It was his 100th birthday party.

Sixty-five guests, nearly all of them family, watched the small man in the brown suit and skullcap do the brisk Jewish folk dance. The party was held at the Rosmont Manor, 1500 Macombs Road, the Bronx.

There could be no doubt that Mr. Levin, who lives with a daughter, Mrs. Samuel Marshall, at 590 Fort Washington Avenue, dominated his party.

He pushed away fussing female hands, asserted his independence with admonishing gestures and reminisced.

A visitor asked the inevitable question: Why do you think you have lived so long and so fully?

"Hard work and no worry," Mr. Levin said in the slight accent of his Ukrainian childhood. "Worry, I leave that to somebody else. Let George do it."

Mr. Levin still works 1 or 2 days a week at selling clothing, a business he has known for 84 years. He specializes in police and firemen's uniforms.

The work now is all mail order. He has a corner of his son Joshua's company, Leff & Levin, at 502 East 138th Street. Thirty years ago he used to visit firehouses all over the city.

He left Russia many years ago, but he could not remember exactly when. He remembered 8 years in Dublin, and 2 in Liverpool.

"I had two stores there," he said. "But the Boer War cleaned us out. I heard about the United States, meat 12 cents a pound, milk 5 cents a bottle. I had 6 boys and 1 girl, then I said I'd go."

Four of the boys, Joshua, Jacob, David, and Alexander, and their sister, Mrs. Marshall, were on the dais yesterday. Mr. Levin's wife, Mollie, died 9 years ago.

A Student Assistance Program

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. GATHINGS. Mr. Speaker, it was my pleasure April 3 to appear before the Subcommittee on Special Education of our House Committee on Education and Labor. My purpose in appearing was to testify on the provisions of legislation I have introduced, H. R. 10908, patterned after the successful student assistance program of the Student Aid Foundation, Inc., of Arkansas. Judge A. F. Barham, of Osceola, Ark., the general counsel for this splendid student assistance program, had been scheduled also to appear, but he was in Arkansas and unable to attend.

Each member of the subcommittee has given long hours of study and hard work into the general problems of high-

UNIVERSITY OF MICHIGAN LIBRARIES

er education for American youth to meet the present need for specialists. They have held hearings in the early and late hours and have digested thousands of words of testimony. They have studied countless bills and proposals having to do with our educational problems. Yet, I found them courteous and willing to go step-by-step into the provisions of the legislation I have introduced. Indeed, I found that they were familiar with the sections of my bill and it had already been given careful study to ascertain its merits or shortcomings. Too much praise cannot be given these fine Members for the great work they are performing in the interests not only of our educational programs but for the national security of our Nation through a qualified, well-educated citizenry.

Subsequent to my testimony before the committee, I received a letter from Judge Bárham of Osceola enclosing a copy of a letter he had written Representative CARL ELLIOTT, the chairman of this educational subcommittee. What Judge Barham has to say is so much in the interests of a sound educational program and so valuable as a guide to the study by Congress of this problem that I desire to include it with these remarks so that it may be available to all Members. I share Judge Barham's high esteem for the committee and their fine work. When their labors are concluded by the introduction of legislation for the consideration of the House, they will have made a valuable contribution to education and the well-being of America.

The letters follow:

STUDENT AID FOUNDATION, INC.,
Osceola, Ark., April 8, 1958.

HON. CARL ELLIOTT,
Chairman, Subcommittee on Special Education, House Office Building, Washington, D. C.

DEAR MR. ELLIOTT: Thank you very much for your letter of April 4.

Of course we do not claim absolute perfection for our Student Aid Foundation and its plan of operation but I sincerely feel that something akin to it is badly needed and is about all that is necessary to make and keep ours the best educated people in the whole world.

Necessary as a formal education is to make a well rounded man or woman, I think we fail terribly when we neglect to build into our students a sense of independence, honesty and integrity. A college education must be paid for by someone. If it is not paid for by the one who receives it, then the only other resort is to the taxpayer. With his already back-breaking burden necessarily imposed upon him by wars and preparation for wars to defend his country, it just does not seem fair to require him to defray the further expense of educating young people who should be looking out for themselves.

There should be no such thing as a free scholarship for anyone. I have no quarrel with scholarships which are earned in some kind of competition, but merely to say that because we feel that we do not have a sufficient number of men trained in certain lines and, for that reason, we are going to saddle upon the American taxpayer billions in additional taxes to give free education to such as will agree to pursue such special studies is unthinkable and falls far short of what should be our goal.

In the first place should such a thing be done, it would not help appreciably to raise the educational level of our people and help to give us more and better doctors, ministers, businessmen, lawyers and the like.

Knowledge cannot be conferred by the laying on of hands—or the giving of money. Unless the boy or girl wishing to become educated is willing to put forth the effort which must be employed to gain knowledge, you know you can't just buy it and hand it to them. Education alone does not make the kind of man who founded this country or who have defended it in all of its trials. You must have the right kind of material from which to make that kind of man. Will you find that precious material among the boys and girls who have been trained to lean upon their Government and look to Washington for everything? I doubt it.

I think the safest bet is the one who says I want to go to college and would be there now, but for lack of money. Loan me the cost of an education and I wil get an education. I will make it a strictly business proposition. I will give ample security for what you lend me and repay it with reasonable interest. I have faith in myself. Give me an opportunity to get this knowledge and I will repay what you lend me.

Such a bill as Mr. GATHINGS offers (H. R. 10908) will, in my opinion, give the necessary opportunity to every worthwhile boy or girl in America an equal opportunity to obtain a higher education.

Will the plan fail for lack of ability of the proposed student to be able to obtain proper sureties on his note? Our experience has been that no sincere, honest student has ever failed to obtain one of our loans for this reason, and we require six solvent sureties to every note. Home folks are always willing to back one of these under-privileged students. In fact, Mr. ELLIOTT, we have found it necessary for the protection of some of our friends to make a rule that no man shall be allowed to become surety on more than a certain number of notes and then when he has reached the limit we will no longer accept him, but the student may supply another surety in his stead.

There are so many angles to this question that they cannot be set out in a letter and I shall never cease to regret that it was impossible for me to appear before your committee on April 3.

I shall always remember with pleasure the many fine letters I have received from members of your committee and from other Members of the House and Senate. From what they have said to me I am encouraged to believe that it will not be too difficult to enact a law something like Mr. GATHINGS proposed and if so, I shall feel that it was the careful work of yourself and your committee that did the job.

With kindest regards,

Yours very truly,

A. F. BARHAM, *General Counsel.*

Resolution Opposing the Harris-O'Hara Gas Bill

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mrs. GRIFFITHS. Mr. Speaker, the following resolution was sent to me by the mayor and the council of the city of Livonia, which I have the honor of representing, and expresses my views exactly with regard to the natural-gas bill:

Resolved, That the mayor and council of the city of Livonia do hereby go on record as opposing the passage of the Harris-O'Hara gas bill, which if passed, would remove the gas producers' prices from Federal control, and would be an added burden to the already burdened income of the consumers of natural gas; and be it further

Resolved, That a copy of this resolution be forwarded to the Honorable MARTHA W. GRIFFITHS, United States Representative in Congress for the 17th District, and to the Honorable CHARLES POTTER and PATRICK MCNAMARA, United States Senators, Washington, D. C.

Very truly yours,

MARIE W. CLARK,
City Clerk.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my newsletter of April 5, 1958:

WASHINGTON REPORT, BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS

APRIL 5, 1958.—Easter time brings cherry blossoms and visitors. This year we are surrounded, too, by sounds of construction. Sounds like boomtime. Of course, I've learned that Washington sounds, including congressional speeches, aren't necessarily the sounds of grass-roots America. A pre-Easter recess roundup of pending legislation now dominating committee and cloakroom conversation includes reciprocal trade, foreign aid, space travel, satellites, missiles, defense, Federal scholarships, labor monopoly power curtailment, Government workers pay boosts, postal rate increase, tax cuts, and old and new spending projects as recession measures.

Bernard Baruch, the elder statesman, lived up to his title this week. He testified to the imperative need for our Government making both ends meet, income and spending, so that we do not further water the dollar. His remarks bring to mind the Joint Economic Committee (Senate-House bipartisan group) Report of January on Federal expenditures, which says, "The subcommittee has found no necessary relationship between the amount of Federal expenditures and the rate of economic growth over the long run." This is quite different from the reasoning now advanced for accelerated spending.

Our real trouble goes back to the Employment Act of 1946 which says:

"The Congress hereby declares that it is the continuing policy and responsibility of the Federal Government to use all practicable means consistent with its needs and obligations and other essential considerations of national policy, with the assistance and cooperation of industry, agriculture, labor, and State and local governments, to coordinate and utilize all its plans, functions, and resources for the purpose of creating and maintaining, in a manner calculated to foster and promote free competitive enterprise and the general welfare, conditions under which there will be afforded useful employment opportunities, including self-employment, for those able, willing, and seeking to work, and to promote maximum employment, production, and purchasing power."

Now analyze it—what does it say? On the one hand, "carte blanche" government aid and control—on the other, "for those able, willing and seeking to work." Is there anything it doesn't cover? Could not any

financial scheme be advanced under one clause or other? Is it not apparent that should a language limitation be found in one part, a fuller interpretation can be construed from another? Couldn't this even be descriptive of a socialist government? This becomes even clearer in view of the double-talk and re-defining of words. Socialists and Communist talk of democracy and imperialism with definitions just opposite to ours, and this confusion carries over into fuzzy thinking on our part. It's easy to understand our confusion over the role of federal government from this language. How many people really believe in this employment act wording? Isn't it the ingenuity and hard work of people—not another law from Congress—that underlies the greatness of our economic system? It seems most urgent to me that we return to traditional constitutional principles. Surely we can learn from experience, and our experience is simply summarized—a $280 billion debt, a dollar worth a fraction of its former amount. Our greatest need is to keep a sound currency, which means no inflation and a government living within its income. Tax cuts and increased spending are incompatible. Tax cut champions say that we must deny government the money by cutting taxes—they completely overlook the government's ability to get and spend more by borrowing and manipulating the value of our currency. We are actually playing with the buying power of the dollar. Our only salvation now is to cut government spending (just opposite to our current legislation), then cut taxes; otherwise, we may perish as have many other nations before us. It could be said that we are not applying corrective measures through current spending projects as we claim; we are just embracing socialism.

Why must we disregard the lessons of the 30's and deficit spending? If we have economic troubles, it will not be the fault of free enterprise but of our man-made controls, with acocmpanying federal spending and heavy taxing of our people to pay for it.

The story of free enterprise, as exemplified with a daily story on the floor of the House, is my continuing contribution. Designed to counter the effect of those who would talk us into a depression, intentionally or not, this humorous self-appraisal can re-establish perspective. We can laugh away the panic antics, and we can work away any recession, real or fancied. I am counting now on the corrective force of enlightened, good-humored, realistic citizens, who can good-naturedly see their own strengths and weaknesses—and see through the spending schemes of self-seeking politicians.

Lure May Have Failed

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from The State of April 14, 1958:

LURE MAY HAVE FAILED

By attempting to induce Congressmen to vote for the 5-cent letter rate by posing the possibility of 365 new post-office buildings, Postmaster General Summerfield may have killed the bill.

Its future was uncertain at best, but the only sound argument for such a proposal was that the post office has been operating at a sizable deficit. If the increased postage rates are merely to rob Peter to pay Paul, then the 5-cent letter measure should be sent back to the source—with a 3-cent stamp.

Five-cent stamps on letters may be desirable from one point of view, but it might not bring in any more revenue. There is such a thing as pricing a product or service out of the market—which is one explanation for some developments in the present so-called recession.

Actually, the Post Office Department cannot live up to the "trade" suggested by Mr. Summerfield. Congress appropriates the money for operation of the post offices, and would have to authorize construction of the new post-office buildings.

However, if construction of new buildings is dependent on the jump in letter rates, then the 5-cent stamp act will become simply another form of indirect taxation. Americans have never been particularly fond of "stamp taxes."

A Salute to Franklin, Ky.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. NATCHER. Mr. Speaker, each year the Kentucky Chamber of Commerce presents awards to various cities in furtherance of community development. Last week, during appropriate ceremonies, the city of Franklin, Ky., for the second successive year, won the top award for towns with a population of over 3,500.

Franklin, Ky., is located in Simpson County on U. S. 31–W, 6 miles from the Tennessee border. It is known as the friendly city. This friendliness is quickly discerned by all those who visit the town.

The city of Franklin was incorporated in 1820. According to legend, Franklin and another town were vying to become the county seat of Simpson County. It was decided that the winner would be the town having the best water supply. Near the center of Franklin was an old well which periodically went dry. Shortly before the judges arrived the townspeople filled the well with water, with the result that Franklin became the county seat. As the story goes, the well has never gone dry subsequent to that time.

The above legend is an indication of the ingenuity and community spirit still manifest in the good citizens of Franklin. Not only the mayor of Franklin, all city officials, the local newspaper—the Franklin Favorite—and radio station WFKN, the chamber of commerce, the business and professional women's club, but every organization, as well as all religious groups, and the people generally, are concerned with the advancement of their city. Just 10 years ago there was only 1 manufacturing plant in Franklin employing 200 persons. Today the town has 6 industries employing approximately 600 people. And many other instances of expansion could be cited, not only along industrial lines, but by way of cultural development and beautification of the city.

Mr. Speaker, the city of Franklin in winning two consecutive community development awards has not only reflected credit upon its own citizens, but upon the State of Kentucky as a whole. I am proud to have such a city located in the Second Congressional District which I have the honor to represent.

Timely Cooling-Off Period for Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. HESS. Mr. Speaker, under permission granted me to extend my remarks, I include an editorial which appeared on Friday, April 11, 1958, in the Western Hills Press, a weekly newspaper in my district. I think this is an especially good editorial and should be read by all Members of the House:

TIMELY COOLING-OFF PERIOD FOR CONGRESS

Probably the best break for the national economy is the current congressional Easter holiday, which has afforded Members of the House and Senate a cooling-off period. Schemes to legislate the Nation out of recession and back to boom were a dime a dozen in Washington before the Congress adjourned and, had it not been for the recess, some of the half-baked legislation would now be well on the way to enactment.

Also timely in curbing the eager beavers who were in such a lather to legislate in haste and repent at leisure was the sound advice given the Nation by Bernard Baruch before the Senate Finance Committee last week.

Assailing such pump-priming nostrums as Government spending and tax cutting, he warned, "inflation is the most important economic fact of our time—the greatest single perid to our economic health. The credit of the United States Government is the foundation upon which our solvency and security rest. We must prevent any further weakening of it by tax cuts, or deficit spending, or lifting the borrowing ceiling every time the debt presses against it."

Those Members of Congress who used their Easter holiday to descend from the rarified atmosphere of Washington's ivory towers to the grassroots from whence they sprang may have discovered that Mr. Baruch put into words the thoughts of many of their constituents, who have no illusions that Government can add billions more to outgo while cutting taxes in an equal amount without dire results.

Such legislative mumbo-jumbo can only lead to even greater inflation, the economic fact of life which has, more than any one other thing, led to the current psychosomatic illness plaguing the economy. Although many politicians, business tycoons, and labor leaders apparently do not understand this—the rank and file of American people are resisting inflation in the only way they know, by withholding purchasing power.

The economy will recover—and quickly—when prices are dehydrated. When government, industry, and labor leaders accept this economic fact of life and decide to take the bitter medicine called for rather than the

UNIVERSITY OF MICHIGAN LIBRARIES

get-well-quick prescriptions that Mr. Baruch has tagged as inflationary and which the public recognizes as economic quackery, then the economy will right itself.

What are some of the components of this bitter medicine? For government, they would include repeal of outdated and inflationary excise taxes, a thoroughgoing revision of income tax inequities that strangle private enterprise for some while opening gaping tax loopholes for others, and real government economy.

For labor, they would include wage and benefit demands that have some semblance of relation to productivity.

For industry, they would include a departure from the policy of passing all increased costs plus percentage on to the consumer without regard for economic values.

Charging all the traffic will bear is no longer the line of least resistance, the people are plainly saying. It behooves their leaders to listen and act accordingly.

No Friend to Tyranny

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 31, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Christian Science Monitor for Monday, March 31, 1958:

NO FRIEND TO TYRANNY

Millions of Cubans believe that the United States supports Dictator-President Batista, against whom the pressure of public resistance is building toward the point of climax. This is a grave mistake, but it can have harmful results unless corrected.

Cubans cite arms given the Habana regime under the Mutual Security Act. Looking down the barrels of United States rifles, the niceties of diplomatic practice which justify such programs escape them. Great numbers also feel that elections under Batista would be a farce, and therefore resented the American Ambassador's public support of elections as a direct meddling in their affairs.

The Cuban crisis confronts Washington with a dilemma. Shall it remain silent and permit the people of that island to continue in thir misunderstanding of United States policy or can it somehow clarify its position?

Primarily Cubans must work out their own problems. But at this critical juncture of their history the United States Government should make it entirely clear that it is not committed to any particular government in Cuba. There is a line which can be drawn between direct intervention that is intended to manipulate, install, or overthrow governments—which all oppose—and the right of a nation to state publicly its inherent political beliefs and to make clear that it is unsympathetic to oppression anywhere.

In the present instance even a general statement that the United States favors democratic evolution in all of Latin America would be a constructive contribution to a solution of the Cuban problem without civil war.

The point is that key Cuban Army officials will make the final decision on whether or not the full power of the armed forces is to be applied against the Cuban people merely to keep a certain man in office. An indication of United States interest in democracy in Latin America might disabuse them of the belief that the powerful neighbor to the north is committed to continuance of the dictatorial regime.

Sooner or later the United States has got to stand for its political principles in the hemisphere. The American people are seriously concerned about tyranny—and not merely when it appears on the other side of the Iron Curtain.

No Longer Fashionable

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Lemmon Leader, Lemmon, S. Dak., which I feel merits the attention of my colleagues. The editorial is as follows:

NO LONGER FASHIONABLE

While the lists of unemployed are reported to be increasing in the Nation a Minneapolis Star staff writer calls attention to a paradox. "There is," he avers "an apparent increasing number of good jobs going begging.

"Private employment agencies complain they have hundreds of good positions from office help to technicians and professional rank that they have been unable to fill. And, at the identical time there were long lines of persons drawing unemployment compensation at the State employment office in this city," the writer continued.

There is no disputing the fact that in many industrial centers tens of thousands of people have been laid off because of factory closings and drastic reductions in personnel have been necessary to permit firms to remain solvent.

At the same time it is a well-known fact that tens of thousands will refuse to take a job of any kind as long as they can draw unemployment compensation.

The Eisenhower Administration is concerned over the increasing number of "unemployed" during the winter months as well it may be. On the other hand, it is known that hundreds of thousands, perhaps a million or more now out of work, are now drawing unemployment benefits paid by the firms that at one time had them on their payrolls. The beneficiaries either refuse or prefer not to work as long as the "easy money" is coming to them regularly.

Under the law no one can make them work. Those who are so inclined can refuse to take a job unless it is suited to them. As a result business firms and many farmers in this area are crying in vain for competent help. This the editor knows from daily contacts and from personal experience.

There has never been an unemployment condition in the Leader office. Since the outbreak of World War II this newspaper has operated with a skeleton force because it could not find competent help. Yet, it is required to pay 2¾ percent of its total annual payroll into the unemployment compensation fund. Tens of thousands of other businesses over the land are assessed the same percentage.

Another thing to remember is that while the figures show more than 5 million persons to be out of work at the present time as against a normal 4 million many of these represent man-and-wife combinations. In some cases both may have been laid off. In others one may still be working, but an unemployment check finds its way into the family just the same.

The only cure for a situation like this is the will to work or a change in the law. And work is no longer fashionable in the great majority of families who now claim to be in difficulty.

The Price of Butter and a Veto

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. BYRNE of Illinois. Mr. Speaker, under unanimous consent, I include an editorial appearing in the Chicago Sun-Times of April 9, relative to President Eisenhower and Secretary Benson's farm policies. I extended my remarks recently on this matter, expressing my solid support of our President and Secretary of Agriculture on this vital matter.

The Sun-Times of Chicago should be commended on their fair and accurate analysis of the true feelings of farmers and housewives:

THE PRICE OF BUTTER AND A VETO

While Congressmen are home this week, putting their collective ear to the ground, we hope that they hear plenty from their housewife constituents in favor of President Eisenhower's farm policies. The housewives can thank Mr. Eisenhower and Secretary of Agriculture Benson for the recent drop in butter prices.

The majority of Congressmen, apparently, would prefer to let a big surplus of butter and other agricultural products pile up in Government price prop warehouses than to go along with Benson's program to restore some sanity in the agricultural program and, incidentally, bring prices closer to market reality.

The majority of Congressmen recently voted to freeze farm price supports at high 1957 levels. Last week, President Eisenhower wisely vetoed the bill. We hope that this week Congressmen will find out what consumers think about the price-freeze idea as well as what the farmers think about it.

Here in Illinois, we believe that Congressmen will find that many farmers are not as keen on Government frozen prices as some Congressmen seem to think that they are. Charles B. Shuman, of Sullivan, Ill., head of the American Farm Bureau Federation, praised the Eisenhower veto. He said:

"The legislation was against the best economic interests of farmers. I think it would have been used as an excuse by the advocates of big Government spending for more unnecessary nonagricultural expenditures which would add to the farmers' already burdensome costs."

In his budget message, President Eisenhower pointed out that the index of prices received by farmers today is 9 percent above that of June 1955. High rigid price supports were in effect in 1955, but although they were dropped later, prices continued to go up under the Eisenhower flexible price policy.

That farmers generally have begun to come around to Shuman's position that the Eisenhower farm policies make more sense than a system of rigid price guaranties and controls was indicated recently at the Farm Bureau's national convention in Chicago in

December. That convention showed that not only the bureau's officers, but rank-and-file members, who had elected the delegates to the convention, believed that the Government should not "guarantee unrealistic prices."

The day before Congress approved the price freeze last month, the directors of the American Farm Bureau Federation objected to the freeze in these words:

"The current satisfactory supply, demand, and price situation for cattle and hogs provides impressive evidence that farmers stand to profit from less rather than more governmental intervention in agricultural production and prices * * *. Price support levels must take account of competitive conditions, supply and demand and market trends."

Congressmen who do have their ear to the ground ought to realize that the Eisenhower-Benson policies have more popular support than the oratory in Congress and the fears of professional Republicans would warrant. And despite the sound and fury about the Benson policies, it should be noted that although the price freeze directed against Benson's policies passed the House and Senate, they passed by less than the two-thirds vote needed to override the President's veto.

The chances are good, therefore, that the President's record on vetoes will continue to stand as far as the price freeze is concerned. President Eisenhower is the first President since Warren G. Harding who has escaped having a bill passed over his veto. It would be an act of folly to pass the price-freeze bill over his veto.

Nassau County Commemorates Theodore Roosevelt Centennial Celebration

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. DEROUNIAN. Mr. Speaker, it is my pleasure to present the following proclamation, issued by the county executive of Nassau County, N. Y., in reference to the Theodore Roosevelt Centennial Celebration:

THEODORE ROOSEVELT CENTENNIAL CELEBRATION PROCLAMATION

Whereas President of the United States Dwight D. Eisenhower has proclaimed this year of 1958 to be Theodore Roosevelt Centennial Year, ending on the 100th anniversary of his birth, October 27; and

Whereas Theodore Roosevelt was one of Nassau County's most illustrious sons, the only one ever to have held the high honor of the Presidency, a man of action whose life was the exemplification of honor and integrity, whose leadership was an inspiration for a nation growing into a world power; and

Whereas Sagamore Hill, the Oyster Bay home of Theodore Roosevelt, has become a national shrine, visited annually by hundreds of thousands of Americans who revere his memory; and

Whereas the Nassau County Board of Supervisors has authorized the establishment of the Nassau County Theodore Roosevelt Centennial Celebration Commission to work with the State and Federal Commissioners and I, as county executive, have appointed nine outstanding citizens to serve on that Commission; and

Whereas the purpose of this Commission is to provide for the people of Nassau County an appropriate program for this nobly conceived celebration to help perpetuate the memory of the great "T. R."; be it hereby

Resolved, That Nassau County officially commemorate the 100th anniversary of Theodore Roosevelt's birth and that all its people be encouraged to participate in its public exercises.

A. HOLLY PATTERSON,
County Executive.

Peat Moss and Peat Products

EXTENSION OF REMARKS
OF
HON. ROBERT J. McINTOSH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. McINTOSH. Mr. Speaker, production of peat moss and peat products in the United States has a great future potential. While it is a growing industry, it is still in its infancy when the annual production is considered in relation to the vast peat resources scattered throughout 30 States. The Bureau of Mines estimates that the peat and peat moss deposits are in excess of 13 billion tons, enough to last 4,000 years at present production rates.

Although peat is one of our most abundant resources, the deposits have remained relatively undeveloped. The use of peat products in the United States is primarily as a soil conditioner for agricultural and horticultural purposes. Since 1950, the consumption of peat products in the United States has more than doubled and this trend may even accelerate in the future.

Ten billion tons of the estimated total deposits in the United States are located in the States of Michigan, Wisconsin, and Minnesota. While Michigan has the third largest reserves of any State, it is at present the largest producer of packaged peat in the Nation. Total production in the United States is about 300,000 tons annually and nearly an equal tonnage is imported.

Except for the relatively heavy imports of peat products into the United States, the domestic industry might have developed more rapidly. Until 1940, the great percentage of peat products used in the United States were produced domestically. However, a customs court decision interpreting the intent of Congress in the Tariff Act of 1930, opened the way for peat moss imports, duty free. A second court decision, 2 years later, further confused the application of the duties specified by Congress and since that time nearly half of the peat products consumed in this country have been imported. Without this competition, the domestic industry might today be about twice its size.

To correct what appears to have been a mistake or capricious action by the Customs Court, I have today introduced H. R. 11938 to restore the language of the Tariff Act of 1930 which called for a duty of 50 cents per ton on imports of peat moss. This legislation, if approved, will resolve the paradoxical situation resulting from court decisions and again place the domestic industry in the position intended by Congress.

Under the court decisions, the identical product, peat moss, is subject to duty in one instance and admitted free in another. If it is labeled "stable and poultry grade," import duty must be paid. If it is labeled "fertilizer grade," it is admitted duty free. It is not difficult to realize that even though the duty rate is low on that labeled "stable and poultry grade," it is only a matter of time until all such imports will be labeled "fertilizer grade" and entered in competition with domestic production duty free.

Interestingly, the statistics on imports show that this is exactly what is happening. Imports on the dutiable classification of peat moss have dropped from more than 31,000 tons in 1948 to about 11,000 tons for the latest year. Imports of peat moss classified duty free rose from less than 60,000 tons in 1948 to nearly 250,000 tons for the latest year.

These facts serve to point up the errors of the court in its decisions. The Tariff Act of 1930 placed fertilizers and chemicals making fertilizers on the duty free list. Congress did not consider peat moss as a fertilizer and in a separate section specified 50 cents per ton duty. During the Customs Court case in 1940, the great preponderance of the evidence showed that peat moss had never been classified as a fertilizer, had never been used as a fertilizer, and research showed that it did not have the properties of a fertilizer. The court confused the functions of soil conditioners with the functions of fertilizer and held that Congress intended that it be admitted duty free as a fertilizer.

Following this court holding, such peat moss was labeled and classified for entry as "fertilizer grade." It should be noted, however, that peat moss has never been sold as a fertilizer, and in fact, cannot be sold as such under the laws of any State in the Union. Customs classifications are supposed to be in accordance with the principal use of a product. If the imports were required to be used according to the classification, sales would be minimal and the imported "fertilizer grade" would merely pile up in warehouses.

In the second Customs Court case in 1942, an importer of the identical peat moss product, labeled "stable and poultry grade" sought classification for his imports as duty free. The court held that duty must be paid since the peat moss was not chiefly used as fertilizer.

As a result of these two court decisions, the customs collector must enter duty free imports of peat moss not in fact used as fertilizer in one instance, and in the second instance, he must collect duty payment on peat moss not used as fertilizer. The United States loses the customs revenues intended by the Congress on the nonfertilizer "fertilizer grade" and the domestic peat industry has lost almost half of its market to the imported product.

UNIVERSITY OF MICHIGAN LIBRARIES

The care and wisdom of Congress in drafting the Tariff Act of 1930 is clear. It treated peat moss for what it is—peat moss, not fertilizer. The consequences of the efforts of the courts to construe the intent of Congress otherwise are apparent. It is time that the contradictory customs treatment be corrected and all peat moss imports be subject to the same import duty.

Bureaucrats and the Brussels Fair—Why America Is Slated for a Humiliation

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. JENSEN. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, I include from the April 14 issue of Human Events, a story by Dillard Stokes, an able and well-informed writer. Mr. Stokes points out some of our shortcomings relative to the International Exposition to be held in Brussels.

The story follows:

BUREAUCRATS AND THE BRUSSELS FAIR—WHY AMERICA IS SLATED FOR A HUMILIATION

(By Dillard Stokes)

By all accounts, April 17 will be a black day for this Nation, when the Universal and International Exposition of 1958 opens in Brussels. There before the scornful eyes of 30 or 40 million tourists America will suffer a shameful humiliation, a cultural debacle, a 6-months denigration of her prestige and pride.

Hundreds of these gloomy phrases in the "liberal" press add up to a forecast that the American way of life is about to be clobbered by alien rivals from Andorra to Yugoslavia. The forecast is being broadcast to put steam behind a high pressure drive to get another $2.5 million out of Congress.

Now this forecast probably is perfectly correct, and now is the time to see why. Next winter the bureaucrats are sure to come whooping back to Washington with official reports that they scored a stuhning success after all.

It is hard to believe America is going to lay an egg at Brussels, when one recalls what Americans have done at other such fairs. Or what they do every year with local fetes—apple-blossom festivals, homecoming carnivals, the Mardi Gras, the Tournament of Roses, the auto shows and so on.

The Belgian invitations went out in 1954 at the height of the cold war. It took no deep vision to see Brussels as a battlefield of propaganda, a priceless chance to pit the American culture against the Red slave system, and also against a baker's dozen of serf (socialist) systems that are kept in business by American grants and "loans."

There was needed a commission, to line up a site, build a nationwide net of State, local, professional and industrial committees, and then promote and coordinate their exhibits.

What a drama, for instance, the doctors, the universities and hospital associations could have made of American medicine.

Think what the steel industry, the movie people, the auto companies—to name but three—could have done to show what America makes, and how.

As for culture—the many, many cultures that are America—who knows how the people of Iowa, Louisiana, or Kentucky would have shown themselves. Would the Texans have wanted to send 10,000 longhorns? Or put up a cluster of oil rigs? Or both.

With Philadelphia sending its symphony, would Boston left Arthur Fiedler and the Pops be left behind? And so with Minneapolis, Louisville, Washington, and every city with a first-rate orchestra.

Exhibits by American industry of course would brush off the Voice of America hogwash about People's Capitalism, and show the world the real, vital, free enterprise for private profit that built the country supposed to be on show. And the cultural showings got up by the people of the cities and States would not jibe with any highbrow Federal theme. They would just be authentic.

Perhaps that is why nothing of the sort will be on view at Brussels. The broad sweep of American life, the living traditions of America shown there will be what the State Department in its wisdom determines to need most to be emphasized abroad.

For there is no fair commission, no local committees, no general participation at all. In fact, nothing was done for 2 years. Then the State Department got $12,345,000 from Congress, paid the Belgians $430,000 in taxes and blew $5 million on a modernistic pavilion. With the rest—and with infinite arrogance—the Department hired a designer and set out all by itself to tell the world what this opulent culture is, and what it means.

As did Russia and her vassal states, this Government barred private enterprise from taking part. The Belgians did not plan a trade fair, it was said, so there must be no commercial exhibits. (As though Americans hadn't invented the "soft sell.")

Some American companies did manage to get in the fair. Pan American Airways, Eastman Kodak, Bell Telephone Laboratories, IBM, Phillip Morris Overseas, and Singer Sewing Machine will have their own pavilions, in the Belgian section, where they were able to—and were forced to—rent space.

This the State Department says nothing about when it proudly lists them in its publicity as participants.

General Motors will be on display, too, as a Belgian industry. This is because cars are assembled in Belgium. And the fair's telecom and electronic equipment is American made.

The Belgian steel industry is making a pageant of its whole production process, from ingot to machined product. In fact, the entire Belgian manufacturing and commercial complex has been able to do a sales job, within the limitations of a cultural exhibition unmarred by huckstering.

The Federation of British Industries will be selling everything from atomic know-how to Jaguars—all in a refined way, of course. The Russians will be showing locomotives, tractors, lathes, milling machines, acres of machine tools. The Germans, the Swedes, the Italians * * * none of them lacks an eye for the export trade.

Competing with all this, the greatest technology in the world will show a few models, a dozen propaganda movies cooked up for the purpose, a chaos of mockups, displays on slum clearance and race relations.

Even the planned live rattlesnake (now canceled) wouldn't have saved the American show from being a flop. More millions, more hundreds of million won't do it. No matter how good a job the bureaucrats do with the money, their exhibition will be a dull and clammy zombie.

For only living Americans acting freely can produce a living sample of American culture.

A Farm Woman's View

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. SCHWENGEL. Mr. Speaker, on Tuesday night I had the privilege of attending a banquet at the Continental Hotel at which members of the Iowa congressional delegation were guests of the Iowa Farm Bureau Women. It was a wonderful affair and it was like a fresh breath of air to visit with these women and to share their optimism about the future of life on the farm. The views of this group were best expressed by some remarks delivered by Mrs. H. L. Witmer, of Tipton, Iowa, State chairman of the women's division of the Iowa Farm Bureau. I was impressed with the sincerity of her message and feel that other Members will be encouraged as I have been, by the solid approach of these people in measuring up to their responsibilities in keeping America the great hope of mankind that it is. Under permission previously granted, I include Mrs. Witmer's remarks in the Appendix:

We in this room, with the exception of our guests, are actively engaged in farming. We know what the world looks like just before sunrise and we know what it is to sit on a bale of straw through a long cold night to help save the life of a little calf or of a litter of pigs. We know the feel of soil in our hands before it has become warm in the spring and we know what the hot July sun feels like beating down on the back of a working person.

Most of the tractors on our farms are lady broke. We know what is being planted in the northeast 40 this spring and we know whether or not the new alfalfa seeding came through the winter.

We know what it is to be tired and discouraged and the next thing to broke but we also know the thrill of being close to nature; of working with live animals; of producing with our own hands and the help of God, the food that is necessary to the world. And we know what it is to occasionally hit the market when it is up and get more for a product that we had anticipated.

We believe in farming as a family operation and we wish that every young person who wants to make agriculture his career could have the opportunity to do so.

Of course, we are concerned about farm income, but we are even more interested in the future we are bequeathing to our sons and daughters and to their sons and daughters.

Are we going to pass on to them a business that is hamstrung by ineffective controls and regulations?

Will the freedom of farmers to farm at their best disappear as so many of our freedoms have disappeared, almost unnoticed?

Will they have the opportunity to live in a great democracy as we have, the right to work and play, to win and lose, the right to plan their own future according to their individual desires and abilities?

Things are happening in Washington which we feel will destroy these freedoms if they are not checked.

It has become the great American pastime to gripe, and we find ourselves criticising as well as praising our Government.

Most of us are not educated in economics but we do not believe that it takes an expert to know that none of us can go on year after year spending more than we earn, and that when certain members of the family keep demanding more than the budget will bear, either something has to give or those members will have to get busy and figure out how to get what they want for themselves, or do without. We know we must constantly cut corners and manage better.

We are not half as afraid of Russia's might and productive power as we are of the panic displayed by many in government and many citizens with every new blast of propaganda.

How often have you heard these statements:

"Russia is outstripping us. Let the Government take over the education of our scientists."

"The Government must build more roads."

"We must set up trade barriers to keep out competitive foreign goods."

"We have to have Federal aid to education. We can't educate our kids ourselves."

And the latest: "Russia has produced more hogs than America."

Our tremendous inflationary spiral has slowed up. We are in trouble.

We are being out-propagandized by Russia.

We are because the American people pick up and echo in mournful voices the latest claims.

We are samrt enough to know that you who represent us can give us nothing which we have not first given you and that in the transfer from us to you and back again we lose a lot and we know that if you furnish the money you will want to help us make decisions and we lose a bit more of our freedoms.

If we are real honest with ourselves, we know that so long as we have the large sums of money we spend on cosmetics, cigarettes, soft drinks, liquor, etc., we should be able to finance our schools.

We know that every bureau that is set up even on the temporary basis, is likely here to stay and make big government even bigger.

We want you to know that we will do all we can to help you represent us in a way that will at least check the loss of our freedoms.

We believe that you want to keep America the great free country she has always been.

We believe in America and the American way of life.

Agriculture is our business and farming is our future. With adjustments and changes brought on by a rapidly changing world, we believe that the family type farm is here to stay.

And we believe that there's life in the old girl yet, if we take away the sedatives and tranquilizers and give her the stimulus of freedom to decide, competitive markets and foreign trade.

This is the future we hope to bequeath to our children and we will help you in any way we can to accomplish this goal.

Is Mr. Truman the Democrats' Answer to All Problems?

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. DEROUNIAN. Mr. Speaker, the following editorial appeared in the New York Daily News on April 15, following the testimony before the House Banking and Currency Committee of a retired Missouri farmer, who obviously knows little of economics and whose quips and general attitude, unfortunately, were hardly suited to a serious committee hearing.

The Daily News comments on the Democrats' new, bold, imaginative economic policy follow:

S. FOR SPENDER, EH, HARRY?

Harry S. Truman mounted the witness stand in Washington yesterday, and gave the House Banking and Currency Committee good ground for supposing that that mysterious middle initial of his stands for spender.

INFLATIONIST IS THE WORD FOR TRUMAN

To combat the recession, Harry wants defense spending hiked in fiscal 1959 (ends June 30, 1959) $3 billion above President Eisenhower's budget figure; $1.5 billion rolled out for foreign technical assistance; $1.7 billion above the Eisenhower estimate spent on education, public health and relief; income taxes cut $5 billion exclusively in the lower and middle income brackets; and interest rates on the national debt pared down.

This would be only a beginning. Little Truman also wants Federal spending steadily increased until 1964 at least.

He is gaily unconcerned about what all this would do to the dollar's buying power, which tobogganed during his and F. D. Roosevelt's administrations.

All his proposals are cockeyed enough, but the one about cutting interest rates on the public debt is the worst. It's a call for partial repudiation of the debt—which would have a murderous effect on Government bonds and credit.

In short, Harry is a dedicated inflationist, a funny-money man, who thinks wild public spending is the answer to virtually every economic problem.

Worse than that is the fact that a lot of people in both political parties think as Truman does. Maybe we'd all better take to studying the devious and intricate ways in which ordinary Joes can hope—if they're lucky—to beat or cheat continuous creeping inflation.

What Part Will I Play as a Citizen?

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. HESS. Mr. Speaker, Tom Haverkos is a ninth-grade student in Cincinnati, and I am very proud of this young constituent. He wrote one of the winning essays in the contest sponsored by the American Legion and the American Legion Auxiliary in the State of Ohio.

What Part Will I Play as a Citizen? by Tom Haverkos, gives excellent evidence that the youth of today is worthy of his heritage. Every American citizen will benefit by reading this brief and well written essay. I am pleased to submit it for the CONGRESSIONAL RECORD:

WHAT PART WILL I PLAY AS A CITIZEN?

(By Tom Haverkos)

What part will I play as a citizen? This is a difficult question to answer unless one is able to look into the future. I can only hope that as an adult I will be a good citizen. Meanwhile, I want to acquire as much education as is possible in order to prepare myself for my future responsibilities as an adult citizen.

I will consider it my first responsibility as a citizen to obey all the laws and to cooperate with all law-enforcement agencies and authorities.

I will expect to pay a just and reasonable amount of taxes. This I will do cheerfully, because I will regard taxes as necessary for the efficient operation of the government, and for the defense of our country.

As a good citizen I will always expect to exercise my right to vote. I will want to be interested in National, State, and local government. I believe that a good citizen should always consider both sides of any issue and should read and study as much information as possible before deciding which side he or she favors. A good citizen should be unbiased. He should not be prejudiced in matters of race or religion.

I anticipate that I will be interested in all worthwhile activities and projects in the community in which I will make my home. I will be interested in having good schools. Also, I will want to give, not only my financial support, but also contribute my time and energy to deserving organizations that help the youth of community and also charitable organizations.

I expect to train myself so that my employers or the people with whom I do business will be satisfied with my work and will feel that they are receiving proper return on their investment in me. I hope that all contacts with my associates in business will be both pleasant and honorable.

Good citizenship begins in the home. I think I have had a good example of citizenship set for me at home by my parents. When I grow up I expect to establish a home of my own and rear a family. I want to have a home where religion is stressed and fair play is practiced. I believe that in establishing a good home with sound teachings I will be making a worthwhile contribution to citizenship.

Harvard University Center for International Affairs

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. PORTER. Mr. Speaker, in these days when the foremost challenge is whether we are smart enough to survive, the organization of the Harvard University Center for International Affairs is a highly significant event. The following information is from their basic explanatory pamphlet and deserves the attention of every Member of Congress:

I. THE NEED

It is a truism that foreign affairs in our era pose unprecedented tasks. But the full sweep of the challenge is not always grasped. The heavy burden on our physical and financial means tends sometimes to divert attention from the even more critical demands on knowledge, understanding, and creative thought. In these fields the requirements still far outrun existing resources. The causes are apparent but worth restating.

For the first time in history international relations have become truly worldwide. Until modern times the various geographic regions pursued their courses with little or no regular contact. For several centuries world

UNIVERSITY OF MICHIGAN LIBRARIES

affairs were mainly European affairs. Today no region is isolated, none can be ignored; actions and events even in remote places may have immediate worldwide impact. The fate of every nation and people is bound up in some degree with that of many other countries around the world.

At the same time, vast forces are reshaping the world with headlong speed. Under the impact of wars, nationalism, technology, and communism, the old order has been shattered. Empires have crumbled; nations once dominant are forced to adapt to shrunken influence. New nations have emerged and are struggling to survive. From north Africa, through the Middle East and south Asia, to the Far East, societies long stagnant are now in vigorous ferment. Social revolution is disrupting their traditional systems of thought and belief, of habit and custom, forcing choices among newer patterns of freedom or despotism. Communist imperialism, still seeking to remold others in its own image, is itself not exempt from the pressure for change both at home and abroad. And over all broods the atom with its promise and its threat.

Thus in a time of rapid change diverse societies must learn to live together on intimate terms. In a divided world they must come to recognize more clearly their common needs and interests and to develop methods and institutions for serving them.

In its dimensions and its urgency the task is staggering.

Nowhere do traditional attitudes fit the new realities. Many inherited concepts and ways of thinking are irrelevant and some are serious barriers to effective thought and action under new conditions. Thus notions of sovereignty and independence need revision to apply to a world where a nation's level of life or survival may depend as much on the actions of other countries as on its own.

More and more the various facets of foreign affairs become a single whole which cannot be dealt with piecemeal. Each thread of policy is tightly woven into one fabric. Policy toward one foreign country must take into account relations with and among many others. Few problems, if any, are purely political or economic or strategic: adequate solutions must take into account all aspects.

Also crucial is the new role of public opinion. As never before it is at once an instrument of foreign policy and a limitation upon it. The ideological struggle, the rapid transmission of information, the spread of self-government, the new international and regional forums, all have transformed the conduct of international affairs into a broadly based political process. In the democracies, even the wisest policies will prove unavailing without a well-informed and mature public opinion.

In short, in seeking to shape its destiny each nation requires a perspective and a comprehension of unprecedented scope.

The ability of governments to meet the challenge will depend ultimately upon the caliber of the men who serve them, the quality of the ideas and thinking on which they can draw, and the degree of understanding and support which they can count on from their citizens.

Hence the need is twofold:

First is the pressing need for widened knowledge and understanding; for more awareness of the nature and complexity of foreign affairs; for more informed and imaginative thinking.

Second is the urgent need for wise and skillful people. There must be experts steeped in the study of geographical areas and other specialized knowledge, but also and perhaps even more importantly, individuals able to analyze the deeper causes of events and to pull them together into a whole.

II. THE BASIC PURPOSES OF THE CENTER

The Center for International Affairs is designed to serve both the need for knowledge and the need for men.

Its program is based on the premise that a Center at Harvard can fruitfully combine basic research in foreign affairs with advanced study by experienced individuals. Free from the pressures of day-to-day concerns, the Center should be able to provide an environment fostering sustained and systematic analysis of foundamental issues. The joint participation of scholars and mature practitioners should make the research more penetrating and significant. At the same time, a period of such work should enable the practitioners to deepen their understanding and broaden their perspective. Those are the convictions on which the Center rests.

1. The need for knowledge—research

In the broadest sense, foreign affairs deal with the impact of societies on each other. Hence sound judgments and effective action required knowledge, insight and analytical capacities of wide scope. And knowledge regarding many of the essential fields and processes is extremely limited or lacking.

Consequently the study of foreign affairs stands at the confluence of many disciplines: of philosophy which colors a nation's view of reality; of history which shapes reactions by analogy with past experience; of sociology and political science which can illumine the structure of a community; of economics and of law which reflect its material aspirations and resources and its notions of legitimacy and order; and of various others. Thus many traditional disciplines can contribute to the study of international relations; none of them can encompass its full scope.

Moreover the study of international affairs is not exhausted even by a synthesis of several disciplines. Much of the most significant data is not accessible to research by conventional means. It resides largely in the minds of those who have been responsible for administering programs while technical and social revolutions were daily changing the presuppositions. Furthermore most issues require an understanding of the attitudes and interests of other nations.

Thus the penetrating study of international relations requires the cooperation of many disciplines and many professions and of present and former officials and their experience with vast and often novel practical problems.

The research at the Center will take account of this primary fact. Its program will be designed to foster research which draws on and combines the thinking and knowledge of academic experts, United States and foreign officials, and others with experience in foreign affairs. Some projects will be individual and others joint efforts, but all will benefit from the informed criticism and insight of the various participants at the Center.

Under this program the Center will regularly invite a few qualified people from Government, academic, and private life in the United States and from abroad to work at the Center. From the United States, officials invited will include experienced officers from the Department of State, the military services, and other agencies engaged in foreign activities. From abroad qualified men will be invited from various regions such as Europe, the Middle and Far East, and Latin America. In each case the aim will be to obtain first-rate men of experience. In Europe the emphasis will be mainly on recruiting men from the foreign offices, economic ministries, or private life, specializing in foreign affairs. From the less developed areas the emphasis will be primarily on obtaining officials and private experts concerned with the process of development in all of its aspects.

This method of combining official, academic, and private experts for specific projects should produce thorough and useful studies:

1. It will bring about the pooling of the wide range of experience and knowledge of the members of the group;

2. It will bring to bear the resources of the academic community at Harvard and elsewhere;

3. It will assure an informed expression of various national attitudes and perspectives;

4. It will focus attention and study on basic and long-range issues.

2. The need for men—advanced training

Their work in the research projects and seminars at the Center will serve to widen the horizons of the participants and improve their capacity for broader responsibility, especially in policy analysis.

More and more in this country and abroad, agencies concerned with foreign activities are recognizing the necessity for advanced training of mature personnel and are searching for suitable methods. A comparable need exists outside of government. Key people in the professions, business, the press, and academic life often engage in activities requiring a deeper understanding of international affairs or influence foreign policy in various ways. Exceptional individuals from such groups should benefit from opportunities to widen their perspective in contact with officials and other experts from this country and abroad.

The Harvard Centers seeks to respond to this need in three ways:

(a) Training in Policy Analysis

The agencies engaged in foreign affairs all over the world include a great many talented and devoted public servants. It is no disparagement of these men to recognize the severe shortage of man qualified for top policy positions in these agencies. The shortage reflects the enormous scale and complexity of the problems to be mastered and the pace of change in contemporary life. Career experience in its early and middle stages does not necessarily offer opportunty to develop the analytical and creative capacity required for policy formation on a broader basis.

The continuing research projects and related seminars at the Harvard Center will be dealing with long-range policy issues in major fields of foreign affairs. The participants from official and private life will be expected to take an active part in these projects and to contribute, drawing on their past experience and on current study. The research, criticism and discussions, with able participants of varied backgrounds, will enable them to develop their capacity for policy analysis and their understanding of the interplay of political, military, economics and other factors.

(b) Broadening Perspective

Under modern conditions, national interests can be served only by common policy and joint action with other nations on a wide range of complex matters. Thus the conduct and understanding of foreign affairs requires the capacity for seeing problems and actions through the eyes of other nations and relating such perceptions to national needs and purposes. This process of finding common interests and agreeing on joint methods for advancing or protecting them is not easy, where, as today, it often calls for bridging a gulf of culture and history, and for adapting to constantly changing conditions.

The task clearly requires an uninhibited exchange of ideas and canvass of alternatives. Yet such frankness is extremely difficult to achieve among representatives of govern-

ments. Even among close allies, officials are seldom able to discuss policy with the same freedom which is considered essential for policy analysis within any government.

Over time these obstacles can be a serious handicap to close international cooperation. Faced with a dynamic situation, a rigid policy can become a straitjacket inhibiting decisive action.

The Harvard Center could assist in solving this dilemma. In the atmosphere of the center, the participants should be able to discuss far more freely the problems likely to arise in the future and alternative ways of meeting them. The seminars, the research projects, and other activities will be directed to presenting, analyzing, and prescribing for such potential issues. Free of their normal obligations, the officials could express views as individuals instead of representatives of their countries.

This process should offer several benefits: (1) It should focus the attention of key individuals of the several nations on future problems and issues and promote thinking about their solution; (2) it should enable the participants from each nation to attain a better understanding of the approach and concepts used by the others in analysis of problems; and (3) it should develop relations among the officials of different nations which would facilitate franker and more useful discussions in their later careers.

(c) Insight Into Development

Nations comprising well over half the world population are seeking to develop their societies and economies by various means. In this process they will have to modify radically the economic, political, and social fabric of their societies. This vast effort is one of the major facts of the world situation both for the nations engaged in it and for the rest of the world. Thus an understanding of what this process will entail is vitally important for them and for others.

The amount actually known on this subject is extremely limited. Much more study will be needed to discover the conditions required for successful development. Such study will range far beyond the strictly economic aspects. It must seek to discover the changes in traditions, habits, and institutions required to make static societies sufficiently dynamic to achieve material and social progress for a growing population. And it must seek to examine and predict the collateral consequences of such changes and their effects on stability, interests, and attitudes.

The program of the Center will assist in various ways:

1. The research will seek new knowledge about the process of development and the actions and policies required for progress.

2. Officials and other experts from the less-developed countries should, in this study, enhance their ability to cope with these problems, both by improving the requisite skills and disciplines and by relating their uses specifically to the development process.

3. The participants from the developed countries should gain an insight into the process of growth and its impact on the societies involved. They should be enabled better to understand the pressures and attitudes generated by this process and their effects on relations with outside countries.

Thus such study should itself contribute to better understanding and more effective action both by the less-developed countries and by the developed countries in their relations with them.

III. OPERATION OF THE CENTER

1. Conduct of research

The research activities of the Center will seek to combine two objectives. They will attempt to make the best use of first-rate talent and to pursue studies of basic issues relating to international affairs.

In foreign affairs, it is always tempting to address study to the topics of current interests. But private agencies, in a university or elsewhere, are often not well-suited for such short-run studies. Usually these are the cases where classified data, not available to outsiders, are most relevant. And in general, the research in Government on such short-range matters is at least as competent and well-done as that outside.

On more basic and longer-range issues the situation is reversed. These often require the breaking of new ground or the blending of several disciplines. For such studies Government agencies are often not as well qualified as outside experts. The pressure of the more immediate crises tends to divert energy and attention from more basic issues. One result is that policy-making must often start with premises which are unexplored for lack of time or staff to analyze them.

Such basic or long-range issues are often especially well-suited to outside study. Classified data are seldom of great consequence for such research. A university may have or be able to attract people with the requisite training and skills and to allow the time for thorough study and for creative thought.

The research program for the Center is designed to put these principles into practical operation in two ways.

(a) Continuing Programs

In the first place, the Center is establishing certain fields of continuing concern within which research on one or more specific topics will normally be in progress. In each of these fields, a member of the Center faculty will normally be working and be charged with developing and overseeing other research in that area. In general he will conduct a regular research seminar in that field which will include, as participants, visiting officials, academic, and other persons interested in that field.

Each participant is expected to work on the study of a specific topic of his choice, either individually or as a member of a small research team. The seminar will provide a forum for criticism and discussion which will make use of the experience and knowledge of its members.

(b) Special Projects

The Center will also support research or studies on specific topics related to foreign affairs which do not fall within the continuing programs. It will be receptive to all projects bearing on foreign policy, provided they are conducted by first-rate people. For such work the Center will afford a forum for criticism and an atmosphere of disciplined study.

Such projects might be proposed and carried out by a faculty member or a fellow or might be initiated by the Center itself. In any case, it is expected that full use would be made of the knowledge and experience of members and fellows at the Center in carrying out the project.

In its continuing programs and special projects the Center hopes to provide natural and effective ways for solving the problem of meshing qualified and interested people with studies of major importance.

2. Fields of research

Five major fields suggest themselves as areas of continuing research:

(1) Europe and the Atlantic Community

The rise of other powers, the loss of empire, Soviet control of eastern Europe, and other factors have transformed the position and influence of Europe, and have caused the European nations to seek new relationships among themselves and with the United States.

The center would be concerned with the whole range of forces and issues affecting Europe and the Atlantic Community including: (a) European integration, (b) western and eastern Europe, (c) Europe and the less developed areas, especially Africa, and (d) Europe and the Atlantic Community.

(2) Economic and Political Development

The problems of underdeveloped countries are being widely studied, but there has been some tendency to deal with them as a single phenomenon, mainly economic. There is need for more intensive study of their distinctive problems and of the social and political, as well as economic, aspects.

The Harvard Center will select specific areas for such study. The existing work at Harvard in the Middle East Center and the Pakistan project will be a starting point and can be supplemented by studies on Latin America and perhaps Africa.

(3) The Role and Control of Force

Military policy and its relation to diplomacy have never been more complex. The revolution in modern weapons has undermined many traditional notions as to the role of force at a time when political conditions are in flux and international schisms are extremely deep. The changing situation poses many difficult issues in strategic doctrine, military policy and structure, the role of force and its control, etc. The purpose of the Center will be to analyze these interrelated problems in relation to foreign policy and evolving technological and political developments.

(4) International Order and Conflict

Perhaps the basic problem of international relations is to develop a new international order to take the place of the 19th century world system. What is required is not only a study of explicitly world organizations such as the United Nations and its agencies, but of the basis of international order in its widest sense. Hence this field would embrace research in underlying factors and principles affecting world economic and political relations as well as the maintenance of peace.

(5) Far Eastern Problems

The Far East poses a wide spectrum of issues, which involve a complex of political, economic, military, and other factors, which require intensive research and analysis. In its studies, the Center would draw on and complement research now going on and projected in this general area under the Far East program at Harvard.

The Center will, of course, be concerned with the development and the policies of the Soviet bloc and Communist China bearing on foreign affairs. These are not listed as separate topics, however, since they will be relevant and often major factors in the analysis of each of the fields listed. In its studies, the new Center will be able to draw on the Russian Research Center at Harvard for data and experts. The Center will doubtless also initiate studies of certain aspects of communism and the U. S. S. R. having a special bearing on foreign affairs.

The Center will not attempt to cover all the various aspects of these areas at any one time. The actual work in any and all fields at any specific time will depend on the availability of first-rate men sharing those interests.

3. Staff and other participants

(1) Permanent Nucleus

The Center will have a nucleus faculty permanently identified with the Center. These permanent members will normally be responsible for specific areas of study and advanced training.

(2) Faculty Associates

The Center will arrange for members of various faculties to devote themselves for specified periods to research on specific topics in the international field. Members of faculties of other universities in the United States and abroad will be invited to come to the Center as fellows.

UNIVERSITY OF MICHIGAN LIBRARIES

(3) Fellows of the Center

In order to attract unusual individuals from elsewhere, the Center will make provision for a group of fellows, chosen for excellence, from the United States and abroad. In general, the fellows will be drawn from government, academic life, business, the professions, and the press; and most will be between 35 and 45, though some might be older. They will be given maximum latitude in the length of time they will spend at the Center, with perhaps a normal minimum of 6 months and a maximum of 2 years.

While each fellow will be free to select his field of primary concern, the majority will undoubtedly address themselves to one of the chief problem areas of the Center and will be strongly encouraged to participate in current research activities. On the other hand, the presence of a given fellow may make it possible for the Center to add to its research fields.

(4) Research Assistants

In carrying out the research projects and related seminar programs, the Center will regularly have a small number of research assistants.

4. Publications

Essential to the work of the Center will be publication of a series of books and monographs resulting from its research activities. In addition the Center may publish a quarterly journal as a forum for experts in foreign affairs.

Position of the Polish American Congress at Washington Meeting Toward Possible Summit Conference

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum adopted at a plenary session of the board of directors of the Polish American Congress meeting on April 11 and 12, 1958, held at the Hotel Raleigh, Washington, D. C., on a possible conference at the summit:

MEMORANDUM FOR SUMMIT CONFERENCE ADOPTED AT A PLENARY SESSION OF THE BOARD OF DIRECTORS OF THE POLISH AMERICAN CONGRESS

We do not contribute to the current clamor for a summit meeting with the Reds. Whatever the Russians may propose will not be for America's best interest nor for freedom's benefit. There can never be a meeting of the minds. The frightful slaughter of the Hungarians is an example of what they offer the free world.

Conferences with the Russians have already done much damage. They have robbed the world of the peace it so desperately seeks.

Yalta, at which we gambled for the friendship of Soviet Russia and lost the peace, highlights the evil of negotiating with those who have committed the most horrible crimes against humanity in history.

We don't need a conference to convince the Reds that we want peace. They know only too well that the United States has no imperialistic designs, and that it poses no threat to Russia.

Global conquest, however, is a vital part of communism and the Reds will never rest until the whole world is communistic. Nikita Khrushchev has said: "Whether they like it or not, the capitalists must die."

We must face the fact that we are dealing with the world's most relentless exploiters.

If, however, we are forced by world opinion, to take part in a conference, we should request as a prerequisite that the Soviets give some evidence of their good will. If they are honorable, which they are not, they will first restore freedom to all their satellites.

The doors should be open only to genuine negotiations and not to provide a forum for Soviet propaganda.

In reference to this proposed summit conference between Soviet Russia and the western powers, the United States should be keenly aware of the fact that the Kremlin insists on the recognition of the "status quo" as regards the Communist regimes imposed on the countries of central-eastern Europe before it will enter into any negotiations for a peaceful settlement of all our world problems.

This demand was put forward by Khrushchev in his address to the Presidium of the supreme Soviet, December last, which later endorsed this very resolution. It was further confirmed when the Soviets suggested that three Communist governments in central-eastern Europe take part in the proposed summit conference. If we assent to this, we would be tacitly agreeing to keep the "status quo".

This is in line with the basic aims of Soviet policy, which seeks so to consolidate Russian domination in central-eastern Europe as to render it immune from any possible exchange. One of the impelling drives in the Russian race to outer space was the knowledge that if it was successful with its missiles and satellites, it would draw world attention away from its activities in central-eastern Europe.

After the Poznan riots of June 1956 and the virtual coup d'etat in October of that year, popular pressure brought a certain degree of liberalization in Poland, although the Communist regime, with Moscow backing, remained in control of the country. Poland began its desperate search for economic aid, because a better standard of living is needed to consolidate and advance any progress towards the restoration of Poland's full freedom and complete independence. Then began that agonizing tight-rope walk which sought to satisfy Russia's coercive demands and the Polish nation's urge for complete liberty.

As we all know, Poland was imprisoned in the orbit of the Soviet Union as the Red army rolled over Poland in its drive to Germany. The Red army still retains military control over this area, with the understanding that Poland must be kept subservient to the Soviet Union. This theory has been borne out in statements by Stalin himself, as well as in an article of the February 1956 issue of the official U. S. S. R. publication Kommunist.

Communist rule was imposed on Poland through the radical elimination of all political opposition, using all the methods of deceit and subversion of which the terror-system of Soviet-trained secret police is only capable.

The Soviet Government has acted in complete derogation of international law, formal treaties, and war-time agreements entered into it with the United States of America and the other allied governments.

Every country subjected to communism is regarded by Soviet Russia as its vassal and part of the Soviet bloc. Any attempt by the people to free themselves from the Communist yoke and to replace it with a democratic system of government is considered as an act of hostile interference with the sovereign rule of the Communist Party, and therefore an act of aggression against the Soviet Union. We have only to consider the ruthless subjugation of the Hungarians, who dared to fight for freedom, to see how the Kremlin follows this rule in its far-reaching aims for international Soviet imperialism.

President Eisenhower made a proposal on January 12, that in the interests of peace and justice, the right of self-determination of the central European countries should be discussed at some future summit conference. Faithful to their philosophy, the Soviet leaders rejected this proposal, first, Khruschev in his violent speech at Minsk on January 22, and subsequently, Bulganin in his answer to the President's letter. None of the later arguments of the President or the Secretary of State affected their thinking in this matter.

Another objective of Soviet policy is the weakening of the West, particularly the destruction of NATO through the reduction in effectiveness of, if not the outright withdrawal of American and English troops now in West Germany.

The success of this particular maneuver is to be achieved by the sponsorship of the so-called Rapacki plan. This is not a Polish plan, and does not follow the best interests of the Polish people. It provides for the removal of all types of nuclear arms from West Germany, East Germany, Poland, and Czechoslovakia. Both national and foreign occupation armies would be affected. This would supposedly lead to the creation of a so-called neutral belt in central-eastern Europe.

Here again we have an example of Soviet duplicity. With no concessions on their part, since they say nothing about removing the Red armies which help communism in control of this area, they want to lessen radically the power of the American and British armies in Western Germany.

Deprived of the use of nuclear weapons and rocket-launching sites, the Western nations would leave parts of Russia immune to attack, while presenting the Soviets with the opportunity of ravaging all of Western Europe and north Africa with thermonuclear warheads.

In short, the so-called Rapacki plan, which originally came into view as the suggestion of East Germany, is merely another gambit in the eternal chess game of Russian power politics which seeks to achieve complete mastery over all the peoples of the earth.

These are our recommendations:

We should remember what the Soviet objectives are when we sit down at any conference table with them. When we prepare to conduct serious negotiations at the summit, we should be aware of any and all procedural matters which would imply substantive conclusions that are not even mentioned.

We recommend that the United States go more deeply into the basic problems of a subjugated people living in a Communist world.

We should generalize less in our policy statements. Instead of waiting and hoping that something might be worked out in the near future, we recommend that a genuine attempt be made to find realistic solutions to specific problems. For instance, we should now try to work out a policy which will be ready to meet any new crisis that may arise in Poland because of economic or political pressures generated in that unfortunate country by the activity of the Soviet government or any of its agents.

We should strive to make it clear to the Soviet Union that we will consider its further and continued interference in the internal affairs of Poland and the other satellite nations of central-eastern Europe a threat to the peace of the world.

The overwhelming majority of the Polish people reject Communist ideology and fervently desire to regain their independence

under a freely elected democratic government.

Let us keep faith with them.

STANISLAW R. J. SUCHECKI,
Chairman.

A. C. F. KINOWSKI.
THADDEUS ADESKO.

The President Supports Secretary Benson

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 18, 1958

Mr. MAY. Mr. Speaker, the editors of the Hartford Courant are to be commended for backing the President in his courageous support of Secretary of Agriculture Ezra Taft Benson. Few men in public life have demonstrated greater personal courage and, for that matter, greater political courage, than Mr. Benson.

His policies are designed to free agriculture from controls which have been largely responsible for the surpluses which in turn have caused a sickness in the agriculture economy today. In my opinion, in the final analysis, the farmers who themselves know right from wrong should and will support Secretary Benson.

Under leave to extend my remarks in the RECORD, I include the following editorial from the Hartford Courant:

THE PRESIDENT SUPPORTS SECRETARY BENSON

The President's veto of the farm-price-support legislation is consistent with his effort to make some sense of the Nation's agricultural crisis. In the last quarter century we have spent over $22 billion to help the American farmer. About half of that was in the effort to stabilize prices and incomes. Yet we have failed to check overproduction, or to get at the roots of the real farm ills. Instead, with the exception of the last measured year, the stocks of Government-held surplus have grown until they hit an all-time peak in February 1956.

But it's politically popular to fertilize the Nation's farms with checks. And Congress had moved to freeze for a year farm-price supports, despite a recent report showing that farm returns were up slightly, even in the middle of the Nation's economic troubles. But the effort to peg supports and acreage allotments at 1957 levels would have slowed any real effort to allow farm production to get into harmony with markets. The Committee for Economic Development observed in a recent study that prolonging price and income supports as they are now used would be futile. It can only encourage more surpluses, higher taxes to subsidize some farms, misuse of people and materials, and pressure to get rid of surpluses in ways that conflict with other national objectives.

The farmer is in a tough spot. The growth of marketing processes far different from what our ancestors knew puts prices higher, with less return for the farmer. He is hit by high prices on what he buys. If he has a small farm, he often earns less in a year for his family than any reasonable man would expect. An estimated 56 percent of all farmers sell less than $2,500 worth of products in a year. But unless the Government moves to get rid of unrealistic farm policies, the entire farm problem cannot be solved.

The easy way out is to keep up the flow of checks; the adherence of the farm belt politicians, Republican and Democrat, to this solution shows its popularity. Yet the facts show that the farmer, as the President noted, stands to gain more by less Government intervention. Farm prices right now, according to the economic index, are 9 percent higher than they were in June 1955; the parity ratio is 6 points higher than a year ago. It is a difficult course to follow, moving away from a solid income base toward one based on a balance of production and demand. But it's the best for the Nation.

Nikita the Inflexible

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. BOLAND. Mr. Speaker, today's Wall Street Journal contains an article by William Henry Chamberlin that needs to be seen, read, and remembered by the Members of the Congress and the American public. Under leave to extend my remarks I include the article in the Appendix of the RECORD.

NIKITA THE INFLEXIBLE

(By William Henry Chamberlin)

Outwardly, Nikita Khrushchev conveys the impression of being a much more human sort of dictator than Josef Stalin. The latter surrounded himself with an atmosphere of gloomy inaccessibility. Many foreign diplomats left Moscow without ever seeing him at close range. He spoke infrequently, on big occasions. His few interviews, granted to foreign newspapermen, were stilted written replies to questions submitted in writing.

Khrushchev's public relations are operated on a very different basis. He makes a practice of turning up at cocktail parties in the Moscow embassy set, jokes with foreign diplomats and journalists, slaps them familiarly on the back.

On one occasion he was even interviewed on an American television program. He is as garrulous as Stalin was taciturn; his recorded speeches, interviews, and diplomatic communications would already fill a large-sized book. But behind this mask of the jolly good fellow there is a mind quite as closed as Stalin's and a purpose just as inflexible, to hasten the coming of the day when, as he believes, communism will dominate the entire world.

One of the most revealing exhibitions of Khrushchev's thought processes is contained in a 9,000-word letter which he recently published in the British left-wing weekly, the New Statesman. This was the third and presumably final shot in a controversy touched off when Lord Russell (perhaps better known as Bertrand Russell) used the New Statesman as a medium for an appeal to Khrushchev and President Eisenhower to agree on a cessation of the nuclear arms race and to promote their respective ideologies only by peaceful means.

Khrushchev made the first reply. Then Secretary of State Dulles, on behalf of the President, sent a much shorter communication, making the point that, while the United States never had sought and never would seek to impose its political and social institutions by force, Communist philosophy demanded expansion by subversion and military force. This apparently stung Khrushchev into a verbose attempt at a rebuttal.

NO FLEXIBILITY

As this letter was directed not to a convention of the Communist faithful, but to an overwhelmingly non-Communist British audience, one might have expected that it would contain a few conciliatory statements, a few evidence of flexibility. Nothing of the kind. It was a most uncompromising assertion of Communist fundamentalism and in some cases the assertions and arguments sound as if they might have come from outer space, so far are they removed from the understanding of people living in the Western World.

Take these two sentences about what happened in Hungary: "The essence is that, in Hungary, the Horthy elements, agents of foreign big monopoly capital, tried to overthrow the people's democratic order, to restore the hated Fascist regime in the country * * *. The conspirators provoked a rebellion against the legitimate government of the Hungarian People's Republic, which the people had elected on a constitutional basis."

In these 2 sentences there are 6 demonstrable untruths. It was not "Horthy elements"; it was workers and students, including a considerable number of Communists, who tried to throw off the Russian yoke. No "foreign big monopoly" had anything to do with the very spontaneous uprising.

The regime in Hungary was not a "people's democratic order," but the dictatorship of a small clique of Communists. At no time did the insurgents manifest any desire to "restore the hated Fascist regime." There was no rebellion against the "legitimate government"; insofar as the Communist government could be considered legitimate, its Prime Minister, Imre Nagy, had gone along with the demand of the insurgents for freedom and a neutral status for Hungary. Nor had there been in Hungary, for many years, an election "on a constitutional basis."

Both in this letter and in more recent speeches in Hungary, Khrushchev displays an ability, at once breathtaking and frustrating, to stand truth on its head.

OH, WHAT RIGHT?

"What right," he virtuously declaimed—in Budapest of all cities—"do the politicians of the United States have to enforce the way of life of their country on other countries?" What he overlooked, but what most members of his Hungarian captive audience probably did not, is that neither now nor at any other time has the United States sought to impose its way of life on foreign peoples in Eastern Europe or anywhere else.

What the United States Government has been demanding, in accordance with international agreements voluntarily signed by Stalin at Yalta and Potsdam, is that the Soviet Union cease imposing its own way of life, as it did so bloodily in Hungary, and permit the peoples of Eastern Europe the same freedom to choose their own governments and shape their own political institutions as the peoples of Western Europe already enjoy.

Khrushchev displays the same cynicism in shying away from the idea of a free general election as the basis for unification of Germany and proposing as a substitute negotiations between the existing "two German states."

One of these states, the Federal Republic, possesses a government that has been freely elected, that is competent to represent the will of its citizens. But the other, the regime that rules the Soviet Zone, has no authority except that of Soviet bayonets.

RELENTLESS COURSE

During a diplomatic reception in Moscow, Khrushchev, somewhat in his cups, shouted after some retiring western diplomats: "We shall bury you." In his letter to the New Statesman he puts the same idea more

UNIVERSITY OF MICHIGAN LIBRARIES

soberly. After giving a very idealized picture of the Communist revolution in Russia he adds: "This is what will happen both in the United States and in Britain, although there are no Soviet Communists there, nor will there be. Such is the relentless course of historical development, and no one can halt it."

Why Suspend Only Bomb Tests?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the text of an editorial by David Lawrence which appeared in the April 11, 1958, issue of U. S. News & World Report, entitled "Why Suspend Only Bomb Tests?"

The editorial follows:

WHY SUSPEND ONLY BOMB TESTS?

(By David Lawrence)

The Soviet Union's proposal temporarily to suspend, of its own accord, the testing of H-bombs has been hailed by some newspapers here and abroad, and by some partisan politicians in Congress, as a great propaganda victory for the Communists.

To the gullible and the craven, to the weak-kneed and the practical, who used to advocate doing business with Hitler and who now want to do business with Khrushchev, the Moscow proposal is a stroke of genius.

But to the President of the United States, who has faith in the truth, the Communist strategem is a gimmick and a diversionary tactic. To all straight-thinking people throughout the world, the Soviet proposal is a transparently phony scheme.

For the Communists have just completed their own series of tests, and they know that the United States is about to begin a new series of tests. Prime Minister Macmillan told the House of Commons last week that Great Britain now has specific evidence that not all nuclear tests can be detected by other governments. The Soviet Union, indeed, rejected the resolution overwhelmingly adopted last November by the United Nations General Assembly calling for a supervised ban on nuclear tests and the ending of the production of nuclear weapons, with controls. Khrushchev now says he favors international control of tests but avoids endorsement of the United Nations plan. What he really wants is his own kind of supervision.

Why, incidentally, was the offer made by the Soviet Union to ban only the tests of H-bombs? Why didn't Moscow announce a decision to accept proposals already made by Western governments to abandon completely the manufacture and use of nuclear weapons under an inspection system that would insure compliance? If testing is a crime against humanity, then the use of nuclear bombs hereafter would be an even worse tragedy for mankind.

Throughout the 8,000-word speech of Soviet Foreign Minister Gromyko, there is only one sentence about a possible abolition of the use of atomic bombs, and this is couched in the vaguest terms as an aim or hope. Yet every word uttered against nuclear tests could be applied even more effectively against the production and use of any nuclear weapons.

The argument of the naive in our midst is that the suspension of the tests will be a good beginning. After this—it is wishfully argued—may come other agreements. It is a familiar refrain. It has been heard every year since 1945. Yet after we engage in talks and conferences, we find out what we knew before—that the Communists break their pledges and will not accept anything but the unconditional surrender of the Western world. Once we agree to stop testing, and the agreement is subsequently broken by the Soviets, then—as the cliche goes—we will at least know where we stand. To put it more realistically, Khrushchev will be in a position to terrorize the Western nations and tell them where they will be buried.

Every one of the Soviet proposals, including the recent demand that American bases be abandoned and our troops be withdrawn from Western Europe, has a single military objective—to win domination for the Communists without firing a shot.

There are groups—here and abroad—who are tired of the fight for ideals. They want to appease the Communists—by accepting the present enslavement of the captive countries as irretrievable.

Why do not some of these same unwitting apologists for the cause of the Communists demand the suspension of a few other things besides the testing of H-bombs? Have they no interest in the fate of the Hungarian people and the peoples of the other captive countries who are being tortured every day, not by Soviet "tests" but by Soviet acts of brutality?

Under certain conditions, we would agree to suspend the use of nuclear weapons altogether, and we have indicated this position frequently in the past. But the Soviet Union first must establish the sound conditions that would warrant the taking of such steps by the free nations of the world today.

The Kremlin could, for example, liberate the peoples of Eastern Europe. It could give East Germany back to the German people. It could permit free elections in all the countries now held in bondage by the Moscow regime. It could by "unilateral" action lift the yoke of tryanny that has deprived hundreds of millions of people of their liberty and freedom.

Acts like these would truly be victories for mankind. But they will not come as a result of any decision by the conscienceless men in the Kremlin today. They will come only when the aroused peoples of Eastern Europe and Asia take concerted action and overthrow the dictatorships.

This is the truth that needs to be broadcast unceasingly. For there can be no compromise with evil. We must say again and again to all peoples everywhere that "the truth shall make you free."

Wobbly Props

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. WAINWRIGHT. Mr. Speaker, the editorial from the Rochester (N. Y.) Democrat Chronical set out below hits the nail on the head. It is brief and to the point. It is constructive. It makes good commonsense. Why not follow the suggestions in the last two sentences:

[From the Rochester (N. Y.) Democrat Chronicle of April 1, 1958]

WOBBLY PROPS

The President's veto of legislation freezing farm price supports and acreage allotments was expected. Any other action would have been admission that his objectives for farm readjustment were unsound.

A week ago the American Farm Bureau Federation, in urging a veto, said that freezing minimum support prices "in terms of dollars and cents regardless of the size of surpluses, thereby attempting to prevent needed adjustments in those farm commodities which are suffering from too much governmental interference, is against the interests of farmers."

Congressional action was touched off by Agriculture Secretary Benson's announcement that price supports for manufactured dairy products would be lowered April 1 from about 82 percent of parity to 75, the minimum permitted under the law. Benson's reason was that production has been increasing faster than consumption and that the Government was faced with the necessity of removing from the market increased amounts of dairy products in its support program.

The National Grange urged the President to approve the freeze "while we are afforded a limited time to develop and achieve action" on new farm program laws. This always has been the plea when any move was made to lower supports. Several years ago Benson continued dairy supports at 90 percent for another year to give the dairy industry opportunity to work out a program of its own. In the meantime Congress and the farm organizations have been unable to agree on farm program policies that gradually would ease the dependence of farmers upon the Government. Billions of dollars have been invested in support programs and still farmers are hampered by restrictions while huge surpluses overhang markets and undermine prices and support programs. The farm problem instead of approaching solution has remained a perennial headache.

If the farm program is bad it should be remembered that the present administration inherited the surpluses and allied problems. Flexible price supports are supposed to move up or down with supply, but each time they are flexed downward under operation of the law there have been violent protests and demands that the President fire Benson.

If the President had yielded to pressure groups, many would have been disappointed in him for deserting his principles. We suspect that the political wolves will be turned loose on Benson now, and we also believe that Benson is perfectly agreeable to sitting down with Congress or farm leaders in an attempt to work out a sound program that will be of lasting benefit to farmers and to the Nation. Maybe this is a good time to do just that.

Resolution Adopted by the Detroit Common Council

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mrs. GRIFFITHS. Mr. Speaker, the following resolutions were unanimously adopted by the Detroit Common Council. They are not only vitally important to the city of Detroit, but their enactment could do much to alleviate the unemployment situation:

Whereas this common council on January 28, 1958, adopted a resolution urging repeal of the Federal excise tax on automobiles; and

Whereas the city of Detroit, the automobile center of the world, is largely dependent upon the automobile industry; and

Whereas the unemployment situation has reached a critical state in this area: Now, therefore, be it

Resolved, That the Common Council of the City of Detroit reaffirms its previous action and again requests the repeal of the Federal statute imposing excise taxes on automobiles; and be it further

Resolved, That a copy of this resolution be forwarded to all of the United States Senators and to the Michigan Congressmen.

Whereas the unemployment situation in the Detroit area is becoming more critical, being now approximately 15 percent; and

Whereas a great number of the unemployed have exhausted their unemployment compensation and must, of necessity, seek welfare aid; and

Whereas the number of welfare recipients has increased greatly during the past few months, this unusual load creating a large deficit in the welfare fund; and

Whereas the extension of unemployment compensation benefits would be of material benefit to the city of Detroit and its citizens and greatly improve the financial position of the city: Now, therefore, be it

Resolved, That this common council hereby requests and urges the extension and increase of unemployment compensation benefits to relieve the unemployment situation and reduce the welfare burden; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the United States Senators and Michigan Representatives.

Whereas this common council on January 28, 1958, adopted a resolution presenting to the Honorable Dwight D. Eisenhower, President of the United States, the serious and critical unemployment situation existing in the Detroit area; and

Whereas unemployment in this area has risen seriously and critically since that time, and it is reported that unemployment has increased to approximately 15 percent: Now, therefore, be it

Resolved, That this increasingly critical situation be again presented to the President of the United States with the request that immediate and favorable consideration be given to alleviating the unemployment situation by any and all prompt and expeditious methods for such relief, including the allocation of Government and defense contracts and public-works contracts to industries in this area; and be it further

Resolved, That copies of this resolution be sent to the Members of Congress with the request that any necessary aid be provided in order to relieve this critical unemployment situation.

Tenth Anniversary of the World Health Organization

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. FOGARTY. Mr. Speaker, the World Health Organization is 10 years old this year. I would like to take this opportunity to remark on the progress this Organization has made in such a short time and what WHO means to every citizen of the United States.

The World Health Organization is one of the specialized agencies of the United Nations, a member of the family of nations devoted to promotion of world peace and happiness through united effort. It was my happy privilege to serve as one of the congressional advisers to the United States delegation to the World Health Assembly in Geneva last year. I was most impressed by what took place at that Assembly. Representatives of over 80 countries of the world—countries with different cultural, economic, and political backgrounds—met in a friendly forum to work toward one objective, the attainment of the highest possible level of health for all the peoples of the world. That is the stated objective of WHO.

It was also my privilege to invite WHO, on behalf of the United States delegation, to hold its 11th World Health Assembly in the United States. And I am happy to say that the action of the Congress in appropriating necessary funds makes it possible for the United States to be host to WHO on the occasion of its 10th anniversary.

The anniversary commemoration and the 11th World Health Assembly will be held in Minneapolis from May 26 to June 16. It is very fitting that this important milestone is to receive recognition in the country where the World Health Organization was born. Its constitution was drawn up by representatives of 61 nations meeting in New York in 1947, and 2 years later the required number of nations ratified the constitution, bringing WHO formally and legally into existence. WHO now has 87 member nations, one of the largest of the specialized agencies of the United Nations; in fact, WHO's membership exceeds by 6 that of the U. N. itself.

The meeting in Minneapolis will provide an excellent opportunity for important visitors from all over the world to see our country. Delegates to the World Health Assembly will come to Minnesota by way of the west coast, the east coast, and the Americas. En route to Minneapolis they will have a chance to observe the American way of life. The National Citizens Committee for the WHO, a nonprofit, nongovernmental organization, has arranged a number of tours for delegates after the Assembly adjourns, enabling them to observe virtually every facet of American life—our State and local governmental structures, our schools, health agencies, industries, agriculture, our recreation facilities, and our dams and water supplies. It will be perhaps the greatest opportunity this country has ever had to show other countries of the world our brand of democracy in action.

In 10 years, WHO has proved to be a truly international body promoting the cause of health for all mankind. The whole world benefits from WHO's efforts. Health needs are universal. Diseases observe no boundary. They respect no culture, creed, economic status, or political belief. Health problems must be solved on a global basis, through cooperative effort. That is what WHO helps to do.

The first World Health Assembly, held in 1948, set the stage for organized attacks against disease by establishing priorities for three chief offenders—malaria, tuberculosis, and venereal disease. Programs were developed to help nations improve health services for mothers and children, to provide more sanitary environmental conditions, and to improve nutrition. The list of the world's accomplishments in health, with important aid and guidance of WHO, is impressive. Fewer mothers die in childbirth, more babies live through their first year and start their second in vigorous, robust health. New or improved health centers throughout the world are providing basic health services for millions of men, women, and children. People of all ages, all over the world, are learning good health habits, and are becoming aware of the necessity for clean, sanitary environment. Through WHO, people throughout the world are understanding the need for cooperation in working toward a healthier community of healthier citizens.

WHO's record in fighting disease is outstanding. Millions of people have been freed from the curse of malaria by WHO-assisted control and eradication campaigns; in fact, malaria has been eradicated from 9 countries and from large areas of 7 other countries through programs stimulated and coordinated by WHO. Under the aegis of WHO and the United Nations Children's Fund—UNICEF—millions of people have been examined and vaccinated through mass campaigns against tuberculosis. Other millions have been treated in mass attacks against yaws, trachoma, leprosy, and other deadly and disabling diseases. Through WHO-assisted programs, previously incapacitated millions are returning to work, cured of the diseases which had kept them from contributing to their country's national production.

Although we in the United States do not suffer some of the devastating illnesses which plague populations in other parts of the world, we nevertheless stand to gain from a strong and vigorous international health organization which is working to eliminate disease and raise the standard of living the world over.

WHO benefits every citizen of the United States, in many ways.

From an economic standpoint, we have a major stake in a healthy world. Our country has billions of dollars of investments, private and governmental, throughout the world. American industry has expanded in many parts of the world, and many Americans are living and working abroad. Improving the level of health in the countries in which we have investments is definitely to our advantage.

The stability of our own economy depends in large measure on our trade with other nations. We have better markets for our products where widespread disease does not depress the national economy. By the same token, we must pay more for products and materials we import if the economy of the exporting country is weakened by disease, ill health and a low standard of living.

Improved health conditions throughout the world are to the personal advantage of every American traveling or living abroad. Poor nutrition, poor sanitation, and inadequate, unsafe water

UNIVERSITY OF MICHIGAN LIBRARIES

supplies have brought distress to many Americans across the seas. More healthful foreign travel is but one of the benefits which United States citizens reap from WHO's activities.

There are still other examples of WHO programs which protect United States citizens in one way or another. One is the worldwide quarantine practices established by WHO to help assure that disease does not spread from one country to another. "Quarantine" in this sense does not mean "isolation" of travelers and merchandise, as it once did. Modern quarantine measures include a variety of international travel procedures which are designed to expedite and protect, rather than hinder, international travel and commerce.

International reporting of diseases is another WHO activity which benefits us. A worldwide communications network, established by WHO 10 years ago, makes it possible to control epidemics. Through this network, outbreaks of quarantinable diseases anywhere in the world are broadcast to WHO headquarters in Geneva. The news is then broadcast to health authorities throughout the world, to ships at sea, to airports, and to seaports, enabling health authorities to apply appropriate measures to prevent the spread of contagious diseases. The importance of such medical intelligence becomes obvious when one realizes that international air travel today makes it possible to transplant communicable diseases from an infected to a noninfected area within a matter of hours.

We were all concerned with the recent Asian influenza epidemic. But I doubt that many of us know about the role WHO played in saving us from another 1918–19 disaster.

Through its influenza study program, WHO keeps a constant worldwide watch on the appearance and spread of influenza. Over 100 laboratories cooperate with two international influenza centers, one in London and one in Montgomery, Ala.—the latter operated for WHO by the United States Public Health Service—to maintain this eternal vigil. Cooperating laboratories in Far East countries first affected by the epidemic identified the virus strains responsible for the outbreaks and reported the information to the influenza centers. Thus it was possible to determine the type of vaccine to combat the causative virus so that the United States and other countries could manufacture protective vaccines in time to prevent a serious epidemic.

WHO has a poliomyelitis program similar to the influenza program. Six outstanding laboratories, designated by WHO as regional poliomyelitis laboratories, together with other cooperating laboratories throughout the world, collect, identify, and exchange strains of polio virus, exchange information on the prevalence of polio, determine the immunity of populations, and constantly seek more effective ways of protecting populations of the world from this crippling disease.

Although WHO has been primarily concerned with fighting diseases which have plagued mankind for centuries and in helping governments set up or improve national and local health services, it has responsibilities in newer fields. One field in which WHO is active is the peaceful uses of atomic energy.

Our health and medical professions have found the new radioactive materials to be powerful weapons in the diagnosis and treatment of disease. But these materials must be used correctly, and certain precautions must be taken to assure proper dosages and to protect workers in the plants that produce them. Medical and public health workers must be trained to meet the demands for protecting the public against radiation hazards. WHO has recognized its responsibilities in the new field in a number of ways.

WHO is already working with other international organizations in the distribution of radiation codes. It also is preparing to facilitate training of health workers to cope with problems associated with the use of the new radioactive materials; recommend specifications for preparation of radioisotopes throughout the world; and stimulate and coordinate research on the health aspects of radiation. Thus WHO is concerned not only with promoting health by fighting the old and known diseases, but by utilizing new discoveries to improve the health of mankind the world over.

I think you will all agree that every American has a big stake in a strong and growing World Health Organization. There is no question as to the value of our investment in WHO. The United States share of WHO's current budget is in the vicinity of $4 million. Where else can we get so much in return for such a small investment? I would urge the Congress to take every opportunity in the future to bolster this very important international body.

The value of the WHO as a contribution to world peace is unquestioned. The specialized agencies of the United Nations are promoting world peace in many ways. WHO, undoubtedly the most successful of the U. N. group, promotes the conditions of life which are conducive to peace: good health and a better standard of living. And good health means more than mere freedom from disease. WHO has helped people in all corners of the world gain self-respect, self-reliance, and freedom from a life where sickness and ill health were considered to be the normal state of existence. These are the tenets of world peace. WHO represents a changed concept of health—the realization that good health is every man's right and is potentially within everyone's reach if we work together for it.

Mr. Speaker, under leave to extend my remarks, I include an editorial from the Providence Evening Bulletin of April 8, 1958. This article graphically sets forth many of the accomplishments of WHO over the past 10 years and pays deserved tribute to its record of achievement. I urge all my colleagues to read it.

The article follows:

TEN YEARS OF HELPING MANKIND

The World Health Organization observed its 10th birthday yesterday, but the event marks a triumph of humanity rather than just an anniversary.

In one short decade, WHO has become one of the most dramatically successful agencies of the United Nations, having saved literally millions of lives and spared countless other millions from the combined human and economic ravages of disease.

Indeed, as much as any other single force, WHO and allied international undertakings coordinated through WHO are changing the world health situation in an inspiring and challenging demonstration of what man can do for man when he wills it.

Although this year's budget of $13,500,000 is the agency's highest outlay to date—and a modest sum it is compared to the price of only one potentially death-dealing missile or jet bomber—WHO already has made deep inroads against familiar world scourges which afflict and debilitate areas containing about three-quarters of this earth's population.

For instance, 10 years ago malaria attacked 300 million and killed 3 million persons annually. Now, it is estimated, malaria may be eradicated by 1965. Only a few years ago, cholera killed 20,500 people each year in Egypt. It is virtually a memory now. In Haiti, 80 percent of the population was oppressed by yaws. The disease, too, has largely been whipped there.

Similarly, the public-health training programs set up by WHO have given primitive peoples the beginning of a knowledge of sanitation and cut infant mortality by more than half in many areas.

WHO also has helped to modernize and win acceptance for international standards for such things as quarantine, drugs, and health statistics. Now WHO is looking ahead to meeting the problems of radioactive poisoning.

This is a record the United States can be proud of, having contributed annually one-third of the World Health Organization's funds.

Unfortunately, WHO's decade of achievement has been overlooked too often in the United States. If its activities are noted, the comment too often involves a criticism of this country's share of the load.

Yet, public health is one area where the community of interest should make a reality of Wendell Willkie's fond dream of "One World." Disease never has respected national boundaries or ideological loyalties, although the oceans once provided insulation of sorts. But with air transport increasing both the speed and volume of travel, nations such as the United States again become vulnerable to diseases once thought eliminated, unless those ailments are licked around the world. A case in point is the frenzy of inoculation that seized New York City in 1947, at a cost of millions of dollars, when an air traveler carried a case of smallpox to that city from Mexico.

The cushion of time the United States had to prepare for the Asian flu invasion is another product of the organization's reporting system and a dividend that Americans receive for their contributions to WHO's humanitarian work. Is further reason needed to wish the World Health Organization 10 times the success and longevity of its first 10 years of activity?

National Jewish Board Provides a Real Service

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. HILLINGS. Mr. Speaker, it is with considerable pleasure that we wel-

come the National Jewish Welfare Board to our Nation's Capital for its biennial convention.

The work of this fine organization and its affiliates represents a valuable service to our country in war and in peace.

A brief but excellent outline of the National Jewish Welfare Board's service over the last 40 years was given in an editorial appearing in the April 15 issue of the Washington Evening Star, which follows:

As the National Jewish Welfare Board prepares to open its biennial convention here this week, it is appropriate to review the war-born organization's 40 years of service to men and women in and out of military uniform. The board came into existence in World War I to provide religious and welfare aid to Jewish men of the AEF in France. From that small but important beginning the board's program has spread around the world and into nonmilitary fields of assistance and guidance to young and and old. It has been a powerful and effective builder of good character and good citizenship.

A few years after the First World War the board was merged with the controlling body of the YMHAs. It now has affiliated with it 338 Jewish Community Centers and YM–YWHAs having an aggregate membership of more than half a million men, women, and children. It was a founder and is still an active member of the United Services Organizations which did so much to keep up the morale of fighting men in World War II and in the Korean war and which has continued to bring cheer and entertainment to our servicemen and women in far parts of the globe. A special phase of the board's service to the Armed Forces is the recruiting of chaplains from among the Nation's rabbis. And in this age of new methods of warfare, the board is extending its missions to cover DEW line radar installations in remote outposts. All of these activities constitute a valuable contribution to the betterment of the military services and of community life in general.

Highway Safety Campaign

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. FOGARTY. Mr. Speaker, we are all very much pleased when we read or hear that some group has taken action in the direction of helping to bring about an improvement in the traffic-safety situation. In this regard, I was particularly happy to learn that district 42, Lions International, a group which has done so much to promote safety on the highways of Rhode Island, has designated Sunday, April 27, as Lions Safety Day.

Highway safety is without doubt one of the most serious domestic problems that faces the Nation today. We are agreed that improved highways do not solve the problem by themselves. There are many other causes, most of them touching on the human factor and many of them of the type which can be eliminated or reduced by an intelligent campaign of education.

The Lions Clubs of Rhode Island have recognized this situation and are conducting a specialized highway safety campaign with the purpose in mind of doing their utmost to reduce highway deaths in our State. For this they deserve the highest commendation and I personally extend to all their members my deep appreciation for their efforts. Should the results of these efforts save the life of only one person on the highways of Rhode Island the campaign will be, in my opinion, a tremendous success.

Mr. Speaker, under leave to extend my remarks I would like to include in the CONGRESSIONAL RECORD the resolution approved by the General Assembly of the State of Rhode Island complimenting district 42, Lions International, for its timely highway safety campaign.

The resolution follows:

ENDORSING THE SPECIALIZED RHODE ISLAND HIGHWAY SAFETY CAMPAIGN SPONSORED BY DISTRICT 42, LIONS INTERNATIONAL

Whereas to reach as many motorists as possible, with the safety message and slogan of district 42, Lions International, in a specialized Rhode Island highway safety campaign with the purpose in mind of doing the utmost to reduce highway deaths in Rhode Island, this organization has set aside Sunday, April 27th, 1958, which has been designated as Lions Safety Day; and

Whereas their slogan, "Drive with care, for all lives we must spare," selected from several hundred others submited by members of Lions Clubs throughout the State, in a highway safety slogan contest, was awarded a United States Savings bond to the writer thereof; and

Whereas members of the 32 Lions Clubs of Rhode Island, in cooperation with his excellency, the Governor, the registry of motor vehicles, the Rhode Island State police, and the police of the various towns and cities are working through many channels to make our people highway safety conscious; Now, therefore, be it

Resolved, That the members of the general assembly now compliment district 42, Lions International, for this timely Rhode Island highway safety campaign, cognizant of the appalling loss of life on our highways, in the hope that necessary and official impetus will be given this program, since the Lions of Rhode Island is the first civic or service group to sponsor a highway safety campaign on a state-wide level; and be it further

Resolved, That a duly certified copy of this resolution be transmitted by the secretary of state to district 42, Lions International, for this exemplary endeavor to save lives on our highways in this State.

Israel's 10th Anniversary

EXTENSION OF REMARKS
OF
HON. JAMES C. HEALEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. HEALEY. Mr. Speaker, I am glad to join my fellow Americans in commemorating the 10th anniversary of the country of Israel. I salute the people of this little democratic country for their remarkable spirit and progress. Against tremendous odds, they have gone forth in 10 years to achieve great and admirable objectives. Israel's open doors have provided a place of refuge and freedom for many homeless thousands—survivors of concentration camps, the displaced of Europe, immigrants from north Africa, Asia, Jewish refugees from Arab countries, from Hungary and other Iron Curtain countries. Already poverty stricken, she has continued to receive destitute immigrants. Her economic problems have been further complicated by the refusal of her Arab neighbors to establish peaceful relations.

In spite of these tremendous problems, and with a population which has almost tripled in 10 years, Israel's achievements have been prodigious in industry, commerce, agriculture, education, health, medicine, science, and culture.

I am sure that American friendship and aid have been a vital source of strength to the people of Israel during this first decade. We will continue to admire the courage of the Israeli people as they go forth into a second decade, still faced with hardship and hazards. We wish them well as they continue to work and strive unceasingly for a life of dignity and freedom, for survival and ultimate peace.

Horror Stories

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Washington Post, Washington, D. C., on Sunday, April 6, 1958, entitled "Horror Stories":

HORROR STORIES

Is it possible that any Government program was ever subjected to a more sustained barrage of misrepresentation than the mutual security program? We doubt it. Through half-truths, innuendo, outright falsehoods and other devices, American foreign aid has been smeared by its opponents so badly that many of the answers to the wild and reckless charges will never overtake them. The International Cooperation Administration and the House Committee on Foreign Affairs have been laboring manfully to set the record straight, and this no doubt will help. But the answers must perforce be many times longer than the accusations, and the program's detractors in any case rush madly on ahead.

For example, among the assorted horror stories are charges that (a) foreign aid replaces private investment "and that is why our foreign trade is declining"; (b) we have built airfields in Afghanistan where most travel is still by camel; (c) we have provided dress suits for Grecian undertakers and public baths for Egyptian camel drivers; (d) we have built highways to serve a Portuguese gambling resort, constructed an Italian village that no one will live in and sent 150,000 collapsible toothpaste tubes to Cambodia.

Well. Our foreign trade, in the time since overseas aid began on a large scale with the Marshall plan, has greatly increased. Af-

UNIVERSITY OF MICHIGAN LIBRARIES

ghanistan needs air connections with the outside world and for domestic transport—as do many Latin American countries with similar undeveloped local transport—if its economic status ever is to be improved. No civilian clothing has been furnished to Greece. The public baths are part of a public health demonstration program in Egypt which, of course, camel drivers and others are free to use. The story about the highway in Portugal originated with a taxi driver and was confirmed by a hotelkeeper, but the ICA records show no such project financed with American aid.

The Italian village project was designed to improve the lot of a primitive group still living in caves, and there is no evidence that the village is not inhabited as charged. Cambodia did buy $6 worth of collapsible toothpaste tubes in 1955 with its own money, but the United States has provided none whatever. And so it goes, on and on, ad nauseum.

There have been some mistakes, to be sure, but none so great as the mistake this country would make if it turned it back on the economic needs of its allies and of the world's vast underdeveloped regions. Let such a course be pursued for half as long as economic aid has been provided, and the likely results in diminished free world security and in enhancement of the Communist-bloc position in world affairs would furnish a real horror story.

A Great Snow Job

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mr. ULLMAN. Mr. Speaker, if there is any doubt as to the reaction of the small farmer to the President's veto of legislation which would have maintained price supports at 1957 levels, I think a recent editorial appearing in the East Oregonian, of Pendleton, Oreg., will clarify the situation.

I highly recommend A Great Snow Job to my colleagues and under leave to extend my remarks I include the editorial, as follows:

A GREAT SNOW JOB

President Eisenhower's veto of legislation than would have maintained price supports on some agricultural produce at 1957 levels is, according to Mr. Eisenhower, Secretary of Agriculture Benson, and others, going to be good for the farmer. The school of thought to which these people subscribe holds firmly to the belief that the farmer would be better off if he had no guarantee of a fair return on his investment. Subsidies are destroying the moral fiber of farmers, these people tell us. The farmer won't be a strong, upright, 100-percent American until he is cast adrift and is required to accept whatever the market will pay for his crops, whether or not the market offers sufficient return for the farmer to stay in business.

The net income of farmers has been declining since 1951. The inevitable result of this has been to drive thousands of people from farming to the seeking of jobs in industry. The exodus from farm to city continues with no foreseeable signs of a halt.

The fuzzy-brained economists who think a recession is good for this Nation think it is also good to reduce the numbers of people in agriculture. According to their thinking, it is good for a few million people to have to subsist on unemployment insurance for a while and on welfare payments for a while longer. And it is good for the man who has been in farming all of his life to turn his back on it and look for a job in the city. If the job in the city isn't there for him that's still all right.

We do not know to what extent President Eisenhower subscribes to this theory of economics. But it is evident that he accepts a part of it. During a period of recession he considers it unimportant to give any special consideration to that segment of the economy that produces its food and fibre, agriculture. He and Mr. Benson think it's better to contine the process of putting the farmer through the wringer than to try to improve his economic condition. That the President does not prescribe the same treatment for other segments of the economy does not, apparently, seem strange to anybody but the farmer and some of his friends.

Senators and Representatives from those States whose economies are based on agriculture have protested what Mr. Eisenhower and Mr. Benson seem determined to do to the farmer. They protest, it is said by people who have no understanding of the problems of the farmer, because they fear that they will not be reelected. These uninformed people have not, as near as we know, at any time conceded that the protests of those Senators and Representatives are the protests of the farmers they represent. The farmers are protesting because their net income is constantly declining and the Secretary of Agriculture refuses to treat the situation as the emergency they believe it to be.

Mr. Eisenhower's veto will not be overridden. It won't because Secretary Benson has performed one of the greatest "snow jobs" ever turned in by a Secretary of Agriculture. His pitch has been made exclusively to the consumer. He has said that he wants to hammer down price supports, he wants to "free" the farmer from Government bondage, so that the consumer can get food at lower prices and so that the taxpayer will have to pay less for farm subsidies. This man who repeatedly tells us that he does everything on the basis of principle knows very well that he has misrepresented the case of agriculture. His program has cost the taxpayer more annually than the farm program ever cost under his predecessors. It has worsened the economic condition of the farmer and retail food prices have continuously gone up. Mr. Benson knows that reducing subsidies will not reduce the price of food to the consumer. It will only reduce the income of the farmer, and he knows it.

Mr. Eisenhower calls this courage and honesty. It is neither. A program that has been designed from the beginning to place the consumer in opposition to the farmer has not been an honest program. And courage is not the correct word to describe the performance of a Cabinet member who disregards his responsibility to that segment of the economy whose welfare is the primary concern of his office.

We've had more than enough of a diet of editorials and magazine articles written by men who argue that the farmer isn't really being hurt, that he just thinks he is. And we've had enough of a Secretary of Agriculture who provides support for such nonsense.

The Late Royal C. Stout and the Stage

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of April 3, 1958, which comments on the passing of Mr. Royal C. Stout, who was well known in the theatrical world:

MR. STOUT AND THE STAGE

Probably no other resident of Wyoming Valley ever gave as much time to the theater as Royal C. Stout, for whom the final curtain was rung down as he slept. He left Wilkes-Barre with a stock company as a young man and never thereafter left the stage, to which he gave more than 60 years.

From the one-night stands of his early career, he rose to success on Broadway and in Europe and then created his own theater at Nuangola, where for more than 20 years he presented Broadway casts in summer stock.

With him when he entered upon his long theatrical career, in which he gained vast knowledge and experience of all facets of the theater, and with him when his career and his life were at an end, was his wife, Ellenor Kennedy, whom he married while she was in Wilkes-Barre as a member of her father's stock company.

It is not supposed that the tragic fire of January 13 which destroyed their home at Nuangola, that he had built with his own hands, and in which he was severely burned, had anything to do with Mr. Stout's death. He had made a remarkable recovery and on March 22 celebrated his 84th birthday at a family dinner. A severe cold which he suffered in recent days probably contributed greatly to his death.

Those who love the theater may well pay tribute to one who gave a lifetime to it and may well mourn with his wife, whose career matched his.

The Great Need for a National Coal Research and Development Commission

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. FULTON. Mr. Speaker, I strongly urge the creation of a National Coal Research and Development Commission, and have introduced H. R. 11802 for this purpose.

The coal industry is in a desperate condition both in my district and nationally. In spite of increased output per miner per day, increased mechanization, and the increased size of mine companies generally, the coal industry has been suffering heavily from unemployment, low earnings, and lack of a synchronized, concentrated research program.

Our annual United States coal production has been at about the same level in recent years but this has been accomplished by fewer mines and less miners. Although the small companies are hit the hardest—the industry as a whole does not have enough know-how and has too limited funds for more adequate research, development, mechanization and improved marketing methods.

Such funds for research should be managed so that maximum results are achieved under proper coordination with findings available to all. The proposed commission is a step in this direction. Substantial unemployment in coal mines

exists in Alabama, Illinois, Indiana, Kansas, Kentucky, Pennsylvania, Tennessee, Virginia, and West Virginia. The cost of unemployment hits heavily not only at coal miners and other employees of coal companies but also exacts a cost in unemployment insurance to the taxpayers who would like to see something done to help the industry help itself, the taxpayer and the consumer. Coordinated research can help an industry get back on its feet.

Coal is of great importance to our present and future United States economy. It exists in coal-bearing rocks in 35 States. At present rates of consumption the United States coal reserves are estimated to be adequate for more than 1,900 years. In contrast, our reserves of petroleum, natural gas and uranium are estimated to be much less limited than coal. Coal is the richest and most valuable mineral deposit in the world, and we in America and Pennsylvania are richly blessed with this resource.

Chemists and scientists know that, in addition to its fuel values, coal has great potentials for chemicals, minerals, plastics, roadbuilding materials, alcohols, gasolines, and many other byproducts. Not nearly enough is known about the origin, composition, properties and chemical behavior of coal, or about its possible new uses or improved methods of its production and marketing.

Research on coal to date has been too small in scope and uncoordinated in planning and execution from an industry level, although the United States Bureau of Mines and many companies are to be complimented for the great progress and real advances in safety and methods that are in evidence today. Increased research and sharing of knowledge for the whole industry is needed.

The proposed Commission would stimulate research by private industries and Government organizations, and make all of its hearings and findings public, available to all companies, large and small.

The Commission would consist of a few members experienced in industrial-type research who would be appointed by the President. It could hire additional research and technical staff. Although it would be an independent Commission, it would report to and be responsible to Congress. The Commission would be for the benefit of the total industry and the Nation, cooperating with private firms, educational and research organizations and Government agencies to further the production, preparation, distribution, and utilization of coal in all aspects.

Qualifications for membership on the Commission's advisory committees assure its being representative of types of coal mined, of types of coal machinery, utilities, railroads, management and labor, consumers, distributors, and research organizations. Provisions are such as to preclude stacking the committee with special interest from one or interlocking companies.

I am particularly glad that the Commission's findings are to be open to the whole industry and to help provide opportunities for independent and small coal producers.

The proposed research program of the Commission is worthwhile. It provides for investigation and reports about: First, improvement and expansion of present uses for coal; second, new and more effective uses; third, reduction in cost and distribution; and fourth, emphasis on development of particular value to small producers.

Clearly more research and better research, the results of which will be available throughout the industry, is the great need of the coal industry today. The proposed Commission is a real start toward stimulating and greatly expanding this kind of research for the greater benefit to mankind and our depressed areas in the coal-producing areas of the United States, particularly.

Cancer Cure?

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 25, 1958

Mr. MINSHALL. Mr. Speaker, evidence that human cancer may represent a virus infection which can eventually be defeated by the right vaccine was recently given in Philadelphia before the American Association of Cancer Research by Dr. Sergio DeCarvalho, of Cleveland, Ohio. Dr. DeCarvalho is the director of cancer research of the Rand Development Corp., of Cleveland, of which J. H. Rand, of Cleveland, is president.

The Rand Development Corp. has done much research into the causes of cancer, and this recent pronouncement by Dr. DeCarvalho could well be a start in the right direction in the battle against this virulent killer of mankind.

An interesting and appropriate editorial appeared recently in the Cleveland Plain Dealer, which I thought would be of interest to my colleagues. The editorial follows:

HAS A START BEEN MADE AGAINST CANCER?

One of the most interesting stories of the recent past for many readers, we suspect, was the cancer agent discovery of a Cleveland doctor reported yesterday by the Plain Dealer's, Josephine Robertson.

In Philadelphia for a meeting of the American Association of Cancer Research, she outlined the breathtaking research by Dr. Sergio DeCarvalho and others for the Rand Development Corp., of Cleveland. That research indicates that these cancer agents or viruses had been isolated from various types of human cancer, the first report that this had been done.

The great interest displayed in Dr. DeCarvalho's account at the meeting showed that the medical and research experts present felt that the work done here may be a major breakthrough, a possible road down which new discoveries leading to cancer vaccines may be beckoning.

As far as laymen can tell, we may begin to hope that cancer research is approaching the same point where polio investigation was when Cleveland's Dr. Robbins and Dr. Enders of Harvard made their virus breakthrough, which was followed by the Salk vaccine.

But we must caution ourselves not to be overoptimistic; there is much work to be done, very costly work, and there will be many persons still dying of cancer until it is completed, and beyond.

On the subject of the costly work to be done, it's worth pondering that the Rand lab, a private and commercial organization, has spent more than $250,000 for its investigations. Its generous publication of Dr. DeCarvalho's findings—for which it deserves a deep bow—means that someone else, checking, seeking, and finding, may capitalize later on a vaccine discovery.

The Rand Development Corp. has had its request for a grant for cancer research before the National Institutes of Health, without action. That request should be given fullest consideration. The fact that the Cleveland laboratory is a private research agency certainly should not be held against it, and its current discovery should speak loudly in its behalf.

Hope for cancer vaccine is certainly brightening, but it needs to be repeated constantly, during Cancer Week and every week, that medical science now can do a great deal in preventing much suffering and saving many lives through early discovery of cancer—through regular trips to physicians and an immediate visit in the event there is any reason for suspicion of the disease.

Certainly it is folly for anyone in the early stages of the insidious killer to wait for vaccine cure, when present techniques may save him.

Greek to Us, Too

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. KILBURN. Mr. Speaker, I include herewith an editorial from the Washington Evening Star of April 15, 1958, regarding Mr. Truman's testimony before our Banking and Currency Committee:

GREEK TO US, TOO

Mr. Truman was in good and engaging form when he appeared before a House Banking Subcommittee to diagnose the recession and prescribe its cure.

The Truman cure consists of two things: (1) A $5 billion tax cut for low and middle income families, and (2) a big boost in public spending. If this is a formula for more inflation, the former President is quite willing to let someone else make the best of it. Inflation "somewhere down the road in the future" doesn't worry him.

When a subcommittee member asked whether Mr. Truman's public works program might not mean a cut in the purchasing power of the dollar, the reply was that such matters "are Greek to me." Mr. Truman is willing to take rag money, hard money or any other kind of money, and he recalled the sad case of an unidentified Senator who went crazy trying to analyze the dollar. Obviously, the former President does not intend to follow in the footsetps of this Senator. He is not going to worry himself into a straitjacket.

Fortunately for Mr. Truman, he can get away with this. He doesn't have to bother about details such as inflation, nor assume any responsibility for what may happen. Unfortunately, the men who must make the decision must also be ready to take responsibility for it. They cannot breezily say, as

UNIVERSITY OF MICHIGAN LIBRARIES

does Mr. Truman, that talk about inflation growing out of his recommendations is "nonsense"—that to worry about this requires a defeatist choice between inflation and recession.

The wise choice lies somewhere in between. The tax cut and the spending urged by Mr. Truman might cure the recession. But they probably would also set in motion another inflationary spiral which would cut even deeper into the already depreciated purchasing power of the dollar. If this prospect does not worry Mr. Truman, it does worry many millions of his fellow citizens who must live on fixed incomes or who, for other reasons, cannot keep pace with a booming inflation. They have a right to expect that the Government will take at least one more careful look at the economic picture before embracing Mr. Truman's spend-more-and-tax-less philosophy.

Toward the Summit: Allies Whittle Dulles' Stand

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of an article by Chalmers M. Roberts which appeared in the April 15, 1958, issue of the Washington Post entitled "Toward the Summit":

Nothing demonstrates better than the current allied discussions in Paris how Secretary of State John Foster Dulles is slowly being pushed toward the summit conference table. President Eisenhower will be the chief American figure at the summit, of course. But it is Dulles who dominates American policy.

The point today is that Dulles is losing his grip on allied policy. And the allies are whittling away at Dulles' own firm position while Nikita Khrushchev stands almost immobile.

Of course, it may turn out in the end that all these months of presummit jockeying amounted to little. Dulles, however, contends that in dealing with the Russians the West must fight for every word and comma from the phrasing of the agenda on down. The record generally supports him on that score, too.

But what is happening now is this: all the western statesmen, from the President and Dulles to the lowest ranking NATO Foreign Minister, are resigned to an East-West summit meeting. Why? Because they think the world public wants the statesmen to meet in hopes of reaching some accord which would lessen or end the arms race and prevent a nuclear Armageddon.

That view has been plugged to a "fare thee well" by the Kremlin. And Khrushchev apparently figures that, if he just sits tight, the allies will wear down the American Secretary of State and force him to accept Soviet terms, or a compromise close to those terms, for the meeting.

In his Moscow speech on returning from Hungary last Friday, Khrushchev told some 15,000 Russians that "we must neither hurry nor must we intimidate ourselves, for this is possibly what they (the West) are counting on." And "if we show persistence," the "people will continue to press increasingly on their governments."

Then, in what was a rambling, disjointed speech, Khrushchev gave a clue as to why he wants a meeting. He said Russia did not want war, adding:

"Why should we wage war? To wage war means to kill people, you understand, so why? What can we gain by it? Ruin, because we shall destroy and kill—and in our country they will destroy and kill. We have now other means to fight the class enemy, my dears. And in this, victory to us is insured. To raise our economy, to raise labor productivity, to produce more per human being, so that soon, gentlemen, you understand, the time will come, you, Americans, and we shall, as the saying goes, give them good old Russian hell."

Then he went on to promise the Muscovites that Russia will soon pass America in economic output and "we will then see who eats the most and who has most clothes." Khrushchev ridiculed the West for trying "to frighten people" with the words "Communists" and "communism" and by pointing to the Soviet Union. Swept up by his own oratory, perhaps by his newly enhanced power, he concluded this way:

"When the time comes, my dears, we will throw open the doors, come all of you, and they will then understand that this is communism, that this is Soviet rule. 'What asses we have been,' they will think, 'that we did not know this sooner.' And this is just what we want. And this is exactly what we want."

Thus it appears that the summit meeting is looked upon in Moscow as a means of lowering world tensions and thus making less hazardous the accident of war. Maybe Khrushchev wants only the summit's inescapable atmospherics of peace; maybe he wants a meaningful arms limitation agreement. Only a summit meeting will tell for he will not bargain at a lower level, especially not with Dulles.

But one should look at all the other things Khrushchev has been talking about in the economic field, such as the remarks cited here, to see why he wants a summit, whichever kind it is. He is talking frankly and publicly about the meaning of nuclear war to Russia. And, as the alternative if there is peace, he is promising far, far more to the Soviet consumer than did Georgi Malenkov, the so-called Soviet liberal who wanted to do more for the Russian public only to be purged from the Kremlin.

Khrushchev has even begun to talk a bit at home about the Soviet version of foreign aid despite reports of grumbling over shipment abroad of things needed at home. Speaking of Hungary last week, he said that Russia must "render assistance to our brotherly Socialist Republics" so that the Communist camp will be stronger. "Then our affairs will be even more stable," he concluded.

In the face of all this sort of talk it is not surprising that many in the West want the summit and are impatient at what they consider Dulles' haggling over preparatory work. And so in the latest western answer, fashioned yesterday in Paris, Dulles is impelled a step closer to the East-West dialogue.

Let's Save the Guard

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. EDMONDSON. Mr. Speaker, Army authorities have now made it clear that they intend to abolish at least 6 of the 27 National Guard divisions in the United States, as a so-called economy move.

When we consider the fact that these divisions render a great and continuing service to their communities and their States, while standing ready to defend our country at only a fraction of the cost of a regular division, it is hard to understand the economy in this proposal.

Personally, I hope the President will carefully review this decision in the light of State and community needs and wishes, as well as from a defense standpoint. When he does—and if he does—I feel certain he will change the signals on this new move for economy.

In Oklahoma, the people are rallying strongly in support of our State's famous 45th Division, and nothing would do more to destroy Oklahoma's faith in the military judgment of Washington than the abolition of this great fighting unit.

Some of the reasons for this Oklahoma attitude are summed up in the Associated Press article which follows, as it appeared in the Tulsa Daily World of April 13, 1958:

FORTY-FIFTH, FIGHTING FOR LIFE, HAS ILLUSTRIOUS HISTORY

For the first time in its long and colorful history, Oklahoma's National Guard, a veteran of five wars, is fighting for peacetime survival.

The Army plans to abolish 6 National Guard divisions. Because of low enlistment, it's feared the 45th Division will be one of them.

The number of men now wearing the famed Thunderbird patch is only a little more than 7,000. The division is authorized more than twice that many. These part-time soldiers train with 114 National Guard units at armories in 78 cities in the State, and for that training the Federal Government signs a payroll of $3,800,000 annually, according to the State Adjutant General, Roy W. Kenny.

FORMED IN 1895

The original Oklahoma National Guards were likewise few in number and they organized for self-protection. After the talk of a territorial legislative assembly in 1895, groups of militiamen, volunteers, and Indian scouts banded together against lawless white men and warlike Indians. The Territory supplied a troop of Rough Riders and four infantry companies for the Spanish-American War. These veteranss returned to organize the First Infantry Regiment, Oklahoma National Guard.

When the Mexican war broke out, the President ordered the guard into Federal service in 1916. After that war, the guards were home less than a month before they again were called, this time to fight in World War I.

Following the armistice, Oklahoma won authorization of two infantry regiments. The National Defense Act of 1920 authorized the formation of the 45th Infantry Division for the area covered by Oklahoma, Colorado, New Mexico, and Arizona.

AMONG THE GREATEST

For 20 years the organization grew, the Guards attending weekly armory drills and annual summer encampment. Occasionally they were called to duty at time of disasters.

On August 31, 1940, the 45th was called into active duty for 12 months, but before long it was plain the division was slated to take part in the second great world war. The division trained intensively for 3 years before embarking for north Africa in March 1943.

The European campaigns of the Thunderbird Division went down in America's military history among the greatest. The invasions of Sicily, Italy, with its bloody Anzio beachhead, southern France and eventually

the Rhineland took the 45th through 511 days of combat.

It was the 45th's performance in these campaigns that led George S. Patton, the famed blood-and-guts general, to say of the division: "Born at sea, baptized in blood, your fame shall never die. Your division is one of the best if not the best division in the history of American arms."

The late Lt. Gen. Raymond S. McClain was active in reactivating the division after World War II. In the summer of 1950, the division was alerted again, along with four other National Guard divisions. After training at Camp Polk, La., the division shipped to Japan in March 1951 and made its first foreign peaceful landing on the northernmost island of Hokkaido, surrounded on three sides by Soviet territory. Throughout the spring and summer, the Thunderbirds trained and late in November the division was ordered to Korea, where again they engaged in combat.

Commander of the division during the Korean hostilities was Maj. Gen. James C. Styron, a West Point graduate, now retired and engaged in the cotton business at Hobart. The present commander is Maj. Gen. Hal L. Muldrow, a Norman insurance man.

The assistant division commander, Brig. Gen. Frederick A. Daugherty, is a district judge at Oklahoma City.

Politics and the Recession

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. KILBURN. Mr. Speaker, I include herewith an article by David Lawrence appearing in the Washington Evening Star of April 15, 1958:

POLITICS AND THE RECESSION—REVIVAL OF DEMOCRATS' TACTICS OF THIRTIES SEEN IN TAKING OF TRUMAN TESTIMONY

The Democrats apparently have decided to make political capital out of the recession. They are putting on hearings which are more concerned with making political propaganda than with helping to put America's economic house in order.

The spectacle of taking testimony from Harry Truman, whose administration has been accused of gross indifference to unemployment in the 1949 recession, is a kind of political circus which awakens memories of similar tactics in the 1930's.

For the people of the United States are again paying the penalty today of a divided government. With the Democrats in control of the House from December 1930 through February 1933, the political warfare against the Republican President in the White House grew so intense that the latter once remarked it was tragic to find his opponents preferring to play politics with human misery.

For almost 4 years now the Democratic Party has had the major responsibility in Congress, while the White House has been occupied by a Republican President. When recessions come and national unity is so essential to economic recovery, why is it so important for the partisans to play politics?

Thus President Eisenhower has just pleaded with Congress to pass legislation, which he recommended on March 25 of this year, to provide a temporary continuation of unemployment compensation benefits for workers who have exhausted their benefits under State and Federal laws. The President declared on Sunday:

"I said at the same time that prompt action was necessary to give these workers and their families a greater measure of security. This is not a matter of statistics or economic theory. It concerns people—human beings—who need, and should have, the assistance of their Government.

"I hope that the Members of the Congress will move as swiftly as possible on this vital problem when they return to Washington. All of us in Government have a special responsibility to act to alleviate the hardships which are being suffered, through no fault of their own, by these workers and their families."

But what is Congress doing? It started out this week with a show in which former President Truman was invited to air his political views. Mr. Truman has been making sarcastic comments about President Eisenhower, one of which was that if he were President: "I would be doing something. I wouldn't be sitting still or playing golf."

To this, Meade Alcorn, Republican National Chairman, replied, as follows:

"In 1949, a serious economic recession began in the spring and unemployment grew through the summer and into the winter. President Truman and the Nation were told in November that unemployment in the previous month had mounted to 3,823,000 or 6.1 percent of the smaller working force of that time.

"On November 26, President Truman left Washington for Key West, Fla., where he spent 24 days. He returned to Washington on December 21 and 2 days later left on a holiday trip of a week to Independence, Mo.

"The recession meanwhile deepened through the winter and into 1950. A peak was reached in February when 4,828,000 or 7.8 percent of the working force was out of work—slightly more than the 7.7 percent who were unemployed in March 1958.

"That figure was announced in the first part of March 1950. On March 13, President Truman again left Washington for Key West where he spent 29 days. The latter trip was taken shortly after Mr. Truman said in an interview that up to 5 million unemployed was 'supportable' and it was 'healthy for the economic body' if job-seeking went on at all times."

The Federal Reserve Board has just announced that industrial production in March of this year was 28 percent above the 1947–49 average. This was during the Truman recession.

Mr. Truman was asked at the hearing here this week by Representative HENRY O. TALLE, of Iowa, Republican, if he said in an interview in the New York Times in 1950 that unemployment of 3 million to 5 million persons would not be too bad a thing. The former President denied that he said it, whereupon Arthur Krock, of the New York Times, who had obtained the interview, issued a statement saying that Mr. Truman proposed the interview to him and that the manuscript was submitted to the White House and was returned to the Times in the form in which it was printed. Mr. Krock also says that in the press conference at the White House the next day, Mr. Truman was asked if the interview was authorized in the form in which it appeared, and he answered: "It was."

Meade Alcorn says the former President possesses "a rather convenient memory of events in his administration."

That's what is going on in Washington in time of recession—the partisan clamor is just as it was in the 1930's when the Government was divided between two political parties. It deepened the depression and prevented recovery in America even though a worldwide recovery movement was underway in 1932.

Keep Our Shirts On

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 25, 1958

Mr. MINSHALL. Mr. Speaker, Mr. Philip W. Porter, the distinguished columnist of the Cleveland Plain Dealer, recently submitted an excellent article to his readers. I should like to call it to the attention of my colleagues, for I believe it is most timely. The article follows:

PUBLICISTS SHOULD GENERATE LESS FEVER ABOUT CURRENT RECESSION

(By Philip W. Porter)

I wish it were possible for publicists of all sorts, particularly politicians and journalists, to discuss the current recession coolly without that twitchy, nervous attitude, as if some doom were impending.

For a long while, we had the same sort of semihysteria when discussing the state of the world, particularly Russia. Still do, to some extent, but lately commonsense has broken out in many places and more and more people have come to believe that Russia is not sitting there just itching to invade Western Europe, or idiotic enough to fire atomic rockets over here.

Matter of fact, if you read the inside as well as the first pages, you know that there is quite a bit of tourist travel from here and from Western Europe into Russia; that exchange of scientific and cultural information is going on now and likely to increase; that the Russian Embassy over here is going out of its way to be more relaxed and outwardly friendly toward just plain tourists as well as newsmen. Such cordiality may be phony, but it's better than the complete hostility and suspicion which existed for so long.

But to get back to our recession—because we were in a boom period for so long, with all of its minor insanities, and everyone is not gainfully employed today, racking up scads of overtime, the recession is the big news of the moment. It seems bigger to us around here, too, because we're in the auto-steel belt.

DOWN TO EARTH?

But really now, can't we come down to earth? There are places around the country which had a slump in certain industries—had it bad—for several years, but the world didn't come to an end. Textiles, for instance, and anthracite coal. A score of cities in New England have had widespread unemployment for several years because both wool and cotton factories were not producing or selling as much as they used to; new synthetic fabrics, the fact that men wore more sport garments and fewer vests, changes in styles, etc., fouled them up. And the anthracite coal mines by Pennsylvania and West Virginia have been in bad shape, too; the use of gas and oil for home heating crippled that industry. Lumber has been in trouble the past year, also.

This slump today is primarily an auto recession. Because the auto industry is so big, and so closely affects other industries which supply it, the effects have spread to steel, glass, rubber, and so forth. But there are quite a few areas completely unaffected, and countrywide, the unemployment total is nothing fearsome. When people not used to statistics see totals mounting each month, they may start to worry, but in normal times there are about 3 million unemployed at this time of year. Actually, the newly unemployed are only about 2½ million out of 65 million. Almost all are drawing compensation from State governments.

UNIVERSITY OF MICHIGAN LIBRARIES

Such funds are supposed to be heavily drawn on in times like these. Otherwise, why build these cushions up? The weekly checks are not any more than enough to pay for food and shelter, but since when is a jobless man expected to live as well as he did when he was working? And was there ever a time when there was not fluctuation in business and some thousands, or even hundreds of thousands, were not looking for new work, or out of work between jobs?

CASH ON HAND

There are plenty of folks with cash in the bank and in the pocket today. They're spending some—such seeming luxuries as the home and flower show, the advance Met Opera sales, and various boat and sportsmen shows all over the country have done well—but they're just not buying autos just now. And they're not going to respond to fatuous appeals to buy for the good of the country; people buy only when they need something or think they do.

The auto industry is oversold just now for several reasons—too high prices, too big cars, too soft credit. The high prices resulted from inflated wages, but the other two reasons can be blamed only on bum judgment. When common sense returns autos will sell again. The legitimate replacement market alone is tremendous—I don't mean the keep-up-with-the-Joneses replacement.

If we'll just keep our shirts on, and not act like nervous mothers with their first cases of chickenpox, we'll come through all right.

One-Man Rule

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. MILLER of Nebraska. Mr. Speaker, recent events make it more and more obvious that on the word of one man alone may hinge peace in the entire world. I believe it has been a matter of dismay to most of us that Russia has returned to one-man dictatorship.

In this connection, I believe my colleagues will be interested in an editorial by Mr. Gene Kemper, editor of the Alliance Times-Herald, published at Alliance, Nebr. The editorial seems to outline the situation quite appropriately. Gene Kemper thinks straight and his views well represent the thinking in the Midwest:

ONE-MAN RULE AGAIN

After a brief interval, Russia seems to have returned to one-man power under Nikita Khrushchev.

The abrupt elevation of Khrushchev to supreme power as Soviet Premier has come as something of a surprise to the world outside the Red orbit. It came as a surprise in part because Khrushchev as Communist Party chief denounced the "personal cult" and was the leader in seeking to erase the worship of Stalin after his death. Now, it seems, the Kremlin will return to the same sort of one-man domination it had under Josef Stalin.

Despite the surprise, the shift which moved Bulganin out of the premiership, has been developing for several months. As Khrushchev pushed Bulganin more and more into the background, there was a strong suspicion that a change was in the making. Most of the observers, however, didn't expect it to come quite as completely as it did.

It will take time to determine just what policy changes the new Khrushchev government has in the making. Almost certainly it will not make the Kremlin any more reasonable or any more willing to ease its aggressive policies a bit. It will not be surprising if it does mean the launching of a new era of stern and tough Communist pressures at every possible point. Khrushchev will seek to equal or surpass the Stalin achievements with some of his own. That could mean more severe trials for the free nations.

The faint hope which awakened at Stalin's death, that Russia might assume a more peaceful role in the world, will be extinguished by the newest move. In its place comes new apprehension.

Great Decisions

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of a letter and enclosure, dated April 7, 1958, which I received from the managing editor of the Detroit Free Press. This letter and enclosure concerns a foreign policy education program the Detroit Free Press has been participating in known as Great Decisions.

THE DETROIT FREE PRESS,
Detroit, Mich., April 7, 1958.

Representative ALVIN BENTLEY,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE BENTLEY: The Detroit Free Press took part this winter in a foreign-policy education program known as Great Decisions. It is sponsored nationally by the Foreign Policy Association, of New York, and has the approval of President Eisenhower and leaders of both parties.

You may be interested in what the Detroit program showed about the foreign policy views of a cross section of your constituents.

The Free Press devoted a full page every Sunday to impartial background articles on 1 of 6 major foreign-policy topics. Readers were encouraged to get together informally, study the material and discuss the issues.

Printed with the background information was an opinion ballot, which readers were invited to fill out and mail in to us.

The response ran from 100 to 225 ballots a week. They came from a wide range—Supreme Court Justices to laid-off factory workers, pensioners and college students, men, and women, Republicans, Democrats, and independents.

While the sample was small, it was spontaneous. No special interest groups were involved. Anybody who wished could pick up his pencil and mark down his views.

Besides our readers, from 50 to 70 persons met in weekly discussion groups. They also filled out opinion ballots prepared by the Foreign Policy Association.

Attached for your information is a summary of the highlights of the opinion ballots.

Sincerely yours,

FRANK ANGELO,
Managing Editor.

SUMMARY OF OPINION BALLOT—HIGHLIGHTS

ON FOREIGN AID

Favor administration's $3.9 billion aid bill, 19 percent. (Among Republican readers, 14 percent approved; among Democrats, 33 percent.)

Wish foreign aid reduced, 31 percent. (Republicans, 34 percent; Democrats, 28 percent.)

Wish foreign aid ended entirely, 50 percent. (Republicans, 52 percent; Democrats, 39 percent.)

Of those who favor some foreign aid, 43 percent want more economic help; only 10 percent urged more military assistance.

ON TARIFFS

Favor higher tariffs, 43 percent. (Republicans, 48 percent; Democrats, 37 percent.)

Favor lower tariffs, 33 percent. (Republicans, 24 percent; Democrats, 44 percent.)

Favor extension of Reciprocal Trades Act for 5 years, 29 percent; for 3 years, 15 percent; for 1 year, 45 percent; not at all, 11 percent.

ON RED CHINA

Favor complete trade embargo, 58 percent. (Republicans, 76 percent; Democrats, 34 percent.)

Favor limited (nonstrategic) trade, 22 percent.

Favor as much trade as possible, 17 percent.

Favor all possible help to Formosa short of war, 48 percent.

Favor recognition of Red China, ignoring Formosa, 21 percent.

Favor recognition of Reds on mainland and Nationalists on Formosa, 28 percent.

ON THE UNITED NATIONS

Keep Red China out, 70 percent.

Abandon U. N., 35 percent. (Republicans, 51 percent; Democrats, 25 percent.)

Strengthen U. N., 56 percent. (Republican, 42 percent; Democrats, 71 percent.)

Favor U. N. armed peace force, 61 percent.

ON THE MIDDLE EAST

Support Eisenhower doctrine, 18 percent.

Urge pro-Arab policies, 32 percent.

Urge pro-Israel policies, 32 percent.

Favor U. N. guarantee of Arab-Israel border settlement, 75 percent.

Favor U. N. economic development agency in Middle East, 48 percent.

ON AFRICA

Use United States influence with Britian and France to speed independence of African nations, 77 percent.

Support British and French colonial policies, 3 percent.

Support native anticolonial movements, 7 percent.

Grant statehood to Hawaii and Alaska as an example, 71 percent.

ON WESTERN EUROPE

Encourage development of European common market, 92 percent.

Retirement of Lt. Gen. James H. Gavin

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of March 31, 1958, on the retirement on that date of Lt. Gen. James H. Gavin, wartime

commander of the famous 82d Airborne Division and, for the past 2 years, Army Chief of Research and Development:

GENERAL GAVIN RETIRES

Wilkes-Barre today joins the Nation in a salute to Lt. Gen. James H. (Slim Jim) Gavin on the occasion of his retirement from the Army. The 82d Airborne Division passed in review before its wartime commander at Fort Bragg to honor him on this occasion. For the past 2 years, General Gavin has been Army Chief of Research and Development.

General Gavin made all four combat jumps with the 82d during the war, being the 1st man out the door and setting for his men a stirring example in courage and fidelity to duty. It is easier to understand why America triumphed over Hitler's formidable military machine when the careers of officers like General Gavin are reviewed.

Of him, it can be truly written:

Well done.

President and Tariff

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Chicago Sunday Tribune of March 30, 1958]

PRESIDENT AND TARIFF

Speaking before a trade policy conference Thursday, Mr. Eisenhower gave perhaps his most comprehensive plea for the extension of the Reciprocal Trade Agreements Act.

The administration's proposal, facing a battle in Congress, would extend the 1934 act for another 5 years. It would permit the President during this period to make further tariff cuts of up to 25 percent in exchange for concessions from other countries, and would enlarge his authority to raise the rates where imports are hurting domestic industries.

Because of the recession and increasing imports, opposition to the reciprocal trade program is probably stronger now than at any time in the act's history. Even as the President spoke, a protectionist group held a rally in another Washington hotel and charged that small-business men and their workers are being robbed of a living by cheap imports that are assessed low tariffs or none at all. There are few congressional districts in which at least one industry, however small, is not pressing for protection.

The general good of the country, both economically and politically, justifies the extension proposed by the administration.

Protectionists claim that 338,000 employees have lost their jobs because of competition from imports. The President replied with an estimate that 4½ million men and women in this country owe their jobs to our export trade and would lose them if foreigners could not earn dollars by selling goods to us. Although some unions, such as the flint glass workers, are crying for protection, the AFL–CIO as a whole is behind the President's plan.

It is true that our imports are large—some $13 billion a year; but our exports are larger, and account for $20 billion a year. It is true, also, that our tariffs are lower than ever before; in the last 26 years the average rate on dutiable goods has dropped from 59 percent to 11 percent, as the accompanying chart shows. Yet customs receipts last year were the highest in history.

Some vital industries such as precision instruments are threatened by foreign competition. But vastly greater defense industries such as steel, automobiles, and aircraft, thrive on their exports. In fact the President has received a good deal of advice in favor of low tariffs from a leading steel man, Clarence Randall, of Chicago.

In cases of proved injury, such as the clock and watch industry, the President has raised the tariff as high as the present law will permit—to 50 percent above the rate of 1945. Under the proposed extension, he could raise it further to 50 percent above the rate of 1934—or as high as under the arch-protectionist Smoot-Hawley Act of 1930.

The Democrats launched the reciprocal trade program in 1934 as one means of getting us out of the depression. How effective it might have been is hard to tell, for the war boom was soon on; and in the last 12 years prosperity has minimized the importance of the tariff as a protective measure. It is interesting to note, however, that while the Trade Agreements Act was enacted to fight a depression, it is now being attacked as bad medicine in a recession.

In his recent speech to a group of Republican women, the President asked, "If we do not buy from [foreign nations] and pay them in dollars, where will they get the dollars to buy our goods?" The implication is that if the trade act is extended, Mr. Eisenhower will not persist in his demands for foreign aid.

In the President will pledge himself and his party to a massive reduction in foreign aid in return for the extension of his tariff powers, much of the opposition to his program will evaporate.

Nuclear Test Ban Hysteria

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. HOSMER. Mr. Speaker, in sharp contrast to the rather hysterical editorials appearing in some Eastern United States newspapers regarding the Soviet's current shell game on nuclear tests, western United States newspapers are assessing it as the intellectual embezzlement it actually amounts to.

The old shell game, of course, was a city slicker's trick to part the yokel from his cash. Three shells were manipulated on a table, with a pea supposedly under one. The yokel bet which shell covered the peas. But he always lost because the slicker palmed the pea and it was under none of them.

Seems that some of the city slick East coast editorial writers have been playing yokels for the Communist propagandists latest device to strip the free world of its needed power to deter Soviet aggression. This does not, of course, apply to all newspapers. For instance, this morning's Wall Street Journal carried an editorial cutting this business of an alleged Russian propaganda coup down to size. It relates that by now the so-called neutralist nations have pretty well firmed up their position between the free world and he Iron Curtain, whereas our allies have pretty well alined their destinies with us, so propaganda of the test ban nature probably has little effect anyway. The editorial is as follows:

THE BOMB AND PUBLIC RELATIONS

The Soviet Union has won a big victory, we are told. With its call for an end to nuclear tests, which we have rejected, it has won a major campaign in the propaganda war.

For example, India is hailing the Soviets and tak-taking the United States. In the British Parliament, meanwhile, Conservative Prime Minister Macmillan, the custodian of the tradition of the old World War II alliance with this country, is backing the United States position. The laborites are damning the United States.

It seems to us that the United States worries overly much about propaganda victories and losses. Or, as it used to be phrased, about the battle for men's minds.

After more than a decade of cold war, whatever propaganda issue is raised, the so-called neutralist nations and our allies have their minds pretty well made up. By and large the camps are rather well drawn.

Mr. Dulles and his aides apparently realize this for the fact that it is. And they are rightly acting not from what is good public relations for America, but from what is good for the American public.

Notwithstanding the logic of the foregoing, and the fact that Gromyko's announcement remained wholly silent about the fact that Russia has both A-bombs and H-bombs which it could use to destroy great segments of mankind, with sort of an obsession about the subject of propaganda, a Washington Post editorial writer earlier this week attributed a great propaganda coup to Khrushchev and company while failing, in my opinion, to cite and expose the treachery of the move as forcefully as should have been done.

By way of contrast the Los Angeles Times pointed out editorially on April 1 that the Russian announcement has no real meaning in terms of peace or hopes for peace, but that United States actions since 1946 have pointed consistently in such direction. The editorial is as follows:

LET'S STAND WHERE WE ARE

It must appear to all reasonable Americans—all of whom yearn to see the end of nuclear weapons—that the announcement that Russia is suspending nuclear tests has no real meaning for disarmament.

RUSSIA IS JUDGE

First of all, the Russian statement is ambiguous. How long are the Soviets suspending tests—for a day, a week, a month? They say they will resume firing nuclear charges if the West does not go along with them. That means that they can resume tests any time on the pretext that the West has not met their specifications for suspension. They are the sole judge.

They are seeking to embarrass the United States. They have conducted 14 detected nuclear tests since last August while we have held none. Presumably they have fired everything in that series from which they could gain data. The United States announced that it will hold a series of tests in the Pacific beginning late this spring. The opportunity for propaganda was perfect. The tragedy is that many among our allies, and even some of our own people, will be determined not to see through this sham.

The United States Government fired a message back at the Russians as soon as the Russian foreign minister stopped talking and it was loaded with logic that does not become weaker with its 12 years of aging. The United States is eager to discuss disarmament through the long-agreed agency, the

UNIVERSITY OF MICHIGAN LIBRARIES

U. N. Commission, which the Russians have boycotted; the United States stands ready instantly to respond to a supervised suspension of nuclear tests.

The first American nuclear shot in the spring testing is likely to be the pretext to release the Russians from their suspension. Then there will be an attempt to make it appear that the United States deliberately prolonged the nuclear frightfulness. Americans will join in the clamor.

REPEATED AT GENEVA

Adlai Stevenson is one of the Americans who would stop the tests on our side. We shudder and give thanks that the American voters did not put him in the place where he could experiment with American security in order to please his foreign friends. The present administration, we are confident, will take no chances.

The United States proposed first, in 1946, that nuclear weapons be abolished. It proposed the abolishment when America alone had the atomic bomb. That offer to Russia and the world has stood ever since: The United States will stop nuclear tests and the manufacture of nuclear weapons whenever a reliable system of international inspection is set up. President Eisenhower repeated the formula with modifications at Geneva. That is where we stand and that is where we should keep on standing.

The Washington Post again this morning dealt editorially with the A-test ban topic, but again from the standpoint of its editorial writers' preoccupation with the propaganda theme instead of the basics of the case. Two suggestions were made as to United States action, one of which seems proper, the other highly dangerous to the Nation.

The first deals with an explanation by our Government of the case for testing. It is a matter which many in the Congress feel should be dealt with by the President himself in a speech to the world at large. As the Post put it, the administration, following the Red announcement, should have made:

A really thorough, documented explanation of why this country was continuing its nuclear tests, an explanation that avoided the usual pooh-poohing of fears and instead made a sober statement of risks. The best case the administration could make for the testing of clean weapons is that they might permit conversion to the sort of deterrent that would not imperil all humanity in the event of large nuclear war.

Had the editorial writer stopped there, he would have been within the range of his technical knowledge and properly backgrounded editorial comment. However, he went on to make a second, and I believe dangerous, statement as to what should have been done by our Government following the Gromyko announcement; it was as follows:

The other, and in this newspaper's opinion far preferable, course was to announce that we were placing further tests under United Nations supervision—and that simultaneously we were making the technology of a clean weapon available to the Russians.

Now, unless this editorial writer has sufficient knowledge of the science and technology of nuclear weapons-making to be able to guarantee to the people of the United States and the people of the rest of the world that placing such information in Russian hands would not simultaneously place in their hands an ability to fabricate nuclear weapons of greater offense capability against the free world's defenders than they now possess, then it was not, in my opinion, a responsible recommendation.

There is at least some substance to the argument that the mere fact that Soviet nuclear armament is dirty deters its use. Giving them clean weapons, and possibly improved weapons, could certainly have nothing but an adverse effect on the strength of the free world relative to the Reds.

Further, such a suggestion coming from 1 of the 2 largest newspapers in this Nation's Capital, now gives the Soviets an additional propaganda weapon to hurl back at us, as well as a lever to try to pry loose this information so vital to our security.

A lot more could be said on this subject, and probably will as time passes. I speak of it somewhat briefly with a hope that calling attention to the need for a rather broad scientific and technological background to make valid recommendations regarding many aspects of the nuclear weapons problem, may deter some editorialists from shooting from the hip with suggestions on this subject which may not stand up, or even be dangerous, when analyzed by our people engaged in the weapons program who have more intimate knowledge of the subject.

So that the Post's editorial comments this morning may be read in context, I include the editorial, as follows:

TEST PROPAGANDA

If the administration regards the controversy over nuclear weapon tests as merely a battle of propaganda, it is no wonder that the United States has come off so badly. President Eisenhower yesterday termed the announcement of the suspension of Soviet tests a gimmick. It may well be a gimmick, coming as it does just after completion of Soviet tests and before a new series of American tests. But the effect could not really have been offset by just a gimmick on our side.

It is true, as Secretary Dulles observed, that the Russians are formidable propagandists who go to lengths to which the United States will not go. They are capitalizing on men's fears and hopes for their own purposes. But their appeal cannot be countered just by calling it propaganda; nor can these fears and hopes be dismissed as impertinent. The Russians appear to be doing something imaginative and affirmative. We don't. It is as simple as that.

Through a combination of hesitation and poor articulation the administration has accentuated its own dilemma. There seems to have been no very clear idea of what the administration wanted to do in anticipation of the Soviet move—except do nothing. The result is a largely negative position which not even the most polished Madison Avenue gloss could have converted into something positive.

Whether or not the decision not to suspend American tests was right, once this decision was made the administration had two logical alternative courses. One was to make a really thorough, documented explanation of why this country was continuing its nuclear tests—an explanation that avoided the usual pooh-poohing of fears and instead made a sober statement of risks. The best case the administration could make for the testing of clean weapons is that they might permit conversion to the sort of deterrent that would not imperial all humanity in the event of large nuclear war. To make a convincing explanation would have been difficult, but it could have been tried.

The other, and in this newspaper's opinion far preferable, course was to announce that we were placing further tests under United Nations supervision would help relieve taneously we were making the technology of clean weapons available to the Russians. United Nations supervision would help relieve fears of radioactive contamination. And if the administration really believes in the humanitarian advantages of clean weapons, such as they may be, surely it would be in our own and our allies' interest to encourage the Russians to clean up their own stockpiles.

These courses remain open. A move along either of these lines now would seem belated, but until the administration determines to assert itself in some such way this country will inevitably remain at a disadvantage. The best propaganda still is constructive actions.

To show editorial contrast, I call attention to the message carried on this morning's Los Angeles Examiner editorial page. The Examiner's comments well exemplify the caution, reason, and good judgment which should characterize editorial comment on the vital subject of nuclear testing.

STEADY ON COURSE

Reason is beginning to supplant emotional clamor here and abroad in the reaction to the Soviet announcement that it is conditionally halting nuclear tests. The evidence:

Refusing to be jarred off course, the administration will proceed calmly with our own tests in the Pacific in the interests of national security, the security of our allies and, as inevitably will become clear, the benefit of mankind.

The propaganda fallout from the Russian announcement shows no indication of damaging the American position to the fearful extent some commentators and editorialists have predicted. Its first effect was considerable. But it was not a debacle. And any propaganda advantage gained by a shoddy and obvious fraud cannot last long.

Secretary Dulles fortified the side of reason when he revealed at his press conference Tuesday that President Eisenhower brusquely rejected last week a suggestion from his top advisers to grab the world headlines ahead of the Russians by announcing we would halt nuclear tests.

The President rejected the idea because, he said, (1) it would be phony propaganda and (2) it would be dangerous to the security of the United States and the free world.

Precisely the same words can be used to describe the Soviet statement by Foreign Minister Gromyko and its consequences if we allowed it to sway us from working realistically and patiently toward real peace, of which one vital condition is to remain strong.

The Soviet announcement is a fraud for two reasons. The first is that the Russians have just completed an intensive series of nuclear tests, conducted in rigid secrecy, and monhts must elapse before it will be technically possible to begin another series. The second is that the big bugle blare about halting tests is conditioned on the United States and Britain doing the same.

In other words, the Russians are using a nontesting interval, that they could not avoid under any circumstances, to make a phony pitch for peace.

In contrast, the administration has announced our coming tests publicly—and for the first time anywhere is inviting scientists representing free world, neutralist and Communist nations (including Russia) to observe the test of a clean-nuclear device.

And that, as Mr. Dulles correctly emphasized, is a chief objective of our tests; to develop small tactical weapons, and to drastically reduce the fallout from big bombs by making them clean, a process in which the

Russians never have shown the slightest interest. As far as is known, they are standing pat with their dirty ones.

Development of a clean bomb is not only a humanitarian refinement of a horrible weapon, but it opens also the prospect of peaceful uses of a force that could almost literally move mountains and give its strength to huge public works.

In view of these facts it is difficult to understand on what logical grounds the frenzied commentators and editorialists are saying that we have suffered an enormous propaganda defeat. What they are really saying, with implicit intellectual arrogance, is that while they can see through the Soviet fraud the people cannot.

We don't go for that. We believe the administration's course is the right one, and that if it is calmly and firmly followed and calmly and firmly expressed, people will understand and indose it, and recognize the Soviet sham for what it is.

Let no one be fooled about the real intentions of the Soviet leadership. Their treacherous record speaks for itself. While their propaganda has been reaching a crescendo in demanding immediate cessation of tests by the West, the Soviet Union exploded 3 nuclear weapons in the megaton range within a period of 5 days (February 23–27) and 6 more nuclear weapons in a period of 9 days (March 14–22). These are in addition to 5 other Soviet test explosions in the August-to-December period, making a total of 14 since August 1957. I am accompanying these remarks with a table summarizing announcements regarding the current Red nuclear test series.

The real motive behind the Soviet propaganda barrage is to tie United States' hands in the development of a rounded arsenal of clean nuclear weapons. They want to deprive us of a colossal counter-weapon against their threatened intercontinental ballistic missiles with nuclear warheads.

They made their decision to mount their nuclear offensive capability against us in ICBM's several years ago. They have proceeded to develop such missiles as well as the nuclear warheads to aim against United States cities and industries if they ever decide to start allout war against us to attain their ambition of world domination. When such Soviet nuclear ICBM capability will be operational is anybody's guess.

Meanwhile, our only really effective defense against such type of attack is to develop antimissile missiles with atomic warheads large enough to intercept and destroy a Soviet attack while it is high in the atmosphere. In order to use such defensive antimissile nuclear missiles over our own heads they must be clean, and not involve radioactive fallout dangers to our own population.

The Reds know we need to test in order to perfect the variety of clean weapons needed to defend ourselves in such manner. They want to force us to stop testing to prevent us from getting them and thus neutralizing Soviet attack power against the United States.

We and the rest of the people of the free world must recognize that the same inhuman masters in the Kremlin who directed the slaughter in Hungary are those who now propose the nuclear test ban. Therefore their move is not prompted by a concern for humanity. They simply have no such concern. What they are doing in this instance, as they have done in all others, is simply what they calculate is most effective in forwarding the designs of Communist aggression. The one thing they want most of all is to render us incapable of resisting those designs. That is what is behind the current propaganda campaign and neither America nor her allies must fall into the Red trap.

We can test with safety, and have consistently done so. It is quite apparent from our recent underground test shot in Nevada that in all probability most of our testing after the current series in the Pacific will, in fact, be done underground where the possibility of radioactive fallout is nil.

A sober look at the fallout problem indicates that even the latest series of 14 blasts by the Russians, when totaled with all previous tests since Almagordo in 1945, have added not more than 2 percent to the radiation background naturally occurring in the earth.

In terms of statistical effect on the human race, authorities have calculated the maximum shortening effect of that radioactivity increase is one-half day in the average United States life span of over 70 years.

By comparison, wearing a radium dial wrist watch is calculated to reduce average life span by 10 days, smoking cigarettes by 9 years.

When a dispassionate and informed balancing is made between the dangers to humanity from safeguarded free-world nuclear tests, and the dangers to humanity from stripping ourselves of the means of checking the Soviets' ambition to impose thir Communist dictatorship worldwide, our course is apparent.

We must continue the fight for human freedom and accept the cost and the responsibilities involved in winning it. An important ingredient of victory is that we calmly chart our course into the nuclear age, without hysteria induced by propaganda from the Communist conspiracy overseas.

Table summary of AEC announcements regarding Soviet nuclear weapons tests (Aug. 23, 1957–Mar. 22, 1958)

Date of AEC press release	Date of Soviet tests	Range of yield
Aug. 23, 1957	Aug. 22, 1957	Detonation of substantial size.
Sept. 9, 1957	Within the past 2 days	Nuclear weapons test of moderate intensity. This appears to be the 2d test in a series which began Aug. 22.
Sept. 25, 1957	Sept. 24, 1957	Detonation in the megaton range. 3d nuclear explosion in the U. S. S. R. announced by the United States since Aug. 22.
Oct. 11, 1957	Oct. 10, 1957	Another test conducted in Soviet series. Latest test was a small explosion.
Dec. 30, 1957	Dec. 28, 1957	Soviet Union is continuing its testing of nuclear weapons. Most recent nuclear explosion occurred Dec. 28. (No announcement re yield.)
Feb. 23, 1958	Feb. 23, 1958	Soviets conducted weapons test today. The yield was in the megaton range.
Feb. 28, 1958	Feb. 27, 1958 (2 tests)	Soviets have conducted 2 more large-yield explosions in current series. Today's test explosions were both in the megaton range, and brought to 3 the number of Soviet large-yield nuclear explosions in the past 5 days.
Mar. 14, 1958	Mar. 14, 1958 (2 tests)	United States has detected 2 Soviet nuclear weapons tests today. Neither test was in the megaton range.
Mar. 15, 1958	Mar. 15, 1958	Soviets today conducted another nuclear weapons test. The yield of the detonation was below the megaton range.
Mar. 21, 1958	Mar. 20 Mar. 21	Detection of 2 further nuclear tests by the Soviet Government. First occurred Mar. 20 and the energy yield was small. The 2d occurred Mar. 21 and the energy yield was in a larger range.
Mar. 22, 1958	Mar. 22, 1958	The test of another weapon by the Soviet Government was detected today. This detonation, which appears to have been in the medium range, is the 3d in the past 3 days and the 6th in the past 9 days.

U. S. S. "Jarvis" (DD–799)

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. HOSMER. Mr. Speaker, the port of Long Beach, Calif., is the home port of many stanch vessels of the United States Navy. One such vessel, the U. S. S. *Jarvis* (DD–799), was written about in the March issue of the Independent Businessmen's News. We sometimes tend to forget the importance of vessels such as the *Jarvis* to the peace and protection of our country. Therefore, I think it well to recount the stories of the three U. S. S. *Jarvis*' as told by the News:

DISTINGUISHED NAVAL DESTROYER
U. S. S. "JARVIS"

The U. S. S. *Jarvis* (DD–799) is the third United States destroyer to be named in honor of Midshipman James C. Jarvis, who died a hero after he refused to leave his battle station on the mainmast of the U. S. S. *Constellation* in spite of extreme personal danger involved.

The first U. S. S. *Jarvis* (DD–38) was launched April 3, 1912, at the yards of the New York Shipbuilding Co., of Camden, N. J., and attached to Torpedo Flotilla, Atlantic Fleet. Until the outbreak of World War I she operated along the Atlantic coast. During World War I the *Jarvis* operated with the Atlantic fleet in Cuban waters and served on patrol duty off the Irish coast and assisted in controlling the menace of German U-boats. She was decommissioned in 1919 and in 1935 was scrapped and the material sold.

The second U. S. S. *Jarvis* (DD–393) had its keel laid in 1936 at the Puget Sound Navy Yard, Bremerton, Wash. Until the outbreak of World War II the *Jarvis* was used in patrol work on the Pacific coast and for summer cruises of Naval Reservists. On December 7, 1941, the *Jarvis* was among th first United States naval vessels to fire on the attacking Japanese bombers at Pearl Harbor. The *Jarvis* shot down four of the attacking bombers at Pearl Harbor. After Pearl Harbor and following convoy escort duty in Australian waters in 1942, the *Jarvis* joined the group of 83 ships in the attack on the Solomon Islands. At Guadalcanal on August 8, 1942, the *Jarvis* took a Jap torpedo intended for the cruiser *Vincennes*

UNIVERSITY OF MICHIGAN LIBRARIES

and was badly damaged with the loss of 14 men and 7 wounded. After being towed to Tulagi, where her crew endeavored to make her seaworthy the *Jarvis* started on its way to Sidney, Australia, for permanent repairs. She was never heard of again. After World War II a search of Japanese records, disclosed that the *Jarvis* was mistaken for an Achilles class cruiser of the Australian Navy by the Japanese destroyer Yunagi, reporting her position. The *Jarvis* was attacked by 31 Japanese planes. No trace was ever found of her or any member of her crew. The *Jarvis* (DD–393) died a noble death, having served to divert the attacking planes from continuing on to Guadalcanal where they would have caught the unprotected transports unloading marines. The U. S. S. *Jarvis* (DD–393) had many men aboard from southern California, among them being the son of the executive secretary of the IBMA.

The third U. S. S. *Jarvis* (DD–799), home port Long Beach and presently operating out of our port, is captained by Cmdr. C. E. Dunston, USN. She was built by Todd Pacific Shipbuilding Co. at Seattle and commissioned January 2, 1944. Her first assignment was in the Aleutian Islands with the Northern Pacific striking force attached to Destroyer Squadron 57. The *Jarvis* got her first crack at the enemy on November 21, 1944, when she participated in the bombardment of an airfield installation on Matsuma Island. The home islands of Japan were the next target of the *Jarvis*, participating with Squadron 11 in the first appearance of American surface vessels west of the Aleutian chain. In late June 1945 the *Jarvis* distinguished herself by sinking an armed seagoing tug and severely damaged a small cargo ship.

After hostilities ceased the *Jarvis* supervised the demilitarization of Japanese naval bases and prepared the way for the army of occupation. The *Jarvis* returned to Charleston, S. C., in late 1945 and was deactivated until February 1951 when she was brought out of mothballs to participate in the Korean war. Joining in the famous police action in early 1952 on the bomb line in North Korea, she gave an excellent showing.

Neutralizing the port of Wonsan; operating with Task Force 77; screening, protecting and lifeguarding the carriers while they launched planes for inland strikes was the job of the *Jarvis* until she returned to the east coast in 1953.

During the time she was on the east coast the *Jarvis* was part of the hunter-killer forces Atlantic taking part in training exercises in territorial and Mediterranean waters.

The *Jarvis* was permanently transferred to the west coast in January 1955 and is a part of Destroyer Squadron 19, with home port in Long Beach.

The I. B. M. A. is proud to have this distinguished naval vessel with her officers and crew as a part of our friendly community.

Abolish Capital Punishment, H. R. 11912

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. MULTER. Mr. Speaker, I introduced H. R. 11912, a bill to abolish the death penalty under all laws of the United States except the Uniform Code of Military Justice.

I favor such legislation for two reasons. In the first place I doubt that the penalty is actually a deterrent to those who would commit the heinous crimes for which the death sentence is imposed. The conclusion that it is deterrent is based on the faulty assumption that the commission of these crimes is the result of rational consideration. But all evidence indicates that these acts are either those of diseased minds or are emotional, compulsive, and irrational. On the other hand, we also have much evidence indicating that the death penalty is no deterrent. Many foreign countries and six States have abolished the death penalty. The figures in all cases show that abolition of the death sentence does not result in an increase in crimes for which it was a penalty.

Secondly, I feel that sentence of death is unconscionable in that we know we are all too capable of error. Only recently the Governor's order to delay an execution reached San Quentin 2 minutes after the fatal act had been committed. Many other examples could be recited. The point is whether we will continue to arrogantly play God knowing full well we are without the omniscience which this role requires. Lafayette's statement is most apropos:

I shall ask for the abolition of the punishment of death, until I have the infallibility of human judgment demonstrated to me.

No Contamination Without Representation

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 26, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following advertisement which appeared in the New York Herald Tribune on Monday, March 24, 1958:

THE WORLD'S PEOPLE HAVE A RIGHT TO DEMAND NO CONTAMINATION WITHOUT REPRESENTATION—QUESTIONS AND ANSWERS FOR AMERICANS ABOUT HYDROGEN BOMBS

Question. What is one of the fundamental arguments against the testing of the hydrogen bombs and nuclear explosives?

Answer. The main point is a simple one. Whenever a nuclear bomb is exploded, dangerous radioactive poisons get into the atmosphere and circle the globe. There is no way of knowing how much will fall on any given place on earth. Nor is there any way of controlling the fallout even if we did know.

This means that a nuclear explosion affects all peoples and not merely the people of the nation which exploded the bomb. A profound moral question is therefore involved in the explosion of nuclear bombs:

Does any nation—whether the United States, the Soviet Union, Great Britain or the other nations which will test in the future—have the right to contaminate the air and soil and water and food that belong to other peoples?

We have every right to take such risks to ourselves as we wish in the pursuit of our own security. But we do not have the right—nor does any nation—to take risks, large or small, for other people without their consent.

The American people fought a revolution because vital decisions were made at a distance without our consent. The issue today is even more basic so far as the world's peoples are concerned. They have every right to demand no contamination without representation.

If we persist in an act that is actually or potentially hazardous to other peoples, we have the obligation to give them the complete right to participate in the processes of Government and public debate inside our own Nation.

Question. Haven't other nations given their permission to the testing countries to set off nuclear explosions?

Answer. This is the heart of the matter. They haven't even been asked. In fact, many nations have been protesting vigorously—inside and outside the United Nations. Their protests have been directed against the Soviet Union, the United States, and Great Britain.

Question. Has any evidence been advanced by these countries that nuclear testing represents a hazard to their people?

Answer. Yes, Japan, for example, has presented evidence to show that detectable quantities of radioactive strontium he turned up in the populous Tokyo area. Japanese scientists estimate that if not another nuclear bomb is exploded, the additional fallout from past nuclear explosions that will continue to fall to earth will bring the rate up to levels far beyond reasonable estimates of safety.

Question. Is there any evidence of actual or potential contamination in the United States?

Answer. In February of this year, a survey under the auspices of the United States Atomic Energy Commission revealed that the amount of poisonous radioactive strontium now in the bones of adults has increased 33 percent over the 1955–56 level. There was a 50 percent increase in the bones of children. For children up to age four, the increase went as high as 60 percent. These amounts are but a very small fraction of the total "permissible dose" of strontium. But the increase, percentagewise, is cause for concern, especially since it is not known with precision how much strontium the body can tolerate without harm.

Question. Why have the tests resulted in a greater increase of radioactive strontium in the bones of children?

Answer. The growth process in children makes heavy demands on the body to assimilate calcium. Since strontium is chemically similar to calcium, the growing body mistakes the strontium for calcium.

Question. Have there been any other official surveys which give proof of radioactive fallout?

Answer. Yes. In 1954, studies made for the Atomic Energy Commission definitely established the fact that farmlands in the Midwest and milk in the Nation showed traces of radioactive strontium.

Question. Did these figures indicate any real or imminent danger?

Answer. The figures show that the amount of poisonous radioactive strontium in our soil and milk were at that time (1954) well under what the Atomic Energy Commission believes to be the danger limits. But the radioactive materials in the air have multiplied since that time because of the many bombs that have been exploded—not only by the United States but by the Soviet Union and Great Britain.

Question. Exactly what is the danger now?

Answer. This is where the debate begins. Some scientists say that the body can absorb radioactive poison up to a certain point without ill effect. But the large majority of scientists who have spoken out on this question say it is dangerous to assume that there is such a thing as a "safe" dosage of radioactive strontium, especially for children. In any event, they believe that the health of our people—and the world's peoples—is too vital a matter to be left to guesswork. That is why they earnestly call upon all nations now testing nuclear explosives to suspend their testing until these questions can be scientifically answered. They point out, further, that as new scientific evidence on the effects of radiation comes in, it becomes necessary to lower the safety limits.

For example, only a few years ago it was generally believed that people could have X-ray examinations at frequent intervals without ill affects. But these estimates have been sharply revised in recent months. Today, the safety margin is known to be only a fraction of what it was believed to be 3 years ago.

We cannot afford to make the same wrong guesses about radioactive fallout that we did with X-rays. After the poisonous radioactive materials get into the air, there is no way of washing the sky. Indeed, a nuclear bomb explosion will have its fallout effects for many years after a bomb goes off.

Question. How long will the danger last?

Answer. Radioactive strontium, for example, loses its power very slowly. After 28 years, it still retains half its strength. Therefore, each nuclear explosion adds to the long-term killing power of the radioactive material in the air.

While it is correct to say that the radiation danger from a nuclear explosion is comparatively small at any given time, we must remember that it does its harm over a long period.

Question. What happens when other countries—France and Germany for example—insist on their right to test nuclear weapons?

Answer. Here most of the debate among scientists disappears. For whatever the difference of opinion among scientists may be on the degree of danger today, most agree that testing cannot go on indefinitely. Even the most conservative scientists foresee a period of serious danger within the near future if there is unlimited testing.

Question. What about the clean bomb?

Answer. The use of the word "clean" to describe a hydrogen bomb is a moral outrage. There is nothing clean about a bomb that can incinerate millions of people at a time. The word "clean" is intended to describe a nuclear bomb that is supposed to be free of radioactive fallout. No such bomb now exists. Even its proponents admit that it may take years to produce it. But we can't afford that kind of time.

Three or four years from now we may be able to point to a stockpile with a lowered radioactive yield. But overhead the sky may have become a canopy of radioactive poisons. In any event, the absurdity of clean-bomb speculation becomes apparent when we reflect that the Soviet may have no interest in dropping clean bombs on its enemies.

And even if the nuclear stockpiles were to consist exclusively of clean bombs it would still be important to seek a ban on H-bombs because of the cataclysmic power of such weapons.

Question. How powerful is a hydrogen bomb?

Answer. A hydrogen bomb has already been tested that is 1,000 times more powerful than the atomic bomb that destroyed Hiroshima, Japan, in 1945. One 20-megaton hydrogen bomb carries more explosive power than all the bombs put together that were dropped during the entire Second World War.

Question. Would hydrogen bombs be used in a major war?

Answer. Both the United States and the Soviet Union have served notice on each other that hydrogen bombs would be used in another war. With the development of the intercontinental ballistic missile the war strategies of the major nations are being built around their ability to deliver bombs on enemy cities within the shortest possible time.

Question. Is there any effective civilian defense against attack by missiles carrying hydrogen bombs?

Answer. It takes a missile less than 18 minutes to complete its journey across the ocean. There would not be enough warning for people to take shelter, even assuming we could develop the kind of radar that would locate the missiles near the start of their journey.

Question. How, then, can we stop the runaway race towards annihilation?

Answer. Doing away with nuclear tests will not by itself bring peace. But it at least represents a vital start.

We recognize that other things must be done. A way must be found to reduce and control stockpiles of nuclear and conventional weapons. The arms race itself cannot be separated from the problem of world security and the larger problem of world justice. The United Nations must be strengthened to provide for just settlement of political problems and human needs.

But unless we are to remain caught on dead center a start must be made somewhere.

Question. How can we make this start?

Answer. We can and should disentangle the nuclear-test issue from the larger disarmament packages of the West and the U. S. S. R.

We should propose a ban on nuclear testing for an extended period, say 2 or 3 years, under a reciprocal-inspection system to be supervised by the United Nations.

Both Harold Stassen, former Disarmament Adviser to the President, and Senator HUBERT HUMPHREY, chairman of the Senate Disarmament Subcommittee, say this is possible now.

The ban on testing should be universal, applying both to countries already in possession of nuclear weapons and those countries about to embark on nuclear armament.

Question. How do we know what the Russians will do?

Answer. We don't. We do know that the Russians have agreed to a test ban under a rigorous inspection system. We don't know whether they will finally accept the necessary conditions, but we have yet to meet their challenge with a clear and determined voice.

When we do this, we may attract to us such massed support in the world as may render it difficult for any one nation to obstruct the already expressed demands of the world's peoples.

NATIONAL COMMITTEE FOR A SANE NUCLEAR POLICY.

Remarks of Hon. John E. Fogarty, of Rhode Island, at New England Hospital Assembly

---

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. FOGARTY. Mr. Speaker, on Monday, March 24, 1958, I had the very

UNIVERSITY OF MICHIGAN LIBRARIES

happy privilege of addressing the Women's Auxiliary of the New England Hospital Assembly at Boston, Mass. This auxiliary is an organization of dedicated women who devote much effort and many long hours toward the continuous improvement of our hospital system.

I had been told by expert hospital administrators that an outstanding contribution of women's auxiliaries is the ability to interpret community needs and viewpoints to the hospital and at the same time interpret hospital needs and policies to the community. To my personal knowledge auxiliary members here in New England have admirably exhibited this ability. Much of the credit for the excellent community response to the hospitals as well as for the high degree of service which the hospitals offer to the communities must rightfully be attributed to their efforts.

Mr. Speaker, under leave to extend my remarks I submit my speech for inclusion in the CONGRESSIONAL RECORD:

REMARKS OF THE HONORABLE JOHN E. FOGARTY, MEMBER OF CONGRESS, DEMOCRAT, RHODE ISLAND, AT THE NEW ENGLAND HOSPITAL ASSEMBLY, STATLER HOTEL, BOSTON, MASS., MARCH 24, 1958

Last year the hospital auxiliary newsletter carried an excellent article from the American Hospital Association's Washington bureau which described how the great bulk of the Nation's legislative business is developed through hearings before committees of the Congress. Such hearings are primarily a means to assist the Congress in learning the problems and needs in specific areas which may require legislative action of some sort. The hearings also provide a means of communication between interested citizens and the Congress before specific legislation action is taken.

In a democracy, communication must be a 2-way process—from legislator to citizen, as well as from citizen to legislator. Consequently, Members of Congress spend a great deal of time addressing groups such as this. It is one of our best means for reporting to especially interested groups on legislative action and needs in a given field.

But Congressmen should report to the general public as well as to special groups. That is one reason I was particularly glad to accept the invitation to discuss health legislation with your organization. You represent the general public of your communities as well as a specialized aspect of your respective hospitals.

I have been told by expert hospital administrators that an outstanding contribution of women's auxiliaries is the ability to interpret community needs and viewpoints to the hospital. I am sure this is as necessary and valuable as your function of interpreting hospital needs and policies to the community.

The size and position of an object often can be determined best when viewed in relation to other objects. Therefore, I propose to discuss the hospital and health situation, as I see it from the Nation's Capital, in terms of its relationship with two other subjects of current importance—the aging problem, and the economic recession. Since hospitals, health, and the aging problem are all profoundly influenced by the status of medical science, I shall also devote some time to this subject.

Let me begin by reviewing briefly a couple of facts which are almost certainly familiar to you. The first fact is that as a people, we are growing older; and yet medicine, hospitals, health services, employment patterns, housing—in fact, virtually every aspect of our culture apparently is still oriented largely to the idea that we are entirely a Nation of bright-eyed and pink-cheeked youngsters.

Before World War II, major changes were apparent in the age composition of our population. We were becoming an older people. There had been drastic reductions in the death rates for infants, children, and young adults. Thus much larger numbers of us were living on into the later years. Accompanying these changes were profound changes in the patterns of national health.

Cancer, heart disease, arthritis, mental illness, and other so-called chronic illness had supplanted the infectious diseases as the major health problems. As a Nation, as communities, and as individual, we were not properly equipped to deal effectively with these diseases.

The Congress became concerned with this situation and shortly after the war initiated a thorough study, which has continued virtually uninterrupted since. Much of this study has been conducted by Appropriation Subcommittees in the House and the Senate responsible for reviewing the annual appropriations requests for the Department of Health, Education, and Welfare. As a member, and for many years as chairman of the House subcommittee, I have been privileged to play an active role in that process.

At this point, I want to pay tribute to the American Hospital Association, the American Medical Association, the American Cancer Society, the American Heart Association, and numerous other non-Federal groups for the advice and technical data they have given in our effort to find out what is needed. In the Federal Establishment all branches of the Department of Health, Education, and Welfare, and the Public Health Service in particular, have contributed much technical data and advice.

I must mention also the fact that this has been a nonpartisan effort, Republicans and Democrats forgetting political differences in their detremination to do what was best for the entire Nation.

Those of us who have participated in this continuing battle for better health in the face of mounting incidence of diseases like cancer, arthritis, mental illness, and heart disease have had to be practical. From the outset, we saw two major deficiencies which needed remedial attention. Very simply stated, these were (1) insufficient medical research on the chronic diseases, and (2) inadequate facilities for their diagnosis, treatment, and rehabilitation.

Therefore, our first major actions were to set up the Hill-Burton hospital and health facilities construction program, and to authorize a long-range expansion of medical research both in the Public Health Service and, through grants of Federal funds, in medical schools, universities, hospitals, and other institutions throughout the Nation. Subsequently, program for grants to stimulate construction of research facilities at medical schools and universities, as well as fellowships and other awards to assist promising young scientists to complete their training for careers in medical research, were authorized.

These two basic programs got their first real impetus some 10 to 12 years ago. That impetus was given through Federal funds, which stimulated and encouraged State, local, and private financial and other support.

What has happened to hospitals in these years?

Under the Hill-Burton program, a total of 3,772 projects have been completed at a cost of more than $3 billion, of which the Federal share has been less than $1 billion. For this expenditure we have obtained 163,000 brandnew hospital beds and 991 local public health units.

Magnificent as these gains have been, they actually are only a beginning. I will go into our remaining needs a little later in these remarks.

What has happened to medical research duing these years?

A few weeks ago Dr. James A. Shannon summarized the past 10 years of medical research for our subcommittee. Dr. Shannon is the Director of the National Institutes of Health, the branch of the United States Public Health Service in which the bulk of medical research by the Government is conducted, and which administers most of the funds Congress authorizes each year to assist non-Federal research projects.

In his summary, Dr. Shannon pointed out that at the close of World War II the United States was spending about $88 million a year for research in the medical and related sciences. Two factors—public support and research opportunity—were at the base of the changes that ensued. The dollars available for support of research and research training began to increase steadily, with part of the increase coming from private sources and part from public funds made available through State and Federal appropriations. By 1950, medical research support was at a level of $140 million. By 1954 it was $220 million. Today, it is estimated that nearly $360 million is being spent for research in medicine and biology in this country. Of this, the Federal Government provides over half, or $220 million.

Dr. Shannon then reviewed for the committee a few of the scientific advances that have been made during these postwar years: Cortisone and other steriods for treatment of rheumatic disease; vaccine for the prevention of polio, influenza, and many respiratory infections.

Radioisotopes have joined other radiation sources and surgery as a means of treating cancer, and a number of compounds which ameliorate certain forms of cancer have been developed.

We have seen the development and widespread use of an inexpensive public health measure that can cut tooth decay in half.

A wide array of chemical weapons useful in the management of high blood pressure have been discovered.

The death rates among mothers and infants and certain of the diseases arising from complications during pregnancy and at birth have been sharply reduced because of research results.

Dramatic improvement has been made in surgery for congenital heart malformations and hearts damaged by rheumatic fever.

A test for early diagnosis of a form of cancer in women, permitting treatment before it is too late, has been developed and given wide application.

A family of drugs has been developed permitting startling advances in the management of mental illness.

Just as in the creation of new hospital beds, progress of this kind is proof that the planned use of a segment of our national resources for medical and biological research is a sound investment, with dividends that are both humanitarian and economic.

When we first began these programs of Federal financial assistance to stimulate hospital construction, and promote medical research and training, there were many who thought that legislation in these fields—particularly Federal legislation—would automatically lead to Government regulation of hospitals and research. I believe we have proved beyond doubt that Government regulation need not accompany Government assistance. Neither of these programs could have been so successful except for very harmonious cooperation between the Federal Government, State and local governments, national and local organizations, universities, medical schools, and hospitals. These programs have demonstrated once again that

Government is truly an instrument of the people.

The health needs of our senior citizens are not substantially different from the need of the Nation as a whole—good nutrition, adequate medical attention, suitable housing, and opportunity for appropriate social, intellectual, and physical activity. However, there is one need, common to all, which takes on particular significance in the later years of life. I refer to the need for coping with the costs of long-term illness. For someone who is retired and living on an income barely sufficient to meet ordinary living costs, the expenses of long-term hospital and medical care can prove truly catastrophic. Prepaid medical care plans, Blue Cross, disability benefits, and other protective measures of the productive years are usually no longer applicable at the very time when they are most likely to be needed.

Surely it is not beyond our capacity to devise more satisfactory methods of providing during our more vigorous years for the medical costs that accompany old age.

Another problem needing, and at long last beginning to receive our attention, is that of providing more adequate facilities and programs for domiciliary care of the aged.

Obviously the ideal place for the old folks to stay is in their own homes or in homelike places in their own communities. This should be possible far more often if the essential community welfare and health services were better organized and made more easily available for this purpose. Home nursing services, dietary consultation, homemaker services, suitable recreational programs, together with good personalized medical attention could keep many people happy and healthy right in their own homes at less cost to themselves, their relatives, and the community than in hospitals and nursing homes.

Earlier this month an important conference in Washington was called by the Surgeon General of the Public Health Service interested in better care of the aged.

One of their conclusions was that we have failed to use both the remarkable scientific and technical advances of this century and the comprehensive array of services available within the community in our fragmentary and inadequate efforts to meet the challenge posed by our older citizens.

Then, too, we have failed to seek out ways to make it possible for old people to help themselves, thus earning part of their support and maintaining both themselves and their selfrespect.

I feel that absolute first priority should be given to those measures which help retain the older individual amid familiar surroundings—in or near his own home, cared for by his own physician, sustaining insofar as possible his interest in community activities. It seems to me that we are too prone to move old people into circumstances where they will be no trouble—to isolate them, to separate them from familiar and loved scenes, to segregate them, if you will. Each community has the capacity, if it has the will, to keep this from happening in many instances.

For those individuals for whom a special kind of care is required that cannot be provided at home, there is often an in-between kind of facility required—between the home and the hospital.

There needs to be more such facilities adequately licensed, and supervised by professionally qualified persons, located in or near the community which the older people call home.

The community hospital has a major role in helping devise plans and provide the medical, nursing, and other services needed in any realistic effort to cope with the problem as it now exists.

In planning for future construction and for future organization of services, the hospital must keep the needs of the aged foremost in mind.

I am convinced that if we could look ahead 20 or 30 years, one of the greatest changes we would see in our hospitals would be the structural and organizational changes required to provide more keep well clinics and more home care services for the aged and chronically ill.

You may be certain that women's auxiliaries will be more essential than ever in the hospital that is dedicated to care of the aged and chronically ill and to preventive medicine as much as to acute illness.

At the outset of my talk I mentioned the recession as one of the major problems that needed to be taken into account in this discussion of health and hospitals.

The Department of Labor has recently announced that over 5,200,000 people are unemployed, the largest number since 1941. Other reliable estimates have placed the number at well over 6 million.

Both the Congress and the executive branch of the Government are considering appropriate measures to combat this recession and strengthen our national economy.

The issues at stake go far beyond the domestic scene.

The world today is wondering whether this Nation will continue to be economically and financially strong, or whether our private-enterprise system will be unable to stand the strains of this modern age. Our position of leadership among the Western Powers is in jeopardy if our economic structure falters and weakens. Our allies are deeply concerned. Our enemies are already deriving great satisfaction from our economic uncertainty; to them, a depressed America presents opportunity to propagandize the world concerning the failures of our fine society.

Among the most important measures being considered to combat the recession are extensive construction programs for highways, schools, and post offices. To this list I would like to add hospitals. I felt so strongly about this that on February 21, I wrote to the President urging that he revise his estimate for Hill-Burton hospital construction needs, raising it from $75 million, already requested in his budget, to $210 million for fiscal year 1959. This increase to the full amount authorized under the law would not only help bolster a sagging economy, but would also enable the States to achieve substantial reductions in the backlog of need for community health facilities.

Just a few weeks ago the Appropriations subcommittee of which I am chairman, took under consideration the President's budget recommendation that only $75 million be appropriated for the Hill-Burton hospital construction program for the fiscal year 1959. From the testimony and data provided the committee, it is evident that while this program has made substantial progress, there are tremendous unmet needs for new and replacement hospital beds in communities throughout the Nation.

Estimates by the Public Health Service place these needs at the following levels: 185,000 general hospital beds; 400,000 mental hospital beds; 303,000 other hospital beds; 300,000 nursing-home beds.

In my many years of service on the House Appropriations subcommittee I have become rather familiar with the hospital situation throughout the country. Among the things I have learned is that many of the Nation's hospitals are over 50 years old, and many suffer major losses of efficiency from inadequate physical plants. The obsolescence factor contributes substantially to our need for hospital construction. Two percent of our general hospital beds become obsolete each year, representing an annual loss of approximately 9,500 general hospital beds. As opposed to this figure, we must consider that 30,000 new beds are needed each year merely to keep pace with our annual population increase.

I offer no comparison to the relative importance of hospitals with post offices, schools, or other public facilities. The national concern for adequate hospital facilities, both public and nonprofit, stems from our interest in health affairs and in providing the American people with the highest quality of medical and hospital care. Moreover, at the present time, hospital facilities have special importance for reasons of national security. With every city and community potential targets, the number of persons who might survive an enemy attack depends directly on the adequacy of the facilities and the organization of care for the injured.

In my opinion, there is no facility more vital than the community hospital in our national civil defense survival program. Funds expended to build up our general hospital beds are investments in national security, as well as in health.

On February 21 of this year, in a letter to the President, I summarized as follows the importance of hospital construction and renovation in any program designed to fight unemployment through federally financed construction programs:

First. Hospital construction and renovation would have a more rapid impact on the economy than would most other kinds of construction. Statewide and up-to-date hospital construction and renovation plans have been made in all the States.

Second. At both the Federal and State level, administrative machinery is in existence and has long been dealing with these matters.

Third. If funds were available, many projects could be quickly reviewed by existing public agencies and construction started in a very short period of time.

Fourth. The need for hospital construction and renovation is widely spread throughout the United States. There is appreciable need for new construction in many of the rapidly expanding suburbs of our larger cities and still great unmet need in our smaller communities and rural areas.

Fifth. Hospital construction and the installation of hospital equipment requires more kinds of highly skilled personnel than does most other construction work. Consequently, a hospital construction program would have great impact on retaining highly skilled persons in their particular fields. In addition, hospital equipment requires the employment of highly skilled labor in its manufacture and has far-reaching effect on production plants and labor which generally would not participate in a public works program.

Sixth. Renovation of hospital plants depends primarily on local contractors, local supplies, and local labor. Such a program would have immediate effect on the economy of local communities.

I told the President that for these reasons I was convinced that a program of hospital construction and renovation would stimulate our national economy and thus would help counteract the recession. It could be undertaken through additional grants under the Hill-Burton Act, with appropriate adaptation in the method of distributing the funds, or much of it—especially the renovation of existing hospitals—could be carried out through loans carrying no interest or very low rate of interest.

I believe the logic of these proposals is inescapable, and I intend to do everything in my power to bring about their adoption.

As I look back over the years that I have represented my State of Rhode Island in the Congress of the United States, I find that one of the greatest rewards has been the friend-

UNIVERSITY OF MICHIGAN LIBRARIES

ships I have gained among those who have dedicated their lives to tending the sick, the lame and the halt.

In conclusion, I would like to read to you three short paragraphs that were written some 30 years ago by Dr. Frederick Smith, who was at one time in charge of all hospitals in the Public Health Service. What he wrote will, I am sure, describe the institutions in which each of you serve. I hope, and I believe, it will also describe the typical hospital of 100 years hence.

"A hospital pays higher dividends in usefulness than any other public building. A department, bureau, agency or court, post office or custom house is open only a third of each 24 hours and is closed 52 Sundays and many holidays each year. A hospital is never closed. Its lights are an eternal fire on the altar of service. Its door is never locked; its windows never darkened.

"When vacation grass grows lush on silent schoolhouse grounds the hospital knows no respite. While the cathedral drouses many days each wek over empty pews, the hospital vibrates through every crowded moment with never-failing service to humanity. Through long hot summer days and nights, as in winter storm and autumn blast, the hospital carries on. In public disaster, when other enterprise is dazed and crippled, the hospital never fails.

"The best that is in men and women is brought out in the crises that try the soul. In operating room and ward is forged, in the fire of sacrifice and renunciation, the character that ennobles. Pious resignation, courage and generosity are here daily witnessed. To the hospital come both saint and sinner, the victim of wasting disease, of violence, or of his own vicious habits. Whether they march to the drums of war or the pipes of peace, the sick and maimed seek refuge where pain is eased and life held sacred and find there, true to hospital traditions, not only scientific efficiency, but tolerance, kindness and understanding sympathy."

Congressman Celler Speaks His Mind on His Weekly Radio Broadcasts, Over Station WINS, New York, April 13, 1958

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the transcript of one of my weekly radio broadcasts over Station WINS, New York, April 13, 1958:

ANNOUNCER. Do you agree with Mr. Bernard Baruch that our taxes should be increased rather than decreased?

Mr. CELLER. That idea of Mr. Baruch's is as startling as it is uneconomic. His only concern is inflation. But there is more involved than our present economic distress of inflation. Unemployment, not solely the result of inflation, has gone over 5 million. The peril point has been reached. Recently, 10,000 workers went on jobless relief in New York City alone. All industrial areas are threatened with more layoffs. Detroit, the auto center, is a ghost city.

Purchasing power throughout the Nation is like a flat tire. Money must be pumped into the market to buy goods deteriorating on the shelves. Some tax reduction, particularly on the widest base possible—that is, to low bracketed income taxpayers—must be passed. This will permit more money to be spent, thus moving inventories, and give the spur to production. Dr. Arthur F. Burns, erstwhile chief economic adviser to President Eisenhower, advocates a $5 billion tax cut. He said as follows:

"If * * * we delay more than a very few weeks, in the hope that economic recovery will come on its own by midyear, we shall be taking the risk of having to resort later to drastic medicine. In that event, we will find ourselves piling a huge deficit on top of the deficit that automatically flows from reduced tax revenues, with the result that our economic problems in both the short run and the long run will be multiplied manyfold."

As to Mr. Baruch, let me dip a little bit into history. Away back in February 1933, when we were in a depression, Mr. Baruch offered the same prescription for ending that depression, to the Senate Finance Committee.

What he said last week was a repetition of what he said in February 1933, namely, that a tax cut would be folly and that taxes should be raised. Let me quote his 1933 statement. "Balance budgets, stop spending money we haven't got. Sacrifice for frugality and revenue. Cut Government spending, cut it as rations are cut in a siege. Tax—tax everybody for everything."

Contemplate for a moment what would have happened if President Roosevelt had followed his advice in 1933. We would have plunged deeper and deeper into depression. Indeed, Mr. Baruch gave bad advice in 1933, and he is giving bad advice in 1958.

ANNOUNCER. Have you offered any bills for a tax cut?

Mr. CELLER. I am not a member of the Ways and Means Committee but I am trying to cushion the current recession by offering a bill which I hope will pass. This would provide immediately a 3-month moratorium on withholding tax paid by all workers who earn less than $10,000 per annum and a corresponding adjustment in individual tax liability. A great bulk of our working population have a part of their wages withheld for income taxes, social security, and the like. The workers would have the benefit of these funds for a 3-month period, thus enabling them to return to the market for more than the bare necessities. It should prime the economic pump by restoring some purchasing power.

ANNOUNCER. How accurate is that report that you are a candidate for the United States Senate from the State of New York?

Mr. CELLER. When asked this question previously, I have said that I am not an anxious candidate but, on the other hand, I am not a reluctant or hesitant candidate. However, I await the wishes of the party. I have had 35 years of experience in Congress and, as we all know, there is no substitute for experience. My record is an open book. I like to think that I have the mental competence, and I am sure I have the moral fitness to fill that high and exalted station. Many good names have been mentioned for this preferment and I am proud to have my name associated as well with these exemplary gentlemen.

ANNOUNCER. Your name has been frequently associated with immigration legislation. Will there be any changes in immigration law?

Mr. CELLER. Immigration comes under the jurisdiction of the House Judiciary Committee of which I am chairman. Hearings are scheduled to be held in about a month on pending legislation. These will be comprehensive hearings to cover all shades of opinion on the subject of immigration and naturalization. My personal conviction is that the immigration quota law, as we have it set up, is unfair and discriminatory. We are permitted to admit, roughly, 152,000 people a single year under the quota system. But, unfortunately, people of certain races are favored over others. For example, most of the quota of 152,000 goes to individuals of the Aryan or Nordic races, that is the English, the Irish, the Germans. Speaking comparatively, about one-third of the total annual figure is set aside for natives of Italy, Greece, Spain, France, and countries of Eastern Europe get tiny quotas. When I speak of Eastern Europe, I mean Poland, Czechoslovakia, Hungary, and I don't mean the Communists. Communists are barred, but there are many non-Communists who are nationals of these countries. Great numbers of them do not even live in Eastern Europe but are refugees in all parts of the world. They clamor for admission into the United States. As we know, they make good citizens—just as good as the Irish, the English, and the Germans.

I would eliminate such discrimination against the Italian, the Greek, the Spanish, and others, and which favor the English or the Germans. Such a distinction is contrary to our American tradition. All these people are equal in my eyes. I am not so much interested as to where they were born as long as America is born in them. If they have an appreciation of liberty and freedom and fair play, then America has been born in them and they should be admitted on a parity with all others. I shall strive to have the law changed so that it will be freed of its prejudicial and discriminating features.

I want men to come here who will be of good character regardless of the label of their race, creed, color, or place of origin. Character is what you are in the dark. Character is what you are when no one is watching.

The opponents of my ideas on immigration are usually those who prate of their better or nobler blood. I say to them—send your noble blood to the market place and see what it will buy.

Others who oppose my point of view are those who boast of their family tree and their ancestors. As for them, I say one cannot make for himself a place in the sun if he continually takes refuge in the shade of a family tree. Your grandfather may have been 6 feet 7 inches tall, but you have to do your own growing.

ANNOUNCER. You are the author of the civil-rights bill which passed the Congress and which was signed by the President and which is now law. Do you contemplate any further steps on civil rights?

Mr. CELLER. Yes. My civil-rights bill was primarily a bill to insure equality of rights on the political level, that is, voting rights. Negroes had been disfranchised in primary and general elections in numerous States. My bill offers remedies against such practices. The bill also sets up a Civil Rights Commission, which is just about getting off the ground. Its purpose is to study desegregation as announced in the Supreme Court decision and to consider other discriminations against the colored people. In all this, we have reached a sort of plateau on the way to the summit. We cannot tarry there.

I have offered a bill to prevent discrimination against colored people on all levels of American life, housing, labor, transportation, public welfare, and the like. The Judiciary Committee, of which I am chairman, has jurisdiction over such bills and I shall start hearings in about a month's time on this highly important subject.

Justice still must be done to the Negro. His rights are still flouted and disregarded in many parts of the land. It has been said justice is the bread of the Nation because all hunger for it, white and colored alike. The colored should have this bread of the Nation.

ANNOUNCER. What do you think of bomb testing?

Mr. CELLER. I believe it is criminal—and I use that word advisedly—for our administration to impose its bankruptcy of ideas upon this Nation. There is not one area, be it our domestic economy, foreign policy, military or scientific advancement, where we have not suffered tragic loss of leadership. Now the Russian announcement of the cessation of nuclear testing has caught Dulles in bathing and the Russians have made off with his clothes. He did not have to go to the summit to lose his shirt. Now we are paying the price for his inflexible, negative, quibbling policy on nuclear test detection. As Adlai Stevenson said, in anticipation of the Soviet move, we have again missed the opportunity to take the initiative. For months we clung to a formula unacceptable to the Russians. We insisted that cessation should be tied in not only with inspection but with an end to the production of nuclear weapons. When the Russians accepted the inspection principle, we still refused to budge. It was all or nothing.

And nothing is what we got.

The President all too easily became captive of the Dulles policy. Inch by inch, and now yard by yard, the United States has lost the initiative in world affairs. Mr. Dulles is so busy saying "No" that he has no time, if indeed he has the imagination, to come forward with any affirmative idea which would give the lie to the Soviet propaganda—that we are warmongers interested only in making bigger and more devastating bombs. Propaganda-wise, now the flag of peace flies on the Kremlin instead of the White House.

Can we pull ourselves out of the dilemma in which the administration attitudes have placed us? We cannot become a mere echo of the Soviet line and stop the tests at this point—only because the Russian announcement pushed us into it. The stopping of such tests must be based on considered judgment, whether or not it would best serve the cause of an honorable peace.

Ought we not to consider the placing of all future tests under United Nations supervision as solid evidence of our good faith, placing our emphasis on the need to increase the peaceful uses of nuclear energy? Then the world could know the results of the tests of detonating clean weapons. Thus the United Nations could declare the devastating effect of radioactive fallout and its danger to humanity, and order all nations to cease testing bombs.

ANNOUNCER. What about Federal aid to education?

Mr. CELLER. That is a very interesting question because I have some novel ideas on this subject and I think we can help the economy of the Nation and help education in the same step.

The most acute domestic deficiencies of the United States are our schools, educational facilities, and teachers. These deficiencies are now reflected, and will continue to be reflected, in the quality of our social, as well as our military achievements. There is no question at all of the need for accelerating the building of schools and making provision for adequate teaching staffs.

I believe we can attack this problem constructively and, at the same time, give the needed impetus to economic revival. There is a way, a practical and realistic way, of accomplishing this. I intend to propose that a percentage, shall we say 1 percent, of each Federal, personal, or corporate income-tax payment be paid directly to the resident State—to be earmarked and used exclusively for educational purposes—which would include the building of schools and the increase in salaries for teachers.

Thus, the objection, valid or otherwise, which has stood in the way of enactment of legislation giving Federal aid to education will be removed. Many have feared Federal control of education and this has been one of the major stumbling blocks. My proposal will give the States control of the management of these funds, albeit for educational purposes exclusively. Likewise, this direct payment to the States by the residents thereof will give a tremendous boost to the economy of each State, for it must perforce create the demand for quantities of goods of many types, and thus spur our productivity. It will put back to work thousands within each State. There will be a need for steel, aluminum, cement, paint, woods, etc. The necessary economic stimulation would result, and it would be no make-work proposition. It would permit each State to draw upon the wealth of its own citizenry. I would propose, further, that such legislation provide that each State render an accounting to Congress on the uses to which these funds have been put.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Assistance for India

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, April 17, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD four editorials which comment on the proposal which the Senator from Kentucky [Mr. COOPER] and I have made regarding economic assistance to India. These editorials, reflecting viewpoints in different parts of the Nation, all argue for the importance of meeting India's crisis now when there are chances for realistic action, rather than later when the crisis can no longer be treated effectively.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Minneapolis (Minn.) Morning Tribune of March 26, 1958]

HELP AND HOPE FOR INDIA

The Marshall plan, a farsighted program of economic assistance developed by former Secretary of State George C. Marshall in 1947 and later adopted by Congress, is generally given credit for having made a major contribution to Europe's speedy economic recovery after World War II.

Now Senators JOHN KENNEDY, Democrat, of Massachusetts, and JOHN COOPER, Republican, of Kentucky, have proposed a similiar program to help India achieve the goals of its second 5-year plan.

Their three-pronged program calls for immediate legislative and administrative action to meet the immediate and emergency needs of the Indian Government, adoption of a congressional resolution expressing American interest in the success of the second 5-year plan, and a multilateral attack on India's long-term economic problems with European experts joining Americans in working out plans for such a program.

In a speech to the United States Senate urging adoption of the program, KENNEDY quoted testimony by Prof. W. W. Rostow, of the Massachusetts Institute of Technology, with respect to the future attitudes of the newly emerging independent states in Asia, Africa, the Middle East, and Latin America:

"Shall these new powerful states emerge to maturity from a totalitarian setting, their outlook dominated by bitter memories of colonialism and by memories of painful transition made without help, while the rich West sat by, concerned only with the problems of defense?

"Or shall these states emerge from a democratic setting, built on human values, shared with the West, and on memories of shared adventure in the decisive periods of transition?"

Through the adoption of the kind of an imaginative, far-reaching plan proposed by KENNEDY and COOPER, the United States could play an important role in helping determine the kind of an economic transition these new nations make in the years ahead. The plan for India could, in fact, serve as a pattern for help to others.

It would cost money, of course, just as the Marshall plan did. But the investment is worth making. India, even though its leaders often annoy us, is a democratic country which is trying desperately to coexist peacefully with its Communist neighbor, China. It has appealed to the West for aid, and the United States already has provided some. But the Kennedy-Cooper program offers the Indians long-term hope as well as immediate help.

[From the Charleston (W. Va.) Gazette of April 4, 1958]

FREE WORLD HAS BIG STAKE IN UNITED STATES HELP FOR INDIA

In urging greater American support for India's economic development program, Senator KENNEDY, Democrat, of Massachusetts, observed the other day that "no thoughtful citizen can fail to see our stake in the survival of free government in India."

The point he was making on the Senate floor was painfully obvious. Unles we pledge greater help to India, and do it this year, we will wipe out much of the good we've realized from a war and the billions in aid that we've sent to Asia in the last decade.

It's sometimes difficult to stomach India's seemingly vacillating foreign policy, as one day she appears to favor Russia and the next the United States. But let's not lose sight of the fact that India is the biggest democracy in Asia, and with some encouragement she can also become one of the greatest in the world.

The unfortunate thing is that as a free nation India is so young that her leaders are faced with the same problems we had when the United States also was an infant republic. They have no choice but to play the game of international politics as neutrally as possible and yet find friends within the family of political thought they adopted as their own.

If geography hadn't placed India so close to Russia the situation might now be quite different. Senator KENNEDY and the pro-India bloc in Congress might not be encountering the difficulty they are in explaining the advantages of a stronger India-American economic alliance.

But geopolitics being what it is, it's high time we put aside our suspicions of our Asian partner and look at the facts. India is in a desperate struggle with the demands of economic necessity. Her leaders must either be able to show to their impoverished constituents that democracy offers a more promising reward than communism or they'll lose them.

India is so bad off financially that she has had to scrap all except the core of her 5-year plan of economic redevelopment. This means that there will be fewer dams, fewer steel mills, and fewer land reclamation projects with which to sustain her people than were planned even 6 months ago. It means also that the Indian mind will become less resistant to communism and the blandishment inspired within the Kremlin is greater aid isn't offered by the West.

Help for India will strengthen the democratic structure, as well as firm up democracy's position in other parts of the Far East, particularly in strife-torn Indonesia. No one can be sure just how much a loan to the Nehru government will help in this regard, but the alternative would be disastrous.

An economic collapse for India or even a continuing discrepancy between India and Communist China is something we cannot afford now or in the foreseeable future. Should we lose this Asian rock of freedom the consequences would be dire indeed in the populations, natural resources, and trade outlets we would hand by default to Russia.

[From the Birmingham (Ala.) News of March 31, 1958]

AID URGENT TO STRENGTHEN INDIA AGAINST RED DANGERS

Suppose India, with her vast population (377 million in a 1954 U. N. estimate) should go Communist. That, of course, would be a terrific setback for the cause of freedom and peace throughout the world. Not only would India's own people and resources come under Red control, but other peoples in Asia and Africa, whose political direction is not now very firmly established, would be greatly influenced toward communism. In some cases this influence probably would be decisive.

While India's government has maintained a neutralist stand in the East-West struggle, its leaders have been striving to meet its very difficult and urgent problems along democratic lines. Its people, like those of other lands, are ardently seeking, with new hope, to achieve better living standards. The country now is in the second year of a second 5-year plan to that end. The extent of progress achieved will, of course, have strong impact on political trends.

In an address in the United States Senate last week, Senator KENNEDY of Massachusetts, called on the free nations to unite in support of a Marshall plan to aid India in her political development.

Senator COOPER, of Kentucky, former ambassador to India, supported the Kennedy proposal, which calls for increased United States assistance this year and further assistance from the United States and other free countries in the 3 remaining years of the current 5-year plan.

"India stands as the only effective competitor to Red China for the faith and following of the millions of uncommitted and restless peoples," Senator KENNEDY said. "Should India fall prey to internal disorder or disillusionment among either its masses or leaders and become absorbed in the Communist system, the free world would suffer an incalculable blow."

The Massachusetts Senator's appeal is very timely. Recently demands have been growing for a reduction of foreign aid. Some strong opposition has been voiced to any aid at all for India because of its neutralist position.

Senator KENNEDY, however, declared that "if the second 5-year plan collapses, so may democratic India and the democratic hope in all of Asia."

Of the enormous and acute needs of the people of India we Americans now know pretty well. But if we all well realized in concrete terms what general economic conditions are and considered the crucial effects they have on political affairs, support for giving sound assistance to the efforts to build up an advancing, free economy would be much greater.

Here is something about which our Nation cannot afford to be indifferent.

UNIVERSITY OF MICHIGAN LIBRARIES

Remember, only a comparatively few years ago, many of us thought that a Communist triumph in mainland China was almost unthinkable. But the Red tide moved swiftly forward and a Communist regime came into power.

Our own American interests, as well as the cause of freedom everywhere, will be well served by wise assistance to the aspiring people of India.

[From the St. Louis (Mo.) Post-Dispatch of April 8, 1958]

INDIA IN THE BALANCE

It may be coincidence but it is not without significance that Republican Senator COOPER, of Kentucky, and Democratic Senator KENNEDY, of Massachusetts, have introduced a resolution for United States support of India's endangered second 5-year plan just at the time of the first anniversary of the Communist electoral victory in the southwestern Indian state of Kerala.

The Cooper-Kennedy resolution in effect proposes that the United States move resolutely to see that what happened among the 14 million impoverished people of overpopulated Kerala does not happen throughout India.

How any substantial number of Members of Congress could reasonably oppose the Cooper-Kennedy resolution is hard to see. Senator COOPER, who speaks with the unusual and convincing experience of a former Eisenhower administration Ambassador to India, says the alternative is to risk watching India go the way of Red China.

What India needs above all else is dollars with which to buy capital goods such as machines and engines and turbines urgently required for the industrialization of the teeming nation of nearly 400 million depressed people. But India does not have the dollars to buy from the United States and it cannot get them unless we make large loans.

Following the recent talks on Indian requirements, Washington announced a plan to lend India $225 million, half of it through the Export-Import Bank. This latter portion would be repayable over a 15-year period at 5¼ percent and so could not remotely be termed a giveaway.

The Cooper-Kennedy resolution would declare it public policy for the United States to support further loans, perhaps as much as a half billion dollars by 1961. Its stated goal would be to assist India to complete its current program for economic development.

India has made great forward strides in the 10 years since it became independent and Prime Minister Nehru became its leader. Villages with thousands of people have begun new lives, with gainful work, sanitary living conditions and greatly improved agriculture.

But this is hardly more than a beginning. If the second 5-year plan is carried through to success in 1961, one of India's leading financial authorities says the average weekly income per person would be only barely more than a dollar. How modest the plan is can be seen from the fact that the 1961 steel goal is 6 million tons—big for India but small when compared with our steel production of 100 million tons.

A great deal of small and misguided talk about Indian neutralism has been spoken in Washington in recent years. India is the most promising fledging democracy in the world. But it cannot toil up that rocky road alone. India needs help and the United States, in our own interest as well as India's, must provide help while it can be of use.

It is fine to talk about democratic ideals. But democratic ideals fill no empty stomachs. They set no hydroelectric projects going.

Senators COOPER and KENNEDY deserve a salute for taking the lead in introducing their resolution. We hope to see Senators from this part of the Mississippi Valley—HENNINGS and SYMINGTON, of Missouri; DOUGLAS and DIRKSEN, of Illinois; and FULBRIGHT and MCCLELLAN, of Arkansas—associate themselves with it.

Columbia River Regional Power Corporation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 17, 1958

Mr. NEUBERGER. Mr. President, proposals for financing future water-resource development of the Columbia River through power revenues, under the direction of a regional power corporation, are receiving increased attention in the Pacific Northwest. Since the introduction of the Columbia River Regional Corporation bill by myself and numerous co-sponsors early in this session, the idea has been discussed editorially by many newspapers, with varying degrees of acceptance. I am pleased that two leading newspapers in my home State have recently given additional endorsement to the regional corporation concept of Columbia River development.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Power Can Pay Its Way," published in the Portland Oregonian, of April 13, 1958, and an editorial entitled "This Is the Way To Do It," published in the Pendleton Oreg., East Oregonian of April 3, 1958.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

POWER CAN PAY ITS WAY

Bipartisan legislation to permit the Tennessee Valley Authority to pledge its power revenues for financing of additional projects is approaching a vote in the House of Representatives. A similar bill was adopted in the Senate last year by a vote of 61 to 20.

The Pacific Northwest has a sharp interest in the proposal, made in three messages by President Eisenhower, for TVA self-financing. A Senate bill has been introduced to establish the Columbia River Development Corporation. It would have authority to issue revenue bonds, based on power sales of the Bonneville Power Administration which the regional corporation would supersede, to pay for the share of the costs of multiple-purpose projects—and later, atomic plants—assignable to power. This would speed up hydroelectric development of the Columbia Basin immeasurably, by taking the major costs of new dams off the back of Congress.

The Northwest Public Power Association, author of the Columbia River Development Corporation bill, points out that the self-financing pattern to be established in the TVA bill may be the precedent for regional self-financing here.

One point needs clarification, in view of early attacks (in the Seattle Post-Intelligencer and elsewhere) on the Columbia River Development Corporation bill. This new Federal corporation, subject to strict administration and congressional controls, would not be the equivalent of TVA, nor would it resemble the Columbia Valley Authority idea of New Deal days.

It would be limited to power development—its goal to make up the deficit between generation and need created by the inability of Congress and local utilities to invest in facilities at a necessary rate of about $1 million a day. The corporation would not, as does TVA, hold responsibility for development of other resources—navigation, flood control, fisheries, mining, agriculture, chemicals, etc. But it would be required to conduct itself in a manner not adverse to other resource development, and to cooperate in such development. It could not, as the Federal Power Commission does, dismiss the fishery as of no account. Its operations would have to be coordinated for flood control, navigation, and other uses of the waters.

The attempt by the Seattle Post-Intelligencer to brand the regional power corporation as another CVA proposal is indefensible.

The only resemblance a Columbia River Development Corporation would have to TVA, if the new TVA legislation is adopted, is that both would stand on their own financial feet rather than being dependent wholly on appropriations from the United States Treasury. The astonishing record of power expansion in the Northwest shows that the region is fully able to finance its own big power projects, for which Congress should be grateful.

THIS IS THE WAY TO DO IT

State Treasurer Sig Unander, one of five candidates for the Republican nomination for governor, told a Pendleton audience recently that he agrees in principle with the proposed Northwest Regional Corp. for development of hydroelectric power from the Columbia River and its tributaries.

"There can be little question that formation of such a corporation would answer many of the area's hydroelectric power problems. Such a program has many advantages. It provides for regional control as opposed to Washington, D. C., control, and would not be dependent upon congressional appropriations for financing," said Mr. Unander.

There is much to be said in behalf of a regional corporation. At this point one of the best arguments for it is the record it can show of support from members of both political parties.

The necessity that a program be developed which would assure the necessary funds annually to develop the hydroelectric potential of the Columbia Basin and at the same time that development be accomplished wisely has been apparent for a long time.

So long as most of the money required to develop the water resources of the basin must come from congressional appropriations orderly development is impossible. The Oregonian, originator of the regional corporation plan, sketched the problem as long ago as July of 1952 and it hasn't changed since. Said the Portland newspaper at that time: "The Pacific Northwest has been staggering forward for 20 years under the most confusing hodgepodge of projects, agencies, and statutory authority—all lumped under the general heading of Columbia Basin development—ever proposed by a President and accepted by a befuddled Congress."

Regional controls of all the many programs that deal with water resource development in the Columbia Basin could bring order out of chaos. And it could get the Federal Government out of the power business in the basin by turning the development program over to an interstate agency, which could finance project development by sale of reserve bonds.

Senator RICHARD NEUBERGER has introduced legislation which would create a regional corporation. He has said that he is not satisfied with all of the provisions the bill encompasses but he likes the principle. Others share his hesitancy in accepting all the

clauses in the legislation as it is now written. Mr. Unander has expressed agreement in principle, and so have many others.

Many who support this legislation fear that the private-power companies operating in the Northwest will try to block congressional approval of it. Perhaps they will. If they do we believe it will prove for them to be a tragic mistake. They cannot make a sound case that a regional corporation would harm them. Opposition would leave them in the poor position of having to refute the charge that they want the game to be played under their rules or they won't play.

Spokesmen for the private-power companies have said that the hydroelectric potential of the Columbia Basin must be fully developed and that it will be necessary for everybody to participate in the program in order to get the job done. If they really believe that, they much support a regional corporation approach to full development of the region's resources.

Swift and Constant Change

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 17, 1958

Mr. THYE. Mr. President, I ask unanimous consent that the minutes of the 938th meeting of the Six O'Clock Club of Minneapolis, Minn., be printed in the Appendix of the RECORD. These minutes summarize an address I made before the club on April 8, 1958, entitled "Swift and Constant Change." The minutes were drafted by the secretary of the Six O'Clock Club, Mr. Ralph Keller. Mr. Keller has for many years been the effective manager of the Minnesota Editorial Association. I know him not only as a good friend but also as one of our State's most able administrators. Mr. Keller has helped unite 435 Minnesota weekly and daily newspapers for the common good of their industry and the reading public which they serve.

There being no objection, the minutes were ordered to be printed in the RECORD, as follows:

The 938th meeting of the Six O'Clock Club warmly welcomed to membership Dr. Robert Towne Thompson, dentist. President Anderson regretfully announced to 63 members and 13 guests the serious illness of Judge Waite, our nonagenarian first president.

In introducing Minnesota's senior United States Senator, the Honorable EDWARD J. THYE, President Anderson pointed out the significance of seniority in the Senate, commended our former governor as the progenitor of current improvements in the State capitol approach, and praised his constructive public record and warm human qualities.

Senator THYE opined that the type of citizen represented in the Six O'Clock roster implies a handsome contribution by the club to the growth and prestige of the city of Minneapolis and the State of Minnesota during our 64 years.

There are today, with due respect to many honored names, only two great nations vying for world leadership, the Senator said. If one doesn't supply it the other must. Which? United States or Russia? How can we prevent a war to resolve the issue? We had sense enough to outlaw mustard gas during the First World War (in which the Senator served with distinction and rapid promotion in the United States Air Force). We have sense enough to avert today a far more dangerous and destructive atomic war, if we try.

We could lose to Russia on the basis of scientific skills, with which they are impressing many nations. We could lose to them on an economic basis, by permitting Russia to extend help to needy oriental countries and nations. We could lose to Russia on the basis of diplomatic negotiations, because the United States has been busy carving a nation out of a wilderness while our older neighbors rehearsed their diplomatic skills. As a result, we find ourselves now able to feed and clothe and arm most of the world's people but woefully unable to persuade them.

One course worthy of vigorous development is reciprocal trade; we stand to gain far more than we could lose by extending trade agreements to encourage the export and import of all manner of goods and products. The few producers and processors who might be injured by such a program, Government could well afford to subsidize.

Perhaps, said the Senator reverently, God intended America, the youngest of the great nations, to be the world's interracial catalyst. Nearly all peoples of earth have here lived neighbor, intermarried, and teamed up in the pursuit of life, liberty, and happiness. Since we have learned to live so peaceably and productively together, why cannot the rest of the world? Can we teach mankind to live with one another? If we fail, the capitalistic system of freedom and abundance can only collapse, and war and desolation must prevail.

We must turn the tide of our unemployment, we must take up the slack in our scientific progress, we must keep our economy healthy and our freedoms strong: Our Government will be as good as we help our public servants make it.

Answering questions, Senator THYE doubts that the Russians are bluffing. It is difficult to trust them because they have not hitherto proven trustworthy. It is possible that when enough Russian citizens have been educated under their aggressive modern program, they themselves will see the shortcomings of their system and repudiate the Kremlin. The Senator believes we are justified in reposing full confidence in our State Department, although perhaps the public could be more articulate in the formation of new and different approaches to international policies. Tax reduction might speed our economic machine, but carried too far it could cripple our governmental program; caution is called for both in accelerating and decelerating our material progress. On the grounds of inadequate information the Senator did not attempt to discuss the so-called Sadlak tax proposal.

R. W. K., *Secretary.*

Mission 66 Program in Jeopardy

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 17, 1958

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared regarding the mission 66 program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The mission 66 program, which envisions completion of needed national park improvements by 1966, is in jeopardy. If funds for the program are not substantially increased above administration requests, the mission 66 program, one of the most important conservation issues facing Congress, may never be completed.

It will take an additional $12 million to keep on schedule the mission 66 program for campgrounds, buildings, and facilities, and an additional $9 million will be needed to keep road construction on schedule. Furthermore, funds needed for management and operations have been cut by about $1 million.

These cutbacks would curtail planned works in Montana estimated at $1.3 million. On the west side of Glacier Park alone $550,000 more could be spent at once on buildings, utilities, and new campgrounds. The Park Service has another $240,000 worth of projects that could be started by late fall if funds are provided. An additional $180,000 worth of road improvements in the Glacier area could also be undertaken. At the Custer National Monument in Montana an additional $340,000 could be programed this year, for shops, warehouses, and housing.

National Park Service Director Wirth advised me today that the additional funds listed for Montana are for projects that could be undertaken as soon as the money is appropriated. On this basis I shall confer with key members of Congress to determine what can be done to get badly needed improvements underway not only in Montana but throughout the park system.

By slashing the budget requests for the National Park Service the administration broke faith with Congress, which has given warm support to mission 66. The very existence of a recession should call for a program ahead of last year's level. Additionally, there has been an 18 percent increase in park use in the last 2 years. More than 60 million Americans visited our parks last year and the number is growing. It will only grow if we can maintain these parks and equip them to handle our expanding population.

Beautiful Bandera

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 17, 1958

Mr. YARBOROUGH. Mr. President, on Tuesday of this week the Christian Science Monitor, which is truly an international daily newspaper, published an article about one of Texas' most famous vacation spots, Bandera.

Located in the timbered mountain valleys and in the breaks of the Edwards Plateau's rugged and beautiful hill country of Texas, Bandera is the dude-ranch capital of Texas and is one of America's most unique vacation areas. For here in all its glory and grandeur still lives the magnificence, the essence, and the spirit and the scenery of the old West; not the artificial, motion-picture old West, for there is no need at all for anything

UNIVERSITY OF MICHIGAN LIBRARIES

artificial in Bandera. Here in the hill country of Texas, the spirit of the West, the rugged mountainous scenery of the West, and the hearty, down-to-earth honest folk of the old West, have never for one moment been absent.

The article very accurately describes one of the truly great thrilling vacation spots and one of the finest places to live in the entire country.

I ask unanimous consent to have printed in the Appendix of the RECORD the article entitled "Old Southwest Sparkles in Modern Texas Setting," written by Fern Pois, and published in the Christian Science Monitor of April 15, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OLD SOUTHWEST SPARKLES IN MODERN TEXAS SETTING

(By Fern Pois)

BANDERA, TEX.—The spirit of the rip-roaring days of the old Southwest is still alive in the famous hill country of Texas.

Located on Highway 16 and only 40 miles northward of San Antonio and the shrine of Davy Crockett, lies the frontier town of Bandera, dude ranch capital of Texas and the favorite vacation spot of thousands. From here many cattle have been driven over the Old Spanish Trail to the pioneer Kansas market.

As one turns onto Main Street, 19th century Bandera looks for the world like a setting for a western movie thriller. Near the Pack Saddle Grocery, the Silver Dollar Cafe, and the Frontier Hotel is the chamber of commerce in its own frame building. A young attendant in true western regalia, blue jeans, bright shirt, and 10-gallon hat, welcomes the vacationer to the hill country, advises about accommodations and where to buy western attire for the entire family. All dress is informal. Jeans and boots and broad brimmed hats are the favored attire.

HOTELS, MOTELS, AND RANCHES

There are hotels and motels in Bandera. Guest ranches such as Flying L, Wagon Wheel, Joleta, Lost Valley, Dixie Dude, and a host of others are readily located by the sharp arrows pointing toward the hills in every direction. Rates at he guest ranches include three meals a day. The motels do not. All try to operate on prices attractive to the average man and his family.

Each ranch offers its own interpretation of a home on the range. Many have tiled swimming pools while others have nature's finest, a swimming hole in the placid Medina River which winds its way through the hills. One ranch has found it necessary to provide its own landing field for private planes. Another boasts its own nine-hole course complete with golf shop and equipment.

Some are real operating ranches covering hundreds of acres. Opportunity is offered here to ride the range with the cowboys, to go on real roundups at branding time and take part in the general ranch routine. Each ranch has its own string of horses for its guests. Ranch hosts are generally agreed that the best way to see the country is from the top of a horse. There is a horse for every type rider imaginable, even for those who have never been on a horse before. All are safe under the ever-alert eyes of the cowboys in charge.

"Give a man a horse he can ride," one cowboy said, "and he's sure to come back again."

Weekly rodeos draw guests from the surrounding countryside. Four of the Nation's top rodeo stars, Scooter Fries, Buddy Groff, Toots Mansfield, and Ray Wharton live here in the Bandera Hills. They're always glad to perform for the appreciative spectators who come in great numbers to see a rodeo.

FLEXIBLE PROGRAMS

The dude-ranch vacationer can be as active or as quiet as he likes. There is always something to do from early morning until late at night. Early morning rides with breakfast over the open campfire beside the river is a favorite way to start the day.

Guests from all over the hill country come into Bandera at nightfall to dance to the cowboy tunes at one of the cafes. Put Yer Little Foot, Hokey Pokey, and Cotton Eyed Joe can be heard coming from the fiddle, guitar, and piano in true western style.

Liquor is prohibited in Bandera and it is a hundred dollar fine for starting a fight.

Some visitors come from the far corners of the United States for their first glimpse of the authentic old West. Others have been coming regularly for years, as they say, "just to get away from it all."

Wisconsin Celebrates Youth Participation Week and Wisconsin Parent-Teacher Congress Meets

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 17, 1958

Mr. WILEY. Mr. President, I am pleased to note that the able Governor of Wisconsin, the Honorable Vernon Thomson, has proclaimed this as Youth Participation Week in my State.

He urged everyone to increase their efforts to help youth become active in the areas where they can be of greater service to their communities.

In other words, let us give our young people a chance to work constructively. Let us tap their vital energies and channel those energies into the most useful civic projects.

In that way, the youngsters will serve themselves, they will serve their communities, and they will serve their country.

I am pleased to note that, simultaneously with Youth Participation Week, there has been meeting, in the city of Milwaukee, the Wisconsin Congress of Parents and Teachers.

Certainly, there are few, if any, groups in the entire United States which better symbolize constructive grassroots interest than do the PTA's.

A PTA, serving our children from nursery school upward, is one of the most heart-warming types of organizations in all the United States.

I ask unanimous consent that two articles from the Milwaukee Journal describing the meeting of the Wisconsin PTA Congress, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal]

HOME IS RATED FIRST IN A CHILD'S LEARNING—REGIONAL PTA OFFICER FEARS OUR ABODES HAVE MORE CHROME THAN CHARACTER

(By Louise Cattoi)

The home is not only the most important educational center, but the child's first community, Mrs. Ralph Hobbs, Cataula, Ga., a regional vice president of the National Congress of Parent and Teachers, said here Monday morning at the auditorium.

She addressed the opening session of the 49th annual convention of the Wisconsin Congress of Parents and Teachers. The meeting, which has delegates from 946 PTA units, with a total membership of about 130,000, will continue through Tuesday. "Circles of Responsibility—in Family and Community" is the theme.

Mrs. Hobbs said that it was in the home that a child "begins to learn the spirit of cooperation, the lessons of give and take, the joys, disappointments and testings that make for character." She observed that the degree of happiness in a home was not contingent on the amount of money a family had.

HAPPY HOME STRESSED

"You can't rear children with a check book," she said. "Some of the happiest homes are those with a very low budget. It is wonderful to have things money can buy, but we need to take care lest we lose those things money cannot buy. I fear sometimes we have in our homes more chrome than character, more kilowatts than kindness, more electronics than ethics. * * *"

Mrs. Hobbs told the delegates that the public schools were "your responsibility, whether you have children enrolled in them or not."

LINKS SCHOOLS TO DEFENSE

"Education means freedom—democracy," she said. "Education is our Nation's most powerful weapon. The public school is the largest defense industry in production today. You, as a taxpayer, are one of the millions of investors of stockholders who provide the money and raw material—your child—that keeps the wheels of this huge factory turning.

"Our Nation—our world—is the customer patiently awaiting, that we may all benefit by the capabilities developed by the public school industry."

STATE PRESIDENT SPEARS

Mrs. James Lohr, Sheboygan, State president, stressed the PTA's responsibility of "knowing your schools." This entails opportunities "to discuss, question, and suggest what might be done to improve them," she said. She recommended a close relationship with the school administration, knowing the school board members and "attending their meetings and inviting them to yours."

Mrs. Lohr urged the delegates to be informed about legislation.

[From the Milwaukee Journal of April 15, 1958]

PARENTS ARE URGED TO INSPIRE CHILDREN—HARRIS ASKS SPARK OF REBELLION AS WELL AS ADJUSTMENT; CITES NEED FOR VALUES

Parents probably should "spark a certain rebellion as well as adjustment" in children, a child development expert told the Wisconsin Congress of Parents and Teachers here Monday night.

Dale Harris, director of the institute of child development at the University of Minnesota, Minneapolis, spoke before 1,200 delegates at dinner at the auditorium. Their 2-day convention ended Tuesday.

Harris challenged parents to "take a stand on values" or risk rearing a "generation of drifters."

He said youth must have outstanding character in a world "where signals sent out by parents no longer work." Love and security are important, he said, but children also must be inspired.

FEARS TOO MUCH FREEDOM

That, he said, possibly should include inducing some rebellion. But, he added, when children are given too much freedom, they may turn out to be "persons uncommitted to life."

"This is not to say that we must never let a child make decisions," Harris said. "But we must also indicate that there must be value standards that he is expected to live up to."

George E. Watson, State superintendent of public instruction, urged the PTA delegates to remember that "You and I have a stake in free, universal education in America, and that if we lose this system of education, we lose part of America."

CITES INDIVIDUAL'S ROLE

At an education workshop Monday afternoon, Dr. J. Martin Klotsche, provost of the University of Wisconsin, Milwaukee, said that "Russia's sputnik is not nearly as important in the field of higher education as some alarmists would lead us to believe."

A crash program in science is not the answer, he said. We must never forget, he said, that the individual is important in American life and education, and that America is committed to free and universal education.

After a luncheon Tuesday, PTA life memberships were awarded to these leaders: Valbur Borger, 2719 North Stowell Avenue; Mrs. Willis Van Horn, Appleton; Fred Delli-Quadri, Madison, director of the division of children and youth of the State department of public welfare; and Henry Weinlick, Madison, executive secretary of the Wisconsin Education Association.

Winners of the Minetta Hastings scholarships for teacher training announced Monday night are: Annemarie Sladky, Custer High School, Milwaukee; James Jones, Eau Claire Memorial High School; Jewel K. Le Mahieu, Cedar Grove High School, and Nancy Watkins, Madison West High School. The scholarships, each totaling $500 covering a period of 2 years in teacher training, are outright gifts. They are given to senior students in Wisconsin high schools having PTA units.

Community Facilities in Wisconsin

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 17, 1958

Mr. PROXMIRE. Mr. President, on Tuesday, I placed in the RECORD a number of letters from officials of Wisconsin communities. The letters set forth the projects in my State which were ready to go upon the passage of the Community Facilities Act.

Today, I have additional letters, from the cities of Watertown and Schofield, which make clear, as the other letters did, that this legislation will benefit the local units of government in Wisconsin.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the letters from the heads of government of Watertown and Schofield.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CITY OF WATERTOWN, WIS.,
April 14, 1958.

Senator WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

HONORABLE SIR: We have your recent letter relative to a Federal program to public works planning and financing which is administered by the Community Facilities Administration of the Housing and Home Finance Agency.

You have requested a list of projects which might be included in work of this sort. The following public works projects are being considered for this community:

Remodeling of high school	$500,000
New Douglas School	600,000
Municipal building	450,000
New street lighting system	100,000
Water works improvements	400,000
Oconomowoc Avenue Bridge	150,000
	$2,200,000

Very sincerely yours,
CITY OF WATERTOWN, WIS.,
C. C. CONGDON,
City Manager.

CITY OF SCHOFIELD,
Schofield, Wis., April 9, 1958.

Hon. WILLIAM PROXMIRE,
Senate Office Building,
Washington, D. C.

HONORABLE SIR: It has been brought to our atention that you are interested in finding out the needs of smaller cities, which could be alleviated through Federal aid.

We are a small community situated in central Wisconsin and we are in a stage of rapid growing pains. We have, with the assistance of the Wausau Chamber of Commerce, developed an industrial area and as a consequence our growth in the last few years has been tremendous. A few years prior we put in a water and sewer system, added a fire department and enlarged our street department, so that we have just about reached the limit for bonding purposes.

Last year we inaugurated a 3-year plan to install storm sewers, which were completed, curb and gutter and black topping. The curb and gutter and black topping has not been started due to lack of borrowing power. So if it would be within your power to help us procure aid for the completion of these projects, it would relieve a desperate situation in the city and greatly improve it.

Very truly yours,
HARRY C. SPANTON, *Mayor.*

Financial Conditions

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 17, 1958

Mr. MURRAY. Mr. President, the executive secretary of the Northwest Public Power Association, Mr. Gus Norwood, recently delivered before several groups in my State an address on the need for maintaining low interest rates for rural cooperatives.

"The exploitation of the West," he correctly pointed out, "took the form of high interest rates and huge profits for the absentee owners. The development of the West is most effectively achieved through low interest rates."

Mr. Norwood delivered the substance of this address before the Lincoln Electric Cooperative in Eureka, the Vigilante Electric Cooperative in Dillion, the Beaverhead County Chamber of Commerce in Dillon, the Yellowstone Valley Electric Cooperative in Huntley, the Billings Business Men's Breakfast in Billings, and the Valley County Electric Cooperative in Glasgow.

This address is commendable not only for its force facts, and timeliness. It is a masterpiece of concise exposition. I would commend it especially to Government officials, who should clearly see in it the reasons why I and many other Members of Congress unalterably oppose the administration's proposed increase in interest rates for REA cooperatives.

Mr. President, I ask unanimous consent that Mr. Norwood's address, entitled "Stand Your Ground," be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STAND YOUR GROUND

Money, like this $20 bill, is of interest to everybody.

Money is something about which we all should know a lot more.

A Congressman once was asked what did he know about money. He answered that all he knew about money was that he did not have enough of it. For most of us also that is probably our main thought on the subject.

But today money is again becoming one of the hot economic and political questions being debated by Congress.

My talk is divided into five parts.

First, the historical struggle for low interest rates.

Second, the importance of the 2 percent REA interest rate.

Third, the effect of interest on electric power cost.

Fourth, the legitimate object of government.

Fifth, I conclude and urge you to stand your ground.

Let me begin then by outlining some of the background or tradition which has grown up in our country in the direction of low interest rates. The original colonies were generally established on a shoestring or on borrowed money. It is now 350 years since Virginia was first settled, and for more than three-fourths of those 350 years we have been a borrower nation. We had to go to the European bankers for our money and we had to pay high interest rates. We were an exploited nation and we resented the high interest rates. As a result of these first 250 years of our history as an exploited borrower nation, we developed a political tradition of sympathy for the borrower. We adopted laws against usury. We learned to distrust the big financial interests.

After the Civil War and ever since then we have had the same struggle of the haves and the have-nots, the lenders and the borrowers, the financial interests against the little people.

We in the West have especially become aware that we were in the borrower class. We have traditionally been the advocates of low interest rates, and of Federal programs for making loan funds available for western development.

The free-silver movement was a part of this tradition. William Jennings Bryan, of Nebraska, became a candidate for the Presidency in 1896 largely on the basis of his speech at the Democratic convention which concluded with the words:

"* * * we will answer their demand for a gold standard by saying to them: You shall not press down upon the brow of labor this crown of thorns, you shall not crucify mankind upon a cross of gold."

In our struggle the last century against the exploitation of high interest rates we have established our farm cooperatives, our systems of farmer-owned grain elevators, our hail, auto, and life insurance cooperatives, our oil and farm supply cooperatives, and

UNIVERSITY OF MICHIGAN LIBRARIES

now our rural-electric cooperatives. These are all self-help, do-it-yourself programs.

Under Teddy Roosevelt we started the great western irrigation program; we created the Forest Service and the great program of conserving our forests on a sustained-yield basis. We began the harnessing of water resources by the use of Federal investment funds, for the benefit of all the people.

Each of these programs illustrates the following general rule: The exploitation of the West took the form of high interest rates and huge profits for the absentee owners. The development of the West is most effectively achieved through low interest rates.

Thus the issue is drawn. One is white. The other is black. Either we have exploitation or we have development. High interest rates means exploitation. Low interest rates means development and industrial progress.

To bring this background up to date we have seen in recent years a steady buildup to increase the interest rates on all forms of Federal loans. The veterans housing and other housing loans, the farm loans have all gone up. One of the few areas which have been able to hold the line and resist the attack has been the rural electrification program.

I think the worst of the battle is over, but we should not unload our guns yet.

The reason I think the worst is over is because of what has happened in the past 4 months to the tight money policy of the Federal Reserve Board. Two statistics dramatize what has happened. Four months ago the Federal Government had to pay 3.6 percent on its 90-day Treasury bills. Today the rate is 1.2 percent. The Federal Government can borrow short-term money today at only one-third the interest that prevailed 4 months ago. There has been a tobogganing, a real downward skid in the interest rate.

The revolt against the tight money policy of the Federal Reserve Board has been growing in recent months. It has been spearheaded by Congressman WRIGHT PATMAN, of Texas, who last year introduced a resolution calling for a congressional investigation of our financial institutions, or in other words on our system of money and credit and why the interest rate is so high.

Congressman PATMAN lost the vote on his resolution by a vote of 225 to 174 just a year ago on March 27. But the idea did not die. The pressure is mounting. The public is getting more curious about why we have 5 million people out of jobs. Why has the Government deliberately sponsored these high interest rates? But let me leave that question on your minds and turn to my second point.

My second point is to show the importance of the 2 percent REA interest rate. Your cooperative is owned by the people who receive electricity from it. It belongs to you. You are the stockholders. You have borrowed money from a banker called the Rural Electrification Administration, which in turn draws its loan funds from the United States Treasury. Thus the REA program is a method whereby we lend money to ourselves. You and I collectively make up the credit of the United States. Our credit is behind the loans which REA makes to us. We are only lending the money to ourselves.

Bills have been introduced in the Congress to increase the REA interest rate from 2 percent to rates varying from 4 percent to 6 percent. This means that where we now pay $20,000 a year interest on a million dollar loan, we would instead have to pay $40,000 to $60,000 or from double to triple our present annual interest payments. This is a considerable amount of money even for a big cooperative and a much greater burden for a small system to bear. The extra interest cost would take a bite out of your pocketbook.

That is the immediate issue in the REA interest rate battle. We want to hold the line on the present 2 percent rate. Your national, regional, and State associations are determined not to give way on this one, and I would like to urge you to support these associations in their efforts on your behalf.

Now let me turn to my third topic on the effect of interest on power cost. I will use two illustrations to show that interest is the most important factor in determining power rates. My first example shows how the power business is different from almost any other kind of business with which we are generally familiar. Take the grocery business for example.

When the grocer invests $1 he expects that dollar to turn over up to about 8 times a year. That is, he expects to receive $8 of gross revenue each year per dollar of original investment. But when you look over the financial statements of a large hydroelectric power system like the Bonneville Power Administration which operates 7,500 miles of high voltage transmission lines to carry about 5 million kilowatts of power from 12 major dams, then we are looking at an entirely different kind of a business.

For every $1 of original investment in dams and transmission facilities the Bonneville Power Administration does not get $8 per year in revenue, it doesn't even get $1 per year, it gets only 8 cents. So there is your contrast, the grocer gets $8, Bonneville gets 8 cents from the same dollar of investment. The difference between the grocery business and the power business is 100 to 1.

Now let's turn this example around a little in order to analyze what the effect is of interest rates in the power business. First let's recognize our figures so that both the grocer and Bonneville get $8 in gross revenue per year. In order to do that the grocer must make an investment of $1 and Bonneville must make an investment of $100. Now in both of these cases let's increase the interest rate by 1 percent. To the grocer the added cost is 1 penny. This is the price of 1 stick of gum and he is always giving away sticks of gum to the kiddies anyway, so it makes no difference to him. But for Bonneville the extra 1 percent on $100 means it must collect an extra dollar from its customers, so instead of collecting $8 it must collect $9, or a rate increase of 13 percent. So for the Bonneville system we have our answer of what is the effect of interest rate on power rates. On the Bonneville system a 1 percent increase in interest forces a 13 percent increase in power rates.

Before leaving our Bonneville Power Administration example let me emphasize that even with only 8 cents revenue per dollar of investment it is in a very sound financial condition. For example for the year ending June 30, 1956, BPA took in $61 million or more than a million dollars a week. How did it spend the $61 million? On a percentage basis 35.6 percent went for interest and was the biggest cost, next 30.4 percent for debt retirement, then 24.3 percent for all operation, maintenance and administrative cost, and that still left a profit of 9.8 percent.

Now if someone would like to crosscheck these figures. BPA's average interest cost is about 2.6 percent. By dividing 2.6 into 35.6 percent we get 13.5 percent as the ratio, and thus again we see that a 1-percent rise in the interest rate would result in a 13-percent rise in power cost. The leverage is 13 to 1.

My second example on power cost comes closer to home. Here again I want to show that interest is the chief factor in the cost of power. This example I call the Hungry Horse iceberg. When we look over the operating statement for Hungry Horse Dam we find it costs about $3 million to cover the costs, but very little of that money is spent at the dam. The entire cost of operation, maintenance and administration at the dam is only $290,000 a year. This is 10 percent of the total. Thus when we visit the dam and see the operators at the control panels and when we watch the men doing the painting and greasing and in fact all the activity that we can see at the dam—we see only the upper 10 percent of the iceberg.

The huge 90 percent that is left of the iceberg is underneath. In order to see how the other 90 percent is spent we must go to Washington, D. C., where once a year, possibly while everyone else is out for coffee, a bookkeeper makes an entry of $900,000 for amortization. This repays the United States Treasury loan over a 50-year period. Next he enters $1,800,000 for interest. Thus 30 percent of the annual cost of Hungry Horse is debt repayment and 60 percent is interest.

Interest is the chief factor in determining the price of power. With interest at 2½ percent, we can easily figure out by dividing 2½ into 60 that each 1 percent of interest cost causes 24 percent of the power cost. Thus at Hungry Horse Dam the leverage is 24 to 1. A 1 percent increase in interest causes a 24 percent increase in power. If we had to pay 3½ instead of 2½ at Hungry Horse, we would have to increase the power revenue $720,000 each year and this rate increase would have to be paid by you and me as the ultimate consumers.

One reason for my presenting the Hungry Horse iceberg example is because the financing challenge of certain other Montana dams such as Paradise Dam in western Montana and Yellowtail Dam in eastern Montana is directly analogous to Hungry Horse. There also, about 60 percent of the power revenue would go for interest, and therefore these new dams can produce low cost power only if we hold the line on keeping down the interest rate.

Summarizing my third point I hope that these 2 examples of the Hungry Horse iceberg and the difference between the grocery and the power business have served to show that low cost power depends on using low cost money, on keeping the interest rate low.

For my fourth point I would like to read you one of my favorite quotations from Abraham Lincoln. Many a time in his writings and speeches Abe Lincoln explained his philosophy of government in these words:

"The legitimate object of government is to do for the people what needs to be done, but which they cannot, by individual effort, do at all, or do so well, for themselves."

In my view the Hungry Horse Dam serves as a clear cut illustration of Lincoln's philosophy of government.

Here is a dam which under traditional private utility financing would produce power about three times as expensive as the present low cost. Obviously no private utility would find a market for such expensive power and therefore no banker would help any utility to finance such a project. Thus the Hungry Horse Dam was going to be built by the Federal Government or it was not going to be built at all.

Incidentally I have heard it said that if a private utility had built Hungry Horse Dam there would have been considerable tax benefits to Flathead County. Of course, there is an obvious fallacy in that statement. Under private utility financing the project would not have been feasible and the tax payment would have been zero.

Now let us take a look at the Flathead County tax situation today. Bear in mind that Hungry Horse Dam is not on the tax rolls. There is not 1 penny of taxes paid. Yet from 1946 to 1956 the tax base of Flathead County has jumped from $35 to $84 millions. The great Anaconda Aluminum Co. plant and all the new homes have been made possible only by the building of Hungry Horse Dam.

Other counties have also benefited. Listen to the report made by Mr. J. M. Gillet of the Victor Chemical Co. when he addressed the Columbia Basin Interagency Commis-

sion at Butte in 1955 when he explains why Victor came to Montana:

"Bonneville Power Administration was building transmission lines to this area so that low-cost power would be available. Phosphate rock was cheaper in Idaho than here because it can be strip-mined, while rock in this area must be mined underground. Bonneville power rates, however, were enough lower to offset this disadvantage. After careful balancing of the economic factors, rock, power, and freight rates on raw materials and finished products, the Butte area was selected, and a plant site was sought."

Look at all the counties of western Montana where rural electric cooperatives enjoyed a reduction in power cost as soon as Hungry Horse Dam was nearing completion. There power cost dropped from about 12 mills, if the power was available at all, to the present Bonneville rate of about 3.5 mills. Also the quality of service is better. This means a higher standard of living for the people in the rural areas of western Montana.

In some respects the same is true in eastern Montana because the Montana Power Co. gets a solid block of 50,000 kilowatts of Hungry Horse Dam power at 2 mills flat charge which it sells in eastern Montana. In fact, the Montana Power Co. receives a large portion of its power supply at an average cost of only 2 to 3 mills from Canyon Ferry Dam, Fort Peck Dam, and Hungry Horse Dam. In addition, it has the advantage of being able to exchange power with the Bonneville Power Administration so that it can either buy more power or sell any temporary surplus as market conditions permit.

Thus Hungry Horse Dam has benefited everyone. It has increased tax payments, it has brought hundreds of stable industrial jobs to Montana, it has facilitated rural electrification, and it has improved the power supply of the largest utility in the State.

Hungry Horse Dam thus qualifies under Abe Lincoln's test of the legitimate object of government.

Another area of public need which meets Lincoln's test is rural electrification. Here again is an area where the traditional private financing methods could not see enough promise of profit to warrant building electric lines into the rural area. Congress decided to lend money through REA to enable the people to do the job themselves. The rural electric cooperative is a self-help, do-it-yourself program where the people in each area actually do the organizing and operation, and Congress has REA act as banker to do the financing on a strictly self-liquidating revenue-producing basis.

For my fifth and last point I want to urge that you stand your ground in the national contest on interest rates. We in the West should advocate the lowest possible rate of interest. We should try to get the public interest rates down as close to the legitimate cost of borrowed money as possible.

* * * * *

Montana alone has a potential of about 6 million kilowatts waiting to be harnessed. The tragedy is that we should have such severe unemployment when there is obviously so much work waiting to be done.

* * * * *

In the winning of the West we have a struggle between development and exploitation. We have a struggle between the advocates of high interest rates and low interest rates. High interest rates means exploitation, and we have had enough of that. Low-interest rates means progressive development and we can stand a lot more of that.

Here is one of the central, universal issues of our time. On this issue the REA interest rate is the main battleground. On this issue I urge you to stand your ground. The 2 percent REA interest rate is good not only for your cooperative, it is also good for the entire country.

Thank you.

Relations With Latin American Countries

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, April 17, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written for the Miami Herald by our colleague, the junior Senator from Florida [Mr. SMATHERS] and another by Mr. Hendrik J. Berns.

These two articles written at the beginning of this Pan American week both emphasize vividly the importance to us of our ties with the Republics of Latin America. The junior Senator from Florida has been foremost in pointing the way to a firmer and more durable Latin American policy for the United States.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

TIGHTEN THE TIES

(By GEORGE SMATHERS, United States Senator from Florida)

All of us, at one time or another, make a serious mistake in dealing with close friends. We take them for granted. We assume that a friendship can flourish unimpeded without care and attention to the wishes and needs of our friends.

But this is dangerous and sooner or later we find our friends gone.

What is true of individuals is to a great extent true of nations. What is said of the erring friend can be said at times, unfortunately, of the United States.

For we as a nation, caught up in the myriad complex problems of life today, sometimes overlook the enormous contributions made to the United States by our Latin American neighbors.

We sometimes forget their unwavering, traditional friendship for us. We sometimes overlook the common ties of democracy and an unquenched love of liberty that binds us to the 20 Latin American Republics. We sometimes fail to note the tremendous importance of their trade with the United States and of the enormous political importance of Latin America as a bulwark against communism.

In a word, we sometimes forget to practice our friendship.

Mounting problems are arising in Latin America. Sensible trade programs are needed for development of the continent's vast resources.

Communist attempts to gain through trade programs what they could never gain through political activities must be countered effectively.

Health, education, and sanitation of the underdeveloped nations must be aided and encouraged.

We have an unmatched opportunity this year—now—to demonstrate in specific terms how firm our friendship is toward our Latin American neighbors. We have an opportunity to discover this again, and to further the valuable and mutually advantageous friendship that now exists.

LATIN AMERICA—WHAT IS IT?

(By Hendrik J. Berns)

What is Latin America?

Is it just a nebulous, turbulent region?

Or is it a promise to be fulfilled in the future?

Is it just a headache caused by foreign aid?

Or is it a sound investment?

Is it just a continent of political upheavals?

Or is it a continent groping for proper answers?

Looking at Latin America, these are some of the questions you must answer.

Let us try to help you:

Latin America means 20 sovereign republics, covering more than 7 million square miles. And in human lives it means more than 150 million people.

In the depth of its soil are all of the world's minerals.

On the surface of its soil grows every type of food.

Among its people are the incredibly rich and the incredibly poor.

And there are, also, the very educated and the illiterate.

Among its cities are the supermodern and the superantiquated.

There is the genial swing of glass-bursting Niemeyer architecture and there is the windowless, termite-infested shack.

There is the sprawling, shining beauty of Copacabana and the plank-built hut, deep in the jungle hills.

There is the wealth that sails to Europe and the Riviera twice a year.

And there is the poverty of the squatter who lives on garbage.

There is the spending for the splendor of uniforms and the election, again and again, of feudal cliques.

But there is also the barefoot miner who never learned to write—much less to vote—and the Congressman who pompously represents him in parliament.

There is the glory with which only God's hand can crown a land's hilltops, valleys, forests, and shores.

And there is also the snakepit where thousands of mentally ill rot to their death.

You want to know what Latin America really is?

It is the child of today growing into the adult of tomorrow.

It is that part of the world which, by its very nature, holds all the promises that a greater tomorrow can fulfill.

It is the land of the future waiting for the vision of today.

Death of Senator W. Kerr Scott, of North Carolina

EXTENSION OF REMARKS
OF
HON. RALPH. W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 17, 1958

Mr. YARBOROUGH. Mr. President, when Senator W. KERR SCOTT passed away yesterday, the Senate lost one of its most loved Members.

While this is not the time for formal tributes in his memory, I think it appropriate that the Senate note the sketches of his life which were published this morning in two of the Nation's leading newspapers.

I ask unanimous consent to have printed in the Appendix of the RECORD

UNIVERSITY OF MICHIGAN LIBRARIES

an article entitled "W. KERR SCOTT, 61, Senator, Is Dead," published in the New York Times of April 17, 1958, and an article entitled "Senator SCOTT Dies of Heart Attack," published in the Washington Post and Times Herald of April 17, 1958.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

W. KERR SCOTT, 61, SENATOR, IS DEAD

BURLINGTON, N. C., April 16.—Senator W. KERR SCOTT died today in Alamance General Hospital here. His death came on the eve of his 62d birthday. A Democrat, Mr. SCOTT was elected to the Senate in 1954. He had also served as Governor of this State.

He entered the hospital a week ago, after suffering a heart attack.

Surviving are his widow, the former Miss Mary Elizabeth White; two sons, Osborne W. and Robert W., both of Haw River, and a daughter, Mrs. A. J. Loudermilk of Cuyahoga Falls, Ohio.

He is also survived by 4 brothers and 4 sisters.

A temporary successor to the Senate seat that had been held by Senator SCOTT is expected to be appointed in the near future by Gov. Luther H. Hodges, a Democrat. At the general elections next November a candidate will be chosen to fill out the unexpired term, which ends in January 1961.

Senator SCOTT's death reduces the Democratic margin in the Senate to 48–47.

A SOUTHERN LIBERAL

WILLIAM KERR SCOTT, blunt-spoken, well-to-do dairy farmer who was once described as "the jet-propelled plowboy with a rose in his lapel" was one of the foremost liberals of the South.

Long a champion of progressive measures in social legislation, Senator SCOTT during his 1949–52 tenure as Governor of North Carolina spoke out for Negro rights (although he was not an integrationist) and cracked down on the Ku Klux Klan when that organization attempted to conduct a membership drive in his State.

Senator SCOTT was elected Governor after having served 12 years as State Commissioner of Agriculture. Support from the farmers, whom he called "the branch-head boys," enabled him to win the gubernatorial and Senate races.

As Governor, he constantly criticized the telephone and power companies in public speeches and insisted that the utilities be extended into rural areas. During his tenure 21,000 miles of powerlines were strung to homes occupied by 153,000 persons.

Also as Governor, Senator SCOTT pushed through a $200 million road-bond issue that resulted in the paving of 14,810 miles of roads, more than had been paved in all previous years of the State's history.

He appointed the first Negro to serve on the State board of education. When he was elected Governor he declared it was time for North Carolina to stop dodging the Negro question.

"I am going to follow through to see that the minority race has a fair opportunity and gets the training to fit into the State's growth," he said.

OPPOSED DESEGREGATION

At the same time, he was not willing to let the segregation barriers down in his State. He expressed the opinion that the Negroes did not want desegregation. When four Negroes were enrolled in the University of North Carolina's law school for the first time he said he expected the influx of Negro students at the university to increase for a few years and then to decline after the novelty wears off.

It was also during his tenure as Governor that the State removed salary discrimination against the staff of the mental hospital for Negroes in Goldsboro.

Born on his father's farm in Haw River, N. C., on April 17, 1896, Senator SCOTT kept the same farm all his life, operating a 200-head dairy. He graduated from North Carolina State College in 1917 and held honorary degrees of doctor of agriculture from his alma mater and doctor of laws from the University of North Carolina and Elon College.

He served as a private in the field artillery in 1918 and became a county farm agent in 1920. He was regional director of the Farm Debt Adjustment program of the Resettlement Administration between 1934 and 1936.

In January, 1956, as chairman of a joint Senate-House subcommittee investigating the controversial Al Sarena mining case, he charged that the Department of Interior had awarded claims before receiving official reports on which the award was to have been based.

His charges were a major development in the Al Aarena case, which the Democrats at the time labeled a Republican administration giveaway of public timber, a dispute that became a part of the political campaign that year.

SENATOR SCOTT DIES OF HEART ATTACK

Senator W. KERR SCOTT, Democrat, of North Carolina, a plain-spoken, tobacco-chewing southern liberal, died of a heart attack yesterday in a Burlington, N. C., hospital.

Mr. SCOTT, who would have been 62 today, was stricken a week ago, and death came yesterday from what doctors described as "a sudden extension of the heart attack."

The renewed attack came without warning on a day in which it had been earlier reported that the Senator was making good progress. A birthday party had been planned for Mr. SCOTT in his hospital room today.

Mr. SCOTT is the fifth North Carolina Senator to suffer a heart attack in recent years. Because of deaths, illness, and political defeats, the seat he occupied has been held by 7 different men in 12 years.

SENATE ADJOURNS

The Senate adjourned its session last night after the news of Mr. SCOTT's death was announced to the Chamber by Senator SAMUEL J. ERVIN, JR., Democrat, of North Carolina.

Upon ERVIN's motion, the Senate unanimously adopted a resolution expressing its profound sorrow and deep regret. It authorized the Senate to send an official delegation to attend Mr. SCOTT's funeral.

Noting that a day would be set aside later for eulogies, ERVIN said in a statement that Mr. SCOTT "never failed in his devotion to North Carolina and her people."

"A humble and honest man," he said. "Senator SCOTT has plowed to the end of the road; his furrow is deep; time will not erode his indelible imprint upon our great State for which he so well labored and gave his full measure."

Senate Democratic Leader LYNDON B. JOHNSON of Texas called Mr. SCOTT "one of the most respected members of this party." JOHNSON said Mr. SCOTT "had a long and colorful career which endeared him to the people of his State and to all who knew him."

ELECTED IN 1954

Mr. SCOTT, a prosperous dairy farmer who never forgot his country background, was elected to the Senate in 1954 after having served as North Carolina's Commissioner of Agriculture for 12 years and as Governor of his State from 1949 through 1952.

Mr. SCOTT always attributed his political success to his popularity among the rural voters, and he was a consistent champion of the farmer throughout his public life.

As Governor, he supported a $200 million bond issue to pave the State's series of rural roads, and they became known as Scott roads. He also was active in behalf of school construction, hospital building, rural electrification, and rural health centers.

Mr. SCOTT appointed the first Negro to the State board of education and appointed the first woman to the superior court bench. He also appointed the liberal president of the University of North Carolina, Frank P. Graham, to fill a Senate vacancy in 1949.

RACE ISSUE IN CAMPAIGN

When Mr. SCOTT ran for the Senate in 1954, his opponents brought the race issue into the campaign, charging that Mr. SCOTT encouraged a breakdown of racial segregation in North Carolina public schools. Mr. SCOTT said he favored separate schools for whites and Negroes.

He was elected to fill the unexpired term of the late Willis Smith, who died of a heart attack while in office. In 1956, Mr. SCOTT was renominated and reelected by the largest majorities ever given to a Democratic senatorial candidate in North Carolina.

In the Senate, he served on the Agriculture and Forestry, Post Office and Civil Service and Public Works Committee. He was chairman of a joint Senate-House committee which investigated the Al Sarena timberlands case, in which Sarena was given mining claims on timberland. He also was active in agricultural legislation.

STUDIED AGRICULTURE

Born in Haw River, N. C., Mr. SCOTT was graduated from North Carolina State College with a degree in agriculture in 1917. A few months after graduation he began a lifetime career as a farmer and dairyman. He served as a county farm agent before being elected agriculture commissioner.

The death of Mr. SCOTT reduces the Senate lineup to 48 Democrats and 47 Republicans.

Surviving are his wife, Mary; 2 sons, Robert, who manages the family farm; Osborn, of Washington; a daughter, Mrs. A. J. Lowdermilk, Akron; and 1 grandchild.

Funeral services will be held at 3 p. m. Friday at the Hawfields Presbyterian Church, where Senator SCOTT served as an elder for many years. Burial will be in the church cemetery.

Fort Clatsop National Memorial Park

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, April 17, 1958

Mr. NEUBERGER. Mr. President, the course of legislation for the establishment of a national memorial park at Fort Clatsop near the Oregon seacoast is watched with great interest and pride by residents of my home State. During an Easter adjournment visit to Oregon, I received numerous inquiries about my bill which passed the Senate early in April to authorize the park at this historic landmark where Lewis and Clark brought the American flag overland to the Pacific for the first time. An excellent editorial about the Fort Clatsop National Memorial was published in the Astorian-Budget for April 8, 1958. I ask unanimous consent that it be printed in the appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BIG STEP FOR A BIG PROJECT

Establishment of a Fort Clatsop Memorial Park with museum and permanent custodial service will be one of the greatest things that

ever happened to Clatsop County from the standpoint of development of our historical background.

All of us know what a tremendous tourist attraction the Astor column has become, with tens of thousands of visitors every year.

The Fort Clatsop Memorial Park will be an even greater attraction, we predict, because of its easier accessibility from the main highway and because of the greater historical interest that attaches to the picturesque site of the Lewis and Clark expedition's winter encampment.

Legislation to establish this memorial park made a great stride toward accomplishment last week when the Senate passed Senator RICHARD NEUBERGER'S bill. Senator NEUBERGER, with justifiable pride and pleasure, has sent the Astorian-Budget copies of the speech he made on the Senate floor advocating the bill, and of the committee report he wrote recommending its passage.

Efforts now on behalf of the legislation are to be concentrated in the House of Representatives where Representative WALTER NORBLAD has a companion bill awaiting hearing in late April before a subcommittee, and where NEUBERGER has reiterated a statement that he will help NORBLAD obtain favorable action.

The goal is to have the legislation adopted in time to have the new park dedicated during the 1959 Oregon centennial celebration. This is a worthy goal, and such a dedication could become one of the major events of the centennial year.

Let's Learn the Causes

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. RODINO. Mr. Speaker, in view of the great interest concerning the problem of safety on our highways, I believe that the following editorial which appeared in the Newark Star Ledger of April 16 is timely and significant:

LET'S LEARN THE CAUSES

There seems to be a growing awareness of how little we really know about the causes of highway accidents. If this is so, it is probably the most important development in finally achieving some progress in cutting down the toll on the roads.

No matter how vigorous, a safety campaign based on mistaken notions of accident causes is bound to get nowhere. Perhaps the best course now is to discard the preconceived notions and start out from scratch.

That is what this newspaper has recommended in the past. We need a case study approach, a detailed analysis of series of accidents to diagnose causes with some measure of exactitude.

This is similar to the approach recommended the other day by D. Louis Tonti, executive director of the Garden State Parkway. He suggested that a research foundation be established to get to the bottom of accident causes and do a scientific job of conducting safety campaigns.

A research foundation dedicated to a scientific understanding of accident causes could be the means for getting to the root of the problem. It's an idea we would like to see catch on.

Neglected Men

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks I am enclosing an article entitled "Neglected Men," written by Maj. Gen. Jim Dan Hill, retired.

It is provocative of much thought and I feel sure that my colleagues will value its reading.

The article is attached.

NEGLECTED MEN

(By Jim Dan Hill, president, Wisconsin State College)

The National Guards, Air and Army, are being sold down the river of false economy.

This volunteer force that gives the most for the smallest fraction of each defense dollar is being sacrificed by meat-ax technique in sputnik-inspired false emphasis, budget trimming.

America has become dangerously rocket happy. Missiles have become more important than men.

The desk fighter's popular science fiction dream of pushbutton, intercontinental wars has captured so many imaginations that America is about to accept the dangerous dictum that for combat men have become obsolete.

Khrushchev nurtured this theme for us in one of his well-planned speeches early in the brief period that sputnik successes were giving him a worldwide forum.

If Nikita Khrushchev actually believes that malarky, why is Russia still training pilots?

Why are Russian crews being drafted into an ever-expanding Soviet submarine force?

Why does Russia, in the face of world clamor for arms reduction, cling tenaciously to the largest army in the world?

The Soviets have 175 divisions on full active duty at all times. Billions are being spent on their modernization.

Khrushchev, distrustful of Field Marshal Voroshilov, degraded him to Siberian obscurity for his resistance to Communist Party surveillance within this powerful force.

Khrushchev and his henchmen are insistent that this great mass of military manpower will unquestionably fight foreign wars for the expansion of Moscow's own brand of aggressive Marxism.

Thus, when Khrushchev says men have become obsolete, his policies give his words the lie.

Men can never become obsolete in a man-made activity.

Great teams of men are essential to the coordination, operation, and relocation of these increasingly complicated and science-inspired engines of war. The greater and more complex the machines become, the greater the need for more men, disciplined into smoothly functioning, fearless teams.

That engines of war must be coordinated, operated, and relocated by large teams of trained men is a principle of warfare that goes back to the ballistae and the battering rams that Caesar used in ancient Gaul. They were the engines the scientists of his day contributed to warfare.

Note the emphasis upon relocation of weapons. No war has ever been won, or ever will be won, without a combination of fire and movement. Any rocket base we cannot readily transfer from one place to another is a base America will not have very long. The enemy will capture or destroy it. In each alternate position, where the weapons are actually located, there must be defense by ground troops, air cover, patrolling submarines.

All this fire and movement by weapons old and new call for men, trained men with teamwork instincts.

No cannon was ever any better than the artillerymen who fired it. And let us never forget that a rocket is just another form of artillery.

Where does America find these teams and teams of men?

The full-time, active forces of the Army, Air Force, and Navy are already small. They are but little more than vocational schools for the development and teaching of techniques and job skills. In these each private costs the taxpayer over $5,000 a year. Higher ratings and ranks cost proportionately more.

Long ago it was decided America should initially depend heavily upon volunteers from civil life who would organize themselves into appropriate team units, and comply with the professional and training specifications of the regulars. These techniques and team training are readily transferable to newer weapons.

The National Guards, air and ground, along with less completely organized reserves of the Army, Navy, and Marine Corps, are America's most immediate sources for citizen soldier and air volunteers for such service, be it with rifles or rockets.

By coordinating civilian and military interests, these teams of avocational-service men give the taxpayer the most for the least cost to the Treasury of any defense agency.

In this sudden delusion that pushbuttons can defend a great nation, the already small, compact, well-trained Guard units are being meataxed by a strength reduction of 76,000 men from their earlier 436,000.

This is just enough to wreck the organizational strength and morale of the 360,000 now being budgeted. The so-called saving is pennywise and pound foolish. The cost of each guardsman is but one-sixth of that of a full-time soldier or airman of like grade.

This small corps d'elite of America's trained and fully organized combat manpower is normally expanded, when money is tight, as an economy measure. Today we witness the folly of reduction.

Credit Where Credit Is Due

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 10, 1958

Mr. HIESTAND. Mr. Speaker, the American labor movement has suffered tremendously because of the actions of a few corrupt union bosses. Millions of honest, devoted union members have been the biggest sufferers, first, because they are most conscious of corruption yet powerless to combat it; and, second, because it is their dues money which is used to feather the nests of the crooks.

It is fitting, therefore, that we pay tribute to some of the well-managed de-

UNIVERSITY OF MICHIGAN LIBRARIES

cent labor unions which are operated for the benefit of their members and the public at large, instead of being run to fill the pockets of the union bosses.

An outstanding example of a soundly operated union is local 11 of the International Brotherhood of Electrical Workers, AFL, which has a membership of just less than 9,000. It has 4 units in southern California: 1 in the Los Angeles Harbor area, 1 in downtown Los Angeles, 1 in the San Fernando Valley and 1 in the San Gabriel Valley.

Local 11 takes great pride in upholding good relations among the union, its members and their employers. Naturally, there are occasions when all do not agree, but usually some common ground can be found where problems can be resolved. The union is interested in the advancement not only of its members, but of the electrical industry as a whole and the Nation as a whole.

Local 11's internal affairs are exemplary. Every bill is approved by the executive board before being paid. A certified public accountant gives a quarterly financial report which is available for any member's inspection at any time. A summary of this report is posted on every bulletin board with copies of it in every district office where anyone can request and receive it.

Moreover, the international brotherhood gives a complete financial report in its Journal Quarterly which is mailed to all members.

In local 11 an election is held every 2 years. Balloting is secret. The polls are open from 7 a. m. to 7 p. m. in each district office. Judges and tellers are elected by the membership to conduct the election. The same method of voting is used as in civil elections, with booths and ballots.

Members take a sincere interest in their union's affairs. At the general meetings there is an average attendance of about 800. Officials estimate that between the general meetings and the unit meetings that somewhere between 2,300 and 2,500 of the members attend a meeting every month.

Local No. 11 feels a strong sense of responsibility to the public. The IBEW construction department has not had a major strike since 1922. There is a clause in the constitution which forbids any local union to strike without permission of the international office.

In 1923, the council of industrial relations was formally established in the IBEW. It is composed of 6 members representing the employers and 6 representing the union, and they come from various parts of the Nation so that a broad segment of the electrical industry is represented. The council of industrial relations considers any unresolved problems arising during negotiations if these problems cannot be decided locally. Decisions of the council are binding and none has ever been violated.

Locally, there is a joint conference committee set up to resolve minor grievances which arise because of differences in interpretations of agreements.

The organization has a pension plan which has been in effect for some 30 years. Both employers and employees contribute to the plan.

Local No. 11 publishes a newsletter to keep its members informed of union affairs and problems. It encourages the families of members to take part in union activities.

Contests for members—including families—with Government bonds as prizes, family picnics, sponsorship of youth activities and other community projects, apprentice-training programs with savings bonds and other awards for outstanding trainees, and information programs for all members, are among the many activities which local No. 11 promotes for the benefit of its members.

Local No. 11 is an outstanding example of a union which operates from the ground up, in behalf of the rank-and-file union man and his family. What a contrast this is to some unions, and especially to some union leaders whose performance and reputation are far more widespread.

Statement of Policy of the Polish-American Congress

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. MACHROWICZ. Mr. Speaker, under leave granted, I submit to my colleagues the statement of policy unanimously adopted by the executive officers and the board of directors of the Polish-American Congress, which speaks authoritatively on behalf of 7 million Americans of Polish origin:

STATEMENT OF POLICY OF THE POLISH-AMERICAN CONGRESS

Executive officers and the board of directors of the Polish-American Congress, the representative body of 7 million Americans of Polish origin, meeting in Washington on April 11 and 12, 1958, unanimously agreed on issuance of the following statement of policy:

1. While since its very inception 14 years ago, the Polish-American Congress stands unalterably opposed to communism and condemns its tyranny, its insidious designs for world conquest, and its suppression of civil liberties. We cannot agree with those few American statesmen, politicians, and publicists who insist on regarding Poland as a Communist country and would deny the Polish people any help from the United States.

It is true that Poland is presently governed by a very insignificant minority of adherents to the Moscow-dominated Communist Party. This situation, however, is not of Poland's free choice. It has been forced on Poland by treacherous means of Red conspiracy and with tacit consent of the West. Poland's 28 million people continue loyally dedicated to democratic principles.

Throughout her 1,000-year history, Poland, as a powerful nation on the ramparts of Christendom, has offered time and again proof of her steadfast and unyielding allegiance to the tenets and democratic ideals of western civilization.

This noble tradition of 10 centuries cannot be changed by Communist oppression of recent years. Historically, traditionally, culturally—the Polish people cannot be susceptible to Communist persuasion and will never accept it even in the face of overwhelming pressure from the Kremlin.

Poland's valiant spirit of resistance against Communist designs for world conquest can be weakened and broken not by the powerful forces from the East, but only by the indifference and lack of moral and material support from the West. Deprived of this help, the gallant Poles would rightfully feel betrayed, abandoned, and the hope of freedom would die in a nation whose people desperately long for a return to the Western family of nations.

A Poland, broken in spirit through our indifference to her plight, to her rights, and to her deeds of the past, would be a major calamity for the West for we cannot emphasize too strongly that a free Poland is the real key to peace in Europe. It is therefore in the best interest of the United States to constantly seek out ways which will restore complete sovereignty to the people of Poland as quickly as possible.

For these reasons, we strongly believe that the people of Poland should be given more economic, technical, and cultural assistance. We of the Polish American Congress are grateful to the United States for having the courage to distinguish between the present Communist regime in Poland and the urgent needs of Poland's people. We strongly urge further assistance to Poland not only in the form of surplus commodities but of credits to help build her consumer industry. We are confident that an economically sound Poland will not long remain in the Communist orbit.

2. We commend the stand of the President of the United States and the Secretary of State against a hasty and ill-prepared summit conference between the heads of governments of the free world and the Communist bloc.

It is our considered opinion, that in addition to undeserved gains in propaganda value, the Soviet Union is striving to create among the subjugated nations within the Red empire an impression that the West, by implications, if not by written consent, is accepting the intolerable status quo among the captive nations in central and east central Europe.

To perpetuate this erroneous impression of status quo would be a tremendous gain for the Soviet Union in the cold war. It would kill the hope of freedom and deliverance among the 100 million people of the captive nations whose only salvation lies in the Western nations' moral force and their determination to oppose Russian conquests and encroachments.

If the United States decides upon a summit conference with Soviet leaders we strongly urge that the first prerequisite of such a conference, the first point on the agenda, should be a demand by the United States for the liberation of the satellite nations. Unless the Soviet Union is willing to place the liberation of the captive nations on the agenda, we feel the United States should refuse to participate in any further summit conferences.

Under no circumstances should the United States agree that liberation of Poland from Communist rule is an internal matter for the Poles to determine. The Red regime was forced on the Poles by acts of omission from the West and restoration of her liberty is a world responsibility.

3. The Polish American Congress further believes that American foreign policy would gain immeasurably in stature in central Europe if the United States would now take effective steps to ratify Poland's western boundaries as agreed at the Potsdam Conference. It is an indisputable fact that the formal ratification of Poland's western boundaries along the Oder-Neisse Rivers would deprive the Soviet Union of her only claim for keeping Soviet troops in Poland under the guise of helping Poland protect her western boundaries. The urgency of this ratification becomes even more apparent when we take into consideration the fact

that leaders of Western Germany have on various occasions indicated they would be willing to discuss ratification of Poland's western boundaries as agreed at Potsdam.

4. The Polish American Congress further believes that the United States should expose the fraud presently being perpetrated by the Soviets and the present Communist regime in Poland that the hundreds of thousands of Poles taken from their homeland to Soviet slave labor camps by the Communists in the early phases of World War II are now being returned to Poland. There is indisputable proof, supported by letters smuggled out of these Russian forced labor camps, that only a small fraction of these long-suffering Poles are in fact being returned to their native land. The United States should not be misled by the so-called "reproachment" between the present Communist regime of Poland and the Moscow rulers regarding the Polish repatriates. This pact is not being fulfilled by the Soviet Union. The United States should proclaim to the world that any continued imprisonment of these gallant Poles in Russia is a violation of the United Nations Charter which the Soviets have signed, and is in violation of the accepted conduct of civilized nations. The United States should demand very strongly that before any further discussions for easing of world tensions are held, the Soviet Union must, through its puppet governments in the satellite nations, release all political prisoners now being incarcerated for alleged acts against Communist authorities.

5. The Polish American Congress believes that we should treat Russia's move to suspend nuclear tests with suspicion. Anyone who indulges in any wishful thinking is immature. The Russian announcement is just another ruse to relax our guard. The Russians will never deviate from their goal of world conquest. Any delusions about this matter may prove fatal. While talking about peace and suspension of nuclear tests, the Reds are building the world's greatest war machine. Before the United States agrees to any discussion regarding suspension of nuclear tests the Soviet Union should be compelled to show the free world the exact extent of its nuclear developments just as the United States had done in 1947 at Eniwetok. This point becomes even more significant when we recall that the United States has agreed to invite representatives of the entire world to view its nuclear tests scheduled for this summer. The Polish American Congress further feels that it would be a tragic mistake to recognize the so-called Rapacki plan to create a "nuclear-free" buffer zone in central Europe because it is clearly apparent that the Soviet Union has authorized this move merely because the Soviets themselves, are fearful of giving their satellite captives nuclear weapons.

6. The Polish American Congress strongly supports current efforts to compensate Polish nationals, and American citizens in Poland at the time, who had suffered indescribable physical injuries at the hands of Nazi troops during the invasion of Poland; with such compensation to be paid by the United States to these victims from the currently frozen German assets in this country. We feel that Congress should enact appropriate legislation for such compensation in keeping with America's traditional policy of justice and humanity.

7. The Polish American Congress congratulates the United States State Department for undertaking action to relieve the pitiful plight of thousands of Polish refugees now stationed in Germany, Austria and other west European countries, through its American escapee program. We pledge our cooperation with the Polish American Immigration and Relief Committee which has been designated by the State Department to perform this task.

8. The Polish American Congress feels that for too long American policy has been on the defensive regarding our dealings with the Communists. We feel that a firm and decisive policy toward the Soviet Union will have the most effective results toward world peace and one such area where decisive action can be taken now is for the United State Congress to adopt the recommendations of a select committee of the United States Congress which in 1952 indicted the Communists for the Katyn massacre and urged that the Soviet Union be tried before the International World Court.

9. The Polish American Congress further affirms that it cannot condone organized excursions to Poland by recognized American organizations lest such excursions be interpreted as tacit approval of the present Communist government in Poland and we caution those who would arrange such excursions that they take every precaution possible to avoid exploitation for propaganda purposes by the regime in Poland of their group visits to that country.

10. We further strongly urge our State Department to demand of the Polish Government that the $1 CARE food packages be admitted into Poland for general distribution to relieve hunger and privation—as a condition of any further discussions with the Polish Government on cultural and economic exchanges.

11. The Polish American Congress sends to the people of Poland warm and sincere congratulations on their basic faith of a free people living under God, and we congratulate the Polish people for the magnificent manner in which they have conducted themselves in bringing about the great changes in Poland. The world owes these gallant people a debt of gratitude for piercing the first significant hole in the Iron Curtain.

12. The Polish American Congress congratulates the American press, radio, and television, and particularly the Polish language press in the United States, for distinguishing between the Communist Government of Poland and her overwhelmingly non-Communist population. We urge continued support of the Polish language press in the United States as an essential link in the continued struggle for Poland's independence.

13. We note with reverence, that in October of 1958, 350 years will have passed since the landing of the first Poles in Jamestown, founded in 1607 as the first permanent English settlement in the New World. Historians justly speak of Jamestown colonists as the beginners of the Nation. The Poles were among them. They were instrumental in building the first factory in America, the historic Glasshouse, in manufacturing rosin by-products, and in defending the colony against Indian attacks.

Contrary to popular beliefs, created by ethnic prejudices at the turn of the century, Americans of Polish origin are not late comers to American shores. Their heritage reaches the earliest epoch of American history.

Justly proud of this historic fact and of enduring contributions made by men and women of Polish origin to the growth and welfare of the United States, we call upon all chapters and divisions of the Polish American Congress and other units of Polish American organizations to commemorate in their localities the 350th anniversary of the coming of the first Poles to America, and to join the national observance planned.

In conclusion, we pledge our moral strength and all material resources of the Polish American Congress to help Poland in her difficult progress toward full freedom—and to support American policy in its search for a just and lasting peace and international security in a world where freedom reigns.

ROMAN PUCINSKI, *Chairman.*
Z. P. ZAKRZEWSKI.
WILLIAM GLOWACZ.

Statement Presented Relative to Assistance to Unemployed Individuals

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. KING. Mr. Speaker, as Members of the House are aware, the Committee on Ways and Means, of which I have the honor to be a member, acted expeditiously to conduct public hearings on pending legislation to provide for an emergency extension of unemployment compensation benefits so as to alleviate the hardships resulting from widespread unemployment throughout the Nation. These hearings covered not only the subject of an emergency extension of unemployment compensation benefits in the case of those individuals who have exhausted their benefit rights under State law, but also were for the purpose of receiving advice and recommendations relative to the most appropriate methods of providing assistance to unemployed individuals who are not within the purview of the coverage provisions of the unemployment compensation laws of the several States.

During the course of these hearings a fellow Californian, Mr. George McLain, president of the National Institute of Social Welfare, presented a statement to the Committee on Ways and Means expressing the views of the National Institute of Social Welfare with respect to the inadequacies of present general relief programs in most States, and particularly with respect to the inadequacy of those programs insofar as unemployed heads of families are concerned.

In order that the views of Mr. McLain may be readily available to Members, I include his statement in the Appendix to the RECORD at this point:

Mr. Chairman and members of the committee, my name is George McLain, and I represent, as its president, the National Institute of Social Welfare, whose Washington address is 200 C Street SE., Washington, D. C., and whose main headquarters are located at 1031 South Grand Avenue, Los Angeles, Calif.

May I thank you for the opportunity to present my statement, which has been confined to recommendations relative to the most feasible emergency measures which might be suitable for affording assistance to individuals who are unemployed and who cannot qualify for the additional unemployment compensation benefits because they have not been covered by unemployment compensation programs of the various States, as outlined by your chairman, the Honorable WILBUR MILLS, in his directive dated March 18, 1958.

I feel that Chairman MILLS and the members of this committee displayed great understanding of our economic problems when you included other emergency assistance with your deliberations on extending unemployment compensation benefits. Certainly, we all know that great numbers of the unemployed do not qualify under State unemployment compensation laws, and, generally speaking, these have been the tragic

UNIVERSITY OF MICHIGAN LIBRARIES

cases displayed in newspaper headlines across the country during these past few months.

It is my belief that Congress has delayed far too long, in taking into consideration the vast number of people who are destitute, and, yet, cannot meet qualifications established for receipt of public assistance funds under any one of the present four categories, which include: Aid to the aged, aid to the blind, aid to the physically handicapped, and aid to dependent children.

Naturally, the present economic depression has been felt most deeply by this group of people, simply because there is no State or Federal program to act as a cushion for their economic downfall. Reports from across the country indicate that county welfare officers are jammed, relief rolls are swollen by people who can qualify for some measure of county relief at the same time, hundreds of thousands of desperate people have been turned away without any aid, because either county funds were exhausted or county rules and regulations prohibit such individuals from receiving assistance.

I, and many others, have long maintained that a fifth chapter, titled "General Relief," should be added to the public assistance sections of the Federal Social Security Act. The need for this was evident during fairly high employment. Now that our Nation faces its greatest economic crisis in nearly two decades, such action would appear almost mandatory.

Under the present hodgepodge—general relief in some form is given in most States. However, it is almost entirely a county affair and the rules and regulations are often so harsh as to make the program practically inoperative. We cannot be too hasty in condemning county governmental units, however, since the entire cost must now be borne by the homeowners in county property taxes.

A number of circumstances combine to make the general relief problem a national one. We are faced, first of all, with the realization that our society has become more mobile each year. Much of the work force, particularly in the low-income, manual-labor bracket, attempts to follow the labor market, with little regard for State boundaries, let alone county lines.

On the other hand, we find States and counties clinging tenaciously to the archaic residence requirement dating back to Queen Elizabeth's poor laws in the matter of public welfare responsibility. Obviously, this mobile society of 1958 is completely incompatible with the static, rigid qualifications borrowed from 17th century England. And yet, it is difficult to blame any one State or county for the harsh residence requirements. Their fear that a great influx of destitute people would be the result of local lessening of residence requirements, I believe, is well founded.

Local boards of supervisors and State legislators are faced with providing funds for their local and State activities. Certainly, no one county—by eliminating its residence requirement—could afford to take on financial responsibility for all the destitute from other communities.

Local governing boards must, necessarily, be concerned with local problems and responsibilities. They can rarely afford an overall look. Congress, however, must always endeavor to see the overall picture, and I feel confident that if you gentlemen take a good, hard look at conditions all over the country, you will see that thousands of destitute families in every part of the country are faced with one and the same problem—they cannot meet State or county requirements for either public assistance or general relief, and no other program exists for their salvation.

Just as an example, let me point to cases in widely separated sections of the country, which have come to the attention of the press during these past few months of economic stress:

In Milwaukee, Wis., the Milwaukee Journal highlighted the personal tragedy of Mr. and Mrs. Carmelo Torres in an article which pointed out the privation now being endured by thousands of families, whose breadwinners have not been able to find jobs. The Journal reporter recounted how Carmelo Torres and his wife had to stand by helplessly while their 2-month-old daughter, Nilda, survived several days on a diet of sugar and water. Nilda's father painfully recounted his futile efforts to obtain work, any kind of work, and when he applied for county aid, he was told that he was not qualified because the family had moved from Chicago just 7 months before. Therefore, he could not meet Wisconsin residence requirements. "Go back to Illinois," he was told.

The newspaper reporter then said that a private charity, the St. Vincent de Paul Society, has helped with food. It gave Torres $5 to buy milk for the baby. For those who do not qualify for relief under the residence law, the society is almost the only resort, but many need help, and there is a limit to what it can do.

Now, let's go from the Great Lakes of Wisconsin down to the vast plains of Texas, where we find an article from the Fort Worth Press, reporting that a jobless father of five cold and hungry children said he is almost desperate enough to steal.

He said that he has had no steady work since he was laid off from an aircraft plant last September.

To make matters worse, he and his wife, Peggy, and their 5 sons, age 6, 4, 2, 1, and 3 months, have been plagued by sickness. The past 2 weeks, this distraught young father has borrowed money from friends to buy milk for the baby. They face eviction from their house in which the heat has already been turned off.

The father said that welfare workers helped the family in December, but he has not been able to get any help since. He said he has applied for unemployment pay, but so far it has not come through.

From the great State of Missouri, in the St. Louis Post-Dispatch, comes this frightening story of want and suffering. The headline reads, "St. Louis Families in Depression—Children Hungry, Some Have No Shoes and Cannot Attend School—Fathers Are Ineligible for Relief or Unemployment Compensation."

"The man is 41 years old and he has 5 children who range in age from 3 to 13. The family has never been well-off, but they have been properly fed, well clothed, and reasonably secure. Two weeks ago, however, this man went through an ordeal that was almost more than he could endure. For 2 whole days, his children didn't have a bite to eat.

"I never would have believed that I'd ever hear my children crying for food," he told the reporter.

"This family is one of the estimated 1,000 or more in St. Louis whose breadwinner is out of work, unable to find work, and is ineligible for State relief or unemployment compensation.

"In Missouri, no State relief funds can be given to a family which has an employable member, even though the employable member is unable to find a job.

"Thus a man who is employable but not covered by unemployment insurance, has no place to turn but to private agencies. For all practical purposes, this means the Salvation Army. The Red Cross is not a direct aid agency for unemployed. The Family and Children Service, a United Fund Agency, does not have direct aid as a part of its program.

And now, to the golden State, California, where we find thousands of migratory workers starving as inglorious victims of the counties' harsh, 3-year residence requirement.

As one example, I point to the agriculturally rich San Luis Obispo County, where several hundred people are stranded without food or shelter. These people came to San Luis Obispo County as harvesters of the big pea crop, but when torrential rains set in, pea picking was impossible, and so their earning power was stopped. Agricultural workers are not covered by unemployment compensation, so they have no recourse there. San Luis Obispo County and California's other 57 counties require a 3-year residence in order to qualify for the most limited, general relief funds and a more harsh, 5-year residence requirement is imposed for receipt of public assistance under any one of the four categories.

In plain terms, so far as the State of California, the county of San Luis Obispo, or the town of Nipomo are concerned, these hundreds of people can starve to death, and no public aid will be granted. And, in view of the lack of Federal action, it would appear that Congress is of the same bent.

As I said earlier, it would be difficult to blame any particular State or locality for the injustices I have just recalled. They are the victims of too little planning and coordination on a broad, sociological basis, and so they stumble along with grossly inadequate, piecemeal programs which are fair to none and downright inhuman to many.

The only solution to this national problem must start right here in this Committee on Ways and Means of the House. This fact is recognized, not only by me and others of us who are primarily concerned with the humanitarian aspects of society, but I am happy to say, by many men across the country who are the administrators of State and community affairs. In support of this, I direct your attention to the sixth report by the Committee on Government Operations which was compiled by the Intergovernmental Relations Subcommittee as a result of its study on joint Federal-State activities.

Questionnaires were sent out to governors all over the country, requesting among other information, advisement on how social welfare programs could be improved.

Among their recommendations, many governors specifically requested Federal participation in general relief or assistance. For instance, the Honorable James E. Folsom, of Alabam, replied, "Participation by the Federal Government in a program of general assistance would be helpful."

Colorado's Governor Edwin C. Johnson, replying through his department of public welfare, said, "The department also feels that Federal funds should be available to the States for the purposes of general assistance."

From the far-northern State of Maine Governor Edmund S. Muskie's department of health and welfare said, "We approve of the principle of the Forand bill, H. R. 10803, which would enable States to retain their present assistance programs or participate in a single, comprehensive, public welfare plan. The only eligibility requirement would be financial need."

Missouri's Governor, Phil M. Donnelly, said, "It is our belief that the Federal-State programs of public welfare should be expanded to include Federal financial participation in the general relief program, which would enable the States to extend assistance to more needy persons, as well as to provide higher benefit payments."

New Jersey's Governor Robert B. Meyner, suggested, "Direct recognition in Federal law and therefore, in attendant Federal financing, that public welfare responsibility relates to all needy persons, and not merely the aged, the blind, the severely disabled and selected, dependent children."

And from way out West, the then-Governor of Washington, Arthur B. Langlie, said, "Basically, Federal grants-in-aid should recognize the comprehensive nature of public welfare responsibility, so that financial assistance and services would be provided for all needy persons."

In brief, we know that widespread suffering exists for a very great percentage of our people. We know, further, that there is widespread recognition of this problem by people on the local levels. It remains only for Congress to recognize this as a national problem—and it surely is—then to proceed with a national remedy. I believe you gentlemen have the power to effect this much-needed national remedy by writing a "general relief" chapter into the Public Assistance section of our Social Security Act. But, in so doing, I would alert you to avoid the harsh restrictions which are largely to blame for the complete inadequacy of present State and county programs.

Most assuredly, I would strongly urge that you specifically forbid enactment on the State or local level of any residence requirements. Unless this is done, you efforts to relieve the most intense suffering will be mostly in vain.

You are convened here to try and find at least a partial solution to our national economic crisis through considered changes in the unemployment compensation programs and other emergency measures. A Federal general relief program is desperately needed to act as the sop for the inadequacies of all our other public welfare programs. Put into immediate operation such a measure and you will have done much to stabilize our economy in the midst of the spreading depression. And at the same time, you will have solved one of the most pressing, humanitarian problems of our day.

Thank you.

I Knew Handy Eulogy

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. DAVIS of Tennessee. Mr. Speaker, the late W. C. Handy, the father of the blues, lived in the city of Memphis for many years. It was there he wrote the Memphis Blues and the St. Louis Blues. He rose from very humble life to a place of great stature throughout our country. He made a very real contribution to music and his name will last forever.

I first knew him when I was a student at the University of Mississippi. We became warm friends and up until his death we kept in touch with one another.

Lt. George W. Lee, grand commissioner of education for the colored Order of the Elks, knew him perhaps better than anyone else I know. Lieutenant Lee, soldier, author, lecturer, civic leader, and successful businessman, delivered a masterful eulogy at the memorial services held in the city of Memphis, where both white and colored sought to pay tribute to this great man.

Lieutenant Lee is one of the great orators of our time and I have asked to include his speech entitled "I Knew Handy Eulogy." Its reading will prove that he has orange blossoms in his voice, his language is as smooth as velvet, and his wisdom and reasoning equal to the wisest.

The speech follows:

I KNEW HANDY EULOGY

(By George W. Lee)

"I hate to see that evening sun go down," is a line in the St. Louis Blues which hangs in the mind like tinsels on a Christmas tree. For W. C. Handy, the composer of this immortal tune, the evening sun has gone down, for the last time, beyond the river. But like Old Man River, the melody of his sad sweet songs will just keep rolling along through the corridors of the centuries and baffle the mist of time.

I once asked W. C. Handy "What is the source of your greatness?" He pondered the question for a moment and finally when he lifted his head to answer, a strange light was in his eyes. He said slowly, "Just say that I love people and I love doing things to glorify them. Somewhere in the Book it says, 'Inasmuch as ye did it unto one of these my brethren, even these least, ye did it unto Me.'"

Handy's life is the tale of three streets—Beale Street, Market Street in St. Louis and Broadway in New York. But from the dust of Beale Street rose the legend of a man. He pressed his trumpet to his lips and a song rose with the drift of the wind. I'd rather be there than any place I know.

Handy had no more irritations or problems on Beale Street, than any other genius would have in any other place that men suffer who star their age and time. He once said to me "Whenever I come to Memphis, a freedom comes over me that I feel nowhere else. The past fills me with a boundless joy and the present prompts me to every fond delight, when I am in the midst of these comforting scenes."

Handy loved Beale Street. He spent a lifetime in full service to all its demands and its traditions, its weaknesses and its ecstasies. To him there was humor, pathos, and drama in this crooked little street which sprang as from some miasmic dream of paved congo, the jerky pantomine of plaint and piety, suppression and sensuousness which was the outer soul of the Negro come to the American town.

Handy had been blind for years, but he could see, though his eyes were closed. Mrs. Louise Handy, his faithful wife, was his eyes. She was the increment of his humble fortune. He had been married once before to Mrs. Elizabeth Handy, the companion of his youth and years who died in 1937.

Last Friday, at 3 in the morning, at the Sydenham Hospital, he slipped quietly away into the unknown, before he had time to see the evening sun go down. There were those about his bedside who saw him come to the end of his day, long before the night had fallen from heaven on a rope of twilight. W. C. Handy, Jr., and Wyer Handy, his two sons; Charles Handy, a brother; Mrs. Catherine Lewis, a daughter; Mrs. Irma Louise Logan Handy, his wife and William Handy a grandson. But from the ends of the earth there are other mourners as thick as grief.

Long before his passing, he had left his beloved Beale Street, to try his fortune on Broadway, but he always came back. He came back to get the Cottonmaker's Jubilee off the ground. He came back again to spark the drive for war bond savings. He came back again and again to furnish the drama for the Elks Blues Bowl Christmas charity game. All the while, he was working on Broadway to establish a Foundation for the Blind.

Rivers full of muddy water have rolled down to the sea since that night, back in 1909, when Handy first got a song right in his head and set it down on music paper, and gave it everlasting voice with his golden trumpet. The mood and melody of the Memphis Blues has resounded around the world and then back to a crossroad shack in the Montana plains. Its melody created the St. Louis Blues which went with President Harding's flagship to Alaska and to Washington to entertain Ramsay MacDonald, England's Prime Minister.

Handy admitted to me many times, the part white southerners played in popularizing his music. When they went North, they clamored so loud for his music that band leaders in hotels and night clubs were forced to place it in their repertoire. Negroes brought him to Beale Street and made him its most glamorous figure.

The life of W. C. Handy and the story of how he originated the blues has been told many times. He has been honored by everybody. His hometown of Florence, Ala., rerently erected a handsome ultramodern public school in his honor; Memphis has a town square named after him; and St. Louis has a scholarship fund in his name to be awarded annually to worthy Negro and white youngsters with musical talent. The fund offices will be housed in a new building to be erected on the spot where Handy once slept as a hobo. The huge clock on its facade will play the opening bars of the St. Louis Blues on the hour.

Handy made a long step from Alabama to the advancing wave of circumstances on which he advanced himself to one of the high pinnacles of earthly grandeur and renown.

The Milwaukee Journal, in its issue of September 22, 1949, listed the 20 grand old men of the world. It named W. C. Handy along with George Bernard Shaw, Lionel Barrymore, Connie Mack, Toscanini, Bernard Baruch, Cordell Hull, and others.

He was born on November 16, 1873, in Florence, Ala. As a child he was thrilled by the singing of his people. In his 10th year, he could read music at sight and he had a good tenor voice. His father and mother wanted him to be a minister, but Handy wanted to be a musician. His first step was to get enough money to pay for instructions. To this end, he left home and walked all the way to Birmingham, where he taught school for a while. When the depression that marked the Cleveland administration brought general unemployment, he joined a saloon quartet and set out for the world's fair at Chicago. The singers had no money, so they hopped a freight train and attempted to beat their way west. Luckily for them, the brakeman who discovered them had a weakness for songs, so with cornet and guitar, as Handy said "they soothed his savage breast," and instead of being redlighted, they were conducted to a caboose de luxe.

In 1897 Handy returned to Alabama and taught vocal and band music at the agricultural and mechanical college in Huntsville. His life at this period was restless, interspersed with travel in Mexico, Cuba and Canada. Handy the composer had not found himself. It was in Memphis, Tenn., where Handy received the impetus that sent him along the road to renown.

Through the mist of the years he beheld the golden towers of his dreams rise at last against a background of reality. A great impulse to set the songs of the cotton pickers, the work songs of the railroad, the river songs of the roustabouts, who made music as they worked. To them singing was a necessity, rather than a luxury. W. C. Handy, who, like Stephen Foster, brooded over the songs of the Negro flowing in quick tears and laughter straight from his unhappy heart. So, in Memphis, Handy emphasized the native and nationalistic element of these songs

UNIVERSITY OF MICHIGAN LIBRARIES

and gave them as an enduring gift to America's treasury of music.

A political situation in 1909 afforded nationwide publicity for Handy and his new music. In that year Williams, Talbot, and E. H. Crump were running for election for mayor of Memphis. Jim Mulchay, political ward boss, hired Handy to play for Crump. Echford and Bynam bands were employed for the other two candidates. In order to outdo these two great bands, Handy was spurred to creative efforts. Down in Clarksville, Miss., in St. Louis, Mo., in Evansville, Ind., in Henderson, Ky., and later on Beale Street, Handy had devoted himself to acquiring the material and atmosphere which would someday aid him in making a musical rendition of Negro folk songs.

Now he found his store of knowledge useful in another way. His band opened the campaign at Main and Madison with a piece called Mr. Crump, a composition which took the shape of the inevitable results of the tempo of cotton-picking work songs along the aching side of old man river, of happy nights in the pleasure palaces strung out along Beale Street, and the privation of poverty-chinked cabins and slender, precarious meals. The crowd in the streets literally went wild over it. They shouted until they were hoarse demanding to hear it again and again. They whistled and danced with the rhythmic sway of the music as the words came with the drift of the wind:

"Mr. Crump don't 'low no easy riders here,
Mr. Crump don't 'low no easy riders here,
I don't care what Mr. Crump don't 'low,
I'm gonna bar'l-house anyhow.
Mr. Crump can go and catch hisself some air."

That tune was the vehicle which carried two to victory. Handy rode on it from Beale Street to Broadway. Crump, to 25 years of undisputed political leadership in Memphis. After the election, the Mr. Crump song was changed and titled "Memphis Blues" and offered for publication. After every publisher in the country had turned it down as worthless, it was sold to T. C. Bennett a young white man, head of the music department of a department store, for $100. The young white man made a fortune out of the Memphis Blues.

Handy's next number, the St. Louis Blues suffered the same fate with the publishers as did the Memphis Blues. When the publishers rejected it and laughed at him, he became discouraged and laid it aside. Finally, he organized the Pace & Handy Music Co., to publish the St. Louis Blues.

This little song about the man stealing woman with her diamond rings, has sold more than 2 million copies, is played and recorded in almost every country on the map and has become one of America's national anthems.

The growth of Handy's music in our times has a consequence which is still impossible to determine. I think someday this music called the blues will provide the raw material which will stimulate American culture.

There are many people in these vast United States, who have become famous in the field of music, but without a doubt the leader and dean of them all is the late W. C. Handy, famous for composing and writing the Memphis, the St. Louis, the Beale Street Blues and in addition, many sacred songs that America is now listening to, such as, They That Sow in Tears Shall Reap in Joy.

Among the outstanding and leading books that have been written by Handy, father of the blues, his autobiography and treasury of the blues, which he edited.

The last time Handy was a visitor in my home, he said that Handy Brothers Music Co. was about to publish an outstanding symphony called Blue Destiny. The first movement would be based on the St. Louis Blues, the second movement on the Beale Street Blues, the fourth movement based on the Harlem Blues and the Memphis Blues.

So, the dean of American music has passed. He brought to the American public songs that the heart cannot tell in its own futile terms, but must borrow out of travesty and fervent plant, the wails from which he drew his own great songs.

The Beale Street Blues, the Memphis Blues, the St. Louis Blues holds fast to something deep down inside of one. They are more than songs. They are a loving, shining symbol that only the soul of man can understand.

So, when the last sun goes down on judgment day, it will reveal three bright musical mansions in the sky. The one on the right for George Gershwin, built out of Rhapsody in Blue. The one on the left for Stephen Foster, built out of My Old Kentucky Home. Then a shaft of lightning will thwart the inky skies and reveal in the center, one for W. C. Handy, built out of the Memphis Blues and the St. Louis Blues and resting on the solid foundation of those who sow in tears, shall reap in joy.

St. Peter, standing in the doorway, in extending his hand in fellowship will say, "You captured the attention of art, and music entrusted her charms to your joyous care. Your magic genius opened the closed door. Your achievements under the Stars and Stripes engaged the wonder of civilized man."

Need for Revision of Federal Policy in Indian Affairs

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 17, 1958

Mr. MURRAY. Mr. President, on January 30, 1958, my distinguished colleague, the Honorable LEE METCALF, Representative from Montana's First Congressional District, delivered an address entitled "The Need for Revision of Federal Policy in Indian Affairs," before the 75th annual meeting of the Indian Rights Association.

Representative METCALF is one of the Nation's best informed students of Indian Affairs. He has, very clearly, pointed out in this speech the shortcomings of present administration policy and ably presented worthwhile alternatives.

Mr. President, I ask unanimous consent to have Representative METCALF'S address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NEED FOR REVISION OF FEDERAL POLICY IN INDIAN AFFAIRS

(By LEE METCALF)

The way white men treated the Indians is truly a sorry page in the history of the United States. The American Indians were driven from their native lands like cattle, and were ostracized, paternalized, supervised, baptized, scrutinized—and finally victimized.

The United States can take justifiable pride in our accomplishments in restoring millions of victims of World War II at least to a measure of peace and security. Our various foreign-aid programs have gone a long way toward alleviating suffering and hunger abroad.

But there is no satisfaction in our record of dealing with the American Indian, from the beginning to the present. Tremendous effort has been put forth. Huge sums of money have been spent. Humanitarian programs have been launched. But today the composite American Indian is the worst fed, the worst housed, the worst clad, the sickest—and, finally, the shortest-lived—racial group in the United States.

The average life of a white man in the United States is now 68. That of a Negro is 60. But the life expectancy of a baby born on the Papago Reservation in southwestern Arizona is 17 years. That figure is approximately the same for the Navajos, the Hopis the Utes, the Sioux, and on other reservations.

CHILD DEATH RATE HIGH

In a report on health services for American Indians, to the Congress last February, the Public Health Service said that the mortality rate from pneumonia was almost 4 times, the national average; the Indian mortality from pneumonia was almost 4 times, from gastritis and enteritis more than 10 times, and from dysentery more than 15 times the national average.

Today the Indian standard of living is low and getting lower, as the population increases on reservations inadequate to provide a living for a fraction of the people already there. Tribal assets, such as they are, are under the trusteeship of white bankers. Indian resources are undeveloped or are being exploited by non-Indian groups—while the Great White Father in Washington pays lip service to proposals to develop these resources.

Our history books tell part of the bloody story—(of white conquest) and the movies and television complete it. What they leave out is that—before they lost—the Indians fought for what was theirs, even as you and I might some day have to fight for what is ours. And when we didn't fear or hate them—for what they did to General Custer—we laughed at them. We mostly laugh at them today as we translate their names into our language—Peter Who Runs With the Wolf, John Takes His Gun. Had we treated immigrants in the same fashion, I doubt that Franklin Delano Field-of-Roses or Dwight Hewer-of-Iron would have become President.

I came to Congress in 1953 and it was then in the 83d Congress that we saw the high-water mark of the flood to make Indians first class citizens by relieving them of everything they owned, of their property rights, and of the obligations secured by treaties entered into between two sovereign nations.

A DECEPTIVE SLOGAN

To the uninformed outsider, the slogan that we must get the Government out of the Indian business makes sense.

The simple, easy-and-false-solution appealing to these uninformed outsiders is the so-called termination formula. As you know, this is a special legislative device which would permit the presently responsible public agencies and officials to shift their responsibilities elsewhere and dispose of the so-called Indian problem by sweeping it under the rug.

Let me review with you briefly the efforts to bring about acceptance of this persistent and serious attack upon the Indian people and their property cloaked by the termination formula.

Like most Members of Congress, I believe that ultimately Indians must be given the management of their own affairs. Eventual—and I emphasize that word eventual—establishment of the American Indian as a full, integrated citizen should be national policy.

So, when House Concurrent Resolution 108 came before the House early in the 83d Congress, I did not object. You recall that it declared as the policy of Congress that

certain Indian tribes be freed from Federal supervision and control.

I voted for this plausible, almost pious, expression of good intentions. But I was appalled at the administrative interpretation given the resolution by the Bureau of Indian Affairs and the Secretary of the Interior. And I was dismayed at the immediate attempt by some congressional leaders to use the resolution as a basis for immediate termination of Federal services to various Indian tribes.

In addition to House Concurrent Resolution 108, the 83d Congress passed Public Law 280, the so-called law and order bill. It permits any State to impose on tribes its own civil and criminal codes and enforcement machinery—thus wiping out tribal authority and codes of self-protection.

When President Eisenhower signed the bill, he pointed out that it failed to require even—and these are his words—"full consultation in order to ascertain the wishes and desires of the Indians." He recommended that—and I'm quoting him again—"at the earliest possible time in the next session of Congress (that would be the 2d session of the 83d Congress) the act be amended to require such consultation with the tribes prior to the enactment of legislation subjecting them to State jurisdiction."

In view of President Eisenhower's willingness to veto meritorious legislation that didn't quite measure up to his standards, I can't see why he didn't veto the law and order bill because of the inadequacy he pointed out. But he did not. And in four subsequent sessions of Congress, we have been unable to secure passage of the amendments he recommended—largely because of the opposition of the Bureau of Indian Affairs.

In this case, no consideration was given to the ability—or the willingness—of local agencies to take over the job of enforcement—to provide social and juvenile workers and probation officers, in addition to policemen.

Because these matters were not considered, and because the Indians were not consulted, the transfer of law and order has not been successful—and in some areas, such as the Winnebago and Omaha Reservations in Nebraska, has broken down.

There is a good deal of difference between consultation and consent. The difference becomes even greater when the administrative record on consultation is examined. The Bureau of Indian Affairs is apparently determined to terminate the various services the Federal Government performs for the Indians whether the tribes or individual Indians like it or not. Consultation is meaningless when, regardless of the opinion of the person consulted, the course of action is predetermined.

TRIBAL WISHES IGNORED

This was the case in the series of termination bills proposed in the 83rd Congress. An example was the proposal for termination of Federal supervision over the Salish and Kootenai Tribes on the Flathead Reservation in the congressional district I represent. The bill was sent to Congress by the Secretary of Interior. In the letter of transmittal signed by Mr. Orme Lewis, Assistant Secretary, the result of consultation is recited as follows:

"Field officials of the Bureau of Indian Affairs of this Department have held group meetings and individual conferences to discuss a preliminary draft of the proposed bill with tribal members, officials of the State of Montana, officials of the local Government primarily involved, and other interested persons, both Indian and non-Indian. The sentiment expressed by individual tribal members residing in the reservation areas was decidedly in opposition to the proposed bill. At a general meeting called for the purpose of discussing the preliminary draft, attended by about 130 adult Flathead Indians, a substantial majority voiced their opposition. The tribal council members voted unanimously against endorsement of the proposed bill, declaring they did not want to accept a terminal bill at this time. They are supported in this petition by the tribal attorney and by officials of a missionary group on the reservation."

In spite of this overwhelming opposition expressed in the consultation, the Secretary of the Interior submitted the bill to Congress and requested its passage. In addition, the letter of transmittal admitted that the problem of protecting the watershed area covered by the Flathead Forest, and the mechanics of transfer of the management of the Flathead Irrigation District had not been solved. But the termination proposal was submitted anyway and a determined effort was made to pass the bill. Other termination bills are in the same category. The Menominee termination program was amended in the 84th Congress and has been the subject of considerable controversy in the Wisconsin Legislature.

Since consultation is a word which this administration brushes aside, it, of course, is violently opposed to legislation, which I have sponsored, requiring consent of the tribes prior to transfer of jurisdiction over Indian reservations from Federal to State governments.

The Commissioner of Indian Affairs called this consent provision an "insidious proposal" and said its adoption would—in his words—"be the worst thing for the Indian people." Commissioner Glenn L. Emmons used those exact words at the final general session of one of the conferences the Bureau of Indian Affairs rigged with the tribes. This was at Salt Lake City, Utah, on September 6, 7, and 8, 1956. I have Mr. Emmons' remarks on consent verbatim from the minutes of that conference.

INDIANS PRESSURED TO ACCEPT TERMINATION

Although it is more subtle than it was in 1953, the attack mounted on the Indian people and their property in the 83d Congress continues today.

Many of you will remember the bill to restore certain ceded lands to the Colville Indians passed 2 years ago. The United States Supreme Court has held that the Government is only the trustee for the Indians and undisposed of lands remain the property of the Indians until disposed of in accordance with the law. But, when the bill to restore the (Colville) lands was before Congress, the Indian Bureau put in a contingency. The Bureau refused to consent to the restoration until the Colville Indians had submitted an agreement for termination. As a condition precedent to the restoration of lands that in justice and equity belonged to the Colvilles, the Bureau added these additional demands. One of the representatives of the Bureau testified, "We are not trying to blackjack anyone, but we are very frankly—and I have no hesitation in telling you—we are very frankly discussing this type of planning, i. e. termination planning, with every group that we think are ready for it, regardless of whether there is this piece or some other piece of legislation or no legislation before the group."

And they have done just that. One of the groups that is slated for termination is the Indians on the Flathead Reservation in my own congressional district. In every way possible, at every meeting of the tribal council, during discussions of routine transactions pressure is being put on the Flatheads to draft and submit a termination plan. Then the Bureau will come to Congress and say that here is a tribe that is ready to be terminated and wants termination and here in the plan.

The price for administration consent to a per capita distribution of tribal assets to the Menominees was termination. The same was true of the Klamaths.

TRIBAL LAND PURCHASES OPPOSED BY BUREAU

Even more subtle is the attack on tribal ownership of land. Late last year, the Bureau held a supervised land sale on the northern Cheyenne Reservation. Indian allottees were selling their land and the tribe wanted to buy this land and keep it in Indian ownership. The northern Cheyennes had tribal funds to make the purchases. But, because of technicalities placed in the way of the tribal council by the Indian Bureau, the tribe was not afforded the opportunity to purchase this land. Nor would the Bureau postpone the sale until the tribal money could be made available.

Some of the key units were lands on which the springs were located or land favorably located adjacent to summer range. Thus, by the loss of half a dozen or so allotments, this grazing economy of the entire tribe has been jeopardized. This is not an isolated instance. The same pattern has been followed on other reservations.

In justice to the Bureau, yesterday the bill for the restoration of these undisposed of lands to the five tribes who had never received their ceded land back, came before the House committee. It received the wholehearted support of the Bureau without any conditions.

Likewise, as to the Cheyenne land sales, the Bureau states that it agrees with the principle that the land base must be maintained in order to sustain the economy of the reservations. A later sale on the Omaha Reservation would seem to set a pattern different than the stated policy of the Bureau. We shall see.

Just last week the Blackfeet Tribal Council passed a resolution protesting the present conduct of land sales. It would seem to be only reasonable that the tribes be permitted to use tribal funds to purchase allotted lands. There should be no question about the right of the tribes and individual Indians to buy adjacent land offered for sale or to purchase key sections when necessary to sustain the economy of the reservation. But the policy of the Indian Bureau has been to discourage and oppose tribal acquisition of allotted lands at these supervised sales.

LAND BASE VITAL TO INDIANS

A secure land base is more important to the Indian than it would be to a comparable group of non-Indians. There is an attachment to the land and a security in land ownership that is a spiritual and psychological factor as well as economic. The individual allotments almost always pass into non-Indian ownership and the only hope of keeping the remaining land in Indian ownership is opportunity for tribal purchase.

As you have read, our present Commissioner of Indian Affairs has said that he is one Federal employee trying to do himself out of a job; he is trying to get the Federal Government out of the Indian business. Of course, you realize that was exactly the aim of our Army for many years. Sometimes I wonder if there isn't a similarity, not only of aims, but also of methods.

Now, precisely against whom are these forces, first military, now civil, arrayed? Well, let's go back to that Public Health Service report to Congress in February of last year. Here are some excerpts:

"The Indian population resides in areas that vary widely in climate, geography, and natural resources, yet environmental deficiencies stand out clearly in all parts of the country. Substandard housing, absence of safe water for domestic purposes (and frequently an extreme scarcity of water of any quality), absence of safe, sanitary excreta disposal facilities, and undue prevalence of

UNIVERSITY OF MICHIGAN LIBRARIES

flies, rodents, and other vectors of disease are the rule rather than the exception."

Second, here is an excerpt from the report on the Rosebud Reservation in South Dakota:

"About one-half of the dwellings are constructed of logs caulked with mud and roofs covered with earth. Almost 25 percent are frame; and the remaining families live in tents or shacks. * * * Forty percent of the dwellings have only earth floors. The remainder are of wood, very few being constructed rightly or properly for healthful living. Seventy-five percent have no ceilings except the bottom of the inside of the earth-covered roof. About 75 percent of the households have only 1 room, with an average of 6.2 persons living in each dwelling. * * * Although electric powerlines run conveniently through the village only 2 of the houses are served. Kerosene lamps are used for light in all homes without electricity. The community obtains its water from the Little White River, Soldier Creek, and 8 underground sources, only 1 of which approaches sanitary standards."

After examining Indian housing and other environmental conditions, the Public Health Service concluded: "To achieve good health, Indians need more than measures aimed directly at disease prevention and control. They need better general education, vocational training, housing, food, roads, and means of transportation. They need more understanding and acceptance by the rest of the population, particularly their own non-Indian neighbors. They also need adequate economic opportunities."

The Service's general conclusion as to current economic conditions and the outlook for the future was:

"Available information and estimates indicate that in spite of some migration the overall reservation population is increasing, although not on every reservation. If this trend continues without accompanying development of reservation resources, the disparity between population and opportunities for support will increase, with consequent deterioration of already poor economic conditions."

The facts summarized in the foregoing report of the Public Health Service state the problem. The conclusions are not those of Indian tribal leaders or organizations espousing the Indian cause, who have in the past been charged with bias, but of a governmental agency. The conditions described clearly call for a concerted program of economic and social improvements.

RESPONSIBILITY OF FEDERAL GOVERNMENT

It is clear that the existing problem is one of such proportions that it can only be solved by governmental action. The only institution equipped to deal with it is the Federal Government.

The Bureau of Indian Affairs has correctly stated that the solution to the foregoing problem lies in, first, voluntary relocation of the excess population of Indian reservations, and second, economic development of reservation areas.

With regard to relocation, few will quarrel with the following comments of the Public Health Service:

"In recognition of the overpopulation in comparison with resources on many reservations, the Bureau of Indian Affairs has begun in recent years to promote voluntary relocation. Under this program, reservation Indians and their families are helped to settle in urban communities where opportunities for employment and housing are known to exist. During the year ending June 30, 1956, the Bureau assisted in relocating over 5,100 Indians, including over 1,000 families and almost 1,100 unattached men and women. According to Bureau officials, approximately a fourth of those choosing to relocate found the experience too difficult and returned to the reservation. The rate of return differed considerably among reservations.

"Indian attitudes toward relocation vary. In spite of poverty and lack of opportunity, many Indians prefer the emotional security of the reservation, with its kinship ties, religious ceremonials, and freedom from the disciplines of an industrial society. Other Indians have felt inadequately prepared to cope with urban living conditions or unable, because of skills and experience, to compete vocationally with non-Indians. The requirement by some tribes of birth on the reservation as a condition of eligibility for tribal membership has also been a factor in causing some Indians to remain on the reservation, or to return.

"In spite of these factors, however, Indian interest in relocation has increased steadily since the relocation program was established several years ago. The number of Indians applying for relocation and assisted to relocate has increased considerably each year. As a result of this demonstrated acceptance, the program has been greatly expanded to cover more reservations and to provide additional areas for relocation. It is anticipated by Bureau officials that during the current year approximately 10,000 Indian men, women, and children will be assisted to relocate."

RELOCATION NOT A PANACEA

"The relocation program is limited to individuals and families who are considered to be able to support themselves away from the reservation. This means that a high proportion of relocates are younger and more acculturated people, with aged or unemployable persons included only if they are members of self-supporting family groups. It is probable, therefore, that even with increasing migration from the reservations the need for health and welfare services on the reservations will not diminish in corresponding proportion."

These facts stand out from the report:

1. The current rate of relocation is under 10,000 annually. Assuming a 25-percent return factor, the net rate is under 7,500; this compares with approximately 14,000 live births annually;

2. A high proportion of relocations are younger and more acculturated people.

It thus is evident that relocation is not, at this time, the sole answer to the problem.

RESERVATION DEVELOPMENT ESSENTIAL

As I have indicated, the Bureau of Indian Affairs has committed itself to the theory of reservation development. So it is, or ought to be, unnecessary to argue the broad principle that such development should be encouraged. However, the fact is that for the last 8 years the Federal Government has failed to develop a comprehensive program of reservation development. As far as I can understand it, Federal policy has been one of drift, permitting economic and social conditions to continue to deteriorate without developing a program of positive action. That is the charitable way of putting it.

It is a matter of record before the Senate Banking and Currency Committee that this administration, which is on record as favoring additional economic development on Indian reservations, opposes legislation to do just that.

The administration bill, S. 1433, which Mr. EMMONS supports, makes no mention of Indians. The aid or loans provided by that bill would be confined to industrial areas. The only thing that Indians could get from that bill would be advice, and the Lord knows the Indians get plenty of that now.

In sharp contrast to this bill is S. 964, the area-redevelopment bill by Senator DOUGLAS and 18 other Members of the Senate, including Senators MURRAY and MANSFIELD of Montana.

In grants for public facilities, and in the section on loans for redevelopment, it provides specifically for Indian tribes. Yet the administration opposes this bill.

All this adds up to the proposition that the relinquishment of Federal supervision and Federal trusteeship must come about in an orderly manner and as a result of gradual change.

Within the framework of existing agencies, many things could be done to help the Indian. You, of the Indian Rights Association, who helped secure the Meriam survey, know that part of the answer has been in the files of the Bureau of Indian Affairs since 1928, for almost 30 years. I'm talking about the recommendation that reads:

"The most fundamental step that can be taken is to advance the economic and social conditions of the Indians of each jurisdiction with due regard to the economic resources of that jurisdiction, and to supply each jurisdiction with a sufficient number of properly trained workers to make that program effective."

In order to give the Indian a chance to make anything like a reasonable adjustment to modern society, he must have a modern education.

Immediate steps must be taken to eliminate the deplorable conditions on the reservations that have made the Indian mortality rate so much higher than that of other population groups.

Any long-term program must concern itself with the natural resources of the reservations. Disregard of watershed values, of the effect of State water laws, of management of irrigation districts—as shown in the Flathead termination bill—can lead only to disaster. It will result in the disruption of the orderly development of entire regions, to the detriment of the entire population, Indian and non-Indian alike.

INDIANS MUST BE HELPED TO RETAIN LAND

Indians must be helped to develop their own resources and the resources of their reservations. The integrity of the present land holdings is the key to the whole program. Land sales must be discontinued—and if the policy of issuing fee patents is to continue, the tribes must have an opportunity to buy the lands when the individual allottees sell them. This will require an extension of credit, sometimes credit up to 100 percent of the purchase price of the lands. Sustained-yield forest operations, the land base for cattle and sheep ranching, the protection of other tribal assets depend on this.

Now, in order to permit Indians to develop their own resources we must remove the dead hand of the House Concurrent Resolution 108 from the program. Regardless of what that resolution meant, it has permeated the Bureau with termination thinking. By that I mean that any new program must, in the minds of the terminators—termites, if you will—must be related to the overriding drive to end Federal responsibilities. Under these circumstances, it has been impossible to develop in the Bureau the programs that could improve the life of our Indian population because such programs would necessarily entail a Federal relationship with the Indians for some time to come.

It is significant, I think, that there has been only one comprehensive Federal program to improve conditions on Indian reservations. And that program was prepared, and is being carried out, by the Public Health Service, not the Indian Bureau.

The main reason offered by the Bureau for its failure to develop a comprehensive Federal program to improve conditions on Indian reservations is that it considers itself under a mandate from Congress to reduce Federal responsibilities for Indians. That alleged mandate is House Concurrent Resolution 108.

HOUSE CONCURRENT RESOLUTION 108 REPUDIATED

Whatever that resolution may have meant, it expressed the sense of a Congress dead and gone. Since then, two Congresses have failed to follow its recommendations, so it has been repudiated.

It is time now for a new policy declaration. Such a declaration is Senate Concurrent Resolution 3, by Senator MURRAY, of Montana. I have cosponsored it as House Concurrent Resolution 155.

This resolution is a policy declaration and a call by the Congress upon the Bureau of Indian Affairs to formulate a new approach to the handling of its responsibilities. The resolution suggests a program of community development similar to those carried on in underdeveloped countries of the world, as well as those of the Department of Agriculture in depressed rural area of the United States. Such a program would try to develop the natural resources of Indian reservations for the benefit of the Indians themselves. It would also attempt to develop human resources as the Department of Health Service point out.

Thus the development of natural resources and employment opportunities must go hand in hand with a program which would condition the Indian population to an approach to life under which they could fully utilize them.

Senate Concurrent Resolution 3 is a statement of a proposed approach, of a fundamental policy. It is not envisaged as a specific blueprint. The specific blueprints, which will vary from reservation to reservation, can be developed only with the help of the resources available to the Federal Government.

At this time I would like to serve notice on the Bureau that Senate Concurrent Resolution 3 is being supported by a growing group, ultimately a majority, in Congress—and that it should be considered in advance planning for our Indians.

The Indians can get along in the white man's society, and still retain their Indian culture, if we help them by constructive legislation. But those who want to maintain their tribal association and Indian culture must also be permitted to do so.

A basic American principle is the consent of the governed. The consent of our Indians—consent freely given—must be obtained prior to any change in policy. They must be consulted by Congress and the administration and must be given adequate opportunity to be heard on legislation affecting them, their property and their freedoms. For mutual participation—not government by decree imposed upon the group—is the way of progress.

We in Congress must legislate to preserve the Indian heritage, insofar as it can be preserved in the 20th century. We must engender respect for the Indian as an individual and for his way of life. We must seek a basic understanding between our races—so that we can mutually trust each other and cooperate for the betterment of our American homeland. We must recognize that our Indians are not an abstract problem to be solved by legalistic formulas administered by a distant and unsympathetic bureaucracy, but that Indians are people—our people.

A Tale of Two Cities

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a vivid and timely article on the serious unemployment situation, as described by Mr. Burt Beck, managing editor, Textile Labor, Textile Workers Union of America, AFL–CIO:

A TALE OF TWO CITIES

(By Burt Beck, managing editor, Textile Labor, Textile Workers Union of America, AFL–CIO)

This is a story of economic disaster in two American communities. It happens to be about the twin towns of Biddeford and Saco, in Maine, but it could be about any of the hundreds of textile towns, mining villages, or industrial centers that have been left stranded when their prime industries gradually or suddenly withered away.

The situation in the Biddleford-Saco area may vary in degree from the picture in other depressed areas. The proportion of unemployed may be greater or less than the jobless total in other sections which are facing economic blight. But in one respect, Biddeford-Saco is similar—these cities are skirting the edge of a black depression.

The twin cities sit astride the Saco River, and the historic falls of that river provide the power that initiated the area's industrial development more than three centuries ago. One of the prime products was textiles.

It is said that when Admiral Perry sailed to Japan in 1854 to open the doors of that country to foreign trade, he carried, as samples of America's finest products, textiles made in Biddeford. From this famous textile region have poured uncounted millions of yards of textile fabrics, to all corners of the world.

Textile machinery, shoes, ships, sealing wax, sewing machines, machineguns, bricks, nails, matches, airplane parts, men's collars—all of these have been turned out by the skilled craftsmen of Biddeford and Saco, in peace and in war.

Today the area is rapidly becoming a deserted village. Typical headlines in the Biddeford Journal proclaim: "Unemployment in Biddeford-Saco Area Takes Jump," or "Biddeford-Saco Food Stocks Running Low, Over 3,000 Get Aid," or "Jobless Claims Reported at Record 20-Year Level."

What is taking place in Biddeford and the sister town of Saco never happened before, not even during the terrible days of the depression of 1929. There are lines of able-bodied workers, men and women, receiving food to keep them and their families alive.

Michael Schoonjans, international representative of the Textile Workers Union of America, in the Biddeford-Saco region, is understandably concerned about the situation. To Mike, the unemployment figures are not statistics; behind each figure is an unemployed worker, in most cases the chief breadwinner of the family.

"A few years ago," said Mike, "we had 7,000 members in the Biddeford-Saco joint board. Today we have less than 3,500. The decline in textile manufacturing also hits all the other workers in town."

ONE-FOURTH JOBLESS

For concrete evidence of this, it took only a visit to the Biddeford office of the Maine Employment Security Commission and a talk with manager Francis M. Coughlin.

He compared unemployment insurance claims for two different dates to show how joblessness is increasing. For the week ending December 14, 1957, his report showed that there were 1,252 claims for unemployment insurance, and what was even more alarming, 561 people had already exhausted their benefits and were consequently ineligible for further compensation.

If this is shocking, what has happened since that date makes even more terrifying news.

As of March 1, there were 3,023 people unemployed in the Biddeford-Saco area, or roughly 25 percent of the total labor force of about 11,000 workers. Of these, 1945 were still eligible for insurance, while 1,078 had exhausted their benefits.

Unemployment in Biddeford-Saco has not increased gradually. Only a few years ago the entire work force was employed. In 1953, a survey of 10 of the larger employers showed that 9,616 men and women had gainful employment. By 1956 the figure was down to 7,836 but the bottom really dropped out in 1957 when unemployment rose 22.2 percent. For one thing, the Bates Mill closed up and over 1,400 jobs were lost. One of the large shoe companies shut its doors, not because of falling business but because the owners had a falling out, and another 325 jobs went down the drain. The Saco-Lowell shops, world-famed manufacturers of textile machinery, have been seeing very rough days and have tried desperately to diversify their products.

The success they had enjoyed was nipped in the bud by the current recession, and only a handful continue to work in the shops. Even the Pepperell Mill, one of the area's mainstays, has cut out one shift completely and is working 3 days a week on the two remaining ones.

When the Bates Mill closed, there was much speculation that soon a contract would be forthcoming that would get the machinery humming again. These rumors gave the people hope and buoyed up their spirits. But even that hope has been exterminated. A junk dealer signed a contract to break up the machines for salvage and on February 19 the sledges started swinging.

These plants that have shut down have not moved away, they simply shut up shop and the jobs were lost, not relocated. Only one new industry has moved into the Biddeford-Saco area—a cabinet manufacturer employing 30 workers.

GHOST TOWNS

Biddeford and Saco, instead of the bustling communities they were until recently, have taken on the characteristics of ghost towns. You see as many men as women on the businses streets. Fewer and fewer younger people are seen—not that they are working, they have left to find jobs elsewhere.

Arthur Maxwell, president of the largest bank in Biddeford, is confident about the future. He thinks the bottom has been reached, and although it may take a few years, things will pick up.

"If some sort of plan can be drafted to give assistance to depressed areas, we can come through with flying colors. It will take hard work," he maintained, "and we'll need help in attracting new industries, but we can do it."

Most of the civic authorities share Maxwell's cautious optimism. The mayor of Saco, Peter A. Garland, is of the opinion that something must be done along the line of encouraging new industry.

"We've laid the groundwork by starting an industrial development committee," he declared. "Now we need help. We're contacting certain manufacturers, but until these things bear fruit, some of the help contained in Senator PAUL DOUGLAS' area redevelopment bill (S. 964) would give us a terrific boost."

The exmayor of Biddeford, Albert C. Lambert, also feels that the region can make a comeback.

"We've got the skilled manpower and we've got wonderful industrial sites," he points out. "All we need now is the third ingredient—industry."

Strange as it may seem, the man who defeated him for the post in the recent election, Clement Deschambeault, holds the same views. He recently headed a delegation which went to Washington to plead for Federal aid. The delegation was well

UNIVERSITY OF MICHIGAN LIBRARIES

treated, and many promises were given, but that was about all.

NEED IS JOBS

Even a stanch defender of the Eisenhower administration could not stomach this. Congressman ROBERT HALE, Republican, is reported in the Biddeford Daily Journal as expressing himself this way:

"The administration has answered with generalities, but has offered very litle in the way of concrete assistance. Federal aid for a Saco (sewerage) treatment plant was approved last year, but that is nothing new. The area will be given full consideration for defense contracts, but promises are not jobs. Possible post office construction is only a trifle. I shall continue to press for a more concrete response from the White House, and seek favorable action in Congress on depressed areas and textile legislation. I shall also continue to work for defense contracts for Saco-Lowell shops.

"Biddeford-Saco needs jobs and more jobs," he concluded, "and I shall not rest until it gets them and unemployment is wiped out."

The appeal for jobs is nonpartisan. Maine's two Senators, FREDERICK PAYNE and MARGARET CHASE SMITH, are both Republicans and both are highly critical of the way the Eisenhower administration is mishandling the whole question of aiding depressed areas. Congressman FRANK COFFIN, the only Democratic legislator from Maine, and Democratic Gov. Edmund S. Muskie join them in the fight to bring this area back from the specter of economic blight.

The bitter employment picture has had its effect on the youth. The percentage of completions of school had dropped as youngsters try to get jobs to help the family eke out its existence. Since jobs are unavailable in the section they live in, they look elsewhere.

"Our citizens have their roots in this community," says Carl Swanson, secretary of the Biddeford Industrial Development Commission, "and they don't want to move away unless they have to. Even when the kids leave the nest to find jobs elsewhere, they come back as often as possible. Why, on a long holiday weekend, most of the autos have out-of-State licenses."

But leave they do.

There are four concrete indications that the situation is not improving; in fact, it is becoming drearier.

Item 1. Many Biddeford and Saco stores held their year-end sales prior to Christmas instead of after the holiday season as was the usual custom.

Item 2. For the first time in many years, the annual Community Chest drive fell short, and the fall-off was mainly from individual contributions.

Item 3. Breaking and entering, especially into food stores, has become a common notation on official police records in Biddeford, Saco and the surrounding communities. These cases were extremely rare previously.

Item 4. City welfare aid doubled from July to November, then started a meteoric climb. As many as 3,000 persons stood in line during the recent bitter snow storm in the hope of obtaining some part of a fish allotment that had been received in the city. More than 1,000 Maine National Guard men joined together to donate canned goods and staples to the welfare departments of Biddeford and Saco, and the number of those eligible to receive surplus commodities stood at 2,319 on February 26, and was still rising.

DOUGLAS BILL NEEDED

There's universal agreement in Biddeford-Saco that they will pull out of it. All they need, they are sure, are some good contracts to start the ball rolling. But where the contracts will come from, no one knows.

"Right now, nothing short of area redevelopment assistance as proposed by Senator DOUGLAS will help us and other depressed areas," is the way Mike Scheonjans sums it up. "There are a lot of people here who are too young to die and not old enough for social security. They want to work, and this sort of program could provide the work for them."

Tonnage Moved by Water in Past 9 Years Is Up by a Healthy Percentage

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article written by Morris Cunningham, one of the country's most accomplished reporters who represents the Memphis (Tenn.) Commercial Appeal in Washington.

He has written a splendid article on the importance of water transportation on the Nation's inland waterways. Knowing that it will be of value to many of my colleagues, because of the factual information it contains, I was anxious that they have the benefit of its reading.

The article is attached:

TONNAGE MOVED BY WATER IN PAST 9 YEARS IS UP BY A HEALTHY PERCENTAGE—TRANSPORTATION BY INLAND STREAMS STEADILY BECOMING MORE IMPORTANT IN RELATION TO ECONOMY OF NATION

(By Morris Cunningham)

WASHINGTON, February 1.—Water transportation, the importance of which long has been recognized in the Mid-South, quietly and steadily is assuming increasing significance in relation to the national economy.

A recent survey by the American Waterways Operators Inc., shows that during the past 9 years tonnage on some of the Nation's inland waterways has increased almost 500 percent.

Braxton B. Carr, AWO president, called the tonnage increases a remarkable tribute to the efforts of individuals on local, State and Federal levels to obtain better navigational facilities.

He also praised the towboat and barge companies for the continuing improvements that have enabled the industry to provide more efficient and reliable service.

He pointed to the increased prosperity that comes to areas that acquire improved navigational facilities. As in the case of Memphis and its harbor project, this frequently takes the course of new business and industries, more jobs, and bigger payrolls.

FEW REALIZE FULL IMPORTANCE

Many Members of Congress, Federal, State, and local officials and leaders, the Corps of Engineers, TVA, and many others have contributed to the construction of the Nation's system of inland waterways.

It has taken many years, and the job still is incomplete. Annual battles still are fought in Congress and elsewhere over extensions, improvements, and maintenance. New ones are shaping up this year.

Few people, particularly in off-stream areas, probably realize the full importance of our inland waterways or the magnitude of the traffic that moves on them today. The writer, on a trip down the Mississippi last month, was amazed at the heavy volume of traffic and the charts showing how it has increased in recent years.

The boats salute each other as they pass on the river. And today the still calm along the banks of the Mississippi increasingly is shattered by the honks of the passing parade of towboats, symbols of the Nation's expanding economy and the growing industrialization of the South.

To portray the spectacular rise of water transportation, Mr. Carr listed the ton-mile and net tonnage growth on the 13 major waterways from 1947 to 1956, the last year for which complete figures are available.

MIGHTY MISSISSIPPI CARRIES BIG LOAD

The 652-mile Tennessee River, which runs from Knoxville to Chattanooga and into northern Alabama before it swings north to Paducah and the Ohio River, showed a 467-percent gain in ton-mileage over the 9-year period to lead all other waterways in percentage of increase.

Ton-mileage on the Tennessee rose from 352,739,600 in 1947 to 2,003,420,261 in 1956. The Tennessee also chalked up the largest net tonnage growth—from 2,792,427 tons in 1947 to 12,299,396 in 1956, a gain of 340 percent.

The main stem of the mighty Mississippi, running 2,350 miles from Lake Itasca, in Minnesota, to the Gulf of Mexico, continued to transport the largest total of waterborne freight.

And the Mississippi secured its lead during the period by chalking up healthy gains. Ton-miles increased from 10,774,164,768 in 1947 to 31,588,018,968 in 1956, a gain of 193 percent. Tonnage rose from 51,426,564 in 1947 to 104,212,466, or 102 percent. The Ohio River, spanning 981 miles from Pittsburgh to Cairo, Ill., continued to be the Mississippi's closest competitor in volume. In 1956, a total of 76,876,633 tons moved over it, an increase of 84 percent over 1947.

Others among the Nation's 13 major inland waterways, the tonnages of freight they handled in 1956, and the percentage of increase over 1957, are:

Gulf Intracoastal Waterway, 1,171 miles from St. Marks River, Fla., to Brownsville, Tex., including the Plaquemine-Morgan City alternate route, 48,243,445 tons, an increase of 112 percent.

The Monongahela River 128 miles from Fairmont, W. Va., to Pittsburgh, Pa., 36,956,496 tons, an increase of 16 percent.

Illinois Waterway, 349 miles from Crafton, Ill., to Chicago, 23,377,342 tons, an increase of 129 percent.

NATION MOVES BY WATER

Atlantic Intracoastal Waterway, 1,327 miles from Norfolk, Va., to Key West, Fla., including the Dismal Swamp Canal alternate route, 8,458,824 tons, an increase of 179 percent.

New York State Barge Canal System, 522 miles including the Erie, Oswego, Cayuga, Seneca, and Champlain Canals, 4,858,044 tons, an increase of 26 percent.

Warrior-Tombigbee Waterway, 415 miles from Birmingham to Mobile, Ala., 4,409,240 tons, an increase of 139 percent.

Missouri River, 762 miles from St. Louis, Mo., to Sioux City, Iowa, 4,333,191 tons, an increase of 393 percent.

Allegheny River, 325 miles from East Brady, Pa., to Pittsburgh, 5,245,102 tons, an increase of 91 percent.

The Columbia River, 421 miles from Wenatchee to Vancouver, Wash., 21,575,596 tons, an increase of 25 percent.

Houston Ship Channel, 50 miles from Galveston to Houston, Tex., 52,293,262 tons, an increase of 65 percent.

As traffic grows on the Nation's inland waterways, more and more industrial plants and businesses that depend upon cheap water transportation spring up along the routes.

During the past year, AWO reported a total of 485 new industrial plans costing millions of dollars were constructed or started on inland waterways.

Many of these were new projects by established companies that have decided to take advantage of the proximity of water transportation.

A Livestock Checkoff Bill Should Be Passed

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks I include a statement by Mr. Herb Pike, farmer of Whiting, Iowa, director of the Iowa Swine Producers Association. During the last session of Congress this House defeated the rule for a checkoff bill. Had the rule been adopted and had the proponents of the bill had a better opportunity to explain the bill I am quite sure the House would have approved the bill by a large majority. Another livestock checkoff bill will soon be brought to the floor, similar to the 1957 bill. I am quite certain that when the Members of Congress understand that the stock raisers pay the entire cost of the checkoff program, by paying a small amount for each head of livestock marketed, and that such funds will be expended to improve the quality of meat and for publicizing this pure, tasty, healthful food, this Congress will pass the bill by an overwhelming majority. Mr. Pike's statement follows:

In the swine industry it appears we need to do four things:

1. Standardize and improve the quality of product;
2. Assure processors an adequate day-to-day supply;
3. Level out the year-to-year boom-or-bust swings in production; and
4. Try to develop new markets, especially abroad.

Much good educational work has been done along these lines by the USDA, State colleges, and processors, but progress has been slow and uncoordinated.

Following the pattern in the broiler industry, vertical integration (or contract farming) has been advocated as a means of improving hog production and marketing. Producers would contract directly with packers for delivery of quality hogs at specified times and would be assisted by packers, and even feed dealers, with management help and financing. While integration threatens to upset the status quo as regards established producers, markets, processors, and even traditional hog-producing areas, such changes will come if integration proves it can contribute to greater efficiency.

Of great concern to producers, however, is how a more integrated swine industry will be controlled. Can a large number of individual producers organize to bargain effectively with other segments of the industry or will feed manufacturers and packers make most of the management decisions, encourage chronic over production, and reduce the producer to the status of a share hogger?

If hog producers are to have effective organization we think they will need a fair and industry-wide method of financing, such as a checkoff when livestock goes to market. At least, that is the way other producer groups (dairy, poultry, cotton) have built strong marketing organizations with top management personnel comparable to those found in the processing and merchandising phases of the industry.

It is impossible to predict what changes are coming in swine production, and how fast they will come, but it is most unfair that producers are hampered by an outmoded law restricting them from using an adequate method of raising funds. We ought to anticipate what turn integration will take and be ready to maintain some degree of control over our own business.

Finally, I would like to see livestock production retained on family farms, but only through effective marketing organizations will they be able to compete—quality wise and price wise—with large specialty farms. Livestock production is still the best way to intensify production and increase family income on a given number of acres. Livestock complements crop production to make yeararound employment and offers a better solution family wise and community wise than an off farm job or Government subsidies to underemployed farm operators.

Burned Book Bares Why Farmers Are Giving Up

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. WIER. Mr. Speaker, after reading the story of the Burned Book as reported by Representative HENRY S. REUSS, it is truly a great opportunity to help maintain our freedom of expression through the means of the CONGRESSIONAL RECORD.

A clipping from Labor, the national railroad organization's paper, tells Mr. REUSS' story, and a letter from Mrs. P. H. Sedlund, Route 1, Center City, Minn., a constituent, tells the family farmer's story without having been burned.

Under permission to extend my remarks in the RECORD, I include the clipping and letter, which follows:

BURNED BOOK BARES WHY FARMERS ARE GIVING UP

Defeat of a book-burning attempt has made available an extraordinarily graphic picture of the worsening plight of small farmers and their families, but this picture has been only sketchily reported by daily newspapers. Here is how it happened:

Every year, the Department of Agriculture publishes a report telling how much farm population has increased or decreased during the past year. To throw some light on the reasons, the report has always included comments gathered from farmers all over the country. That was true of the report for 1957, printed about 2 months ago, but not made public.

It leaked out that Assistant Agriculture Secretary Don Paarlberg, right-hand-man to Secretary Ezra T. Benson, had ordered that all copies of the report be burned, and a new report prepared and made public. That was done.

This censorship of an official document aroused Congressman L. H. FOUNTAIN, Democrat, of North Carolina, chairman of the House Government Operations Subcommittee. He demanded a copy of the original report, but the Agriculture Department insisted they had all been destroyed. FOUNTAIN finally got a copy of the report by putting Paarlberg on the subcommittee's witness stand.

TWO MILLION IN ONE YEAR

Then Congressman HENRY S. REUSS, Democrat, of Wisconsin, compared the original and substitute reports and told the House this story:

Of the 19 pages in the original report, 15 were omitted from the new one. The 4 remaining pages gave figures showing that, during the past year, the number of people living on farms fell from 22.3 million to 20.4 million. That, REUSS pointed out, was an unprecedented drop of nearly 2 million in 1 year.

The reasons for that huge flight from farms, REUSS said, are graphically revealed by the farmers' comments which filled the 15 omitted pages. He proceeded to read those comments to the House.

Some of them were from farmers who claimed they were getting along satisfactorily under the farm policies of Benson and the administration. A large majority of the comments, however, were like the following samples:

"More and more farmers in our locality are moving away from the farm. In 3 townships, you will find 15 farms where the buildings stand empty. Farmhouses are being abandoned and torn down.

"In this area of 3 communities of better-than-average farms, not 1 young person plans to farm as a career.

"More and more farmers in our locality are moving away from the farms because they can't make a living for their families. The small- and medium-sized farmer is a dead duck."

LEAVING FOR CITY

"I have before me 2 dozen auction notices of farms selling out. Forced auction sales here have been terrific.

"Because of the price squeeze and the Soil Bank plan, farmers are leaving for city and factory work. I plan to put all possible land in the Soil Bank, remove buildings or let them rot down, and let it go at that.

"And so on and so on," REUSS said. "The story told in the burned report—of declining farm prices and income, of catastrophe for the family farmer, of ever greater consolidation by the big corporate-type farmer—is a far different explanation of the decline in farm population than the one given by the Department of Agriculture. Reading of the burned portion of the report offers a clue as to why it was burned."

MOST STILL SECRET

Several days later, REUSS added another chapter to this amazing story. He pointed out that the 125 farmers' comments printed in the original report were selected by Agriculture Department officials from 2,700 comments the Department had received from farmers.

REUSS asked permission to see the 2,575 comments which were not printed but are in the Department's files. Then, REUSS said, here's what happened:

"True D. Morse, Acting Secretary while Benson is away, said I may examine the comments but must keep them confidential." That is, not disclose them to the public.

"In effect, the Agriculture Department is asking me to join its organization for promotion of secrecy and suppression of farmers' opinions.—I must reject the invitation to membership in such a club."

CENTER CITY, MINN., *April 12, 1958.*

Mr. ROY WIER,

DEAR SIR: It is hard for one who tries to be honest and frugal in ways of living to hear radio and other reporters, as well as the

UNIVERSITY OF MICHIGAN LIBRARIES

President, say we should "buy our way out of the recession." We know you, Mr. WIER, are doing all you can for the common people and farmers and we thank you for that. But we felt that perhaps a little report from the real family farm people would encourage you to work harder and get help to override the recent bill vetoed by Mr. Eisenhower that has hit the dairy farmer and many more. When buying power is taken away from these people, how can we buy what we know we need? That is one of the many quirks I can't see this administration thinks possible. Just in our case alone, our monthly cream check has dropped $50, due to this dairy defeat. Take that for a year, and then multiply by just each of our closest neighbors in this area, and the sum is large. We spoke to our feedmill man recently, and he said they will feel this veto badly—since farmers buy feed there. Some have had to charge until their cows begin to come into full production to pay up their accounts. Now, this millman said they will be left in a bad way, too, since they know some will not be able to pay as they used to. The hardware and implement dealers have a hard time of it trying to sell new equipment and machinery that both he and farmers know and see need to be replaced, due to age and wearing out. Banks have been as lenient in some cases as they can be to help farmers who have always been fair and honest in paying debts—but, even here too, farmers are both ashamed and afraid to ask for more credit, knowing there's a limit to all this. Yes, that prices are made in Washington we surely can see and experience sadly. Burning reports not favorable to Bensonian ideas don't change the local conditions. Instead, it is causing more farmers—and small- and large-business men—to begin to mobilize for changes and try to get real facts before our Representatives and Senators.

We have farmed for over 35 years—have only 3 years until retirement, as farmers now can (?) at 65, so want to remain on our place. We need to make long-needed repairs to roofs and parts of buildings, and had hoped by our steady (now?) milk check to do a little each year ourselves. Can't afford to hire at rate of rising costs in everything we have to buy from a few nails and bolts and even cheapest lumber to repair with. And here again we're not alone in these needs. Every farm around this area could and needs repairs to one or more of the buildings. The idea that a farmer should work part time away from the farm sounds wonderful. But do what and where is the question. Many farmers are being pestered by smooth talking land agents having as prospective buyers some city folks either jobless or about to enter that vast army of unemployed. These come out in the country thinking to live here. Often a city home is offered as downpayment or trade. But upon investigation such property is heavily mortgaged, etc. So what would the farmer get then should he fall for those buyers? Young couples often want to take over the home place or some farm nearby and have in some instances started farming. Had to mortgage selves for everything—and now we've seen auctions lately where income from them went to pay for the equipment bought (and not always new) and cattle, so there stood the young folks barehanded—broken in spirit—farm taken in some cases, too. What jobs can they find in the cities, where already the crowds grow larger every day.

Yes, this is a dismal picture, but a true one, that should be presented to those who farm statistically and on paper in the Department of Agriculture. Facts can't be burned as reports have been.

Thank you for being patient in listening to one farm region's prosperity and more from the vetoed dairy help bill. Do all you can to override it, and we shall both remember and thank you.

Yours truly,

Mrs. P. H. SEDLUND.

University of Alabama's New President

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. ROBERTS. Mr. Speaker, the University of Alabama has inaugurated its new president, an outstanding educator, Dr. Frank A. Rose.

Mississippi-born, Dr. Rose comes to the university from Transylvania College, that noted Lexington school from which came Alabama's first president in 1831, the Reverend Alva Woods.

The people of Alabama already are fond of the personable new president and we hope that Dr. Rose's tenure at the university will be one of long standing and great accomplishment.

I am sure the Members will be interested in an editorial entitled "Dr. Rose Charts Course," which appeared in the Anniston (Ala.) Star on April 14, 1958. Under leave to extend my remarks, I submit this editorial:

DR. ROSE CHARTS COURSE

The formal inauguration of a president of the University of Alabama deserves all the stage setting given to it, the office being one of great responsibility and great honor.

The event symbolizes the wide range of a university's meaning, significance, and service to the State of Alabama.

The weather somewhat beclouded the ceremonies last Wednesday but in no way dampened the spirit of the occasion, and certainly did not dampen the evident courage and enthusiasm of the president of the university as he declared his idea of a university's function.

President Frank A. Rose saw the university as an institution with a defined purpose; namely, the cultivation of excellence. That is a magnificent formula.

The proclamation of that formula to the people of Alabama will no doubt give them renewed confidence in the university and equally generous confidence in President ROSE.

It is almost platitudinous to observe that Alabama, with the Nation of which it is a part, literally faces a new world environment.

There are old grads who will remember when the students who graduated returned to native homes and communities and gave service almost within hearing distance of their alma mater. Now the graduates are to be found in distinguished service in all the continents of the west and the east.

This enlarged range of service, vocationally and geographically, gives added force to President Rose's emphasis on purpose, quality instruction, and the cultivation of excellence.

As these observations are reflected upon by the people of Alabama, they will be able to see in the appearance of young men in the present political campaign a fulfillment of the university's service to the State.

For young men are now looking on their State as wealthy in natural resources, and as equally rich in human resources.

In a sort of a biological phrase, organism is a higher and more concrete conception than that of matter and energy. An enlarged meaning of life is the product of experience and its interpretation is a mental product.

The principle of life consists in the tension which connects spirit with the realm of matter. And that tension is made visible by instruction, by what President Rose called good teaching.

Knowledge is a means for liberating men from the destructive fear which often attends tension and points the way toward a goal of rewarded ambition sustained by faith and decreeing excellence as man's final peace.

A university is the institution of a man's faith, which outmodes parochialism and declares the sovereignty of reason.

The Anniston Star offers congratulations and good wishes to President Rose, nor less to the citizenry of Alabama that he gives them good promise of high purpose, and the goal of excellence.

Local Service and Territorial Airlines

EXTENSION OF REMARKS
OF
HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, April 17, 1958

Mr. BIBLE. Mr. President, it was a pleasure during the Easter adjournment to be the invited participant and banquet speaker of the Association of Local and Territorial Airlines, holding its quarterly regional meeting in Las Vegas, Nev.

Participating in this program, the distinguished Chairman of the Civil Aeronautics Board, James R. Durfee, delivered an address keyed to today's status of the local service and territorial airlines. The chairman's remarks were related to anniversaries, first of the Civil Aeronautics Act and appropriate tribute to the original contribution of the Honorable Pat McCarran of Nevada; of the anniversary of ALTA and the aggressive part it has played in advancing the industry position of local service and territorial airlines, and finally, his own second anniversary as chairman.

Believing the remarks to be so timely and of interest to the Members of the Senate, I ask unanimous consent that his speech be included in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE LOCAL SERVICE AIRLINES TODAY

Address by the Honorable James R. Durfee, Chairman, Civil Aeronautics Board, at the quarterly regional meeting of the Association of Local and Territorial Airlines, Las Vegas, Nev.

I want to speak to you today about anniversaries—three anniversaries that brought to mind the points I want to make in this talk this noon.

The first of these anniversaries is the 20th anniversary of the Civil Aeronautics Act, which was signed into law 20 years ago this June 23.

Before I go on, I would like to interject that our setting here in Nevada today is a particularly appropriate one for noting this anniversary. It was under the guidance of the Honorable Pat McCarran, from Nevada—predecessor of my cospeaker today—that this charter of air transportation in America became law 20 years ago. Nevada can well be proud of having another of its sons—the Honorable ALAN BIBLE—as a godfather of this same industry in his role as a distinguished member of the Senate Committee on Interstate and Foreign Commerce.

I need hardly point out the importance of the Civil Aeronautics Act to this group, for your local service industry is entirely a prod-

act of the Civil Aeronautics Act. The existence and growth of this local service industry is a vindication of the vision of the drafters of the act.

Last year the 13 local service carriers moved over 3.9 million passengers or almost 3½ times the number carried by the entire domestic industry in 1938, the year the act was passed. It did this job at a subsidy cost only slightly more than 1½ times the subsidy cost for the entire domestic industry in 1938, and it did this despite a significantly shorter average passenger haul.

In the 6-year period since 1951 local service passenger miles have gone up 250 percent—a growth that exceeds that of the air carrier industry as a whole—which grew approximately 238 percent in the same period. To make the achievement the more remarkable, the local carriers have realized this greater increase in their share of the total market during a period of almost explosive growth in trunkline traffic. Over this same 6-year period the locals have cut the passenger-mile subsidy cost by more than 30 percent, despite steadily increasing cost of operation.

I wanted to make these growth comparisons in terms of traffic carried, rather than in terms of total aircraft or total investment or some other index of growth, because traffic figures are the real measure of service to the public.

We are often inclined to forget the public service being provided by the local service carriers when we consider the annual subsidy bill. Their public service record, however, is the important fact of their lives. The act was designed to promote a public service. The subsidy bill is the cost of spreading this service and the bulk of the year-by-year increase in subsidy has been due to route extensions that have brought service to more cities and more areas across the continent.

If the route systems are spread further—and at a still greater annual subsidy cost—it will be because the local representatives of thousands and hundreds of thousands of citizens, supported by their Senators and Congressmen, have appeared before the Board to urge the further spread of this public service.

However significant the public service the local carriers have performed—however much they may have improved their operating characteristics while expanding their services—there will have to be even faster improvement in the future.

If the Board grants any major portion of the route improvements that both the public and the carriers are seeking in the several area cases, there will be a substantial jump in the annual subsidy bill. This will be compounded during the initial years of new equipment, if experience is any lesson.

The increased subsidy bill can be justified only if the local carriers are, at the same time, showing real progress in efficiency—in the ultimate elimination of that subsidy bill.

This is your job. The Board cannot do it for you. The plan of regulation contemplated by the Civil Aeronautics Act is not intended to be a substitute for sound managerial initiative and discretion.

What we can do, and what we will do, is to improve the regulatory framework in which it will be easier for you to do your job. Experience is teaching us that some of the basic regulatory concepts require improvement.

First and foremost, the Board has become increasingly convinced that our present ratemaking methods cannot achieve both financial stability for the carriers and subsidy control for the Government.

The ratemaking methods now in use were formulated, in the main, to handle the trunkline subsidy needs, the needs of a group of carriers with significantly different economic characteristics. For a variety of reasons they do not appear to be working for the local service carriers.

Despite constant efforts by the Board and its staff, the local carriers have not achieved the financial stability that is necessary to their sound development. The Board is constantly put in the untenable position of reversing management judgments on a hindsight basis, often with respect to management decisions as to equipment, as to scheduling practices, the kind of decisions that are most difficult for the Board to review.

In too many instances the Board is faced with the impossible choice of making disallowances that will cripple a carrier or allowing expenditures that, in our judgment, should never have been made.

Our present system does not provide the necessary incentive to remain on final rates. It provides no real incentive to minimize expenses under a temporary rate, and no definite dollars-and-cents standards by which carriers can judge their own performance.

In our review of individual mail rates, and in talks with the managements of various carriers during recent months, we and our staff have become convinced that some drastic revision in approach must be found. You have undoubtedly noticed expressions of this conclusion in recent orders and opinions of the Board.

In discussions with our staff, we have become convinced that an alternative can be found.

As we announced in a letter to Colonel Adams for your group earlier this week, our staff is already at work in developing the basic information and tentative formulas that will be the starting point for future discussions with all the carriers affected.

Our basic objective will be to provide definite subsidy standards within which the carriers will have to live, within which carriers will have the freedom, and the profit and loss incentive to conduct their operations as good management judgment dictates.

By improvements in the ratemaking process, by route improvements that we hope to accomplish in the area cases, and by other regulatory improvements, we hope to create an improved atmosphere to complement the developmental steps that the carriers will be taking in the next few months, the new financing, the introduction of new equipment, the extensions of routes, all the things that promise to make this 20th anniversary year a memorable one for local service carriers.

The second anniversary I want to mention is that of your own organization, ALTA, your first anniversary. It slipped by almost unnoticed a few days back, on March 19, to be exact. I do not believe it ought to go unobserved.

In one short year, under the able direction of my former colleague, Col. Joe Adams, your association has emerged as one of the most potent forces for progress in the local service industry.

To my mind one of the most important, and most promising, objectives of ALTA is to promote improved relations with appropriate governmental agencies, and to undertake such actions as are necessary to insure full cooperation with interested Federal agencies.

You have already made real progress in furnishing us with that kind of help. Last January, representatives of your group made a very able and thorough presentation on subsidy policy to the Board. This gave impetus to the searching reexamination of those policies by the Board, of which I have already spoken.

The meetings between your group and the Board, as well as other contacts between the Board and individual managements, informal meetings of that kind are the ferment of progress in regulation. Without them we at the Board could never hope to keep abreast of this dynamic industry. Without them our process would become sterile. I can't overemphasize the importance of these relationships.

It is especially important to realize the importance of the role of an organization like yours today—today, when the relationships between regulators and the regulated are under such serious attack in Washington. There is widespread misunderstanding of the crucial difference between improper fraternization of regulators with regulated, and the indispensable cooperation between them that is part and parcel of the regulatory process itself.

No one seems to have any difficulty understanding the need for this type of cooperation in the Board's safety work. The public would be shocked, and properly so, if the Board and its staff were to insulate itself from the industry in safety matters. Our job simply could not be done without close day-to-day contacts on all levels between the industry, the Board and its staff.

Why is the need for this same type of cooperation not equally apparent in our economic work? The reason, perhaps, is that the Board far more often assumes a judicial-type role in the economic field than it does in the safety field.

The fact remains, that the Board is not primarily a court with basic judicial power. Its powers are the limited legislative delegations given to it by the Congress, with adjudicatory procedure.

We adjudicate and we legislate.

When we adjudicate under the Federal Code of Administrative Procedure, we are quasi-judicial, and we should conduct business the way a court does, not only on the bench, but throughout the decisional process.

But equally important to remember is that our legislative duties—the developmental and promotional duties specifically imposed on the Board by Congress—these duties cannot be discharged without close cooperation between the industry and the Board. That is why I am here discussing some of our common problems with you today.

It is because one of your most important purposes is to achieve this close cooperation for the good of aviation and the American traveling public, and because you have been so successful in doing so during your first year of existence, that I want to congratulate you and wish you the same success in the future.

The third anniversary I want to mention is one of my own. On Sunday next I shall celebrate the beginning of my third year as member and Chairman of the Civil Aeronautics Board.

If I am a little the worse for the wear of 2 years on the job, it is perhaps understandable, because I think it is fair to say that the job gets tougher each year. I think I can also say, after 2 years in the job, that I understand why the turnover of CAB chairmen has been so high.

Also, after 2 years I have a fairly good idea of what the Chairman, the Board, and its staff are faced with. And, in a word, it is appalling.

There is a grain of truth, perhaps, in some of the recent comment that the Board is a 1938 model trying to handle 1958 problems. We are still 5 members, just as was the 1938 Board. Our staff has doubled since 1938, but the industry has grown, in volume of revenue passenger miles, to more than 70 times its 1938 size.

An even more meaningful comparison is with the Board of 1948. By that year the industry was taking shape as we now know it today. That year, just 10 years ago, we had 620 staff members. Since then the industry's volume has increased by 295 percent. The Board's staff has increased by 10 percent to 682 over the same 10-year period.

UNIVERSITY OF MICHIGAN LIBRARIES

The Board itself, and by that I mean the five members, is fast reaching the limit of what it can handle. In 1938 and for several years thereafter, the Board members could, I understand, afford the luxury of conducting hearings and taking evidence themselves in some cases. Today, because of the rapid increase in our business, we can ill-afford even the time that must be devoted to the extensive oral arguments we are often faced with.

If the Board members are to continue participating in steadily increased foreign-air negotiations, if we are to attend meetings such as this one today, if we are to get closer to the operational and safety problems that the industry and the Board will face during the coming years of the jet age and if we are to perform all the other special missions that Board members must undertake, to still have even a quorum of the Board available in Washington to do business will become increasingly difficult. To handle, in addition, the greatly increased volume of more complex work we face, will be a tremendous burden.

The Board has, in the past, done a considerable bit of remodeling and reorganization on that 1938 version Board I spoke of a moment ago. Efficiency has been increased markedly, as it has had to, for us to do the work at all. We are constantly on the watch for improvements in methods and procedures.

During the past 2 years Congress has granted substantial increases in our appropriations for salaries and expenses. We are asking Congress again this year for more personnel, but with the realization that another 50, even another 100 staff members will not enable us to meet all the demands on our time.

The next year, my third year will be devoted to meeting this ever-increasing challenge. Our own approach to our work will have to emphasize greater speed and efficiency, more than at any time in the past. Our techniques will have to be reexamined to see where we can find improvements.

I mention this problem to you because it is your problem as well as it is mine and the Board's. It is of vital importance to ALTA's second year, for the vitality of the Board's processes in meeting your problems, and the problems of the industry as a whole, is the key to your future as well. Your cooperation, and the industry's, are as important to our success as ours is to yours.

If the public is to get another 20 years of progress in safe and economical air transportation such as we mark in this anniversary, this 20th year must be not just a commemoration of the foresight that Senator McCarran and his colleagues showed 20 years ago, it must be a reaffirmation of that foresight.

Today's problems are no more imposing than the problems that fledgling industry and a fledgling Board faced in 1938. I am confident that we can face them today as then—and that the second 20 years of the act and the Board will be marked by the same progress in the industry and its service to the public as was the first 20 years.

Wheel Chair Club of Wilkes-Barre Builds Good Will Around World

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Record of April 14, 1958, on the humanitarian program carried on by the Wheel Chair Club of Wilkes-Barre throughout the world. This organization was founded 23 years ago by Mrs. Paul Bedford.

WHEEL CHAIR CLUB BUILDS GOOD WILL AROUND WORLD

Quietly and unobtrusively, a generous minded woman—always thinking first of the suffering needy—is building good will around the world for Wilkes-Barre and America.

This women, Mrs. Paul Bedford, who founded the Wheel Chair Club 23 years ago, is sending her wheel chairs—free—to leper colonies, to small hospitals in the jungles of Africa, Guatemala, Korea, India, Thailand, and the Philippines. In addition, walkers have been shipped to many countries in Europe.

More than 50 of the wheel chairs have been sent to far corners of the earth—to spots so distant as to sound almost legendary. "And," she added, "I have more ready to go."

From the flood of requests for chairs arriving from remote countries whose names crop up only in datelines of international stories, it won't be too long before Mrs. Bedford will be well along the way toward achieving her target—of seeing that "everyone who needs a wheel chair may have it."

The most veteran stamp collector couldn't help but be intrigued by the pile of colorful foreign stamps that carry the urgent and usually touching requests for chairs to the local woman's desk.

Operating on the theory "the field is the world," Mrs. Bedford makes it clear, "We'll send the chairs any place." She explained, "We pay for the chairs and transportation to New York and from there on the foreign missions and the overseas committees take over always paying the balance of transportation and sometimes the duty.

Originated in Wilkes-Barre with one chair, the Wheel Chair Club has had as many as 400 wheelchairs and 300 walkers in use at one time here. Demand from other towns for chairs has gradually developed 16 wheelchair clubs in Pennsylvania and 4 other States and new ones are being promoted.

All wheelchairs sent overseas are marked with plaques inscribed "This Chair Is Given by the Wheel Chair Club of Wilkes-Barre, Pa., U. S. A." The club founder emphasizes that the project is interdenominational.

Farthest outpost, perhaps, to hear of Wilkes-Barre through the Wheel Chair Club's latest expansion is Chiengmai, Thailand, formerly Siam in southeast Asia.

The words of the director of two hospitals in the French Cameroun sum up Wilkes-Barre Club's thoughtfulness of the stricken in other lands: "There has never been such a marvelous thing back here in these jungles before."

Besides giving the ill and disabled of other places the same break that shut-ins in this country have had for many years, the local club's newest arm has satisfied an urge Mrs. Bedford has had since Sunday School days—to do something for the lepers and those doomed to elephantiasis. "I've always wanted to do it—always heard about it," the club founder added. "So, nine chairs have been shipped to the Congo."

At Batouri in the French Cameroun, folks frequently are admitted to the hospital with elephantiasis, Dr. H. Wallace Creig, who is responsible for two hospitals there, writes. In this disease there is an abnormal swelling of the feet and legs—sometimes so that a man's ankle will be as big around as his thigh. These people have to be kept off their feet for months. Says the doctor, "Your wheelchair will be a wonderful help to them. You should have seen their eyes popping when first they saw it."

Putting down the letter, Mrs. Bedford said simply, "That's the kind I'm striving to help. We try to reach places that no one else does—the small out-of-the-way spots."

She added, "In 1 part of the French Cameron, South Africa, there are 8 and 9 operations going on simultaneously in the same big room in 1 hospital. The families come and live in tiny huts to care for their patient, thus learning of Christianity and modern ways."

First chairs shipped in the Operation Overseas were destined for American hospital in Tabriz, Iran.

"Off today," Mrs. Bedford went on, "are two chairs to Bundaim, southeast of Delhi, Central United Provinces, North Indian Union."

Dr. Marshall P. Welles, who received a chair at Bangkok Christian Hospital, describes his facility:

"The 40-bed hospital, a comparatively young one—8 years old—has a special baby department of 45 babies from 1 week to 2 years of age. These are not orphans but are all boarders as their parents work. All have been born in the hospital. This is a very strange situation and quite unique for most places."

Another faraway link touched by Mrs. Bedford's seemingly endless chain is the Wanless Hospital, Miraj Medical Center, Miraj District, South Satara, founded by Dr. William Wanless in 1894. The hospital has treated 3,500,000 out-patients and 200,000 in-patients. Bare facts give only an inkling of the suffering that has been relieved. "Patients come from many parts of India and even from Arabia," Dr. Wanless tells the local club founder. "I'm sure many patients will benefit from the use of the chairs and will thank God for your thoughtfulness."

It was not until the wheelchairs were in use at the Wanless Hospital that Mrs. Bedford learned the gift had a personal significance to her. At the farflung center there is a clinic. The Goheen Clinic, named for a missionary surgeon, the father of President Robert F. Goheen of Princeton. The university head spent some of his younger years there. The local club founder's husband is a trustee at Princeton.

Turkey is another country which will hear of Wilkes-Barre through a wheelchair. Seeking a chair for his aged father who was returning to Turkey, a physician in Danville called the local club founder. Since the man had to have a chair to make the trip, Mrs. Bedford quickly agreed. "We'll do it." Later, the club head asked the physician's wife how the father's name was pronounced. The young woman freely admitted she's been married for 10 years and still can't pronounce it. "But I can spell it," she added, and she did—"Edir Yozgatiloglu."

The Family-Type Farm

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. CHRISTOPHER. Mr. Speaker, Senator JAMES MURRAY, of Montana, is to be highly complimented for his address to the Senate on April 2, 1958, to be found on page 5411 of the CONGRESSIONAL RECORD.

I know, firsthand, of many cases happening in my home State of Missouri which are exactly as the Senator de-

scribes them. Farmers who were born, reared, and trained on the land and who wish to make farming a career are being forced to seek employment in the cities. Many of these young men are driving for distances as great as 75 miles one way each day, working 4 or 5 days per week in a factory, and at the same time they are trying to operate a farm which they originally purchased as a home with the intention of operating the land as their sole business. These men are working in the cities not because they desire to do so, but in order to make enough money to avoid losing the equity in their land and country home.

Mr. Benson would probably say that these young farmers are submarginal and inefficient. Probably 75 percent of all farmers were submarginal and inefficient by the Benson standard when they began to farm.

How is a young man going to make a start in agriculture if he must have sufficient capital to purchase 320 acres of land, $20,000 worth of implements, and a minimum of $30,000 worth of livestock before he can commence his farming operation?

America has always been considered the land of opportunity—a place where a young man could begin at the bottom and grow up in any business. Is that opportunity to be forever denied to the young men and women of this Nation who want to make agriculture their careers? Must conditions be allowed to develop which will make it forever impossible for a young couple to begin life on an American farm unless they are born rich? Mr. Eisenhower and Benson have demonstrated over and over in the past 5 years that it is their firm determination to replace family-type farming in this country with corporate landownership and labor-camp operation.

The time is short. Wake up farmers. Wake up farmers' sons and urge your Congressman and Senators to protect the remaining remnant of family-type agriculture in America today.

Senator MURRAY addressed the Senate as follows:

Mr. President, for some time I have been interested in the formula by which Secretary of Agriculture Ezra Taft Benson and his staff are aiding family farmers through their much publicized rural-development program.

The other day Under Secretary True D. Morse sent us all, bearing his personal signature, copies of the monthly magazine Extension Service Review, which is issued by the Department of Agriculture. It is the March 1958 issue, and is devoted entirely to glowing articles about the rural development program.

Mr. President, I combed this magazine almost line by line to find an example of a farm family that had been saved by the program to get some clue about how it really works. My efforts were finally rewarded. On page 58, in an article entitled "Keeping Them on the Farm," which is about Choctaw County, Okla., I finally found this clear example of the operations of the program. The article reports:

"Farm people in the county were quick to take advantage of the opportunities provided through the rural-development program. Floyd Berry and wife are good examples. Berry operates a 280-acre farm and has a small grade A dairy and a commercial beef herd. To supplement farm income Mrs. Berry drew on her experience as a housewife to get a job cooking in a local cafe. She works from 6 a. m. to 2 p. m., daily. Her husband is working at a filling station from 3 p. m. until midnight.

"Berry handles the farm chores in the morning and his wife takes over afternoons."

This, then, is the formula for successful farming under Benson. Get your wife a full-time job in town. Get yourself a full-time job in town.

If you are lucky, the husband's in-town wages will pay the losses resulting from farming under Benson and you will still have your wife's pay as a fry cook to buy some groceries and clothing.

Mr. President, I think other Members of Congress and the farmers of America are entitled to have this shining example widely publicized and know that this is the pattern of family farm life being promoted by the Benson regime.

I want it to be entirely clear, however, that this shining example of the results of one of Mr. Benson's programs simply reinforces my own conviction that he should be fired before sundown—a conviction I have had for the past 1,896 days, which goes back to the day after his appointment.

Fire Ant War

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. ROBERTS. Mr. Speaker, unknown to many people despite our efforts to familiarize them with the facts, there is a great war being waged in a number of our southern States. The combatants are, on the one hand, a small battalion of farmers and other people who recognize the existence of the conflict. On the other side is a mighty army of vicious, imported fire ants, intent on attacking and destroying if possible agriculture, cattle, dairying, and trucking in several Deep South States.

Unfortunate for the whole Nation and particularly for the immediately affected areas is the fact that the insects have lost only a few skirmishes in this fight and are far from defeat in the total war. To turn the tide, there needs to be an all-out eradication program, with leadership for this program coming from the Federal Government.

The Congress started the job in the right direction last year by approving a $2.4-million authorization for combating fire ants. This is not much, considering that vast job that must be done, but it is a start. I have no doubt that in the not-too-distant future we will have to appropriate a good deal more before we are done with these pests.

Another step in the right direction is the quarantine announcement from the Department of Agriculture. My feelings on this subject coincide with those of the Selma Times-Journal as expressed in an editorial of recent date.

Under leave to extend my remarks, I include this editorial from the Times-Journal of Selma, Ala.:

FIRE ANTS MUST BE ELIMINATED

Starting May 6, parts of eight Southern States will be placed under quarantine by the United States Department of Agriculture as a means of checking spread of the destructive fire ant.

The regulated area will include 92 counties and parishes and parts of 49 more in Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, South Carolina, and Texas.

Regulations will restrict interstate movements from the quarantine areas of soil, plants, grass sod, forestry and timber products, and other items which help spread the insect.

The areas to be under quarantine regulation in Alabama are counties of Autauga, Baldwin, Bibb, Bullock, Butler, Chilton, Choctaw, Clarke, Conecuh, Covington, Dallas, Elmore, Escambia, Geneva, Greene, Hale, Houston, Jefferson, Lee, Lowndes, Macon, Marengo, Mobile, Monroe, Montgomery, Perry, Pickens, Sumter, Tuscaloosa, Walker, Washington, and Wilcox, as well as parts of Barbour, Calhoun, Crenshaw, Dale, Etowah, Henry, Limestone, Morgan, and Russell.

Although this quarantine is going to be costly for the areas affected, nobody familiar with the agricultural peril presented by fire ants is likely to challenge the soundness of it, because something drastic must be done to check the spread of these deadly invaders.

It is in order, however, to point out that Federal Government has been a great deal quicker in applying drastic quarantine methods than it was in recognizing the peril of the fire ant in the first place, and that adequate steps to eliminate the threat entirely still have not been taken.

Quarantines may curb the fire ant in some degree, but the only certain method of protecting infestation-free areas of the Nation is to stamp out the insect entirely and take steps to prevent reentry from other countries.

This would cost a great deal of money, but it would cost even more to daily along with the problem while maintaining sectional quarantines, which cannot be expected to really curb what easily could become a national infestation.

Results of Questionnaire in Sixth Congressional District of Washington

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. TOLLEFSON. Mr. Speaker, recently I mailed questionnaires to several thousands of voters in my congressional district asking their views on a number of issues pending before Congress. The response was most gratifying. More than 6,000 persons have already completed the questionnaires and have returned them. In a majority of instances these people expressed opinions on additional matters either on the questionnaire itself or on an attached sheet. Their views will certainly be most helpful to me. I am inserting a tabulation of the views herewith for the information of other Members of Congress. They are as follows:

UNIVERSITY OF MICHIGAN LIBRARIES

	Percent		
	Yes	No	Undecided
1. To cope with the international situation, the President's budget asks Congress for $73,900,000,000. Should Congress appropriate that sum even if it means that the Government will operate in the red?	46	49	5
2. If it appears that the Government will operate in the red during the next fiscal year should—			
	Percent		
Taxes be increased?	30		
The national debt be increased?	41		
Undecided	29		
3. Because of increased defense expenditures should Federal projects throughout the Nation (including perhaps some in your area) be postponed?	50	43	7
4. Do you favor a continuation of our mutual security foreign aid program? If yes, at present cost? (17 percent.) At reduced cost? (50 percent). Increased cost? (4 percent)	71	29	------
5. Should the Federal Government provide 40,000 science and engineering scholarships to selected high-school graduates?	56	38	6
6. Do you believe in direct Federal grants to States for school construction?	49	46	5
7. Should Congress increase postal rates to help meet postal deficits?	66	30	6
8. Do you think that Congress should vote pay increases for postal workers and other Federal employees?	58	36	6
9. Do you believe the Government should continue to expend funds to support farm prices?	22	71	7
10. Do you believe American industry should be protected from imports of cheaply produced foreign products by imposing tariffs on those imports?	77	18	5
11. Should labor union welfare funds be regulated by law?	85	11	4
12. Should private enterprise be permitted to join with the Federal Government and local agencies in building hydroelectric power projects in the Pacific Northwest?	60	34	6
13. Do you believe that permission should be granted for the construction of a ski lift or aerial tramway in Rainier National Park?	73	21	6
14. If new overnight facilities are built at Mount Rainier should they be located—			
	Percent		
Inside the park boundaries?	81		
Outside the park boundaries?	12

Quack Recession Cures Perilous to Our Economy

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. HOFFMAN. Mr. Speaker, from the Chicago Daily News of March 29 comes an editorial which emphasizes the danger of apparently fallacious political remedies.

While so many are insisting that Congress attempt the impossible, a little consideration of this editorial may, in the end, be helpful.

The editorial reads:

QUACK RECESSION CURES PERILOUS TO OUR ECONOMY

The recession, depression, or whatever you choose to call it, will not be cured with the quack remedies being offered by the political medicine men in Washington.

On the contrary, dosing the economy with these palliatives may temporarily alleviate the pain, but could ultimately kill the patient.

Because this is an election year, both parties are vying with each other to see which one can produce the most attractively packaged antirecession pills.

President Eisenhower, for instance, has proposed extending unemployment compensation by 50 percent. This would mean that a man who drew $25 a week in a State with a maximum of 26 weeks, would, if he had used up his 26 weeks, continue to draw $25 for another 13 weeks.

However, the gimmick is that the States will be expected to reimburse the Federal Government for money advanced to meet these additional payments. If the States fail to repay the Federal Government, the Federal tax upon employers would be increased until full repayment was made.

What this actually means is that once such a "temporary" plan has been adopted, it will become a permanent part of our social welfare structure.

Under union and political pressure, the companies which provide the job opportunities will be even more heavily taxed in the future.

TAX CUT OVERRATED AS TRADE STIMULANT

In the current recession hysteria, there is a growing agitation for tax cuts.

Many economists contend that a tax cut is the quickest way to stimulate purchasing power and the economy in general.

The administration and the Democrats have both toyed with this idea, but are now said to be wating until the March economic indexes are available before making a decision.

While everyone would like a tax cut, I agree with economist Paul E. Belcher, who argues that the economic efficacy of tax cutting in the present situation is being vastly overrated.

Belcher contends that reasonable tax reductions simply aren't powerful enough and couldn't act fast enough to do us much immediate good.

A convincing case can be made for a long-range program of tax reduction. Taxes have reached the point of confiscation—punishing initiative and forcing smaller firms into mergers or absorption by their more powerful competitors.

But it is strange indeed that those who clamor most vociferously for tax reductions are frequently the same people who favor greater expenditures of your money both at home and abroad.

They cry for more foreign aid, broader welfare measures, Federal scholarships, and larger appropriations for education.

It apparently never occurs to the big spenders that they cannot have it both ways and retain any stability in the economy.

The President's budget is already headed for a huge deficit. If we continue on the theory that we can spend more while taking in less, the outer planets may have to organize a Marshall Plan for the United States.

SELF-INTEREST RULES PROPOSED REMEDIES

The trouble with most of the antirecession nostrums is that they are brewed in the pot of self-interest.

The politicians of both parties vote for continuing subsidies to the farmers, even though it costs the taxpayers a million dollars a day to store surplus farm products, plus another million a day for interest on money borrowed to carry out the farm program.

The unions demand, even in a recession, higher wages and other benefits which contribute to the price spiral already burdening their members.

Business, particularly in the automobile industry, is so price-conscious that it contends reduced prices would not sell more cars.

But in the same breath, the automakers call for the reduction or elimination of excise taxes, which would make cars cost less.

This is the sort of "double-mindedness" which is so typical of every special interest group.

Even Secretary Dulles is using the recession as an argument for increased foreign aid. To cut it, says the Secretary, would mean more unemployment in the United States.

RECESSION CAUSES CLEARLY FORESEEN

The paladins of panic, in their furious search for an economic wonder drug, show too little understanding of the basic malady.

The recession was not unexpected. Cutbacks in capital outlays, a marked drop in exports, holdbacks on defense programs, inventory reductions, the tightening of credit and pronounced consumer resistance all contributed to an economic slowdown.

We are passing through what economists call a classical recession, neither permanent in character nor foretelling a major breakdown in our profit-and-loss economy.

While a tax reduction and other stimulants such as public works might create a more optimistic psychology, these remedies cannot cure the infections in our economic system.

As Mr. Belcher has said, "Psychology can't correct such items as a rigid wage system; high prices necessitated by high costs, the frequent use of artificial price props, arbitrary limitations on productivity, and the threat of strikes in the auto industry."

The politicians never talk about it, but a crucial factor in the economy today is the ever-growing cost per unit of labor.

When times were good, annual wage increases were passed along to the public in higher priced goods. The recession began when the consumer—to protect himself—stopped buying.

But neither the unions nor business paid the slightest heed to the President's several appeals for restraint in wage demands and the pricing of goods.

By asking for trouble, they got it.

UNCONTROLLED INFLATION COULD SINK OUR NATION

The present danger, as I see it, is not that the Government will do too little, but that it may do too much.

One school of economists is actively advocating reflation (to reinflate) on the theory that it may not cause as much additional inflation as feared.

Walter K. Gutman, of Goodbody & Co., observed that if we seek to go back to the dollar value of 1940, only one thing can happen—an economic collapse.

Mr. Gutman says "our problem is to adjust to the fact of the one-half dollar, stop fussing about the $1 and make sure that we have enough one-half dollars in people's hands so that the price level established since World War II can be maintained."

He says also that "the authorities—meaning the Government—are coming to this point of view with regret, but there is every indication that they are coming to it."

I profoundly hope that Mr. Gutman is wrong. But the political weathervane points to high deficit spending, cheaper dollars, and running—not creeping—inflation.

This is the same course that has marked the decline of every nation which has en-

braced inflation as a solution for its economic ills.

Shrewd European investors are betting it will happen to us.

When it does, you will have seen the end of the United States as a great power.

JOHN S. KNIGHT.

Knifing the National Guard

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. ROBERTS. Mr. Speaker, despite unanimous opposition from the House Armed Services Committee and a good many others of us in the Congress, the Army has proceeded to order a reorganization of the Reserve forces which would eliminate 6 National Guard divisions, 4 Reserve units, and some 1,100 company-size supporting units.

I find it hard to justify any consideration of a plan to slash the very backbone of our defense. To curtail the strength of these forces at a time when we must maintain the strength of our Nation is completely out of harmony with our objectives.

Like many others here, I have long contended that the National Guard must not be crippled and I speedily protested the Army's reorganization order in a letter to Secretary Brucker.

Under leave to extend my remarks, I include my letter to the Secretary of the Army, as well as a very fine editorial on this subject which appeared in the Anniston (Ala.) Star on April 9, 1958:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 2, 1958.

Hon. WILBUR H. BRUCKER,
Secretary of the Army,
Washington, D. C.

MY DEAR MR. SECRETARY: I have read with very deep concern of the announced reorganization of the Reserve forces which would eliminate some 6 National Guard divisions and some 4 Reserve divisions.

This action, in the face of the resolution adopted by the House Armed Services Committee and the opposition of the governors' conference, does not seem to be in the best interest of the Nation.

For many years it has been the policy of the Defense Department to maintain a nucleus in the Regular service and to depend on the National Guard and the Reserve forces as the backbone of our defense. To curtail the strength of these forces at a time when we must maintain the strength of the Nation does not appear to be in harmony with our objectives.

It is true that new weapons may require modernization of units to conform to present conditions, however, we must never lose sight of the fact that the evaluation of a successful battle is that of obtaining the objective and holding it. Up until this time it has been, and I believe, in the future it will always be, necessary to take and hold our objectives and we must rely on the soldier. Therefore, we must maintain the Ready Reserve and National Guard units.

I strongly oppose any proposed reduction in these forces and sincerely trust that the Department of the Army will reconsider its position in the matter.

Very sincerely,

KENNETH A. ROBERTS.

KNIFING NATIONAL GUARD

Alabamians have every reason to be alarmed over proposals now being considered in Washington which would cut the strength of the Army National Guard from 400,000 officers and men to 360,000 during fiscal 1959, and eliminate 6 of the 27 guard divisions and approximately 25 percent of company-sized units in the next 30 months.

These Pentagon-backed changes have been termed "the most serious threat to the guard's existence in many a year."

An ill-advised money matter, the manpower cut would be madness in this time of global unrest and actual fighting in north Africa, Indonesia, Cuba, and elsewhere.

The guard has proved itself in previous wars, and it is no secret that even if full guard strength were impressed into Federal service, our military manpower still would come nowhere near matching Russia's, numerically speaking.

A cut in guard strength also would ignore that organization's role as a State police force, available for service in natural disasters and other emergencies.

The stakes in the present fight are particularly high insofar as Alabama is concerned. For in only 4 other States—New York, California, Massachusetts, and Texas—did guard strength top Alabama's 14,518 officers and men, as of last January 31.

It sincerely is hoped that the Congress will show the good sense to vote the funds necessary for a 400,000-member guard.

The reorganization plan is something else, again. It would not save money, but it is supposed to modernize the guard and make it a more effective force.

Guard divisions would be converted to the modern "pentomic" structure recently adopted by the Regular Army. Manpower would be distributed according to the mobilization priorities of various units, and excess units—6 divisions and 1,100 company-sized groups—would be eliminated.

Congress has indicated it is willing to go along with the reorganization plan, but it still must be cleared with the governors of the affected States. The law provides that "no unit of the National Guard * * * shall be withdrawn from any community or area * * * until the governor * * * shall have been consulted and shall have consented. * * *

Theoretically, then, a governor could block—or at least soften—the reorganization blow, and indeed it could be borrowing trouble to surmise that in any reshuffling, the powers-that-be might consider doing away with the famed 31st Division, made up of units from Alabama and Mississippi.

If past record, esprit de corps and present battle readiness means anything, this outfit surely will weather any conversion deemed necessary in this atomic age.

But, again, the Pentagon has an ultimate weapon in reserve. If negotiations reach an impasse, it can cut off Federal financial support for units it considers unnecessary.

In a word, changes are being proposed that could weaken, not strengthen, the guard for its role in national defense. It stands to reason that more strength would not be gained by cutting 40,000 officers and men from guard rolls.

The Army National Guard must needs be kept intact for the vitally important dual role it plays—as part of the Federal Army and as an emergency force within each State.

How the Times-Herald Was Born and How It Died

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. SHEEHAN. Mr. Speaker, the Thirty Club, a group made up of former employees of the Washington Times-Herald and its two predecessors, the Washington Times and the Washington Herald, recently held its fourth annual reunion here in Washington, D. C.

The Times-Herald, the voice of conservatism in the Nation's Capital, for years occupied the building at 1317 H Street NW. It was bought by Eugene Meyer's Washington Post and closed on St. Patrick's Day, 1954. At the reunion, Mr. Speaker, congratulatory telegrams and letters from many persons high in Government life were read. Among them were messages from Herbert Hoover, who formerly owned the Times; Vice President Richard M. Nixon; and Senators Lyndon Johnson and John Kennedy.

On the occasion of the fourth annual reunion, Mr. Speaker, the Thirty Club inaugurated an award, to be given each year to America's outstanding newspaperman. The award is unusual in that it recognizes the value of factual and excellent reporting and has, as a club spokesman said in making this year's presentation, absolutely no social significance.

The award to Bob Considine was made in recognition of his reporting in three distinct fields—international, national, and sports. Cited were his interview with Nikita Khrushchev, his handling of the controversial Little Rock integration disorders, and his coverage of the 1957 world series. The committee which selected Mr. Considine as the Nation's outstanding newspaperman and winner of the Thirty Club Royal ivory typewriter award described his writing as factual, lucid, and free of personal bias.

That the selection was a wise one was borne out a few days later when Mr. Considine also won the annual award of the Overseas Writers' Club.

Much has been said both for and against the Times-Herald, Mr. Speaker, but no one can deny that it crusaded for its principles with a vigor seldom displayed by today's newspapers. I can think of no group better qualified to make an annual award for excellence in journalism than the former editorial employees of this newspaper.

Although it traced its beginnings to the latter part of the 19th century, the Times-Herald attained greatness in the 1930's under the leadership of Eleanor Medill Patterson, a distinguished member of the Chicago family which gave the Nation its two largest newspapers.

UNIVERSITY OF MICHIGAN LIBRARIES

She was the granddaughter of Joseph Medill, who convinced Abraham Lincoln that he should run for the office of President of the United States. Mr. Medill also was one of the founders of the Republican Party and published the Chicago Tribune. Mrs. Patterson's first cousin, Col. Robert R. McCormick, late publisher of that newspaper, built it into the second largest in the country. Her brother, Joseph, founded the New York Daily News with surplus funds from the Tribune and built for it the greatest circulation on this continent.

In tribute to Mrs. Patterson, whose blood was generously mixed with printer's ink, and to the hundreds of newspapermen and women who worked for and with her in the golden age of Washington journalism, I ask that the following article, which appeared in the program for the Thirty Club reunion, be inserted in the RECORD.

HOW THE TIMES-HERALD WAS BORN AND HOW IT DIED

The Times Herald had its beginning on March 18, 1894, when a group of unemployed printers founded the Washington Times.

Fifty years later, it did not publish a story about the anniversary.

Ten years after that, it did not publish at all.

That, for the sake of journalistic brevity, is the history of what often has been referred to as the damndest newspaper ever to hit the streets.

In all, the Times-Herald was an institution which lasted exactly 60 years. It died when Col. Robert McCormick, who claimed Irish descent, observed St. Patrick Day in 1954 by selling out to his political enemy, Eugene Meyer.

It was more than just the end of a newspaper. It was the culmination of an era of blazing journalism and blistering crusades, of tough and efficient reporters.

What really made this great institution was the ability of its personnel and the genius of the men and women who owned, at one time or another, the Times, the Herald, or the Times-Herald—Frank Munsey, Herbert Hoover, Arthur Brisbane, William Randolph Hearst, the beloved Eleanor Patterson, Colonel McCormick, and the "Seven Dwarfs"—Bill Shelton, Ed Jewell, Frank Waldrop, Mike Flynn, Mason Peters, Happy Robinson, and Irving Belt.

There were hundreds of others, most of them equally a part of the Times-Herald, and to them all the Washington area paid its debt on the newsstands and in home circulation.

From Hearst, Mrs. Patterson inherited her personnel and the intrafamily competitiveness developed by such hatchet wielders as "Long John" Hastings, who would fire an entire staff just because he didn't feel well on a particular morning.

Cissy never eliminated all the factionalism, but it was a healthy sort of bloodletting. Reporters afraid of a falling ax somehow worked harder and produced better results.

Cissy did put a quick and efficient halt to one of the biggest rivalries soon after she leased the Times and the Herald, August 7, 1937. For years, the two papers had operated as separate and bitter foes under the same roof. Cissy merged them February 1, 1939, 3 days after she bought the entire property.

The effect was electric. Washington went for the combined product like a trout for a fly. From that day until the closing, 15 years later, the Washington Times-Herald led all other newspapers in the city in circulation. In addition it was, typographically and from a standpoint of makeup, one of the outstanding newspapers in the country.

When Cissy passed on, the seven trusted employees to whom she left the Times-Herald continued her policies, but the Times-Herald just wasn't the same. Soon after Colonel McCormick took over, the makeup was changed to resemble the Chicago Tribune. The many fonts of Ryerson, a type which almost was named Patterson in Cissy's honor, and the other faces that had made the newspaper so readable, were junked. Shorts on page one were banned. It should have been obvious then that the Times-Herald would never be the same.

But it thrived vigorously, nevertheless, until that St. Patrick's Day 4 years ago when a notice was pinned on the city room bulletin board, announcing that there would be no edition the following day.

It was just as well that a certain redhead who sported an equally red pedicure and a temper to match was not around. She would have made a story the likes of which she had never published.

The newspaper she lived, fought, and died for would not have gone so easily.

And the building at 1317 H Street NW. would be something more than a warehouse for office furniture belonging to the Washington Post.

A Do-Nothing Administration—Far From It

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. HOFFMAN. Mr. Speaker, from the independent Newsweek of March 31, 1958, comes this statement—well worth reading—an answer to the unjustified criticism that the administration is not moving forward.

The statement reads:

THINGS DONE, NOT JUST PLANNED, FOR A STEP-UP

THE ACTION

August 5, 1957: Housing Adminstration lowers downpayment requirements on FHA-insured home loans. Example: The required downpayment on a $12,000 house cut from $1,200 to $600.

THE OBJECTIVE

Stimulate the sagging housing industry. Note: By January 1958, new FHA loan applications were up 64 percent over previous January.

THE ACTION

November 14: Federal Reserve System lowers bank discount from 3½ percent to 3 percent, easing administration's hard money policy.

THE OBJECTIVE

Spur home, commercial, and municipal borrowing; encourage capital investment.

THE ACTION

December 23: President Eisenhower unfreezes $177 million in Federal funds for military housing, cooperative home building, and slum clearance.

THE OBJECTIVE

Get stalled housing developments around missile bases and co-op projects moving again.

THE ACTION

January 7, 1958: President asks Congress for $1.2 billion supplemental defense appropriation for current fiscal year. Request approved by Congress, signed by President February 11.

THE OBJECTIVE

Primarily to catch up with advances in Soviet war capabilities, but indirectly to help construction industries with accelerated spending on missile and SAC bases.

THE ACTION

January 13: President submits $73.9 billion budget, increasing defense outlays but putting moratorium on new public-works projects. Democratic and Republican Congressmen rebel, pass resolution calling for speed-up in public works.

THE OBJECTIVE

Again primarily to match Russian advances, but also to pour more money into defense industries and stem unemployment.

THE ACTION

January 21: Federal Reserve lowers bank discount rate again, from 3 percent to 2½.

THE OBJECTIVE

Further to stimulate credit and capital investment.

THE ACTION

February 11: President asks 5-year, $1 billion Post Office modernization program. Plan calls for improvement or replacement of 2,500 Government-owned buildings, 12,000 leased structures. Passage by Congress doubtful.

THE OBJECTIVE

Stimulate construction, encourage investment by stipulating that $1.5 billion of the fund come from private money.

THE ACTION

February 20: Federal Reserve Board lowers bank-reserve requirements by one-half percentage point.

THE OBJECTIVE

Free $500 billion in cash reserves and $1 billion in lending power, thus offsetting a seasonal decline in bank loans.

THE ACTION

March 6: Federal Reserve cuts bank discount rate for third time—from 2¾ to 2¼ percent.

THE OBJECTIVE

Ease up on credit still more.

THE ACTION

March 7: President releases $200 million to Federal National Mortgage Association for purchase of mortgages on low-cost homes.

THE OBJECTIVE

Enable builders to arrange financing of homes under $10,000; boost low-cost housing projects.

THE ACTION

March 8: The President orders a speed-up in all Federal construction including highways, dams, and Government buildings, but holds the line against new public-works projects.

THE OBJECTIVE

To accelerate the flow of already obligated Federal funds to builders and contractors.

THE ACTION

March 12: Pentagon speeds up defense expenditures, freeing money that was idled by the hold down of last year.

THE OBJECTIVE

Spur defense industries and get some of the unemployed factory workers back on the job.

THE ACTION

March 18: Federal Reserve Board cuts bank reserve requirements another half percentage point.

THE OBJECTIVE

Free another $490 million in cash reserves, another $3 billion in bank credit.

THE ACTION

March 19: President orders Housing Administrator and Secretary of Agriculture to

expedite $2.2 billion worth of college-housing, urban-renewal, public-housing, and rural-electrification projects.

THE OBJECTIVE

Boost business and provide employment (but the plan is dependent upon $1.7 billion in State, local, and private funds).

THE ACTION

March 19: Congress passes new $1.8 billion emergency housing bill.

THE OBJECTIVE

Further encourage low-cost housing development; provide jobs; distribute money to builders and suppliers.

THE ACTION

March 19: Army announces it will order $100 million in trucks and trailers within 30 days.

THE OBJECTIVE

Help auto and parts makers in Illinois, Indiana, Michigan, Ohio, and Pennsylvania; restore jobs.

THE ACTION

March 19: President outlines plan for extending State unemployment compensation an additional 13 weeks with $200 million in Federal funds. States now pay benefits for from 6 to 30 weeks.

THE OBJECTIVE

Sustain the unemployed during their idleness and put purchasing power in their hands.

March 31, 1958.

George Harris Collingwood—Public Servant

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. PORTER. Mr. Speaker, the other day many of us here in this House and thousands in the field of forestry and conservation in which he had made his career, were appalled by the sudden and unexpected death of George Harris Collingwood, the Chief of the Natural Resources Section of the Legislative Reference Service in the Library of Congress. It is a pardonable tendency and an altogether fitting custom to speak only good and put the best possible aspect on the life and character of the dead. I feel that in the case of George Harris Collingwood one can be severely austere in words of eulogy and yet emerge with a sublime epitaph.

There are achievements that can be measured in the life of Harris Collingwood such as his printed works, his original procedures in teaching forestry, and even more concretely the mass of his reports and analyses that helped inform and guide the Congress on legislation in the area of farm forestry and conservation. But these are statistical paragraphs in a coldly abbreviated biography. Collingwood's singular contribution was no particular detail of his accomplishment, however worthy. It was rather in the quality of his personality—gentle, firm, utterly selfless—which lent to everything he did a kind of purposeful goodness that made life happier and easier for those around him.

Yet in his 67 years the sheer substantive quantity and quality of his work was immense.

If I inject a personal note it is only because this illustrates what I mean by the quality of his personality giving so much extra value to his worth as a scholar, an administrator, a teacher, and a very special mentor, for example, to those of us here in the House who felt the need for calling upon his knowledge, his experience, and his technical guidance. As a freshman Member of Congress, I was buttressed and defended many times by his great depth of knowledge in the fields which, because of my district—the fourth—in Oregon, meant the most to me. Here, so to speak, through this Chief of the Natural Resources Section of the Legislative Reference Service, I had at my elbow instantly, or within reach of my telephone, or by report and special analyses prepared for me, the lessons I needed to do best my job as the representative of my district.

The technical data, the information, the summary of a complicated conservation problem, that I got from Collingwood I knew was the last word on the subject told in depth with clarity and simplicity. When I speak of the quality of his personality I mean too the character, the integrity, and the diligence he invariably applied to any question in hand. Here from Collingwood was something I knew I could go out on the floor of the House with and use to corroborate my point of view. Or the information I had from him might have the effect of disabusing me of an impression his expert research showed was inaccurate.

Collingwood's formal education and background was an index to the depth of his scholarship. He was born in Fayetteville, Ark. His schools included: Michigan State College and Muenchener Universitaet. Before he returned to the United States he had studied forest practices in Germany, Switzerland, and Austria. For 2 years he was a ranger in the Apache National Forest in Arizona. He was a professor of forestry in Cornell University in 1916. In 1923 he was an extension forester in the Agriculture Department. Always his unique training and background had a continuing influence on the character of forestry education in the United States because he invested these with the fire and dedication of his personality.

What made him, I would say, especially outstanding was his love of his subject.

From this love, in the field he had chosen for his career, stemmed a love of people which was genuine and all-inclusive. This made him an ideal teacher, mentor and lecturer, a schoolmaster, in his way, who was also a friend, philosopher and guide. People loved him so that it was he who was quite apt to be elected to be the chairman or toastmaster or head of a committee to make an award, or offer a tribute to a fellow worker, or express an encomium on some associate's long service in the Library of Congress. Not aptitude alone but respect and affection as well played some part, I am told, in his rise to head the forest conservation division of the National Lumber Manufacturers Association from 1940 to 1946. He was the author of the association's industry program. Among other task force jobs he served as an agriculture expert on the Hoover Commission for executive department reorganization, and was forestry consultant to the United States Chamber of Commerce.

The Government of the United States owes a profound debt to Collingwood and people like him in the Government service. It is on the occasion of the death of a public servant like Collingwood that I think it is highly appropriate to extol the vast amount of top-level work that people like him perform for us, the Congress, and for the people of the United States. I think it is not only fitting but a duty for us to stand up, as I am doing now in this place to testify to this extraordinary dedication and fruitful productivity of the people who work for the Government. It makes immeasurably for a better United States in the age when this country is called upon to take the leadership of the free world. And it is precisely correct for these words to be spoken in the House because we who allocate the expenditure of the people's money are the people's agents, and the people are the true employers of brilliant, competent, and effective Government employees like the man in whose honor and memory I speak. Whatever pay Collingwood got could hardly be said to constitute any kind of balance for the achievement he gave in return.

Government servants like Collingwood—anonymous, without self-interest, ambitious for their tasks and not for themselves—are the Nation's most outstanding operational economy and one of the mightiest forces for the progress and strengthening of free government.

In the epitaph of George Harris Collingwood there must remain a very special place for his role as a hubsand and father. For something of the glory that came to his wife, who survives him, Mrs. Jean Cummings Collingwood, must redound to him. Mrs. Collingwood was named Distric tof Columbia "Mother of the Year" by the local American Mothers Committee in 1955. It is significant of this magnificent family that all of the Collingwood sons and daughters are engaged in some form of service for the betterment of mankind, ranging all the way from helping retarded children to advancing public education. One of their sons is the distinguished Charles Collingwood, CBS television and radio news analyst, now in London. Another is the Reverend G. Harris Collingwood, Jr., of Junction City, Kans. The other children and grandchildren are a credit to American home life, and the high standard of upbringing and education often overlooked in the flood of news about the more spectacular aspects of the American family.

George Harris Collingwood, as a citizen, as a man dedicated to his career, as

UNIVERSITY OF MICHIGAN LIBRARIES

a father, and as a friend of his fellowman, deserves the highest commendation from his generation.

The Present Recession

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 6, 1958

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a letter discussing the present recession and our present economic condition which letter I recently received from Dr. C. O. Jayne, of Centralia, Ill.

The logic of Dr. Jayne, in discussing the present recession, I feel, largely typifies the thinking of the great majority of the people who are solely interested in the welfare of our Government and are free from political bias.

I believe many Members of Congress will find the logic of Dr. Jayne's letter of interest to them:

CENTRALIA, ILL., *March 12, 1958.*
HON. CHARLES VURSELL,
Congressman from 23d District in Illinois.

DEAR CONGRESSMAN VURSELL: I am prompted to write this letter mostly because of my anxiety over what the administration and Congress may do to relieve the current recession.

* * * * *

I know our recession is serious enough to make us all want something done to relieve unemployment. I fear that our administration and Congress may do too much, rather than not enough, to relieve unemployment. I note there is talk of huge public-works program and cutting of taxes. Our National Government needs revenue so much to meet all expenses that I would hate to see taxes cut any at this time unless it becomes absolutely necessary to do so. A reasonable sized works program seems wise at this time but I feel that care should be taken not to go too strong on such a program.

Fundamentally, I believe our economy is such as not to go into a deep depression. The buying power of our people is even now, of I am correct, at an almost all-time high. The inflation spiral had to be stopped. Of course we all enjoy to some extent the prosperous times of inflation, but I cannot enjoy such, much, knowing full well that the opposite must come and the greater the inflation spiral, the greater the depression must be when it comes, and with much inflation, depression will surely come as night follows day.

It is most likely that some will play politics with this recession, but I trust that Congressmen and Senators of both of our great parties will rise above politics in this matter. I admit that too much negative talk scares people sufficiently to keep them from buying, but I do not believe that is going to hurt our economy much this time. When people stop buying except what they must, it hurts by cutting down production and employment.

With our economy as good as I believe it to be, I consider there are at least two fundamental causes for this recession other than fear, and sooner or later had to bring on a recession, if not a depression, depending on how long and to what degree those causes go unrestrained. First, I wish to mention installment buying of so many things by so many people and that has been carried to almost the limit with car sales, some of which have obligated the buyer for 36 months, more or less. It made good business while it was going on, but sooner or later it had to stop for there is a limit to how much the general public can obligate itself financially and have a sound economy. For this condition we will have to blame to a great extent businessmen and industrial leaders In due time, after many months, this condition will right itself when people get caught up with those monthly obligations. No optimistic talk now will relieve this condition we find ourselves in and that part of the recession caused by overbuying on the installment plan. Public works can give some relief, but will not cure this situation.

The second fundamental cause of our recession which can and will lead in time to a great depression preceded by uncontrolled inflation is caused by the misleaders of organized labor and industrial leaders are to a great extent to blame for this condition by permitting wages to rise time after time to pass the cost on to the public. To my knowledge, prices have never failed to rise when there has been a round of wage rises and this keeps causing more inflation. Any labor leader or any industrial leader should have known long before now that after each general wage raise, the worker who got increased wages is no better off within 2 or 3 months as prices rise accordingly and those who have fixed incomes and the workers who are not organized have less and less buying power. That which is not good for us all in the long run cannot be good for any group for long. Prices have now risen to such a level that those who need machinery can ill afford to buy it and materials have become so high that all construction must sooner or later come almost to a standstill, except such building that has to be done. I am not optimistic over this situation in which we find ourselves in this respect. I know no solution except ultimate depression preceded by uncontrolled inflation unless labor leaders and industrial leaders act with commonsense and stop this mounting spiral of wage increases and ever higher prices. Just confidence, alone, in our economy will not correct this condition in our national economy. It is time, and that time is long overdue, that men in high places talk and write concerning this matter and make it unpopular for labor leaders to ask for more and more, and industrial leaders to grant more and more higher wages and thus make prices higher and higher. Instead of organized labor asking for higher wages, it should voluntarily reduce some wages and I especially have in mind the building crafts. Most people just cannot afford to pay the present high wages to build or repair. I am not sure what can be done in this matter, but something must be done to stop this foolish rise in wages and prices, or else.

In this election year, some Congressmen and Senators may favor making increases in social security taxes and liberalizing social security payments. That tax may have to be increased some but I wish it might not be done and if it is increased any, I trust it will be increased as little as possible. I would suggest that instead of increasing social security benefits, that Congress permit one who gets his social security be allowed to make considerably more each year than the present $1,200 without being penalized by taking from his social security. This would increase the buying power of a great number on social security without added taxes and there is a need of the kind of work they will do.

We must not be taken in by the Russians any more. We know them now and we know their ultimate aims. Their policies change to meet changing conditions but their ultimate goal of world domination has not changed and will not change, in my judgment, until they know that they can no longer fool us and they know we can and will resist them in their aggressions. Their economy, as well as ours, cannot stand the stress and strain of armaments. Such a stalemate will, in my judgment, bring the Communist leaders to thinking differently. We must not be moved by smiles and pleasantries of Russian leaders.

We must not in any sense give up atomic weapons. Without such, the Communists will be far superior to the free world in men and conventional weapons and then the "brush fires" they meant to start here and there to conquer parts of the free world in pieces will begin as they intended it from the beginning. Atomic weapons have made such unlikely now and we must keep it so with those weapons. They do not want a big war for they know it will mean destruction to them as well as to us. Let us keep "brush fires" unpopular with them. I have written much to say but little, perhaps. I trust I may not burden you too much in reading this letter.

My best wishes are ever with you.

Your friend,

C. O. JAYNE.

John Gray Exemplifies Finest in Community Service

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. BROOKS of Texas. Mr. Speaker, an outstanding citizen of the Second Congressional District of Texas and a longtime friend, Mr. John Gray, of Beaumont, has been selected by the East Texas Chamber of Commerce for its man of the month award for April 1958.

This selection has been acclaimed throughout southeast Texas and the people of Beaumont, I feel sure, join unanimously in this exceptionally well-deserved tribute to a civic leader who has made community progress his personal responsibility.

Versatile, hard-working John Gray has the vision and courage to provide effective leadership needed to weld together all parts of a community to provide better opportunities for all its people. As president of the Beaumont Chamber of Commerce this year, Mr. Gray is continuing his tireless work for Beaumont and Jefferson County.

It is with genuine appreciation for his years of service that I include an editorial about Mr. Gray which was published in the Beaumont Journal of April 5, 1958, in today's RECORD:

ONE HONOR FOR ALL

All Beaumonters, we believe, are proud and pleased that the East Texas Chamber of Commerce has chosen one of their most outstanding fellow citizens for its Man of the Month honor for April.

The regional chamber would have to reach a long way and perhaps make several reaches to find another man as deserving of the signal recognition as John E. Gray.

It would be repetitious to set down here all the things John Gray has done and is doing

for the betterment of Beaumont. It would be an old story to our readers, even as his name is old and familiar. But it is the kind of old that, like gold, brightens and shines with use.

East Texas, official publication of the aggressive and far-reaching chamber, recounts how Mr. Gray entered junior college, graduated with honor, returned as a professor, helped make it into a 4-year college and became its first president. It tells, too, of how the college president switched from a successful career as an educator to banking and has become executive vice president of the First National Bank in Beaumont. It also, and proudly points out that he is now president of the Beaumont Chamber of Commerce.

This, of course, is only a brief summary of Mr. Gray's interests and accomplishments. In church, in civic work and in all phases of community betterment, Mr. Gray has left hardly anything untouched. And he has touched nothing that he has not improved.

The regional chamber's official publication says "thorough" is the word for John Gray. It is. He is so thoroughly a part of everything worthwhile in Beaumont that the whole city shares in the thoroughly deserved honor.

Coal's Top Role in Power Picture

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial "Coal's Top Role In Power Picture," which appeared in the April 14, 1958, issue of the Madisonville Messenger of Madisonville, Ky.

The editorial is as follows:

COAL'S TOP ROLE IN POWER PICTURE

Coal and steam turbines will be here for a long time, a gathering of 600 or so electric-utility executives from the Southeast were told the other day in Boca Raton, Fla.

Bearer of this important news to mines and miners was Fisher Black, editor of Electrical World, and our information came from the New York Times, whose Gene Smith covered the session for the New York big print.

Mr. Black predicted that coal would be the predominant factor in the fuel picture between now and 1975, while Dr. C. Guy Suits, vice president and director of research for General Electrical Co., agreed with Black on the importance of nuclear and fusion power in the future and at the same time held that neither development would cut into the overwhelming influence of coal and steam turbines.

Dr. Suits for his part said there was nothing on the technological horizon that gave promise of replacing rotating machinery (steam turbines) for generating electricity—not on a big scale or in the near future, as he put it.

He pointed out, reported the Times, that there was an interval of 15 to 20 years between the point of technical feasibility of fission (nuclear) power proved in 1942 and the economic feasibility "which we are now approaching but have not yet reached."

And, continued the General Electric man: "The technical feasibility of fusion power (harnessing the hydrogen bomb reaction) has not yet been proven. From our studies we have proposed that practical fusion power should not be anticipated until at least 20 years have passed."

Analyzing the future sources of energy for the electric utility industry, Mr. Black said he was not very bullish on nuclear energy through 1975 and "not going wild over fusion, with commercial fusion powerplants anywhere from 20 to 50 years distant."

Both speakers at the Boca Raton session dismissed the possible application of solar energy to power generation, but Dr. Suits said it and fuel costs, semiconductors, converters, and other new laboratory methods should be investigated as "interesting further technical possibilities."

Mr. Black described coal as being in "the most optimistic reserve picture of all fossil fuels." He placed overall remaining coal reserves at the vast figure of 943 billion tons, plus 525 billion tons of lignite.

Based on present annual consumption of about 500 million tons, coal reserves east of the Mississippi River alone (152 billion tons) would provide 300 years' supply, he explained.

Further impetus to the use of coal for power generation stems from an expectation that coal prices will rise in the coming years at a much slower rate than will prices for gas and oil, Black said, concluding:

"Not only will the use of coal increase over threefold in the next 18 years, but its share of power generation will rise from 55 percent of annual production in 1957 to at least 66.5 percent in 1975."

No matter what happens in the field of nuclear power, he said, utility thinking must center around coal.

Forestry Yesterday and Today

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, it is with a great deal of pride in the talents of Mr. Ben Massie, of Ellington, Mo., that I include a copy of his speech which was entered in the subdistrict contest of the Future Farmers of America. His speech and timely subject, Forestry Yesterday and Today, merits thoughtful consideration:

FORESTRY YESTERDAY AND TODAY

(By Ben Massie)

From the time explorers began to visit the North American shores, they recognized resources which they could use. They began at once to harvest timber and carry it home to Europe.

Forests continued to play a vital part in American history as the young Nation grew. Wood and more wood was needed, wood for covered wagons, bridges, ships, poles, railroad crossties, and mine timbers. Houses, stores, schools, and churches had to be built.

To pioneers moving westward from the Atlantic seaboard, the forest seemed more like an obstacle to progress and safety. Wherever their covered wagon took them except on the prairies—the land had to be cleared of trees to make way for farms, roads, and settlements. Although most of the trees thus cleared were burned, a lot of them were used for fuel or lumber.

People sometimes look at this period of exploration and settlement and shake their heads over the timber and land clearing. But in those days there was a tremendous surplus of timber. Trees were in the way for homesteading and farming. The easiest and fastest means of cleaning land of trees was to burn them. It was the accepted answer to the problem of to many trees. Consequently forest fires ranged unchecked. Forest protection was unheard of because almost no one could see that there would ever be a need for conservation of trees. These same practices are still carried on in some instances today in the United States.

By the 1870's, however, when settlement had reached the Pacific Northwest and there were no more frontiers to explore, men began to think about taking steps to insure a future timber supply. The United States Government appointed men to study the forest situation, and in 1905 the United States Forest Service was founded to improve and protect Government-owned forest lands. Many of these first foresters employed to do this job were German foresters.

At the same time lumbermen were learning about conservation from the cutover forests of New England, the Lake States, and the South. They saw young new forests springing up where the old trees had been harvested. Men learned that trees grow and actually replace themselves. Seeing the potential in these young forests, lumbermen stopped moving about and settled down to grow crop after crop on their own lands.

In recent years, sound forestry practices on privately owned and Government woodlands have become widespread. Today most industrial forest owners are growing trees as a crop under the guidance of professional foresters.

The great variety of trees in America astonished the early settlers. Even today, all of Europe—not counting Russia, has only 85 species of trees. The United States has more than 1,000. Although there are 1,000 kinds of trees in the forests of the United States, only about 100 have commercial value; that is, they are suitable for manufacturing into lumber, paper, and other products.

Trees grow in all parts of our country except in grasslands, the desert regions of the Great Plains, and the arid basins of the West. Nevertheless, there are rather definite groupings of trees into six different regions, determined by the climate and the lay of the land. The groupings are northern, central hardwood, southern, western, and west coast and a small area of tropical forests.

Fire, insects, and disease along with men are the forests' worst enemies. In some sections fire is enemy No. 1. In others, such as old growth forests, insects and disease do the greater damage. All make heavy raids upon our forest capital.

Fire means a tragic loss of wildlife as well as timber. Birds and animals try to escape, but fire has been known to move faster than even a deer can run. Even the animals which escape may die later from starvation because their food supply has been destroyed.

A farmer would soon be out of business if he did not grow crops over and over on his land. Forest land should be used the same way. Trees can be grown as a crop just as cotton or corn.

A wise farmer would not let his cattle graze in his unripened corn or let fire burn his cottonfield. Nor would he let his cattle destructively graze his woods or permit fire to run through his forest.

As a farmer cultivates his corn to keep out the weeds and thins his vegetables as they will grow faster and larger, so should he keep the decayed, deformed, and diseased trees out of his woodland and thin his young stands to give the trees more room and sunlight.

Before a farmer's grain crop ripens, he carefully explores the market so he can get the best price. He should do the same for the products his woods can yield.

UNIVERSITY OF MICHIGAN LIBRARIES

There are still people who misunderstand the basic purpose of forests overlooking entirely the great contribution trees make to the American economy. They would have the primeval forests remains as they are, when nature has different plans. Like people, trees age and die. Modern forest management has demonstrated that the forest must be used or eventually it will be lost. This means that a thrifty forest is never idle and to keep healthy it must keep busy and productive. Conservation of the forest is wiser use of the forest.

Most farm woods do not contain enough trees to fully utilize the soil. Due to this understocking, together with inadequate protection and poor management, farm forests are producing only from one-fifth to one-third the amount of wood products which could be grown under good management. The quality of the material which is being produced at the present time is so low that many of the large wood-using industries in the State will not buy Missouri timber. As long as this situation exists and as long as woodland owners make no effort to determine the actual value of their timber before making sales, stumpage and log prices will remain too low in many sections of the State to encourage intensive woodland management.

Few people realize that overgrazing of woodlands by livestock causes damage very similar to that caused by burning. But rot in older trees, the complete lack of seedlings and young trees of good species, compacted soil, eroding soil, and slow tree growth are as prevalent in grazed woods as they are in burned woods. Furthermore, efficient livestock production requires better pasture than Missouri woodlands produce. The farmer who owns a small woodland will make more money from both his timber and his livestock if he fertilizes, limes, and otherwise improves his open pasture and fences livestock out of his woodlands.

On many farms in the central and southern parts of the State the timber and pasture acreage is out of balance. Again, small tracts of woodland which are expected to provide both pasture and timber usually fail in both respects.

The most valuable timber species should be encouraged. In some cases where no reproduction is present, it may be desirable to introduce such species through planting.

Insofar as is known at the present time, in small woodlands where frequent harvests are expected, management should be directed toward the development of uneven aged stands. In other words the ideal woodland should contain trees of all sizes ranging from very young trees to mature sawtimber. Therefore, the owner who attempts to keep his woodlands free of all undergrowth and in a park-like state is actually creating unnatural conditions and doing a poor job of timber management. In such a woodland when the trees which are now present reach maturity and are harvested, the area is either through producing timber, or there will be a gap of several decades before another harvest can be made.

The Central States region in spite of being highly industrialized, densely populated, and extensively farmed, is 20 percent forested. The forests are predominently hardwood—chiefly oak. Most of the forest land is located in the southern part of the region—along the Ohio River, in the mountains of eastern Kentucky and in the Missouri Ozarks. Missouri has 15 million acres of timberland.

Generally, these forests are in poor condition; understocked, and containing many cull or worthless trees. The potential for producing more and better timber is there. In fact, the average acre of forest land in the region is considered capable of producing three times as much usable wood per year as it is producing now.

The better timber is scattered throughout the northern part of the region. This is farming country and many of these small woodlands are owned by farmers who do not depend upon timber as a primary source of income. Such an ownership pattern complicates the instruction of farm woodland management since the land is spread among so many owners who have various interests.

Near the center of the State is the headquarters for the Columbia Forest Research Center, which is maintained in cooperation with the University of Missouri. There are more different kinds of research going on there than at any of the other centers. Research is being done in the fields of forest management, fire, economics, range, watershed management, and forest insects and diseases.

Burning forest land in an effort to eliminate brush and tree sprouts in order to improve forage has been a common practice in the Missouri Ozarks for years.

On recent experiments at Sinking Experimental Forest in southern Missouri, they found that burning an area with a hot ground fire is a very inefficient way to control the undesirable woody growth. After 1 year, the hardwood cover had been reduced by only 5 percent.

On a similar area that had been treated with a herbicide, the cover was reduced 40 percent the first year and should be reduced by another 50 to 40 percent the second or third year. Production of planted little blue grass was 3 pounds per acre on the burned area and 250 pounds per acre where herbicides were used.

Because the production of cattle is an important industry in certain parts of the Missouri Ozarks, they have been carrying on experimental work along this line for some time. They have been trying to reconcile the interests of both forester and cattle producer so as to provide for the best and fullest use of every acre of wild land.

Some of the forested land in this area may be more suited for growing forage than trees. One of the important problems is to determine which is more important economically, trees, or forage. Where the land is more suited for growing forage, one of the rangeman's big tasks is to keep the land free from brush and trees. For years it has been common practice throughout the State to attempt to control this undesirable vegetation by burning the range every spring. But fire is a dangerous tool and an inefficient one. So they have been trying in recent years to find ways to do this job cheaply and effectively with herbicides.

Mr. Hilterbrand, our vocational agriculture instructor, and Mr. Fred Whitt, district forester, took us to Van Buren on a wood-industries tour to Nichols Stave Co., Beamer Handle Co., and Levitt Fallet Co. At the stavemill, Mr. Nichols showed us a bolt containing a nail that had ripped several teeth from the barrel saw. When we arrived at the handle factory, Wayne Keathley greeted us and pointed out fire scars on some of the blocks which were culled as unfit for the manufacture of handles. He also explained that 95 percent of the timber, which is hickory and ash, is transported from Illinois, Kentucky, Tennessee, and Mississippi. Thirty-three years ago when this plant was established it had a plentiful supply of timber from this locality. Now it must transport its timber from another State. This emphasizes that we have witnessed a deterioration in the management of our timber that must be corrected if we are going to continue to produce timber for our wood-using industries.

What could we, as FFA members, and others do to correct the conditions that exist today in our timberland?

First we must cooperate with the agencies that are promoting conservation today. These agencies include the Missouri Conservation Commission, the United States Forest Service, the Soil Conservation Service, and many allied agencies.

This cooperation should extend from the farmer to the businessman and from the commercial worker to the professional man. In other words, all people should be vitally interested in the conservation of our forestland and the time to begin is when we learn of the importance of our timberlands. FFA boys can own forestry projects. To begin with, the plots should not be over 5 acres in size because caring for them requires considerable work. Some of the practices that should be done are inventories, culling and girdling of undesirable trees, keeping out fires, and fencing out the livestock.

We believe conservation is of primary importance today, not only to supply the necessary food and fiber we need to live but to produce enough for the generation to come.

On field trips we have seen stumps of virgin pine trees relics of a bygone era. We have seen examples of good forest management such as practiced in Deer Run State Park. We have seen many acres of cutover, burned forest which cannot yield any timber today.

Our job today and our future of tomorrow will depend upon our decision to correct the thinking of the past and work together for better forests and conservation of our land.

Rural Electric Cooperatives

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. NATCHER. Mr. Speaker, on March 25, 1958, I asked and received unanimous consent to have printed in the Appendix of the RECORD, a letter from Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association, to the President. This letter gave a brief analysis of the President's recent directive to Secretary Benson to encourage REA cooperatives to spend their loans faster.

Mr. Ellis concluded his letter with a request that these important matters might be discussed with the President in person. Since then, one of Mr. Eisenhower's assistants informed Mr. Ellis that such an appointment was unnecessary.

Pointing out that rural electric systems can play an important role in fighting the recession, Mr. Ellis once again has urged the President to take time for a discussion on these REA matters with grassroots representatives of the program.

Mr. Speaker, I ask unanimous consent to have printed in the RECORD Mr. Ellis' letter to Jack Z. Anderson, Administrative Assistant to President Eisenhower.

The letter is as follows:

APRIL 10, 1958.

Hon. JACK Z. ANDERSON,
Administrative Assistant to the President, The White House, Washington, D. C.

DEAR MR. ANDERSON: I am very sorry, indeed, that you do not think it is necessary for the President to talk with me about the crucial REA matters covered in my letter of March 21, 1958. These are tremendously important to those of us concerned about the welfare of rural electrification and rural America, and, therefore, I would like to request an opportunity for our Board of Directors and me to talk with the President at his early convenience. These men are elected by the rural electric systems in 43 States and

Alaska and understand well the problems we face.

In view of the constantly deteriorating farm situation and the drastic migration away from the farm, many rural electric systems are in critical times. For example, the systems have built power lines to 335,000 rural homes that now stand vacant. This construction cost about $100-million and the remaining consumers have to pay this back, along with the rest of the funds borrowed to build rural lines. I am sure all this must be of concern to the President as part of the recession picture, if for no other reason.

Our rural electric systems do want to help fight off a depression. And there is much they could do if Mr. Eisenhower should choose to give them the sympathetic understanding and consideration of their needs he has so often expressed.

These are the things our Association Directors would like the opportunity to discuss with the President. As farmers and officials serving local rural electric cooperatives they know that the President's directive to Secretary Benson to urge REA borrowers to speed up expenditure of loan funds is simply bad advice from every standpoint.

At the same time they are aware of the fact that the President, in his budget request, asked for less than half the amount of funds needed by the rural electric program during the next fiscal year. As you know, he asked for only $150 million. Department of Agriculture officials have admitted during recent appropriations hearings that the need is about $325 million. Our own NRECA survey, which has always been conservative, shows that this need is $359 million.

Our directors would like the opportunity to talk with the President about this matter, also, because uncertainty over adequate loan funds is bound to lead to a slowdown in new construction. Furthermore, they would like to seek his assistance in expediting new loans rather than old loans because this would help rural electrification as well as the fight against depression. And finally, they would like him to know how Mr. Benson's stop orders on $74½ million of loans already made to 55 cooperatives are slowing down the rural electrification program.

None of us can understand why the President on the one hand apparently is pushing the rural electric systems while holding them back on the other. Neither can we understand how you can claim for the administration that it has been responsible for the REA and water resources development progress over the last several years when the record clearly shows that it has been Congress which has set the pace and provided the leadership. We know, for instance, that there have been times when REA would not have had enough funds to make needed loans had Congress not increased the administration's budget requests.

On behalf of the Board of Directors, I respectfully request the opportunity for them and myself to present to the President these matters which are of utmosst importance to rural America.

With personal regards.

Sincerely,

CLYDE T. ELLIS,
General Manager.

Survival

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. UDALL. Mr. Speaker, wise counsel comes from many sources: Indeed, there are times when wisdom may be distilled out of wit. As evidence of this, I include in the RECORD a short verse, written by Richard Armour, which appeared recently in the New Leader magazine:

SURVIVAL

(Able to take 100 times as much radiation as man, insects may be the only survivors of atomic war.—News item.)

Insects, which men long have plagued
With doses of insecticide,
Now under stones, in holes and cracks,
Await the turning of the tide.

—*Richard Armour.*

Navaho Dam and San Juan Chama Units of Upper Colorado River Storage Project Opposed by Colorado River Board of California

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. HOSMER. Mr. Speaker, I am in receipt of a letter under date of April 10, 1958, from the Colorado River Board of California, an official agency of the State of California, setting forth that State's official objections to the San Juan Chama and Navaho Dam units of the upper Colorado River storage project. The letter sets forth the reasons for the opposition in each instance. So that my colleagues may be informed thereof, I have asked that the letter be reproduced as follows:

COLORADO RIVER BOARD OF CALIFORNIA,
Los Angeles, April 10, 1958.

The Honorable CRAIG HOSMER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HOSMER: The construction program currently proposed for the upper Colorado River storage project includes the Navaho Dam storage unit, which in the opinion of the Colorado River Board has no reasonable justification since it would serve no useful purpose at this time.

The Navaho Dam was authorized as a unit of the Colorado River storage project in 1956 under Public Law 485, 84th Congress, 2d session. The record indicates that $1½ million was appropriated to start construction. However, no construction contracts were awarded, as far as is known; and the President in his budget submitted in January 1958 recommended that the $1½ million previously appropriated for this storage unit be transferred to and used for the construction of the Flaming Gorge unit of the storage project.

Subsequently, during the consideration of the deficiency appropriation bill by the House at the current session, an amendment by Congressman DEMPSEY, of New Mexico, was approved directing the Secretary of the Interior to use the $1½ million previously appropriated for Navaho Dam to start its construction during the current year. The bill, as passed by the Congress, retained this directive. In addition, the accelerated reclamation construction program submitted by the President to the Congress on March 12, 1958, recommends a further appropriation of $7 million for the Navho Dam unit for the fiscal year 1959.

The primary and almost sole purpose of the Navaho Dam and Reservoir would be to serve the proposed Navaho Indian irrigation project. There is no power development in connection with this dam and the reservoir capacity is not needed for hold-over storage in the upper basin. In preliminary storage project bills introduced in 1954, the Navaho Dam and Reservoir were included as an integral part of the Navaho Indian irrigation project. However, the Indian irrigation project was subsequently eliminated; but for reasons unexplained, the Navaho Dam was authorized in Public Law 485.

Public Law 485 directed that further investigations and planning reports be made for the Navaho Indian irrigation project, and also for the San Juan-Chama project in New Mexico, which proposes a transmountain diversion of Colorado River Basin water into the Rio Grande Basin. The Bureau of Reclamation report on these 2 projects was completed a few months ago and submitted by the Secretary of the Interior to affected States for review and comment under the provisions of the Flood Control Act of 1944.

The Colorado River board, as the State agency responsible for protecting the interests of California in Colorado River system water, has made a careful review of the report on these two projects. The board's comments will in due course be transmitted to the Secretary of the Interior through the State department of water resources and the Governor, in accordance with etsablished procedure on review of Federal reports.

It is concluded from the board's studies that neither the Navaho irrigation project nor the San Juan-Chama project as proposed in the bureau's report is economically feasible. The Navaho irrigation project, including the necessary storage which would be provided by the Navaho Dam and Reservoir, would cost $1,550 per acre, according to estimates in the report. The capital subsidy, including interest up to start of full operation, would amount to $2,500 per acre, or about $240,000 per farm family. The San Juan-Chama project, as proposed in the report, is infeasible because of the high cost of the irrigaton development ranging from $200 to $1,200 an acre to provide a very small supplemental water supply. In addition, these projects would adversely affect the water supply for the lower Colorado River Basin either as to quantity or quality, or both, unless proper safeguards can be secured.

It is the position of the Colorado River Board that neither the Navaho Indian irrigation project nor the San Juan-Chama project, as proposed in the bureau's report, should be authorized by the Congress at this time for construction as Federal undertakings.

Since the primary and almost sole purpose of the Navaho Dam storage unit would be to serve the Navaho Indian irrigation project, and since the irrigation project proposed in the report is infeasible, construction of the Navaho Dam should be deferred until such time as it may be proved to be necessary as a unit of a feasible project for some useful purpose. To construct this reservoir at this time, when it would serve no useful purpose, would only result in an unnecessary waste by evaporation and other reservoir losses of the limited Colorado River system water supply, and in an unwarranted expenditure of $42 million of Federal funds. Furthermore, since the only useful purpose of the dam would beto store water for the Navaho Indian irrigation project, the building of the dam at this time would no doubt be used as an argument to persuade the Congress that the costly and infeasible Navaho Indian irrigation project should be built in order to use the storage created by the dam.

Parenthetically, it is believed there is no need for expenditure of Federal funds in this area as a deterrent to recession, since the general community is thriving with the rapidly expanding development of minerals, oil, and natural gas.

UNIVERSITY OF MICHIGAN LIBRARIES

In view of the information presented herein, it is respectfully requested that you use your influence and take such action as you may deem proper and effective to stop any additional appropriations for the construction of Navaho Dam at this time. Your cooperation in reaching this objective will be greatly appreciated.

Sincerely yours,

RAYMOND MATTHEW,
Chief Engineer.

DAR Resolution on the Panama Canal

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Daughters of the American Revolution at their national meeting in Washington, D. C. Said resolution was passed on Thursday, April 17, 1958. House concurrent resolution 205 is also included.

The resolutions follows:

PANAMA CANAL—DAR RESOLUTION PASSED APRIL 17, 1958, AT NATIONAL MEETING IN WASHINGTON, D. C.

Whereas widespread propaganda of Communist origin has, and still is, aimed at wresting ownership and control of the Panama Canal from the United States and its internationalization; and

Whereas radical elements in the Republic of Panama are carrying on active and highly provocative propaganda on behalf of fantastic demands for (a) further, and impossible, annuity and other benefits, and, (b) the impairment and practical destruction of the absolute and exclusive sovereignty, in perpetuity, of the United States over the constitutionally acquired territory of the Canal Zone, and over the Panama Canal, constructed at the cost of the American taxpayer and maintained and operated by the United States on terms of equality for all nations as required by treaty; and

Whereas these sinister and demagogic agitations have, as their purpose, the liquidation or fatal weakening of such sovereignty, altogether indispensable for the maintenance, operation and protection of the canal, and this without the slightest suggestion of reimbursement to the United States for its vast investment in the canal enterprise: Be it

Resolved, That the 67th Congress, National Society, Daughters of the American Revolution respectfully, but most earnestly, urge upon the Congress of the United States, the prompt passage of House Concurrent Resolution 205, now pending, which has for its purpose the reaffirmation of the complete and exclusive sovereignty in perpetuity of the United States over the Canal Zone and Panama Canal in accord with basic treaty agreements.

Whereas there is now being strongly urged in certain quarters of the world the surrender, by the United States, without reimbursement, of the Panama Canal, to the United Nations or to some other international organization for the ownership and operation of the canal; and

Whereas the United States, at the expense of its taxpayers and under, and fully relying on, treaty agreements, constructed the canal, and since its completion, at large expenditure, has maintained and operated it and provided for its protection and defense; and

Whereas the United States, following the construction of the canal, has since maintained, operated, and protected it in strict conformity with treaty requirements and agreements, and has thus made it free, without restriction or qualification, for the shipping of the entire world; and, in consequence of which, with respect to the canal and the Canal Zone, every just and equitable consideration favors the continuance of the United States in the exercise of all the rights and authority by treaty provided, and in the discharge of the duties by treaty imposed: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That (1) it is the sense and judgment of the Congress that the United States should not, in any wise, surrender to any other government or authority its jurisdiction over, and control of, the Canal Zone, and its ownership, control, management, maintenance, operation, and protection of the Panama Canal, in accordance with existing treaty provisions; and that (2) it is to the best interests—not only of the United States, but, as well, of all nations and peoples—that all the powers, duties, authority, and obligations of the United States in the premises be continued in accordance with existing treaty provisions.

Statement in Support of National Defense Education Bill, H. R. 10381

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. HUDDLESTON. Mr. Speaker, the present status of public education in the United States is of great concern and alarm to me as I am sure it is to all the Members. As you are aware, the Subcommittee on Special Education of the House Committee on Education and Labor has held lengthy and exhaustive hearings on various Federal aids to bolster our educational system.

It was my privilege to speak out in the cause of public education before the subcommittee. Under leave heretofore granted, I include my statement in support of H. R. 10381, the national defense education bill:

STATEMENT OF HON. GEORGE HUDDLESTON, JR., OF ALABAMA, BEFORE THE SUBCOMMITTEE ON SPECIAL EDUCATION, HOUSE COMMITTEE ON EDUCATION AND LABOR, IN SUPPORT OF H. R. 10381

Mr. HUDDLESTON. Mr. Chairman and members of the committee, I am very grateful to you for your courtesy in permitting me to make a statement at this vital hearing. In my opinion, the appalling state of education in the United States today is a matter of paramount importance. At a time when an enlightened educational system should provide the vision to lead our Nation onward, it becomes the Nation's duty to revitalize our program of public education and lift it from its present low level.

The public neglect and ultimate decline of education presents a very distressing picture. Our schoolhouses are bulging with millions more schoolchildren each year and our school officials must search harder and longer to find good teachers. Rather than an alibi, however, this must serve as a challenge to our educators. The role of education is more diversified, more complex, more exacting than ever. As a result, the American educational system has almost Gargantuan responsibilities to the youth of our Nation and time. If America is to maintain its position of world leadership, our graduates of tomorrow must be a most imaginative citizenry, ably prepared to assume its responsibilities.

In addition to being a distinct privilege of far-reaching significance to each individual, education is a long-term investment in our future security and independence. To this extent, education is a matter of national concern although primary responsibility for our educational system must rest with the individual States and school districts. In preparing for the age of space, adequate education is of the utmost consequence. As Benjamin Franklin so aptly stated, "The good education of youth has been esteemed by wise men of all ages, as the surest foundation of the happiness both of private families and of commonwealths."

The Federal Government most certainly has a responsibility, therefore, to make sure that American schoolchildren receive a suitable education to assure our Nation's intellectual preeminence. This is the purpose of H. R. 10381, which is sponsored by my good friend and colleague from Alabama, Mr. CARL ELLIOTT, who is also chairman of this hard-working subcommittee. Particularly am I impressed with the provisions of title III of his bill, entitled "National Defense Student Loan Program." This program would allow loans of as much as $1,000 a year to prospective teachers in order for them to attend college. These loans would be canceled, however, at the rate of 20 percent per year for each year's service as a full-time teacher in an accredited school.

Unfortunately, we are not training nearly enough teachers to meet the needs of our school population, but numbers alone fail to give the complete story. In addition to teachers in quantity, we need teachers who are well trained and amply qualified. Our society demands, rather than supermarket-type schooling, what might be called "quality education" or education in depth. No student should ever be skipped over in our educational processes, but every outstanding student should certainly be educated to the fullest capacity. If we are to receive maximuch benefit from our system of education, there is no place for mediocrity in teaching.

For generations, teaching has been one of the noblest and most honorable professions. In terms of service to humanity, it is beyond doubt one of the most rewarding. Yet a critical shortage of teachers now confronts our country. In almost every section of the Nation the supply of competent teachers falls far short of the increasing demand. More importantly, there is every indication that this shortage will grow much, much worse. This, in itself, is probably the most pressing problem facing education in this Nation today.

Good teachers have become scarce for a number of varied reasons. To some extent, the present teacher deficit reflects the low birth rate of the 1930's. True, the impact of World War II and the Korean conflict have had an adverse effect on our educational systems. Perhaps the heaviest teacher loss, however, is due to the growing demand for college-trained specialists in business, industry, and Government. The exodus from the teaching profession in the last two decades has been unparalleled in our history.

Why teachers choose to leave the classroom for shops and offices is indicative of the present decline of our educational system. In a sense, the system has fallen victim to a vacuum of trained manpower which it has failed to fill. Numerous teachers leav-

ing the classrooms have plunged us into an educational depression. What is worse, at least 20 to 35 percent of our potential teachers who have received a well-rounded and general education are lost to other occupations before ever reaching the classroom. Interest in teaching is sadly waning. If we are to reverse this trend and revive the desire to teach, the economic and social position of our teachers in the community needs immediate bolstering.

The immediacy of this problem is borne out by the rapidly increasing school population. In the fall of 1957, the United States Bureau of the Census estimated that some 32.9 million pupils were enrolled in full-time elementary and secondary public schools. This comprises almost one-fifth of our entire national population. By 1960, officials figure the school population will total 37 million and by 1965 it is estimated that there will be 41 million pupils—representing an increase of almost 25 percent within 7 years.

Speedy adjustments in our educational system must be made to handle these bumper classes in our elementary and high schools. These are the formative years and an efficient education is all important. The current shortage of elementary and secondary teachers has been placed at 120,000. This mere figure is misleading, however, since teachers skilled in the instruction of science, engineering, mathematics, modern foreign languages, and other disciplines—the courses so necessary in our preparation for tomorrow—are extremely limited in number. It is quite imperative, therefore, that the Nation's overall teaching staff be augmented to accommodate increased student loads, to replace substandard instructors, and also to provide training especially in science and technology which is not now generally available.

In studying the need for teachers in our public school systems, emphasis must be placed on the quality of the educational program. There must be assurances that each school child will have adequate opportunity to acquire an education to the limit of his capabilities. Obviously our educational system cannot operate with maximum efficiency by attempting to utilize unprepared teachers. More than 91,000 full-time teachers, or 7½ percent of all United States elementary and secondary teachers, hold substandard certificates.

After the less competent are weeded out, our educational system can be further improved by the addition of new teachers to offer special instruction and services. Specialized teachers might give remedial help to the handicapped, encourage talented students in neglected fields, and generally fire pupils' imaginations. This Nation is one of specialists, and there is certainly need for specialized training in our public schools.

In addition, our schools must have more teachers to replace those leaving the teaching field, to relieve overcrowding conditions and to serve added enrollments. In each of these categories, the teacher demand is ever growing.

The national defense student loan program, such as proposed in the bill now under consideration, would do much to rectify this unfortunate teacher supply situation. By affording worthy and deserving students the monetary means to attend college, it would help them to help themselves. A loan program of this type is, in my considered opinion, highly justified at this time.

As I have mentioned, public education is a basic responsibility of the various States and school districts. Local control of education must be maintained, but the Federal Government has a definite obligation to ensure the quality of public education. In these crucial times, Federal grants for educational purposes are vitally needed to stimulate interest and awaken the desire to learn.

A Federal loan program as proposed in the Elliott bill would, in effect, serve as a type of local recruitment program for teachers. Communities and school districts might well plan ahead for their teaching needs by encouraging potential teachers to attend college on Federal loans. In providing that the total loan might be canceled if the recipient returned to teach in the public school system, for 4 or 5 years, this legislation provides assurances that a large number of college graduates trained in the teaching profession would, in fact, return to teach school in their hometowns and sections.

There would be many other benefits to a Federal loan program to prospective teachers. It would make possible a college education for the student who was academically qualified but financially unable to go on his own. Once in college on a Federal loan, a student would be encouraged to earn high marks in order to keep his loan. After graduating and entering the teaching profession, the loan recipient could well look on the subsequent cancellation of his loan as a portion of his "salary" from teaching. Indeed, if he were to enter any other profession, he would have to pay back $1,000 or so per year, taking away from his net salary.

It is apparent, therefore, that the national defense student loan program has numerous long-term educational advantages. It provides the necessary machinery to produce the additional qualified teachers we so desperately need. It would set in motion a process which could result in a steady upgrading of our educational level.

Unless something is done, and that speedily, in the interests of public education, all of us will suffer. Certainly a student loan program allowing Federal grants is meritorious in its scope and fully warranted by the present status of public education. Therefore, Mr. Chairman, I strongly urge its adoption.

Thank you.

Plight of the Small Farmers

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. CHRISTOPHER. Mr. Speaker, under date of April 14, Mr. J. B. McMillan, president of the Texas Broiler Association, directed a letter to me, and I am glad to note that Mr. McMillan realizes the dead seriousness of the present situation. The administration of the agricultural policy, under the leadership of Secretary Benson and with the wholehearted support of President Eisenhower, is forcing the American farmer off his land at a rate never before equalled in the history of our country.

Our giant corporations already own or control most of the national resources of our country. Corporations control the oil, natural gas, coal, iron, aluminum, forestry products, and the fisheries. Multi-million-dollar corporations buy and pack the meat and process the cereals. Other giant corporations manufacture the trucks, automobiles, farming implements and appliances. The private merchant as we once knew him is almost extinct, and the giant food chains have taken over the retail field.

The soil of the United States, where the food and fiber which feeds and clothes this Nation is produced, is the only great natural resource still owned in a considerable part by individuals. But the heat is on to displace these individual families with corporation-production, with farmers doing the work in a state of peonage which would rival anything that may have been found in the old world.

More strength to the good right arm of men like Mr. McMillan. Let us tell the story from one end of this land to the other so that the farmer may know the facts. The time is short—the conditions critical—it is later than you think.

The letter follows:

TEXAS BROILER ASSOCIATION, INC.,
Garrison, Tex., April 14, 1958.
Hon. GEORGE H. CHRISTOPHER,
House Office Building,
Washington, D. C.

DEAR MR. CHRISTOPHER: Through the courtesy of Mrs. Stetzel of Paris, Ark., I have read copies of some of your letters and wish to commend you for your fine attitude and broad grasp of the situation.

I thoroughly agree with you that only the Federal Government can do anything for farm folks and that Benson has kicked out all farmers from the USDA and installed yes men from the food, feed, and milling industries. Such unjust handling only adds insult to injury, since no other group in America are denied the right to have their own men represent them in Government departments. As a matter of fact, I have long felt that the so-called farm problem is largely manufactured by the predatory interests of big business for their own exploitation of farm folks and deeply believe that, there is nothing whatever wrong with American farms which farmers themselves can not remedy, provided the antifarmers are driven out of USDA and position of dominance in agriculture. Only Congress can do that.

Mr. CHRISTOPHER, as I see it, we farmers today face the greatest crisis in the entire history of American agriculture, since 5 million farm folks have been driven from their farm homes and the land they love while the remaining farm population are doomed to the most galling economic slavery of modern times with the ruined millions forced to live on the land that was once their birthright and to work for absentee landlords they never see. * * * Thousands today suffer that terrible bondage at wage rates ranging from 12½ cents to 25 cents an hour. Just think of such appalling conditions in our enlightened day and in a country where the policy of Government has set $1 per hour as the minimum wage. But alas, the farmers have been excluded from the benefits of law while exposed to all the severity of the law just as the Plebians were in ancient Rome. Where is the justice? Where is the reason for such shameful exploitation, robbery made all the more galling because it is done under Government sanction? Why are the farm folks left naked and alone at the mercy of vast combinations of greed-crazed monopoly? Why is USDA allowed to pursue its cruel and inhuman antifarm policies solely in the interests of malefactors of big business and to the grievous injury of both farm and country?

And in our poultry industry, the great enemy is evil, unbridled monopoly, hiding behind the fancy facade known to infame as vertical integration, the most vicious and

UNIVERSITY OF MICHIGAN LIBRARIES

destructive monopoly in American history and far more vicious than anything Teddy Roosevelt had to fight in the dawning years of the century. But this unmitigated, indefensible evil is backed, endorsed, and encouraged by the moguls of big business, currently running USDA and enforcing cruelly unfair and unjust policies deliberately designed to enthrone corporation farming and to destroy the last vestiges of the traditional family farm which has, since colonial times, been the backbone and mainstay of the Nation.

And this hell on earth, vertical integration, having enabled vast combines of wealth to dispossess thousands upon thousands of farm folks and to absorb an estimated 90 percent of the broiler industry in its deadly grasp, is now moving into other fields of agriculture, notably swine production, where it has already moved in the first stages of vertical integration, so-called contract growing which always comes just ahead of the paralyzing mass production against which nothing under heaven except the might of Congress can now stand. This vile and utterly evil monopoly made a mockery of free enterprise and completely unhinged the law of supply and demand, thus making economic slaves of thousands upon thousands of once independent small farmers.

There, on the very verge of farm catastrophe, we poultry farmers look to Congress as the only power now capable of arresting the arrogant billion-dollar monopoly, vertical integration, and hope that you will arise and restrain the evil so that thousands may survive on the farm.

Assuring you that we are grateful for your fine sentiments and trusting that you will join with others and do something about the most deadly economic evil of the 20th century, I am,

Sincerely,

J. B. McMILLAN,
President, Texas Broiler Association; Also a Director and Member of the Executive Committee of United States Poultry & Egg Producers Association, Inc.

Experiments by Teen-Age Rocketeers

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MANY HAVE EARMARKS OF KEEN SCIENTISTS

(By George N. Allen)

Who are the amateur rocketeers who have caused many public and private agencies to commend teen-age experiments with live rockets?

Are they children playing dangerous games with "candlestick" rockets? Or are they serious young scientists?

A club of six Bronx boys is typical of the advanced groups. Aged 15 to 19, they are building a 17-foot rocket designed to reach 100 miles altitude and a speed of 2,000 miles an hour. It will carry a full payload of instruments to measure temperatures, cosmic rays, meteorites, engine performance and will be powered by professional fuel.

The boys have nearly all won prizes in their separate fields of physics, chemistry, radio, and medicine. One has already fired about 250 smaller rockets. Their knowledge, displayed in a 2-hour discussion of their project, is awe-inspiring. They rattle off complicated formulas and equations with the same certainty that other boys recite baseball statistics.

Their rocket cannot be fired anywhere except a fully-equipped professional launching site. Capt. Bertrand Brinley, news chief of the First Army, said he would attempt to get Army permission for them to use official facilities.

ASK TO STAY ANONYMOUS

The boys asked to remain anonymous to avoid undue publicity before they complete their project.

This group became known when they wrote to Captain Brinley, in response to an appeal he made through the press for amateur rocketeers to write him of their projects. Boys deluged him with letters pleading for aid, advice, supervision, facilities. The Army man says the letters indicate a widespread, serious interest in space technology. He estimates that about 3,000 boys in the metropolitan area currently are experimenting with rockets and that about 5,000 will be doing so by summer.

Many letters show a surprising knowledge of the scientific complexities involved in fuels, instruments, and design. This one from a 16-year-old is typical of the serious experimenters:

"I am aware of most of the dangers of rocket testing and firing and my mother and father are helping to the best of their ability toward my safety. In the rockets that I am going to send up there will be instruments to radio back the effects of aerodynamic heating. I am experimenting with various metals and alloys."

To check on whether their ideas were matched by their abilities, a reporter interviewed a number of the stripling space men.

ENGINE BUILT

One, George Berger, 16, of Far Rockaway, has on his drawing board blueprints for a 12-foot rocket designed to reach an altitude of 5 to 10 miles and a speed of 1,000 miles an hour. He already has built the engine, a high-pressure fuel tank, a fuel-control system, and a launching panel.

"The panel is designed," George explained, "to insure safety during the countdown. If anything goes wrong I can pull a plug and everything does dead. I am planning to use liquid oxygen and alcohol for fuel. The rocket will have a guidance system, an emergency system to blow it up if it gets out of control, a radio transmitter, and a device to report on engine performance in flight."

George is a high-school sophomore and hopes to go on to a technical college to study missiles. He has been studying rockets for 3 years. Total cost of his rocket will be about $100.

A less-advanced group in Brooklyn has reached the stage where they are firing 2- and 3-foot rockets without instruments. Robert Hall, 15, is a leader of the group. His mother explained that the parents of the boys have formed an informal group to supervise their activities.

USE DESOLATE AREA

"We take the boys out to a desolate area of Long Island," she said, "where they can fire their rockets without hurting anyone. We gave them notes so they can buy the chemicals they need for fuel."

Asked if she was aware of the potential danger involved in handling rocket fuel, Mrs. Hall replied:

"We recognize the danger. But we believe many other things boys do are more dangerous. We supervise all their fuel handling and don't allow them to mix chemicals where anyone might get hurt. And isn't it true that a bit of danger always makes a thing more attractive to a healthy boy?"

Higher Prices Attracting Foreign Beef Competition

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. DORN of South Carolina. Mr. Speaker, Eric Johnston's committee is out over the country trying to drum up support for his completely bogus foreign-trade program. The American farmer is a particular target for false slogans, innuendoes, and fear psychology. They do not dare tell the American people that foreign exports are falling off except where we are paying the other country to buy our goods. They do not dare tell the American people about the hundreds of thousands of jobs that could be added to those presently engaged in foreign commerce through a truly mutually advantageous reciprocal trade program.

A desperate attempt is being made by Eric Johnston, Charlie Taft, and company to mislead, bamboozle, and hornswoggle the American tobacco farmer. This present attempt smacks of sheer chicanery and fraud in that in a few years they will do the same thing to the tobacco farmer and the tobacco industry that they have already done to the cotton farmer and the textile industry.

While trying to fool and temporarily brainwash the tobacco farmer, the ICA, under the table and behind the tobacco farmer's back in the secret recesses of distant lands, are teaching the people the art of American agriculture with the American taxpayer's dollars. I might remind the American tobacco farmers that this same Mr. Taft is listed as an official in the International Cooperation Administration. Their policy is to play one industry against the other, to play one segment of agriculture against the other until their nefarious scheme of growing our crops takes roots all over the world in foreign lands.

We are exporting less tobacco under Johnston and Taft's policy of "trade for the benefit of foreign countries" than we did in the year 1920.

I might remind our tobacco farmers that the millions of employees of the coal, oil, lead, zinc, plywood, and textile industries could purchase millions of pounds of tobacco and smoke the cigarettes if they could be placed on full time with time and half for overtime which they formerly enjoyed before Johnston, Taft, and company started all their one-world treatment.

Every segment of American agriculture, as it reached a climax of prosperity, has in turn been beaten back by fallacious administration of foreign trade. Now, Mr. Speaker, since the livestock industry is enjoying the best prices in years, their turn is next. Here it is for the American beef producers to see.

The following editorial was taken from the Chicago Daily Drovers Journal:

HIGHER PRICES ATTRACTING FOREIGN BEEF COMPETITION

As many cattlemen had feared would be the case, cattle returns are attracting stock from outside the continental United States to compete for a share of the market. And despite what domestic cattlemen think about such competition, there is not really much of a barrier against it.

Thus a current item in the West Coast New heralds the fact that beef from New Zealand cattle is to be available in butcher shops out there by summer. And cattle from Australia are definitely slated to be imported here in the near future.

Word received here is that a cattle importing firm has been organized for the purpose of bringing over both New Zealand and Australian cattle. A shipment of New Zealand cattle suitable for further finishing was due to arrive on the California coast around April 1. Most of these will go into feedlots, although a few may be fat enough for immediate slaughter. Included are around 1,700 head of steers 2 years old and older, and the report is they were bought in New Zealand for 9 cents a pound. Freight and other charges will probably add at least that much to their laid-down price here in the United States.

Another report tells of another firm having contracted for 6,000 New Zealand steers averaging over 1,000 pounds at around $10 a hundred. Freight would add around $11 a hundredweight to that price, making them cost around $21 a hundredweight laid down. The importers hope to realize $2 to $3 a hundred on them. It is reported that the boat trip from New Zealand takes 22 days and that shipping charges run about $7 per 100 pounds on cattle.

The tariff barrier does not offer domestic cattlemen much protection against such competition. The rate on cattle over 700 pounds is 1½ cents a pound on the first 400,000 brought in. After 400,000, rate rises to 2½ cents. There is no rate break on lighter cattle weighing 200 to 700 pounds, and all come in at 2½ cents. On calves under 200 pounds the duty rate is 1½ cents on the first 200,000 head and beyond that, 2½ cents.

It is possible for any domestic group to increase its protection against foreign imports under an escape clause in the tariff laws. This may be done by appealing to the United States Tariff Commission in Washington. If the relief is granted, the President has the power to change duties and quotas immediately to provide for such.

Despite the favorable level of prices prevailing on cattle in this country, there is certainly no shortage, and definitely no excuse for bringing in a flood of cheaply-produced foreign beeves to help drag down market prices. Producers of beef in the United States are capable of turning out all the Nation can use, and even at this moment are increasing their herds for larger output in the years ahead. Thus it would appear that they deserve adequate protection from foreign competition through a realistic tariff rate.

All in Favor Say "Aye"—We Like Miller, Too

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 27, 1958

Mrs. KNUTSON. Mr. Speaker, I ask permission to insert in the RECORD, my second of the Davis motion that Fishbait Miller is one of the "most" and/or "greatest." Fishbait does things for you as if it were his entire pleasure. His care, attention, understanding, and help in any and all problems, large and small, is way above and beyond the call of duty, and done always with the best humor. No wonder he is so popular. All in favor say "aye." Aye.

Speech by Gordon H. Scherer, 67th Continental Congress, Daughters of the American Revolution, Constitution Hall, April 14, 1958

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. WALTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by GORDON H. SCHERER, 67th Continental Congress, Daughters of the American Revolution, Constitution Hall, April 14, 1958:

Practically everything that the Daughters of the American Revolution said and did at its Continental Congress a quarter of a century ago, I am certain was applauded by the great majority of our countrymen. What you do and say here this week, however, will bring wide and varied reactions. They will range from approbation by the great veteran organizations of this country and your sister patriotic societies to ridicule, contempt, and hatred by the Communist conspirators within our American community. The ill will of the latter, our sworn enemies and would-be destroyers, we expect. They are the challenge we must face in our time. They are the Concord, the Bunker Hill, and the Valley Forge of today, tomorrow, and God only knows when after that.

Then there is that fast-growing, cynical segment of the populace which scorns and scoffs at any mention of patriotism. To them patriotism represents immaturity, narrowness, and old-fashioned sentilmentalism. To them reverence for the flag is a childish emotional display for those who relish silly rituals and ceremonies. To them Americanism is not even secondary to one worldism. To them the American heritage and basic constitutional rights should be chipped away and even surrendered when political expediency—treaty by executive agreement—demands.

Then last there is that group of self-styled loyal citizens to whom the word "Americanism" is distasteful although they do not admit it. They are the extreme left-wing, who for one reason or another have lost faith in the American system. They believe in a qualified loyalty to this Government which leaves room for socialism and communism. They are the people who through the years, wittingly and unwittingly, have given their names, money, and prestige to innumerable Communist-front organizations and causes. Among them are those who are the foolish and naive puppets of the Communist agents within. They are the people to whom Georgi Dimitrov, one of the top world Communists, refers when he says:

"As Soviet power grows, there will be greater aversion to Communist parties everywhere. So we must practice the techniques of withdrawal. Never appear in the foreground: Let our friends do the work."

Dimitrov continues:

"We must always remember that one sympathizer is generally worth more than a dozen militant Communists. A univeristy professor, who without being a party member lends himself to the interests of the Soviet Union, is worth more than a hundred men with party cards. A writer of reputation, or a retired general, is worth more than 500 poor devils who don't know any better than to get themselves beaten up by the police."

Dimitrov concludes:

"Every man has his value, his merit. The writer who, without being a party member, defends the Soviet Union, the union leader who is outside our ranks but defends Soviet international policy, is worth more than a thousand party members."

So spoke this member of the Communist hibrarchy just a few years ago.

These are the people who will vehemently oppose and attempt to discredit and distort what the 67th Continental Congress of the Daughters of the American Revolution will do and say in the Nation's Capital this week.

It is the same group which has been attempting over the years to strangle or destroy the FBI, the investigating committees of Congress, and those who have stood in the forefront of this fight, stalwarts like Pat McCarran, Joe McCarthy, Martin Dies, J. Edgar Hoover, Bill Jenner, Francis Walter, and Dick Arens. I know these men; thank God, they are on the same side as the DAR and the Legion in this battle.

The tragedy of this hour is that, in spite of all that has been revealed, so few Americans—in fact, only a handful—understand the Communist mind and the strategy used by the Soviets to reach their goal of world domination.

Such lack of knowledge is understandable when even the Supreme Court of the United States, by a series of disheartening decisions, has demonstrated that it too has failed to grasp the modus operandi of at least one phase of the total offensive new being waged against the free world by the Kremlin.

As long as the Supreme Court has violated all precedent by going beyond the record and consulting the dubious writings of foreign Socialists as authority for its decisions, may I suggest that the High Court take a look at a book written by E. H. Cookridge, an authority on the Communist conspiratorial apparatus.

The Court might learn that the Communist Party is not a political party as we know political parties in the United States—that we are not dealing with an economic or political philosophy, as the Court's recent decisions suggest. It might at long last find out, as Cookridge says, that "we are dealing with the sordid story of theft of atomic and NATO secrets, of arson, sabotage, poisoning, assassination, infiltration, and subversion, plotted in Moscow and carried out all over the world."

It was the investigating committees of the Congress which finally brought to light the penetration of this fifth column in the United States. They recommended law after law to deal with this threat from within.

With one fell swoop last year, the Supreme Court seriously weakened, if not destroyed, most of the weapons that have been available to deal effectively with this conspiracy.

Our committee was commencing hearings in San Francisco on the day the Supreme Court handed down the Watkins decision, dealing with congressional investigations of Communists, and the Yates case freeing the convicted California Communists. On that day—Red Monday—a former chairman of the Communist Party in California rejoicingly exclaimed:

UNIVERSITY OF MICHIGAN LIBRARIES

"It was the greatest victory the Communist Party has ever received." She continued: "It will mark a rejuvenation of the party in America. We have lost some of our members in the last few years, but now we are on our way."

The committee saw and felt that rejuvenation at the San Francisco hearings. During the last few years, the Communist hangers-on at such hearings had diminished. Enthusiasm had been dampened. The witnesses exhibited less confidence in the ultimate triumph of the Communist cause.

All this was changed in San Francisco. The Communists filled the large hearing room and overflowed into the corridors. Their snide and vituperative remarks to Committee members as they passed through the halls were again in evidence. The witnesses and the lawyers were jubilant as well as arrogant. The delaying tactics, the evasiveness, and the long Communist propaganda speeches returned.

Yes; it was a great day for the Kremlin but an ominous one for the people of the United States. So few, including the Supreme Court, understand that there is more to save than the geography of the United States.

Since these frightful decisions of the Court last year, what has been the Communist strategy in the United States?

On September 20 last in Carnegie Music Hall, the Emergency Civil Liberties Committee, heartened by the "Red Monday" decisions of the Supreme Court, started a nationwide campaign to abolish the Federal Bureau of Investigation, and the investigating committees. Meetings in cities all over the United States were set up. Congressmen were to be contacted in their home districts and urged to vote against the forthcoming appropriation for the operation of the House Committee on Un-American Activities.

Our Committee placed in the hands of every Member of Congress a publication entitled "Operation Abolition," which revealed the long Communist and Communist-front records of practically every leader in the Emergency Civil Liberties Committee. While the Emergency Civil Liberties Committee's Operation Abolition failed in its effort to destroy the Committee on Un-American Activities by cutting off its appropriation, I am sorry to report that the campaign for abolition goes on unabated among the left-wing crowd.

Since your 1957 DAR Continental Congress, the Communists have started a clever and subtle propaganda offensive, contending that the Communist Party is shattered and dying in the United States, that Americans need have no further concern, and, therefore, investigating committees are institutions of the past which are beating dead horses for personal political aggrandizement.

They are holding out the olive branch. A worldwide peace offensive is now in progress. All we have to do is sit down at summit conferences and enter into a few executive agreements with the gangsters of the Kremlin, the slaughterers of the Hungarian freedom fighters, and we will be on our way toward peace. But the kind of peace, I assure you, that we would buy at a price, even at the sacrifice of truth, honor, and righteousness.

I need not remind you that the United States has already had 19 top-level conferences with the schemers of the Kremlin. Forty agreements resulted; only three—which the Soviets felt were to their advantage—have been kept. In all, the butchers of the Kremlin, in the short span of their 40-year history, have entered into nearly 1000 treaties, nonaggression pacts, and agreements with other countries. In every single instance when it served the interest of the Soviet Union to do so, these pacts were flagrantly violated in its drive toward world domination.

Another compelling objection to continued dealings with the masters of the Kremlin is the effect such meetings have on the people inside the Soviet orbit, the great majority of whom are anti-Communist. Eugene Lyons, in his book entitled "Our Secret Allies," dramatically points out that, if we are ever to win this conflict, we will need these secret allies—the people behind the Iron Curtain.

We have just given $225 million to neutralist India, yet Nehru, among other things, tells the world that Russia's occupation of Hungary is no different from our position in Japan.

A short time ago we sent $63 million in farm surpluses to Communist Yugoslavia after we cut off military aid to Tito at his request because such contributions were embarrassing both to him and to his bed partner, Khrushchev.

Of the $193 million doled out to Communist Poland in less than a year, $98 million was given as late as February. It did not go to the Polish people in their fight for freedom, but to Gomulka. As Senator STYLES BRIDGES said:

"We merely made it possible for Gomulka to quiet the natural unrest in opposition to his Communist regime. Far from helping free people along the road to self-determination, we are actually forging stronger chains for their bondage."

What has become of the honor of this Nation when we attempt to bribe our sworn enemies and betray those whom they hold in bondage? Is this the price we must pay for so-called peace?

The recognition of Red China and its admission to the United Nations—for which, I am sorry to say, there is a growing sentiment—would mean the death knell of anti-Communist resistance on the part of some 500 million Chinese, who, historically and traditionally, have been friendly to this country. The DAR is to be congratulated on the resolution it adopted last year, recommending that the United States withdraw from the United Nations if Red China is admitted. This great organization was quick to see through the Communist line—parroted by dupes and soft heads—that recognition of the Red clique in Peiping was the same as recognition of the millions whom they have enslaved.

Before Americans are seduced by the current Communist peace offensive, they should reflect upon a statement by Dimitri Z. Manuilsky, made in 1931 when he was instructor in the Lenin School of Political Warfare in Moscow. He said:

"War to the hilt between communism and capitalism is inevitable * * *.

"To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep, so we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions."

Ladies, does this have a familiar ring today?

Manuilsky continued:

"The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

And now listen to J. Edgar Hoover, the greatest authority on internal subversion, in his latest Independence Day warning to the American people. He said:

"Public apathy is the sure way to national suicide—to death of individual freedom. It allowed the Communists to penetrate and make satellites of once-free countries, and it is presently enabling them to honeycomb and weaken the structures of the remaining countries, and there is today a terrifying apathy on the part of Americans toward the deadliest danger which this country has ever faced. Some of that apathy is deliberately induced."

Hoover continued:

"The Communist Party in the United States is not out of business; it is not dead; it is not even dormant. It is, however, well on its way to achieving its current objective, which is to make you believe that it is shattered, ineffective, and dying. When it has fully achieved this first objective, it will then proceed inflexibly toward its final goal * * *.

"Those who try to minimize its danger are either uninformed or they have a deadly ax to grind."

Do I hear someone say that no one pays attention to the Communist-front Emergency Civil Liberties Committee in its current campaign to subvert our security agencies? Listen to how a newspaper in the Nation's Capital has been brainwashed (and I am being charitable when I say "brainwashed"). The Washington Post, in an editorial designed to influence Congress against voting for the appropriation to the Committee on Un-American Activities this year, said:

"For 20 years the committee has been disclosing and reporting on the pattern of Communist infiltration of American life; this part of its function has long since been completed, and the pattern of the past no longer has much application to the present."

The editorial then continued with a plea to strangle the committee.

If time permitted, I could give you example after example of subversive activities being brought to the cold light of common day by the committee—activities revealing a diabolical pattern of the present, which even the Supreme Court ought to be able to comprehend. Let's take a look at just two cases which are as current as today's newspaper.

We have been worried about sputniks in outer space. The committee uncovered a sputnik right in the Congress of the United States—not 5 years ago, not 2 years ago, not 1 year ago, but just a few months ago.

The Communist record of one Wilfred Lumer was recently brought to light. Now who is Wilfred Lumer? He is the man who was doing research for Members of the House and for at least two committees of this Congress. The results of his handiwork found their way into reports on legislation that is being considered by this present Congress.

Let me quote just two questions and answers from his testimony which will clearly illustrate my point.

Mr. Arens (counsel for the committee): "Have you reported your activities on the Hill, on Capitol Hill, over the course of the last several years to a person known by you to be a Communist?"

Mr. Lumer: "I must decline to answer that question on the grounds of the first and fifth amendments."

Mr. Arens: "We have information, and I want to be absolutely frank with you, Mr. Lumer—we have information that in the recent past you have been in contact with, and under discipline of, Sam Abbott, a ranking Communist in the District of Columbia. We want to give you an opportunity now while under oath to deny it."

Mr. Lumer: "I must decline to answer that on the grounds of the first and fifth amendments."

Just a month ago today in hearings in Boston, Mass., the Committee on Un-American Activities heard the testimony of a man who was then—at that moment—an undercover agent of the FBI in the Communist Party. He had served in that capacity for over 8 years in several key posts in the conspiracy. "The Communist Party today in the United States," he said, "is a greater menace than ever before. It is deeper underground, is more disciplined, more determined and more effective than it has ever been."

Let's take a look at still another current operation of the conspiracy. Some 10 million pieces of subtle, effective Communist propaganda from Iron Curtain countries are coming into this country annually through the United States mail. Let me describe one of a series of committee hearings dealing with Communist political propaganda.

Our committee met in Buffalo a few months ago. On the courtroom floor were dozens of large sacks of mail. They were opened at random and their contents dumped on the tables.

Eighty percent of the mail in those sacks was pro-Russian propaganda in one form or another, addressed to people in the Buffal community. Part of this propaganda, printed in 11 different languages, is directed to various nationality groups, often to individuals who have migrated to the United States or who have families still living under the Kremlin's heel.

The propaganda is cleverly and subtly presented in magazines, newspapers, and pamphlets which from a casual perusal do not reveal the poison therein contained. Expensive magazines, comparable in size and format to our Life and Look publications, are sent free or sell for only a small fraction of the cost of printing. They are obviously subsidized by the Communist propaganda agencies since they carry no advertising whatsoever.

Those who want you to believe that the Communist Party is shattered, ineffective, and dying, and that the investigating committees are beating a dead horse for headlines point to the recent folding-up of the Daily Worker to sustain their charges. The Daily Worker's demise was not a natural death. It was a well-planned suicide. So let's not be too jubilant over the Daily Worker's sham burial rites. The conspiracy has only switched its strategy by flooding this country with a more subtle propaganda.

When the Communists want to influence the attitude of certain nationality groups in this country on current political and other issues, there appears a rash of concentrated mailings to these groups.

People who receive these mailings often become greatly disturbed when they find that the Communists know their addresses in the United States. Some were so upset that they changed their residences and their names. Some became panic-stricken when within a few weeks mailings arrived at their new addresses with their changed names.

Our committee determined how these addresses were obtained by the overseas Communist propagandists. The findings illustrate how effective one Communist can be. The argument made by the leftwing that there is nothing to fear because there are so few Communists in the United States is again negated.

Let's take a look at one method used. A member of the Communist Party joins, say, a Polish singing society. His Communist connections, of course, are unknown to the members of the group. He surreptitiously obtains the mailing list of the organization. One of his obligations to the Communist conspiracy is fulfilled when he sneaks that list behind the Iron Curtain.

Let me give you a few excerpts from the record of the hearings. A woman writes to a postal official as follows:

"Lately I have been receiving propaganda from abroad. I do not know who sent my name in or how they found my address."

A former resident of Berlin has this to say:

"I would like to advise you that I do not want any mail sent to me sealed from Berlin. This is black, dirty Communist Party literature to return us new Americans to our native countries. I am loyal to my new home, the United States of America."

A group of displaced persons wrote as follows:

"We, the displaced persons, been getting by mail, Communist propaganda here in five different languages. * * * We are very sorry we cannot give our names and addresses in this letter; we are in fear of danger same as five Russian seamen been kidnapped from here. * * * All we ask kindly to stop the propaganda mail coming over so we can live peacefully."

A professor at one of our universities, as late as January 1 of this year, wrote to the committee in part as follows:

"I am enclosing a bit of East German literary work. * * * I am concerned about the influence of this propaganda upon the average person in this country. * * *

"This is obviously a government-subsidized venture. * * * They take unfair advantage of the absence of censorship by the United States mail to further their shady cause, which is to cast doubt upon the United States position toward Russia. They provide additional eyewash for those who are eager to forget the Hungarian struggle for freedom, and to break down American morale by 'proving' that the Russians aren't so bad after all. * * *

"It is an example of the new twist in Red psychological warfare. * * * The stuff is poisonous and, even if the reader is critical, too many of the facts are out of his reach. Maybe some education by your committee of potential recipients of such propaganda would help."

So wrote a college professor.

There is another facet to this Communist propaganda offensive. Some months ago the country was flooded with what purported to be scientific radio journals from the Soviet Union. Great prominence was given in these journals to a quiz for ham radio operators. A series of prizes were offered to the winners.

It is significant that, after the contestant had answered the questions, which in themselves were filled with propaganda, he was asked to give his address, the call letters of his radio station, and other pertinent information about his activities as a ham operator. It would be presumptuous for me to detail how highly valuable such information is, not only to the propagandists but also to the Russian secret police.

Of the tremendous number who participated in this contest, it is significant that not one person but several thousand won the second prize. It was a copy of a publication entitled "Radio Moscow." The Communists certainly got a lot of mileage out of the rubles spent on this one.

Under the first amendment this propaganda cannot be barred. The committee does, however, want a law with teeth which will require this Communist propaganda to be labeled as such. If our pure food and drug laws can require that certain foods, medicines, and poison, which go into our stomachs, be properly labeled, then certainly the law should provide that poison for the mind should also be unmistakably labeled.

The straw that broke the camel's back in these hearings was the development of the fact that the taxpayers of the United States who are subsidizing our tremendous postal deficit, help to pay the heavy cost of delivering this propaganda which would destroy us.

As I said in an article in this month's American Opinion, today there are those who still think of war in terms of military aggression—of planes, guided missiles, and nuclear projectiles. So few understand that firepower—destructive force—is only one of the weapons, one phase of the total offensive being waged by the Soviets against the West.

Here is the appraisal of Gen. Albert Wedemeyer who, you will recall, served as chief of our World War II planning operations. Testifying recently before the Committee on Un-American Activities, he said:

"The Soviets are obtaining their objectives without the use of military force. If I were the senior planner in the Soviet hierarchy, I would advise Khrushchev to continue to do exactly what he is doing now."

Just a few weeks ago the Washington Star, in headlining the latest statement of Allen Dulles, Chief of our Central Intelligence Agency, said: "Subversion, Not Arms, Is Chief Red Weapon."

All of the credible evidence indicates that the firepower and destructive force of the East and the West are fairly well balanced. The Russians are not dumb. They know that an all-out nuclear war will mean the total destruction of their cities—that today the United States would win such a conflict. Consequently, we are not going to have a nuclear showdown in the foreseeable future.

The Kremlin is not going to sign its own death warrant—and why should it? So few understand that in the last decade the Communists have been incredibly successful in expanding the Soviet empire by the use of a weapon far more effective than sputniks or nuclear missiles and certainly less costly.

So few understand that the insidious and diabolical weapon of infiltration and subversion has done the job of taking approximately one-third of the earth's surface and one-third of its people into the Communist orbit and that another one-third, in the so-called neutral bloc, is fast drifting toward Russian satelliteism.

So few understand that, while the near equality of firepower between the East and West creates the present military stalemate, the effective weapon of infiltration and subversion is the deadly cancer at work on the institutions and governments of free men everywhere.

We are not engaged in a popularity contest with a competing economic system. We are not merely faced with certain annoying adjustments which should be made so that we may coexist with a different system of government. We are now in a death grip with an enemy the like of which for debasement and inhumanity the world has never before experienced—an enemy whom we can ignore, appease, negotiate with—only at the expense of our survival.

This is the challenge to all patriots of this Republic. We must accept this challenge. We shall either dedicate ourselves to it or face slavery and destruction.

Robert T. Hartmann Honored for Excellent Reporting

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1958

Mr. HILLINGS. Mr. Speaker, I would not hazard a guess as to the amount of copy filed by the Washington press corps each day, but the true figure would astound all of us.

Seldom do we stop to judge the quality of Washington reporting as we read the thousands of words moved daily by capital correspondents. The reporting actually is excellent considering the tremendous pressures under which the press corps must operate in the biggest news-producing city in the world.

Probably the most competent authority for judging the excellence of news

UNIVERSITY OF MICHIGAN LIBRARIES

reporting is Sigma Delta Chi, national journalism fraternity.

Recently Sigma Delta Chi announced its awards for excellence in the numerous categories of the information and communications media of the United States.

Selected for excellence for Washington reporting was Robert T. Hartmann, chief of the Los Angeles Times Bureau in the Capital.

I know Mr. Hartmann personally and I know of the tireless effort he puts into digging out the news. This energy, combined with exceeding talent, has earned Mr. Hartmann this well-deserved honor.

I congratulate Sigma Delta Chi and Mr. Hartmann for the high standards they insist upon in reporting the news to the American people.

Alaska Statehood

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. BARTLETT. Mr. Speaker, last month the Alaska Statehood Committee, an official agency of the Alaska Territorial Government, met at Juneau, Alaska. At that meeting a resolution was adopted requesting immediate statehood for Alaska.

The resolution sets forth a case for Alaska statehood. I am glad to present it here for the information of the House:

RESOLUTION

To the President of the United States, Vice President of the United States, and Presiding Officer of the Senate; the Speaker of the House of Representatives; Members of the Senate, Congress of the United States; Members of the House of Representatives, Congress of the United States; and the Honorable Secretary of State; Secretary of the Interior; Secretary of Agriculture; Secretary of Defense; Secretary of Health, Education, and Welfare; Secretary of Commerce; and the Attorney General of the United States:

We, the members of the Alaska Statehood Committee, an official bipartisan agency of the Alaska Territorial government, in formal session assembled at the capital city of Juneau, Alaska, respectfully request that you support and urge the immediate passage of Alaska Statehood enabling legislation by the Congress of the United States, and submit for your consideration the following reasons:

ALASKANS DESERVE AND ARE READY FOR STATEHOOD

The ideals of self-determination and self-government constitute the foundations of our American system of democratic government. The treaty under which the United States acquired the Territory of Alaska from Russia on March 30, 1867, guaranteed the resident of Alaska the rights of full citizenship in the United States.

Alaskans have demonstrated over a period of many years their ability to govern and administer their own affairs even under the inadequate and cumbersome governmental structure and authority inherent in their present Territorial status.

Consecutive Alaskan Legislatures have established and now maintain all branches of government essential to the operation of a State, with the exception of a judiciary system, which area is now reserved to the Federal Government. These departments include education, health, welfare, social security, taxation and revenue, Finance, highways and public works, fish and game, mines, police and many boards and commissions essential to the effective operation of a modern State government.

Alaskans have amply demonstrated their desires and abilities to govern themselves and to support the costs of operating and maintaining an adequate level of State government. Alaskans are ready for statehood now.

ALASKA NEEDS STATEHOOD; THE UNITED STATES NEEDS THE STATE OF ALASKA

Alaska is a vast area with rich natural resources of undetermined extent. To induce private exploratory capital to enter Alaska in sufficiently large quantities to explore, locate, and later bring into production such natural resources, a stable local government at the State level is needed.

Large amounts of Federal Government money have been and are being expended in Alaska for military and defense purposes; however, private investment capital is available in only limited amounts for short periods at high interest rates.

Private capital in large quantities is loath to enter an area where, by the actions of a Federal Government, not elected from its people and sitting over 4,000 miles away in Washington, D. C., can upset and, by failure to appropriate adequate funds, can overturn Alaska's economy in the course of one fiscal year.

In contrast to Alaska, governed and controlled as a Territory by the United States Federal Government, Canadian provinces in the same latitudes, with local provincial governments similar to our State governments, are prospering and developing their natural resources rapidly under the impetus of private capital investments. Alaska, as a Territory under the United States Federal Government, with equal or even greater resources, is lagging far behind in this respect.

The Dominion Government of Canada states that in 1957, $3 million of American private capital was invested in Canada every 24 hours, a large percentage of which was invested in exploration and development of natural resources and needed minerals. Alaska is lagging behind in economic development because of its cumbersome, nonrepresentative, relatively inefficient, and unstable Territorial form of government.

THE UNITED STATES NEEDS ALASKA AS A STATE

In the course of the military and defense program in Alaska some highly intelligent and well-informed United States military leaders have recognized the need for a representative State form of government. They have based their reasoning on the facts that a State would have a more rapid economic development and a more rapid increase of population, and that a well-developed economy functioning normally is more easily converted to a military and defense program than a barren, undeveloped land. They further reasoned that an economy with supply, communications, and transportation facilities developed and supported by, and for, everyday civilian needs was more economical to convert and use for military and defense purposes than a complete parallel military development constructed through the exclusive use of Federal military funds.

Under statehood, Alaska's economy would prosper and offer added opportunities and employment for American citizens and American capital.

The population of the United States is increasing rapidly. The United States Census Bureau estimates that at the present time the United States has a population of 172 million people. They estimate that by 1975 the population of the United States will approach 200 million people. At the present time there are an estimated 600,000 added employable people annually seeking employment in the United States labor market. If encouraged and allowed to develop under statehood and with private investment capital, Alaska's vast resources could assist in offering employment to and absorbing substantial numbers of these employables.

With the United States economy at its present level, those States that have substantial production of natural resources are showing the least unemployment and suffering. The most notable example is the State of Texas; however, States with similar natural resources in the Rocky Mountain group indicate like economic health in comparison with the greater unemployment in the industrial and industrial-processing States. Alaska's economy under statehood would be that of a natural-resource State and could be expected to induce investment and the development of its resources by private capital and the subsequent employment of greater numbers of United States citizens.

At the present time Alaska contains known commercial deposits of oil, gas, coal, iron, nickel, lead, tin, tungstenite ores, mercury, sulfur, magnesium, manganese, copper, cobalt, silver, gold, and radioactive ores, including uranium. Under the added impetus of State government, the exploration, development, and bringing into commercial production of these and other natural resources of Alaska would be accelerated. For rough processing of our natural-resource materials into a form that would permit their shipment to the United States and world markets, Alaska has the greatest untapped reserve of potential hydroelectric power remaining on the North American continent. Waterpower development would make more rapid progress under statehood.

THE UNITED STATES SHOULD SHOW THE WORLD

In the field of foreign affairs at this time, when the United States is seeking by many means to insure the support and confidence of other nations, and at a time when confidence and respect for the American democratic ideals and principles is threatened, the granting of statehood and self-determination to Alaska would most effectively show the world that the United States practices the principles and ideals upon which it was founded.

We again request that you support and urge the immediate passage of Alaska statehood enabling legislation by the Congress of the United States.

Alaska Statehood Committee: R. B. Atwood, chairman; M. Stepovich, Governor of Alaska and ex-officio member; E. L. Bartlett, Delegate to Congress from Alaska and ex-officio member; Mildred R. Hermann, secretary and delegate to constitutional convention; Victor C. Rivers, president, Alaska Senate and delegate to constitutional convention; Warren Taylor, member of the house of representatives, Alaska Legislature, and delegate to the constitutional convention; Percy Ipalook, former member of the house of representatives, Alaska Legislature and Alaska Statehood Committee member; Jack Hinckel, delegate to constitutional convention and Alaska Statehood Committee member; Mike Walsh, delegate to the constitutional convention and Alaska Statehood Committee member.

JUNEAU, ALASKA, *March 8, 1958.*

United States Trade Policy Hit by Russell

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. DORN of South Carolina. Mr. Speaker, one of the greatest dangers to the free world today is the maladministration of the great reciprocal trade program in the United States. During and after World War II, America was known as the arsenal of democracy. The products of American labor and industry influenced the decision on every battlefield and stemmed the tide of Communist infiltration. America's high standard of living was an example and model for the world. Now, this great American arsenal of freedom is being gravely threatened by the undermining of our wage and hour benefits by placing American labor in direct competition with labor in foreign countries with no beneficial labor legislation.

This policy is just as detrimental to the welfare of foreign countries as a direct Communist threat simply because it is weakening American industry and American labor. It is undermining our capacity to withstand the Communist threat throughout the world. It is subordinating essential defense industries such as coal, oil, lead, zinc, plywood, and textiles to the development of competitive industries in easy reach of the Red army and Red air power. Nothing suits Communist plans better than this dispersal of American industries close to the periphery of Russia.

One of the most qualified men in America today to speak on this subject, Senator RICHARD B. RUSSELL, of Georgia, made a great speech recently. I commend to this Congress the following newspaper account of this speech which appeared in the Washington Post:

UNITED STATES TRADE POLICY HIT BY RUSSELL

HOLLYWOOD, FLA., April 12.—Senator RICHARD B. RUSSELL, Democrat of Georgia, said today the State Department has turned the once-useful reciprocal trade program into a device for doling out more foreign aid. He said that it has helped make the cotton industry a sick business.

"I supported reciprocal trade and also the Marshall plan to restore the ravages of war and get Europe back on its economic feet," RUSSELL said.

"I still believe in the original concept of reciprocal trade but I shall not support a program to liquidate vital American industries, to throw thousands of American citizens out of work in order to create an economy in some foreign land suitable to some dreamer in the State Department * * *" RUSSELL said in a speech at a concluding session of the American Cotton Manufacturers Institute.

"Time will not permit a discussion of the details of cotton's contributions to American world leadership," RUSSELL said. "Yet, cotton today is a sick business. A careful study might indicate that many elements of the present recession are attributable to the distress of the cotton industry."

RUSSELL said the cotton industry expects to cope with normal problems of technical demands, investments and competition, but is saddled further with taxes for foreign aid, plus foreign competition generated by this aid.

"Unless the present policies are changed or the Congress can be persuaded to take steps necessary to prevent it, this great industry is threatened with liquidation," RUSSELL said. "It will become the No. 1 casualty of a foreign policy which in some cases seems dedicated to the building of unfair competition for American business to develop the economy of foreign nations."

RUSSELL said reciprocal trade originally meant that the United States would export goods it produced or could produce in surplus quantities, and that the United States would import goods or raw products which either it did not produce or produced only in negligible quantities.

With the end of World War II, we have seen a change in the purpose of the reciprocal trade program," he said. "Instead of being used purely to stimulate trade, the State Department has now seized upon it as a method of extending additional foreign aid."

No Commitment on Summit Meeting

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. MICHEL. Mr. Speaker, the following editorial appearing in the Peoria Journal Star, Tuesday, April 15, pretty well expresses my feeling relative to the proposed summit conference. Ever since it was originally proposed, I have never been enthusiastic about it simply because there are very definite possibilities of pitfalls along the way. Unfortunately, a number of our allies in this cold war believe there is some sort of magic about a summit conference and that nothing but good can come from it. Actually, our Ambassadors and Foreign Ministers are espousing the policies and positions of their respective heads of state. I cannot help but recall how this country came out on the short end in those conferences held at Yalta, Teheran, and Potsdam, and I am confident that our Secretary of State, John Foster Dulles, is bent on getting some concrete results that will inure to our benefit before finally agreeing to a meeting at the summit:

NO COMMITMENT ON SUMMIT MEETING

If diplomatic talks start with Russia within a few days, as indicated by Secretary of State Dulles, we hope our Government holds firm to its refusal to make a clear commitment for the holding of a summit conference regardless of the outcome of these conversations.

Russia has insisted that any talks like those which now are expected to be held be the preliminary to a full-scale summit meeting whether or not the first conference be productive of any agreements.

Acquiescence to any such arrangement would be folly on our part. President Eisenhower could find himself tied up in a meeting which would serve only as a Russian propaganda device. Mr. Eisenhower should agree to meet with the Russians only if there is a definite indication that such a meeting could be productive in the case of world peace.

If the ambassadors who conduct the preliminary talks are unable to agree on procedure or on the subjects to be discussed at the summit meeting, the chances of anything fruitful coming out of the top conference would be mighty small. It much more likely would result in damage to world disarmament efforts than anything else.

The Russians also want to be free to bring up any subject they desire at a summit conference. Such a wide-range agreement would permit the Russians to propose any subject they desired and the conference easily could bog down in a lot of general and pointless discussions as most previous meetings with the Russians have done.

Mr. Dulles is hopeful that the preliminary talks will lead to substantial steps toward disarmament. We hope so, too, and although we have little confidence that they will, we are in favor of their being held. We are not in favor of any blank agreement being given that these meetings, regardless of their outcome, will lead the way to a summit meeting. We must not agree to a summit conference unless there are sound assurances that it will be helpful.

Social Security and Railroad Retirement

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 28, 1958

Mr. PELLY. Mr. Speaker, under unanimous consent I wish to include in the RECORD a letter from one of my constituents. The clear and concise statements contained in this correspondence, in my opinion, merit the consideration of every Member of Congress and in particular those who have jurisdiction over social security and railroad retirement. The letter follows:

SEATTLE, WASH., *April 14, 1958.*

HON. THOMAS M. PELLY,
Member of Congress,
Washington, D. C.

MY DEAR MR. PELLY: May I inquire what progress, if any, is being made on the various bills to amend the Social Security and Railroad Retirement Acts to lower the age limit to 60 years in lieu of 65? Do you suppose that any of these bills will be enacted at this session?

The average American although not an intellectual is fairly intelligent and he knows that grave and serious problems confront the Congress, the administration, and the Nation. However, the average citizen does not understand why so little or nothing is done to bring these two statutes in conformity with present day realistic conditions.

Vigorous efforts are being made to combat the recession and to help employment. This is fine but it is futile so far as the middle aged man or woman is concerned, people over 60 and under 65 years of age. No private employer will give these people jobs regardless of what is done to alleviate unemployment.

So why does not the 85th Congress act during this session take this class of citizens off the labor market for good and all. The facts are easy to develop and no extensive hearings should be necessary as it is well known that middle aged workers ar not desirable employment risks any more.

Revisions in the Social Security and Railroad Retirement Acts would be a help. Why cannot this be done at the present session and thus assist a large segment of our poputions which needs it. No other legislative palliative will do it.

UNIVERSITY OF MICHIGAN LIBRARIES

Would it be too presuming to request that this letter be read on the floor of the House, or as an alternative mimeographed copies be placed in the hands of every Member of the House of Representatives?

I know that one lone individual does not constitute mass thinking but yet if the real facts were known many thousands of citizens feel this way. If any Member of Congress doubts this, let him canvass his constituency to see how individual voters feel on this matter. I am sure his volume of mail will corroborate what I have stated. After all, the Federal Treasury is not being tapped as the funds held in these two administrative agencies are the withholdings of the employers and employees, not public tax moneys. It is their money so why not give it to them a few years earlier.

Yours most respectfully,

PHIL W. BOWMAN,
1419 Madrona Drive, Seattle, Wash.

Basic Research

EXTENSION OF REMARKS
OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1958

Mr. DORN of New York. Mr. Speaker, under the leave to extend my remarks in the RECORD, I should like to call the attention of my colleagues to the interesting letter from and address by Dr. Ernst Weber, president of the Polytechnic Institute of Brooklyn, at the Engineering Societies Building, 33 West 39th Street, New York City, April 8, 1958.

POLYTECHNIC INSTITUTE OF BROOKLYN,
Brooklyn, N. Y., April 16, 1858.

The Honorable FRANCIS E. DORN,
House of Representatives,
Washington, D. C.

DEAR SIR: Permit me to send you the enclosed copy of an address which I recently gave as the introduction to a 3-day international symposium organized by the Microwave Research Institute of Polythechnic Institute of Brooklyn, and cosponsored by the Office of Naval Research, Office of Scientific Research of the Air Force, and the United States Army Signal Engineering Laboratories, with the commanding officers present at the meeting, namely, Rear Adm. R. Bennett and Brig. Gen. Earl F. Cook. Brig Gen. H. F. Gregory was represented by Col. William Bowers.

The symposium had an attendance of nearly 500 scientists and engineers from all over the United States as well as from Canada and abroad. Six foreign scientists, including two Russian, gave outstanding contributions.

I thought you might be interested in two of the points that I mention in my address: One, the need to keep basic research within present universities and engineering educational centers rather than establish new national research institutions and two, the need for long-range funding of basic research in order to make possible a stable operation within universities.

As an example, we are now making appointments of faculty members for the year September 1958 to September 1959. It is obviously impossible to plan on basic research programs if funding runs from year to year, with the uncertainty of renewal. Our commitment is real and extends over a minimum of 18 months. The ideal funding for basic research should extend over a period of 3 years to provide adequate stability within university operation, to permit faculty members to plan ahead and engage in searching investigations, unworried by approaching expiration dates of funds. Perhaps you are familiar with this situation, but I thought it opportune to bring it to your attention.

With kind personal regards.

Sincerely yours,

ERNST WEBER, *President.*

I am very happy, indeed, to welcome you to this eighth symposium of the Microwave Research Institute. The title, "Electronic Waveguides," might deserve some explanation inasmuch as it had its origin here and has so far not been widely used. We are all familiar with the more restricted term "waveguide" in the passive sense, meaning a metallic tube or a coaxial cable confining the propagation of very high frequency electromagnetic waves to essentially plane wave modes. If we make the mode concept of propagation the essential aspect, then we can speak of guided waves very generally and the confinement becomes less essential. We can, in fact, consider all propagation as guided either along a single interface between two mediums, such as a solid and air, a solid and a liquid, etc.; or between two interfaces of various geometrics, spherical, conical, or otherwise. If we admit now free or nearly free electrons in the spaces in which the electromagnetic waves propagate, we have new systems of modes justifying the designation electronic waveguides. Examples are all traveling wave tubes whatever their structural details; ionized spaces either natural such as ionosphere or manmade as in rocket propulsion; and leading right into the tremendously interesting field of magnetohydrodynamics.

To study the new phenomena that interactions of fast-moving electron and ion assemblies can produce when subjected to magnetic and electromagnetic fields, requires a judicial combination of theory and experiment, of creative scientists and engineers, of facilities and appropriate financial support. Unfortunately, the happy days of the individual scholar surrounded by eager pupils and undisturbed by worries about continuity of effort are fairly well gone. Few, if any, universities can afford today the means and the facilities to provide the appropriate atmosphere for creative research without calling upon outside sponsorship and support. It is to the everlasting credit of the Navy to have created at the end of World War II the Office of Naval Research to assure continuance of several of the university research centers which grew up during the war. It is also gratifying that the other services followed the example and that several Government agencies, notably the National Science Foundation, have provided stimulation for academic research. I say stimulation, because recent events have clearly demonstrated that the total basic research effort is far too small and subject to intolerable vagaries of funding to assure this Nation continuance of its hard-won scientific and technological leadership.

What is urgently needed is truly adequate, genuinely long-term national support of basic research in the universities where capable faculties already exist and where graduate teaching and research is conducted at a high level. There is a bill before the Senate (S. 3126) called the Science and Technology Act of 1958, which proposes the creation of a Department of Science and Technology, headed by a Secretary with Cabinet rank, and which also includes the proposal to establish National Research Institutes. Though one could envisage a specialized institute for oceanography, for example, it is hard to see how such institutes detached from universities can contribute in the long run to the scientific potential of our Nation. In fact, if these institutes are to be newly created and run by Government agencies, I fear that the results will be the exact opposite of what is intended. Such a move might well mean the disintegration of graduate study in science and engineering.

For where would the staffs for these institutes come from, except from the universities, since industry certainly will not give up its leading scientists and engineers. And if the universities should lose more of their capable and indispensable faculty members, how could graduate teaching continue? How could we secure the increased number of young engineers and scientists we profess to need to keep up with large-scale research efforts conducted elsewhere in the world?

I am certain that it is not necessary to underline here the importance of intensified efforts in graduate teaching and basic research. They are inseparable in any field of study. The quickest and safest way to increase the basic research potential in the country, now when we need it, is to give genuine support to the centers of graduate study and research that now exist and to make possible for these to retain their outstanding faculty members and preferably to augment their ranks; to make sure with a liberal national fellowship program that an adequate number of full-time students enter the graduate schools rather than that too many be syphoned off into industry.

Creative research cannot be commanded, it cannot be induced by offering lavish facilities. It grows where individuals are involved with the thirst for knowledge, where they have an atmosphere of congeniality, and where they can teach and guide their pupils. Is it not a fact that most of the outstanding scientific discoveries have been made in university laboratories, often with rather simple means, though surely not because of the lack of funds and facilities? I might, indeed, support my argument by pointing out that of the 25 papers on basic research that are included in this program, 14 came from universities, including 2 from abroad, 9 came from industrial organizations, again including 2 from abroad, and 2 came from Government institutions in the Soviet Union. University research is indeed the ideal setting for creativity as it always has been, but it now needs more tangible support than we have been able to give it, than the country has been willing to give it.

This discussion of the broad problem of continuity of basic research, is rather pertinent to the ability of organizing symposia such as the one we are about to open here. Symposia should alway remain integral activities of centers of graduate teaching and research, being part of their inherent educational function; they provide channels of communication and facilitate interchange of scientific results on national and international levels. At this point I should like to take the opportunity to acknowledge the cosponsorship of the scientific offices of the military services; namely, the Office of Naval Research, the United States Army Signal Engineering Laboratories, and, in particular, the Air Force Office of Scientific Research, which has provided the transportation of our visitors from abroad with the exception of Mr. O. Doehler who was sent by the Compagnie Generale de T. S. F., from Paris, France. We are happy to also enjoy the cosponsorship of two of the professional groups of the Institute of Radio Engineers, namely the Professional Group on Electron Devices and the Professional Group on Microwave Theory and Techniques.

Complying with a delightful custom established at our first symposium, I take great pleasure to call upon the sponsor representatives in turn for a few words of greeting.

Decatur's Economy Fails To Turn the Corner

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1958

Mr. MACK of Illinois. Mr. Speaker, like most other Members of this body, I am deeply concerned about the economic situation throughout our country. Most of us were hoping for a spring upturn which would relieve the strain on our economy but this upturn has evidently failed to materialize.

Mr. Speaker, I have just received an alarming report concerning the economy in central Illinois and a report of new layoffs in the Decatur, Ill., area. Decatur is not in my district, but many of my constituents have been employed in this city since I represent several of the adjoining counties. Under leave to extend my remarks, I would like to include an editorial from the Decatur Herald, which gives a realistic report on the Decatur situation. The editorial is as follows:

DECATUR'S ECONOMY FAILS TO TURN THE CORNER

It is difficult for most persons to be downhearted in springtime, the season of hope. But, unfortunately, there is much to be discouraged about in Decatur this spring. For Decatur's industrial economy has not yet rounded the corner. The hoped-for spring upturn has failed to materialize. Rather, with April have come new layoffs.

While it is unquestionably true that Decatur's long-range economic outlook is good—as evidenced by the announcements within the last month of plans to build two new shopping centers, a supermarket, and a motel—it cannot be denied that Decatur has been hit hard by the recession which started last fall and as yet shows no real signs of abating.

In Decatur the recession began with a layoff of 625 Caterpillar employees at the end of November. Another 225 workers at the Decatur Caterpillar plant were let go Friday. From November to April Caterpillar has hired only 80 persons, which means that its layoffs have thrown a total of 770 persons out of work.

The Borg-Warner plant has reduced its work force by 500. Wagner has let out 180 employees, the Wabash shops 100.

Nor is that all. A month ago Western Electric disclosed that it would close down its Decatur plant, which has been employing 400 persons, by the end of June. And Friday the Navy announced that the Macon Arms plant would be out of production by the middle of May and then operated on a standby basis. This means that 350 of the plant's 375 workers will be thrown out of work.

Plants like Caterpillar, Borg-Warner, and Wagner have their slack periods, even in good times. Nevertheless, it is sobering to note that while unemployment in Decatur a year ago amounted to only about 2,000, a total of 1,550 persons have been thrown out of work by the major layoffs here since November. And during the next 2 months another 750 will be seeking work when the Western Electric and Macon Arms plants end their production.

In March unemployment in Decatur was estimated at 4,200, or more than 9 percent of the area's labor force of 44,800. The spring weather will undoubtedly result in an increase in employment in construction and other outdoor work largely dormant during the winter. But it now seems doubtful whether the usual upturn in these areas will offset the continuing industrial layoffs.

What can Decatur do? There simply are no easy answers. Unemployment compensation and the State and local relief programs make certain that people unable to find work are able to eat. Some persons who have lost their jobs have dropped out of the labor force. Some have moved to cities where there is work for them to do. And so on.

But it is time for Mayor Sablotny, and other members of the city council, the Association of Commerce, the Allied Industrial Workers, and other labor unions in the Decatur area and everyone else concerned about Decatur's future, to take a hard look at the city and see whether Decatur can do more than just wait for its industrial economy to turn the corner.

How 4-H Club Work Contributes to Good Citizenship

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. ABBITT. Mr. Speaker, we all realize that the future of our country depends upon the proper education and preparation of our youth. The 4–H Clubs of Virginia are doing a wonderful work in preparing our young people to assume their proper place in society upon reaching maturity.

On April 12, a 4–H public speaking contest was held at Longwood College, Farmville, Va. This was a district contest with the winner to be given a trip to the 4–H short course at Virginia Polytechnic Institute, Blacksburg, Va., to participate in the State finals. The 4–H short course at VPI is a wonderful affair and gives the young people of Virginia an opportunity to receive worthwhile training in making themselves better citizens.

Miss Penny Abbitt, of Appomattox, Va., who is 16 years old and a sophomore in high school, represented Appomattox County at the contest at Longwood College on April 12. Penny is an outstanding student at Appomattox High School who participates in practically all extracurricular activities and is a leader among her associates. She is a member of Liberty Baptist Church where she participates in Sunday school, Baptist Training Union, youth choir, and church work.

Miss Abbitt, in competing at the Longwood contest delivered a splendid address on How 4–H Club Work Contributes to Good Citizenship, which won first place in the contest and entitles her to participate in the 4–H speaking finals at the short course. The address is a splendid analysis of the good accomplished by the 4–H Clubs of Virginia as well as the importance of the proper training of our youth.

The address is as follows:

HOW 4–H CLUB WORK CONTRIBUTES TO GOOD CITIZENSHIP

(By Penny Abbitt)

America's future success, at home and abroad, depends upon the training and experience that the young people of today receive in regard to citizenship. I know of no better way to develop the qualities of a good citizen than through participation in 4–H Club work.

4–H Club projects provide great opportunities for development of skills and interests which may often guide a conscientious member in choosing his vocation. Those who take part in club activities learn how to take full advantage of all the opportunities of life by learning how to work and plan in a variety of fields. Such habits of industry formed early in life lay the foundations for a productive citizen.

4–H Club work hastens the maturity of the member who applies himself diligently. Many of the projects require detailed planning, skillful management, and knowledge of economics. Emphasis is placed on perserverance and the completion of a task once it is begun and recognition is given only when the work is one's own. Activity in 4–H soon teaches the member to recognize and acquire standards by which to measure good habits in all phases of life. Thus through club activities a member prepares himself to accept his responsibilities as an adult in society. It is readily recognized that these adult responsibilities surely include a concern for an interest in welfare and civic activities.

Members in 4–H learn to measure their successes in life in terms of their ability to accomplish their ambitions. This conclusion is fully justified when we observe how successfully the various club projects are planned and accomplished by the individual 4–H Club members. These activities lead directly to a deepening concept of the close relationship between the young citizen and his community and civic affairs. In working on their projects, members learn how to strive intelligently to satisfy their worthwhile goals and desires. The good citizen is one who always has worthy ambitions and works to attain them.

4–H strengthens family ties as most of the projects are concerned with activities in the home and on the farm. Although the 4–H member accomplishes his projects personally, he soon forms the habit of discussing with his family, particularly his parents, the problems that arise in connection with his project. As a result of this, a broader and more practical fellowship is brought about between the club member and his family. He will soon learn the advantage of seeking advice from experienced persons and discover that his parents are anxious to be helpful in all areas of his life. Wholesome home life contributes to the development of well-balanced citizens, capable of worthy accomplishments.

Giving demonstrations and, of course, participation in the 4–H public-speaking contest develops the ability to express our views and to explain ideas before large groups. The preparation of an original speech also encourages serious, constructive thought. A good citizen must be able to form and express opinions in public.

Leadership is one of the qualities of an outstanding citizen. Through the examples set by the 4–H leaders, our own qualities of leadership are developed. We receive practical experience in this field by serving as officers in our club or as junior counselors at camp. The annual presentation of leadership awards in 4–H provides a goal which members strive to attain.

Of course, the success of any leader, no matter how good he may be, depends upon the cooperation of his followers. By working together in small groups on 4–H projects, in

planning programs, and in serving on committees we learn to get along with others. Surely you would readily agree with me in the observation that the willingness to cooperate and the virtue of being able to live peaceably with your fellow citizens is one of the most valuable traits of good citizenship. Just as the achievements of our club are the result of teamwork, so America progresses through the cooperation of all her citizens.

In closing, I would like to leave you with these words, spoken by Raymond C. Firestone, president of the Firestone Tire & Rubber Co.: "4–H * * * will help you become a better American and therefore a more valuable citizen in this great worldwide community of nations."

Map Know-How Can Make H-Bomb Surplus in War

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. SIKES. Mr. Speaker, I have noted an excellent statement on the importance of a modern and progressive mapping system from the pen of Monte Bourjaily, Jr., in the Army Times of April 12, 1958. It is entitled "Map Know-How Can Make H-bomb Surplus in War." This article contains significant information and I feel that it should be called to the attention of the Congress.

The article follows:

Ignorance, indifference and inability to communicate between components within the vast edifice of the Defense Department have caused not only the great propaganda defeat inflicted on the United States when Russia announced its unilateral suspension of thermonuclear tests, but alo threatened, if continued, the health of our grandchildren.

Evidence on which to base the above charge has just come to hand.

These facts, combined with conservative military reasoning, are proof of the need for reorganization of the channels of communication between operating agencies and policy-making bodies.

The evidence implies names. No individuals are blamed below, for two reasons: the facts speak for themselves. And the individuals are, it seems, products of and perhaps vicitims of the system.

The facts are these:

Testifying before a congressional committee before retiring as chief of research and development, Lt. Gen. James M. Gavin said that there will soon be available to the United States intercontinental ballistic missiles with a circular probable error of less than 1 mile.

"It is nonsense, however," he said, to expect accuracy from these missiles because "we do not know within 5 miles the relations of the major land masses of the earth."

This is partly true, although there is no reason to believe that General Gavin was aware that his statement was almost out of date or that it could have been untrue had certain easy and inexpensive steps been taken within the last 6 months.

Shortly after the launching of Explorer I, the Army put out a press release quoting Dr. John O'Keefe, Army Map Service geodicist, as saying that by using accepted techniques of measurement, errors in maps in the Pacific could be reduced from three-quarters of a mile to 300 feet.

Use of the Explorer measurements for mapping will "ultimately lead to a precision on the order of 30 feet throughout the world," the release said.

Congress has since been told, in other committee hearings, that there is no need for additional satellites to determine distances between points on the earth's surface. If only "good orbits" are produced for Explorers I and III and for the sputniks, distances can be accurately determined to within a tenth of a mile or less.

At the moment the trouble is that this good orbit has not been determined for any of the satellites because of failure to process the hundreds of sightings of all these satellites from points throughout the world through the computers available to the Navy Research Laboratory and other Government agencies.

Once such computations are made—and it takes programers, men who can translate information from human into machine terms so that the computers can handle it, and who also tell the computers how to process the information—determining the distance from United States launching sites to targets in potential hostile areas becomes a simple matter.

This is because true distances between various parts of the United States are accurately known now. Likewise the distances between various points in Europe as far east as the Ural Mountains are known. The error in these distances is less than half a mile. This has been proved not only by chaining distances when drawing maps but also by using both lunar and astral observations.

Thus, since late last fall, it has been possible to know within less than half a mile, and in the near future it could be possible to know within 300 feet or less, the distances between any two points on the surface of the earth, with the possible exception of the interior of Asia.

It is accepted military doctrine and established American policy today to seek in war to destroy military targets, wherever located. The great argument in favor of the hydrogen bomb—thermonuclear weapons—is that because of errors in maps and in the accuracy of weapons which combined could throw a shot 15 miles off target, we must have weapons of massive destruction to be sure we get the military target. The fact that nonmilitary areas will suffer has been accepted as one of the unfortunate hazards of war.

But according to some public testimony and to other testimony that is not classified but which, because given behind closed doors to congressional committees, has not yet been made public, these errors need no longer exist.

With pinpoint accuracy available, atomic rather than thermonuclear weapons would fulfill all military requirements. And atomic weapons, according to all competent witnesses, do not carry with them the long-range genetic dangers of thermonuclear weapons.

With the need for thermonuclear weapons gone, the United States could safely suspend further thermonuclear tests—not with a proviso that the suspension of tests would continue only so long as no other country tested hydrogen weapons but absolutely.

From a national standpoint, the tragedy is that the necessary information to justify such a decision was not developed as soon as possible, so that Russia could not have scored its recent propaganda victory. From the human viewpoint, it continues to be tragic that this information has not yet been worked up and passed along to our policy-makers so that tests can be suspended now.

Why hasn't it yet been done?

Partly it is a hangover from the "what good is it?" attitude toward satellites that typified statements by former Defense Secretary Charles E. Wilson and administration officials after Sputnik I was launched. This has generated indifference to, even resistance to, supporting satellite activity not only on the top levels but also among politically minded junior supervisors.

Another reason is that the Army Map Service budget is being cut by $8 million this year. It will not be able to process information so that though we could be accurate in maps, we will continue not to be for months, even years.

In addition, accurate measurement of distances and accurate orbital figures on the various satellites has been given a low priority. The military necessity has been subordinated to other considerations.

From General Gavin's testimony, it is obvious that the possibility of map accuracy in feet over distances of 5,000 and more miles was never presented to him. It has also not been presented to his superiors.

Yet officials of the Army Map Service know that it is possible. How has this failure in communications come about?

It is not my purpose to argue the politics of continuing or suspending thermonuclear tests. All who have engaged in the discussion, however, agree that there is a possibility of danger, especially to those as yet unborn. The argument is as to the degree of danger.

If any danger at all exists, and if the military necessity for thermonuclear weapons either no longer exists or can be ended within a short period, then it is the duty of those who can to bring about the situation where this is possible.

This requires two things: The first is to spend whatever money is needed to revise maps to the accuracy possible from information available today which simply needs processing. The second is to continue to devote American ingenuity to increasing the accuracy of long-range weapons, a field where the United States is preeminent.

The result of this could be that our efforts in the field of thermonuclear research could be devoted to peaceful goals, thus eliminating the genetic danger of strontium 90 and other radioactive fallout material.

Last Words

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following article which appears in the April 21, 1958, issue of the New Republic:

LAST WORDS

A fine young man was David Dalrymple Jones. Eisenhower said "buy." and Jones bought. It was the thing to do. "Buy anything," said Eisenhower. "Buy anything," Jones told his wife. He was counteracting mass discouragement. Fine stuff was Jones. Even when he lost his job and joined the 5.2 million unemployed he kept his chin up. As he queued for jobs he was sustained by heartfelt expressions of sympathy voiced at the White House or Augusta. He had no patience with those who noted unemployment had increased in March. "Don't you see the rate is slowing down?" demanded Jones testily.

They repossessed his car and foreclosed his mortgage and Mary and the children went back to her parents, but Jones was of stout heart. He applauded Budget Director

Stans' attack on Congress for "turning on vast new programs for spending." Cried Jones—"That's the stuff." His enthusiasm for Bernard Baruch was unrestrained: "Let us not unbalance the budget," said Jones. "What an estimable young man." said businessmen to whom he unsuccessfully applied for work. Sleeping in cheap boarding houses, Jones yet found pennies to buy the editorials applauding Eisenhower for rejecting unwise tax cuts.

Yes, a fine young man was David Dalrymple Jones. His last words were (at the hospital where they brought him with acute malnutrition)—"Doctor, keep me going just a little longer. I must vote Republican this fall."

Now It Is Up to Congress To Halt the Flood of Obscene Literature

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. CRAMER. Mr. Speaker, today the Judiciary Committee of the House reported to this body and I strongly supported it in committee, the bill of the Honorable EMANUEL CELLER (H. R. 6239) which is a measure to further control the heinous distribution of obscene literature throughout the Nation. This measure is similar to one introduced by myself (H. R. 11185) and several other Members of this Congress. Action by the Judiciary Committee of the House now places directly into the lap of the Congress itself responsibility for a proposal to bring to a halt this growing and insidious tool of the perverted and criminal element that is subverting the youth of the Nation today.

By the wording of the bill reported to Congress the F. B. I., Postal Inspectors, and other law enforcement agencies will be armed with the proper tools to better enable them to provide the protection so necessary to development of moral strength in our Nation today. Because of inadequate and inoperable legal tools law enforcement agencies have not been able to do the job we expect of them. I hope that both the House and Senate will promptly rise to defend the minds of the youth of the Nation today.

The bill approved today simply permits prosecution where obscene literature is received as well as where such material is mailed. In this fashion, and within the ability, jurisdiction, and interest of local prosecuting officers and officials will the question of obscenity be determined and the power to prosecute lie. It is my opinion that prosecution on the site where impressionable adults and, what is worse, the youth of our Nation are attacked by the cohorts of crime and filth is the place where penalties will promptly be inflicted that will halt this surge of obscenity.

At this point in my comment I would like to include two statements by the Honorable J. Edgar Hoover describing the situation in regard to obscene literature as he sees it:

UNITED STATES DEPARTMENT OF JUSTICE, FEDERAL BUREAU OF INVESTIGATION, WASHINGTON, D. C.

EXCERPT FROM ADDRESS OF J. EDGAR HOOVER, DIRECTOR, FEDERAL BUREAU OF INVESTIGATION, BEFORE THE NATIONAL CONVENTION OF THE AMERICAN LEGION, ATLANTIC CITY, N. J., SEPTEMBER 19, 1957

The peddlers of obscene pictures and writings have so flooded the market with this toxic trash within the past few years that to find a news rack without samples of it is the rare exception. The trade in this printed poison is big business and a lucrative one. A single smut dealer, for instance, can produce at small initial cost obscene photographs or publications which can then be copied by the thousands. Unlike the narcotic cigarette which is reduced to ashes after degrading one unfortunate victim, the obscene photo, film, or book can be transmitted on an almost endless round of moral destruction. The activities of the muck merchants are national in scope and are closely organized. These moral degenerates draw no line of age distinction when it comes to customers. Your child can easily become one of their tragic victims.

An aroused public is necessary—one that will not countenance the placing of this trash on public display. Parents and other guardians of the young must be aware of what is being read by those in their care. Guidance and concern for a child's mental and spiritual development are just as important as regard for its bodily needs. Stiffer legal penalties, particularly in local and State courts, are needed to replace the frequent wrist slap given those convicted of this vile trade. Not until longer sentences and heavier fines remove the financial advantages of this traffic will the producers, distributors, and dealers of filth be driven out of this sickening business.

There is today a vicious movement to undermine the traditional spiritual and moral principles of our Nation. Freedom, divorced from authority and discipline, is a frightening thing and is the first step toward total moral degeneration.

UNITED STATES DEPARTMENT
OF JUSTICE,
FEDERAL BUREAU OF INVESTIGATION,
Washington, D. C., May 1, 1957.

To All Law Enforcement Officials:

At the approach of the warm months and the beginning of the seasonal rise in sex crimes, there is a special need to focus public attention on a despicable business—the sale and distribution of obscene material. The serious danger of this big business criminal enterprise lies in its degrading influence on youth and American communities. Too often the purveyor of filth in the form of movies, playing cards, books, photographs, and other devices, reaps a rich reward as a result of lackadaisical public opposition to his evil occupation. The carefree hours of school vacation time afford these parasitic peddlers of ugly wares many opportunities to claim the inquisitive and impressionable minds of the Nation's youth.

The most effective means of preventing juvenile crime is proper adult guidance and practical moral training in the home, school, and church. A breakdown in this basic phase of adult responsibility, however, is clearly evidenced by the spiraling youth crime statistics. The shame of this problem lies in the fact that all too frequently the clean-living majority of our youth seek in vain for guidance through the pitfalls of this modern era. Many letters which I receive from the younger population implore help against these temptations, particularly the obscenity bombarding them from all sides. One 17-year-old stated that even though lack of family life and absence of religious training were seeds of the youth problem, certainly sordid literature, pornography, and other forms of obscenity acted as fertilizers to nourish these seeds into juvenile crimes. His cry, typical of the respectable youngsters across the country, was "Please do us American teen-agers a big favor and get rid of the trash that is trying to kill us."

Only with disastrous consequences can adult America disregard this plea of young citizens. Although statistics are not available to compute the exact influence of the illicit traffic in obscene material on the incidence of sex crimes, it would be naive indeed to assume that there is no relation between the mounting deluge of such filth and the increase in sex crimes. In crimes reported by police in cities over 2,500 population, the crime rate of persons involved in sex offenses, excluding rape and prostitution, rose from 38.5 per 100,000 population in 1953, to 41.7 per 100,000 in 1954, to 45.3 per 100,000 in 1955, and reached 47.5 per 100,000 in 1956.

The weapons for combating this menace must be found or forged in the arsenal of local, State and Federal laws. One major blow at these dealers in indecency was the amendment of the interstate transportation of obscene matter statute in June of 1955, giving the FBI additional jurisdiction in cases involving the use of personal automobile or any other form of transportation, as well as express or common carier, in such interstate trafficking.

What are the next steps? There must be cooperative public and police effort to assure that local ordinances against obscenity are adequate and rigidly enforced. While these sewage salesmen prosper in the loopholes of weak laws and license-fee type small fines, heavier sentences or jail terms upon conviction serve as strong deterrents to their trade. Parents, school authorities and law-abiding citizens interested in the welfare of youth must share the duty of reporting sources of obscene material to the proper officials. Most certainly, local civic leaders and legislators have a responsibility to their communities in the matter of controlling this pollution problem. It is indeed an obligation of police officials to enforce the law to the maximum limit to rid their localities of this vermin.

Public opinion and coordinated action can sound the death knell for the obscene material peddler. Assuredly, each and every citizen must contribute to the fight against filthmongering or suffer in the contamination spread by this diseased busines.

Very truly yours,
JOHN EDGAR HOOVER, *Director.*

Mr. Hoover has further said that "distribution of pornographic literature is now so efficient that it is quite accurate to say that no child is beyond its reach." He continued, and pointed out, that "the peddler will be halted and his merchandise disappear only if an aroused public now goes on the alert."

Gentlemen, I believe that each of us has had impressed upon us the fact that an aroused public does now exist. I am sure that the Judiciary Committee of the House, after due deliberation, has presented us with a bill that will give legal backbone to our law-enforcement officials who wish to stamp out this evil. The responsibility now lies with us. I hope that we shall answer the call of the churches, the public officials, the mothers and fathers, and all good people of this land and act promptly to halt and prosecute those who would prey on and try to subvert the healthy minds of our American people and particularly upon

our youth to whom we look for the sound, moral, God-fearing future of this Nation. We dare not delay.

Steel Imports and Our Domestic Economy

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 2, 1958

Mr. REED. Mr. Speaker, a distinguished American citizen and American industrialist, the Honorable Roger M. Blough, chairman of the board of the United States Steel Corp., has recently delivered a speech in Cleveland, Ohio, in which he ably presents the problem that confronts our domestic steel industry with respect to growing competition from steel imports. I do not entirely agree with Mr. Blough's suggested solution to this problem. It is my own view that the tariff protection that Mr. Blough perhaps rejects is an effective answer, at least in part, to the need for protecting our American standard of living. Another answer in part to this question of what to do about growing imports is for us to hold our trading allies accountable for their tariff and trade practices that have effectively kept international trade from being truly reciprocal as the Congress of the United States has intended as repeatedly expressed by Congress in extending the trade agreements authority.

Mr. Speaker, despite the fact that I do not subscribe entirely to the remarks of this distinguished industrial statesman, I believe the substance of Mr. Blough's Cleveland speech should be available to the membership of the House and for that reason I include his remarks in the RECORD:

A TALK OF TWO TOWNS

(Speech by Roger M. Blough, chairman of the board, United States Steel Corp., at the annual meeting, Cleveland Chamber of Commerce, Cleveland, Ohio, April 17, 1958)

For the opportunity to be with you here—for your generous hospitality and for your warm and cordial welcome—I am deeply grateful. And by way of reciprocity, let me assure you—right at the outset of these remarks—that I do not come before you today as an expert on subjects economic.

An expert, as you know, has been defined as a man who is able to avoid all minor mistakes as he sweeps on to the grand fallacy. And judging from all the divergent and contradictory panaceas that are currently being offered as a cure for the present economic recession, it occurs to me that another expert with another plan of that kind—added to those which already afflict us—could set our business recovery back indefinitely.

So for the sake of your business and mine, I shall prudently refrain from unveiling before you the Blough prescription for the care and feeding of prosperity. And instead, I should like—very simply—to talk of two towns. * * * Two towns which are many thousands of miles apart, but which—in this shrinking world—are exerting an ever greater influence upon each other and upon the business conditions which now confront us.

And much to your surprise, no doubt, one of these towns is Cleveland.

Now a lot of things have been happening in Cleveland. Its population has grown, its industries have been expanding, and 50 new ones moved into greater Cleveland last year. Thus its job opportunities have been growing too. And so have the many cultural advantages which it affords. In short, then, it is a good town in which to live, to work, to raise a family, and to engage, generally, in the pursuit of such happiness as we are privileged to seek in this topsy-turvy world.

The other town I have in mind is Duesseldorf, in Germany, and in many respects it's a lot like Cleveland. It, too, is a great industrial center which has been growing rapidly in recent years. It is attracting new industries, providing new jobs, building new schools, adding twelve to fifteen thousand housing units per year, and enlarging still further the many cultural and artistic aspects of its community life.

True, it is only about two-thirds the size of Cleveland; but still its transportation facilities have to handle some 380,000 persons in the rush-hour traffic; and the number of passenger automobiles on its streets has multiplied by 2½ times in the past 2 years. And if there remains in your minds any lingering doubt as to the similarity between these two delightful communities, let me simply quote a sentence from Fortune magazine which reports that "Dusseldorf, today, is noted for its rich and beautiful women and for its hard-working and ambitious men."

So we must conclude, definitely, that Dusseldorf, too, is a good town in which to live, to work, to raise a family, and to engage in the pursuit of happiness.

Now by a curious coincidence—which is by no means unintentional—it happens that a major industry of both of these towns is steelmaking. Steel is one of Cleveland's largest single industries; and Dusseldorf is the center of an industrial area which produces 85 percent of all the steel that is made in West Germany.

But right at this point the similarity between Dusseldorf and Cleveland gives way to a number of significant differences which provide considerable food for thought. Let's look at a few of them.

First and foremost, perhaps, is the fact of the recession. In Cleveland many steelworkers—together with many men and women from other industries—are currently unemployed; and the primary concern of all of us in this room here today is to get these people back on the job and to find markets for the products they once made. But in Dusseldorf, steel and other industries are humming along at much higher rates of operation. There is no marked unemployment, and they are managing very well with the markets for their products.

Next is the fact that virtually all of the market for Cleveland's steel lies here in the United States. At best, only a minor percentage of your steel is sold in foreign markets. But 27 percent of the steel that is made in the Dusseldorf area is exported; and these export markets for German steel have been growing considerably in recent years. So the prosperity of Dusseldorf's steel mills does not depend on the ups and downs of their domestic demand to nearly the same extent that yours does here in Cleveland.

Then, too, most of the steel mills here in the Cleveland area are modern and highly efficient; and while it is true that great strides are being made in improving the Dusseldorf area mills, it is also true that a steelworker in Cleveland—using its modern, highly productive tools—can turn out more high quality steel with the expenditure of less time and effort than his German counterpart can. There is, however, another major difference; the weekly wage of a steelworker in Cleveland is more than three times as high as the corresponding pay of the steelworker in Dusseldorf. So the cost of producing finished steel products there is substantially lower than it is here.

Now what does all this mean to you in Cleveland? What does Dusseldorf matter to you?

Well, let me give you just one example which concerns a reel of barbed wire.

The one I am talking about is a very ordinary reel of barbed wire—one of the types most commonly used for fences. It was manufactured by our American steel and wire division; and it was delivered to a jobber whose warehouse is right here in Cleveland.

But in the jobber's warehouse it was placed alongside another reel of barbed wire that had been manufactured in Dusseldorf. That German wire was of exactly the same type, and it had come from a mill many thousands of miles away. It had been shipped from Dusseldorf to the sea, and across the ocean to New York. It had been freighted to Cleveland by rail, and hauled from the freight yards to the warehouse by truck. Yet, delivered to that warehouse, it still cost the jobber $40 a ton less than the reel of wire sold right here in Cleveland.

Now next spring of course, the people of Cleveland will celebrate the opening of the St. Lawrence seaway, and Cleveland itself will become a great inland seaport of the United States. Perhaps the people of Dusseldorf will have reason to celebrate too. Their wire will no longer face the costly overland haul from New York to Cleveland. It can be shipped by boat direct to the docks on your Lake Erie waterfront, and thus it can be sold here even more cheaply than it is today.

Now it is certainly true there must be give-and-take in order to have international trade. It is also true that many Americans had jobs in the last few years because our exports of steel were considerably greater—primarily because of availability and quality—than our imports although the historic pattern is changing. Nevertheless had this foreign wire—some 64,000 tons of it last year—been produced at home as much of it formerly was, it would have provided hundreds of thousands of man hours of work in the steel industry alone and kept coming those most important pay envelopes to the American steelworkers who formerly made that wire; pay envelopes to the tune of about 6 million dollars.

So when a farmer comes into this city to buy wire for new fences, what is he going to do? He likes progress in America, and he is just as anxious as you and I are to buy the products of American industry and to support the jobs of American workmen. But he has his problems too, and the high cost of building fences is one of them. Does he buy the imported wire then?

Well, a great many farmers certainly did last year—for while barbed wire is as American as blueberry pie—while it was first patented and manufactured right here in the United States, and while it is little used in Europe and in other countries of the world—the fact remains that more than half of all the barbed wire sold in America last year was imported from abroad.

And barbed wire, of course, is only one small, but an important, example of what is happening in steel—just as Cleveland and Dusseldorf are merely symbols of the many steel-producing centers, at home and abroad, which are vying with each other for markets.

Out on the west coast, the industrious Japanese have bought scrap metal at premium prices, hauled it back to their bills in the Orient, manufactured it into finished products, shipped them back across the wide

Pacific, and still undersold American producers by such substantial margins as $29 a ton on reinforcing bars.

To show how serious offshore competition has become, I understand cast iron soil pipe is being imported for sale at $100 per ton in California where the price of the domestic product is $175 per ton.

And so it is with a wide variety of imported steel products which are rapidly moving into the American market not only on the west coast, but on the eastern seaboard, at the southeastern seaports and along the gulf coast as well. For the year 1957 total steel imports into the United States were about a million and a quarter tons—considerably less than we exported but still a lot of tonnage. And let us note in passing that the production of 1¼ million tons of steel here in American would provide direct employment for some 11,000 people, and that indirectly it would provide jobs for thousands more than that number in supporting industries.

So we must acknowledge the fact, I think, that what is happening in all of the Dusseldorfs of the world is profoundly affecting the welfare of the people in all of the Clevelands of America. But I do not wish for a moment to leave the impression that the steelworker is the only loser—or even the principal loser—of this new influx of goods from abroad. He isn't.

The same situation prevails to a greater or lesser degree in industries like lumber, chemicals, textiles, watches and many, many others. Until very recently, for example, this Nation has been a leading exporter of automobiles; but now it is a net importer. I noticed a news report the other day which stated that Great Britain had already exported more autos in the first 2 months of this year than she did in the entire 12 months of last year.

Now why is it that foreign industries can turn out some of the very products thousands of miles to our shores, and sell them in our markets at a price so low that we can no longer compete, even here at home—let alone in the far-away markets of other countries of the world?

Gentlemen, nobody loves a fact man. But there are times when facts—like spinach and taxes—must be faced with fortitude, and this, I believe, is one of them. So I would like to lay before you today, two simple and undeniable facts—however unpalatable their implications may be in certain political circles.

First is the fact that when an American consumer buys any average American product—whether it be a reel of barbed wire, an electric toaster, or a pair of pajamas—very little of the price he pays for that product is for the actual, tangible materials out of which it is made. More than three-quarters of the purchase price goes to pay the wages and salaries of the men and women who transformed the raw materials into the finished product, brought the product to the market place, and sold it to the consumer. In other words, what you and I are really buying when we spend a dollar at the store, is a few cents worth of materials and more than 75 cents worth of the time of some worker or group of workers.

So much for fact No. 1. Fact No. 2 is that in almost every country of the world today, the American dollar will buy more of a workman's time than it will here at home. The same American dollar which will buy 20 minutes of working time here in America, will buy more than 60 minutes of working time in Germany, nearly as much in England, and considerably more than that in Japan.

That situation, of course, is nothing new. It has prevailed in varying degree ever since America's industrialization began. And despite this disparity in wage rates, we have been able to remain competitive in many markets because of what we call American ingenuity, "know-how" and because of capital investment in machinery and equipment.

By providing the most efficient tools of production that the world has thus far seen—by devising American methods of mass production, and by devoting billions of dollars annually to unending research and improvements, we have made it possible for the American worker to produce considerably more in an hour's time than his foreign competitor can. And that kept the cost of our products competitive.

But since the end of World War II a great change has been taking place. The technological revolution that began in America in the early part of the present century is sweeping across the face of the globe at a vigorous pace; and happily so. And American know-how is being exported from our shores in even greater degree, I suspect, than are the products of our factories.

Fine new steel plants are being built in Europe and Asia—some of them with American financial assistance.

When United States Steel built its Fairless works only a few years ago, it was the last word in steelmaking efficiency. Today its counterpart can be found in Wales; and I am told that an equally modern—and perhaps just as efficient—plant is now operating in Poland.

Moreover, much of our marvelous machinery—like the electrolytic tinning lines that were developed and perfected by United States Steel—is now being installed in European plants under licenses which we have readily granted to all comers. It can produce just as efficiently in Europe as it can in America; and with foreign wage rates far below the American level, these new machines can be installed—and these new steel plants can be built—at far less of a capital outlay than we, here at home, must make for our new and improved facilities.

Beyond that, too, is the program of technical assistance through which American steelmakers, for example, are helping, under Government auspices, to train technicians from India and other countries. It is hoped that by this exporting our American know-how, we can enhance greatly the prospects for world peace; and as long as there is any possible chance of progress in this direction, then certainly no one of us would have it otherwise.

But meanwhile the fact remains that we are rapidly losing the technological margin that we have had over other nations, and that has thus far supported American wages at levels high above those prevailing elsewhere in the world. And this situation has been gravely complicated by the fact that not only have American wage rates risen enormously in recent years, but that the wage costs in almost every American product have gone up as well.

If an American worker gets three times as much pay as a German worker, but produces three times as much steel per hour, the direct wage costs per ton remain about the same in both countries and the products of the two workers are fairly competitive in world markets. That is obvious.

But when the wage costs in the American product keep rising—as they have—farther and farther above those in the foreign-made product, the area in which the two can still compete begins to shrink alarmingly—first in foreign markets, then in our own coastal markets, and finally, ever-farther inland from our shores.

And as our market shrinks, so too does the number of jobs that remain in American industry. That is obvious also; and while I do not know how much of our unemployment today can be attributed properly to the inability of American workmen to compete, wage-costwise, with their foreign competitors, there can be no doubt, I think, that this is a significantly important factor in the present business recession.

Certainly it accounts for the growing clamor for high tariffs, rigid import quotas, and a general scuttling of the trade agreements program—a clamor that comes these days not only from a number of distressed businessmen, but equally loudly from a number within the ranks of American labor.

Now while I realize that some of you here in this room may disagree with me profoundly on this point, I must say to you frankly that increased tariff protection, in my opinion, is not the basic answer to this problem.

If experience can teach us anything, then certainly we have learned that the power to erect tariff walls or other trade barriers is not one which America enjoys a monopoly. We can shut foreign imports out of our markets only by shutting our exports out of foreign markets. And if we look at markets in terms of people—as we must if we are realistic about it—let us remember that only 6 percent of the world's population would be inside our tariff wall, while the other 94 percent would lie outside it. And don't forget that the raw materials so necessary to our Nation's production may also recede beyond our reach.

Nor can I see the wisdom of spending millions and millions of dollars to build a seaway that will transform Cleveland, Detroit, Chicago, and other Great Lakes cities into seaports, and then building tariff walls around those cities to keep their ports in idleness.

Presumably such a policy might—as a temporary expedient—restore a substantial number of workers to their jobs in manufacturing industries; but it would also throw out of work a large part of the 4½ million other Americans who gain their living in foreign trade. So in the end, we should merely have exchanged one group of jobless Americans for another.

Tariffs, then, provide no permanent solution, as I see it.

An equally doubtful solution to our difficulties, I think, is to be found in the realm of direct Government subsidy.

We know today that ships built in American shipyards at American wage costs can compete with foreign-built ships only because our Government subsidizes American construction at the expense of all of us as taxpayers. It supports these high wage costs out of taxes primarily because the maintenance of a shipbuilding industry here is essential to the security and the defense of the United States.

But many other industries are equally essential to our national defense and security—steel, oil, chemicals, motors, and dozens and dozens of others—and should the day ever come when these, too, must be subsidized by the Treasury, the resulting burden would soon bankrupt the American taxpayers.

So it seems to me that recognizing the value of such expedients as tariffs, quotas, subsidies, controls, freezes, and all of the other ways out sooner or later we will have to face up squarely to one undeniable fact: That American workmen today are pricing themselves out of the market, or—to put it even more accurately—that America, as a Nation, is costing itself out of the market.

There is, I believe, an inexorable law which can never be defied, nor escaped, for long. I won't call it an economic law, because—as I say—I am not an economic expert. But it is a fundamental law of business, and every businessman knows it. That law is: "Compete or die."

There is no other choice. Twist, turn, squirm as we may, in the end we are going to have to compete with our foreign friends or else resign ourselves to the fact that America

would soon be on its way to losing the industrial leadership it now possesses.

Yet if we are to be competitive—and remain competitive—we have today the greatest opportunity, and the greatest potential market for the products of our people, that we have ever had in our history. With European production, and standards of living rising at a rapid rate, millions of western Europeans are eager to buy for themselves and their families all the luxuries of life that have become so commonplace to our people here in America—the very products that we have so long excelled in producing. This is also true in other areas of the world.

To serve these new markets, and to be able to compete with foreign producers, a number of American companies have established factories abroad where the combination of American productive efficiency and low wage costs provides a solution to at least some of their problems. Indeed I have seen figures recently which show that a growing number of these companies are shipping their foreign-made products back here to the American market. And this, of course, is a logical and natural development dictated by the present disparity in wage costs at home and abroad. But carried to its ultimate extreme, it too becomes self-defeating; because without a job, the American workman has no money with which to buy anything, and there is then no market in America for the products of these factories overseas.

So again we come back to the one, inescapable fact that nobody wants to face: That the only practical way to keep foreign-made products from overcrowding our markets here at home is to compete on equal terms in quality, in price and in service; and that the only practical way to reach foreign markets successfully is to keep our costs—which means primarily our wage costs—competitive.

And right here is where I think that the American workman is being misled in a big way by some of his most vocal and most powerful leaders.

He is being told that his wages in recent years have not kept pace with rising output per man hour—that he is entitled to more than he is getting, and that he can get it without increasing the wage cost in his product.

Such statements, unfortunately, are not even within shouting distance of the truth, either in the steel industry or in industry as a whole.

The latest official reports of the United States Government show that during the first 6 years of the present decade, average hourly earnings in all manufacturing industries as a whole went up more than 35 percent; while output per man hour in these same industries rose less than 19½ percent. Thus wages have gone up more than 80 percent faster than output per man hour in these 6 years alone.

Now raising the standard of living for everyone in this country, by producing more of the goods which everyone needs and wants is one thing. But raising the cost of producing those goods, so that the producer and his employees are placed at a competitive disadvantage, is quite another thing. And when those who profess to speak in the interests of the American working man advocate raising wage costs as a means of increasing consumer purchasing power, they are seeking to perpetrate what is, in my opinion, the most dangerous hoax of our times.

They know that higher wage costs can only be met by higher prices, so in the end no increase in purchasing power results. Meanwhile the ability of American workmen to compete with their industrious counterparts abroad is further diminished, thus shrinking the market for American products and diminishing the number of available American jobs.

To me, then, the perpetrators of this hoax are labor's one-way philanthropists. They would take jobs away from our workmen here and give them to workmen abroad. And that kind of labor philanthropy is in my idea of economic crime on the waterfront.

Let me sum it up this way:

We are all striving, as I have said, to get our people back on their jobs by finding markets for the products of their labor. The only way to find those markets is to make our costs competitive and to keep them that way. How then can this be done?

Well if it is done, then we as businessmen must do everything in our power to maintain our technological advantage over foreign producers by replacing as rapidly as we can every obsolete and obsolescent machine, technique and facility we have, with new, better and more efficient methods and facilities. That is our part of the job.

Government, too, has a vital role in this task as I see it. If we are to maintain our technological superiority, then Government must certainly reexamine some of our antiquated and misbegotten tax laws which discourage investment, penalize the productive use of wealth, and treat as taxable profits what is really the excess cost of replacing our wornout tools and equipment.

But despite all that we and the Government may do to promote our competitive position, the final decision rests with the American working man, and with his delegated leaders. For the fact remains that in the last analysis the only one who can fully protect the American workman is the American workman himself. If he can keep wage costs from mounting while rising productivity brings our total costs into competitive balance with foreign costs, then truly I believe that he can expect to see the greatest era of prosperity our Nation has ever known.

But if, on the other hand, he permits the vast economic and political power that he now possesses to be used to force wage costs ever higher, then I am very much afraid that the great St. Lawrence seaway—when it opens next year—will be nothing more than a one-way street, westbound.

The Farm Freeze Bill

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. BREEDING. Mr. Speaker, it is my sincere intention to lend my full support to the House movement to override the President's veto of the so-called farm freeze bill, should this body be afforded that opportunity on the basis of successful Senate action.

During this period of economic recession, the farmer of the Nation should be given as much purchasing power relief as any other segment of our economic structure. If the President's veto of Senate Joint Resolution 162 stands, the wheat farmers of the State of Kansas will suffer an average 22-cents-per-bushel cut in the price of wheat, thereby causing a reduction in their purchasing power of between $40,000,000 and $50,000,000.

To illustrate the seriousness of this impending drop in most farm production prices, particularly wheat, I am including in the RECORD pertinent letters from Mr. R. L. Patterson, president of the Kansas Association of Wheat Growers, and Mr. Floyd Root, president of the National Association of Wheat Growers:

KANSAS ASSOCIATION OF WHEAT GROWERS,
Dodge City, Kans., April 10, 1958.

Hon. J. FLOYD BREEDING,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BREEDING: Shortly after Congress reconvenes following the Easter recess, the Senate will vote on the question of overriding the President's veto of Senate Joint Resolution 162, a measure to freeze price supports and acreage of certain farm commodities at the same level as they were in 1957. In the event that the veto is overridden in the Senate, the matter will be before the House for its consideration.

Kansas farmers are vitally interested in this measure, and I am writing you on behalf of the Kansas Association of Wheat Growers. With costs and expenses on the farm still going up, we feel that the very least that should be done is to maintain support prices at last year's level.

If the veto stands, it will reduce the purchasing power of Kansas wheat growers by fifty to sixty million dollars, and the wheat growers of the Nation by $250 million on wheat alone, not counting all other commodities of agriculture.

In addition we desire to call attention to the fact that this joint resolution is a very modest proposal compared with the far-reaching measures which have already been adopted or are now under consideration in Washington for the purpose of stemming the recession. It is effective for 1 year only. It doesn't increase price supports, acreage or production, but merely leaves them where they were in 1957. It will not increase the price of food or other articles made from farm products.

It is consistent with the antirecession program in every respect. By increasing the buying power of farmers for steel, farm machinery, automobiles and other commodities, it will put men back to work wherever substantial unemployment exists.

I urge that you give this matter your most earnest consideration, and sincerely hope that after doing so you may see your way clear to vote to pass this joint resolution over the President's veto.

Thanking you in advance, I remain,

Very sincerely yours,

R. L. PATTERSON,
President,
Kansas Association of Wheat Growers.

NATIONAL ASSOCIATION OF
WHEAT GROWERS,
Pendleton, Oreg., April 9, 1958.

To: Members of the Executive Committee,
National Association of Wheat Growers.

GENTLEMEN: Last night, a telegram was sent to the representatives of each of the member State organizations, requesting that you contact your Senators and urge them to override the veto by the President of the farm freeze bill.

Please find enclosed a copy of a letter and a statement which were mailed to each one of the 96 Senators encouraging them to override the presidential veto. If you have not contacted your Senator, may I suggest that you do so immediately, since the attempt to override this veto will be made soon after the Senate convenes on April 14, following the Easter recess.

In addition to the letters to the Senators, encouraging the veto, may I also suggest that your organization contact Assistant Secretary of Agriculture Marvin McLain, and urge him to support including a barter provision in the bill to extend Public Law 480. As you know, a mandatory barter provision was removed from the Senate bill, when it was approved extending 480. The manda-

tory barter provision does not have the support of the Department of Agriculture, because they say they have permissive authority to barter anyway. However, last year, barter sales of wheat were only one-tenth of what they were the year before when emphasis was placed on barter deals.

The State Department has opposed emphasis on barter sales which were so successful during the marketing year 1956–57. Apparently, the pressure from the State Department has influenced the Department of Agriculture. It is reported that Marvin McLain told a Senator from Colorado that the Department was not interested in a mandatory barter provision for wheat and had not been contacted by any wheat growers about barter sales of wheat.

On another matter, may I bring to your attention the fact that according to the constitution and bylaws of the national association, all officers of the national are to be elected from the voting delegates. Several vice presidents now members of the executive committee are not State voting delegates. Therefore, it is necessary to conform to the constitution and bylaws for all officers of the national, including the vice presidents, to be voting delegates from the State associations.

Your consideration of these requests and suggestions will be appreciated.

Sincerely yours,

FLOYD ROOT,
President.

NATIONAL ASSOCIATION OF
WHEAT GROWERS,
Pendleton, Oreg., April 8, 1958.

Hon. GEORGE D. AIKEN,
United States Senate,
Washington, D. C.

MY DEAR SENATOR AIKEN: The National Association of Wheat Growers strongly urges you to support the move in the United States Senate to override the Presidential veto of the measure passed by Congress in March, calling for a 1-year freeze on farm-price supports.

Please find enclosed a statement explaining why the veto should not be allowed to stand.

Unfortunately, current increases in farm prices are a temporary situation due to the loss of vegetable and fruit crops this winter, and to a cycle rise in cattle and hog prices as a result of herd depletion during drought years in the Great Plains.

Your consideration of our position would be appreciated.

Very truly yours,

FLOYD ROOT, *President.*

STATEMENT BY THE NATIONAL ASSOCIATION OF WHEAT GROWERS SUPPORTING AN OVERRIDE OF THE PRESIDENTIAL VETO OF THE FARM FREEZE RESOLUTION

(By Floyd Root)

APRIL 1958.

The National Association of Wheat Growers strongly protests the veto by President Eisenhower of the measure passed by Congress in March calling for a 1-year freeze on farm-price supports. If the veto stands, it will mean that price supports on wheat for the 1958 crop will be sharply reduced by an average of 22 cents per bushel. The reason that we are protesting lowering the loan rate to this extent is not that we favor high fixed price supports for wheat, but rather that our experience leads us to believe this action will in no way solve the wheat surplus problem of the United States.

The 1958 wheat crop is estimated nationally at 1,200,000,000 bushels. This will be an increase in production of approximately 250 million bushels over the harvest of the last 2 years. However, the increase is not due to higher price support or a higher price in the market, but to the best overall weather conditions which the United States wheat producing areas have had during the past 10 years.

Lowering price supports by 22 cents a bushel at a time when the Department of Agriculture is carrying a surplus of more than 750 million bushels of wheat, can only result in the market following the support price on down. This will mean that all the farmers in the United States who grow wheat will collectively lose approximately $260 million due to the action of the Secretary of Agriculture.

It is an inconsistent policy for the administration to be responsible for reducing income by this large an amount to one segment of the population while working vigorously with other segments to stimulate the economy and reverse the recession. In these times of increasing farm costs, lowering the price of wheat only accentuates the cost-price squeeze, and accelerates the movement of people off the farms, which in turn adds to the national unemployment and increases the need for additional relief and welfare funds. If the income of the wheat farmer could be increased he would in turn start buying some much needed equipment. This would lead to more employment in our factories and would help our present unemployment problem.

It is most unrealistic to lump together all farm commodities when the farm problem is considered. With some commodities, lower prices to the farmer will reflect lower prices to the consumer. Such may be the case with food products which have an elastic demand. The United States Department of Agriculture has determined, however, that the price of wheat has little effect on the price of bread. At the present time, there is less than 4 cents worth of wheat in a large loaf of bread costing about 31 cents. You can see why wheat growers have a feeling of bitterness toward statements to the effect that lower farm prices mean lower food prices. As far as wheat is concerned, a 22 cents per bushel reduction in the loan rate at this time means a loss of $260 million to the wheat farmer which will be absorbed by the processors and bakers in an expanded profit margin and will not benefit the consumer.

We feel it is also inconsistent for the Secretary of Agriculture to urge lending agencies to expand credit to farmers and allow them to go further into debt. Wouldn't it be better for the farmer to obtain his income in the market place even if it is dependent, due to surpluses, largely upon the Government loan rate?

The officials of the Department of Agriculture would readily recognize that lowering the loan rates on the 1958 wheat crop will not reduce the wheat production this year due to the excellent weather conditions in the High Plains area of Kansas, Texas, Oklahoma, and Colorado. It is questionable that in future years lower prices will decrease the production of wheat because in the commercial wheat areas there are few alternative crops. At the present time there are no alternative crops which will produce anywhere near a profitable return on wheat land.

The National Association of Wheat Growers does not favor high fixed price supports, but we know that as far as wheat producers are concerned flexible price supports are also not the answer to the problem. Therefore, we respectfully request your support for overriding the Presidential veto to allow the continuation of price support for the 1958 wheat crop at the same level as for the 1957 crop, as a temporary measure until a long-range wheat plan can be developed.

Raise Postal Wages

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two editorials. The first is from the Pittsburgh Sun-Telegraph relating to postal wages, and the second from the Pittsburgh Press, deals with the space program:

[From the Pittsburgh Sun-Telegraph of April 13, 1958]

RAISE POSTAL WAGES

It is no secret that the Nation's postal employees have long been one of the most neglected groups in the entire Federal employment structure.

For many years the Hearst newspapers have championed the cause of these hard-working, faithful, and conscientious public servants in seeking pay standards to keep pace with the living costs.

Since July 1951 they have received only one salary increase, and that was a modest one.

They have amply earned another increase at this time.

But they are now being deprived of their long-overdue pay boost because of a parliamentary snarl in Congress.

This is due to the fact that the Senate chose to tie up postal pay and postal rates into a single package, which was clearly a mistake from its inception. President Eisenhower had recommended a pay raise of $165 million a year, but the Senate upped this to $309 million.

As far back as last August the House passed a postal rate-increase bill without tying in any postal-pay provisions. Meanwhile, the House Post Office and Civil Service Committee has reported an independent postal pay-increase bill which is now on the calendar awaiting action.

The postal pay raises in the Senate bill run from 7½ to 12½ percent, whereas the House pay bill provides raises from 10 to 14 percent.

The bills as passed by both the Senate and House are now in conference. They also differ radically in the scale of higher charges for carrying all four classes of mail.

As a matter of simple justice to the inadequately paid postal workers, we strongly recommend that the congressional conferees divorce the pay raises from the bill and pass them independently.

The unfortunate coupling of postal pay and rate increases in the one bill has created the impression that the rate increases are necessitated by the proposed salary boost. This is not true.

Postmaster General Summerfield has been seeking rate boosts at every session of Congress since 1953 without regard to whether postal-pay legislation was being considered.

There is no valid reason why the Post Office, of all the Government's vital agencies, should be singled out for operation at a profit at this time. We don't expect our defense forces, our health, and other protective agencies to return cash dividends.

But there is every reason to demand that the injustice being done to the Nation's postal workers is not prolonged by the wrangle over the merits and demerits of the rate increases.

The Hearst newspapers believe that this injustice will be compounded if Congress does not give priority to passage of a decent living wage for postal workers.

[From the Pittsburgh Press of April 14, 1958]

OFF THE GROUND

Six months after the Soviet sputnik shocked us into despair and frustration the United States seems ready to launch an organized program of space exploration.

President Eisenhower has asked Congress to set up a new civilian agency to direct all aeronautical and space science activities except those which are chiefly of a military character—such as missiles. This climaxes a series of recent steps obviously aimed at overtaking Russia in the space race.

Only recently the President disclosed the initial framework of a program laid out by his science advisers for this grand adventure. At the same time he repudiated those in his own administration who don't think going to the moon is worth the effort—or the cost—by giving the Defense Department a green light to try as soon as possible.

Thus the stage is set for the United States to embark on what the President terms "an imaginative and well-conceived space program" devoted primarily to peaceful and scientific purposes.

No doubt about it, the years ahead hold great promise and excitement. But only if we have the vision and the courage and the determination to pursue the growing opportunities of the infant space age as vigorously as did the explorers of the earth itself 400 or so years ago.

As this exploration of space proceeds it will be well to bear in mind that many of the discoveries and achievements may seem of little immediate practical value. For such is the way of science.

The basic scientific work that makes it possible today for us to send satellites whizzing outside the earth's atmosphere, for example, was not done yesterday. The groundwork for space flight was laid back in the 17th century by scientists like Johann Kepler and Sir Isaac Newton.

So it will be with much of the work in space. The results will add up to a legacy for future generations to put to full practical use.

The important thing right now is to get a coordinated space program underway. Happily, this seems to be in prospect.

Under the President's proposal the program will be directed by a new National Aeronautics and Space Agency which will absorb the old National Advisory Committee for Aeronautics—an organization that has played a key role in developing America's airpower as well as our commercial aircraft industry.

However, no agency can be any better than the men who run it. Once the new agency is created we must make sure it is placed in charge of people who not only exercise good judgment but also make quick decisions.

For we cannot travel in space at a snail's pace.

The Community Facilities Bill

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mrs. GRIFFITHS. Mr. Speaker, the Senate has just approved an antirecession bill to provide Federal loans to cities and States for public-works projects. On March 10, 1958, I introduced H. R. 11279, a similar bill, in the House. The communities in my district are in favor of this legislation as is certainly indicated by the following letter I received from the city manager of the city of Plymouth, Mich.:

PLYMOUTH, MICH., *April 1, 1958.*

Hon. MARTHA GRIFFITHS,
United States House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN GRIFFITHS: Local units of government are constantly plagued with tax limitations, debt limitations, and limitations on sources of income. As a result, many local units of government have delayed construction and paving programs from year to year, with the hope that the financial picture for them will be somewhat brighter. At the moment, the financial picture looks more dim than ever. Half of the streets in the city of Plymouth remain to be paved. It is hopeless to appeal to our State government for financial aid because it, too, is plagued by debt limitations and limited sources of income.

It is proposed that the Federal Government undertake a public-works program, which will benefit not only the economy of this area and the Nation, but also provide, for the citizens, improvements sorely needed. Attached is a memorandum from our supervisor of planning and engineering, dated January 25, 1957, in which he submits a summary of street-improvement costs, which, for 75,000 linear feet of pavement, will cost almost $2 million. About one-half of the total cost could be recovered by the city by special assessment from properties abutting the improvements. The other half of the cost would be city share for intersections, city-owned parcels of land, and corner-lot improvement costs absorbed, in part, by the city. It is proposed that the Federal Government underwrite the whole program, that the special assessments be collected and returned to the Federal Treasury over a period of 9 years, and that the city's share of the program be repaid over a period of 15 years. It is recommended that in order to accelerate the program, a letter of intent be executed both by the Federal Government and the city of Plymouth, which will authorize the immediate preparation of plans and specifications and the taking of bids at the earliest possible time.

Rather than stimulate business by way of tax cuts, it would seem more reasonable to stimulate business by increasing the durable-goods industry, which, at the moment, is relatively inactive. In addition to the road program, the city of Plymouth needs 3 underpasses, estimated to cost $400,000 each, a new city hall, and has about 2 miles of creek to enclose at an estimated cost of one-half million dollars. There is plenty of work to do. It is a matter of distributing the labor and money to accomplish the job.

Very truly yours,

A. F. GLASSFORD,
City Manager.

Eric Johnston's Foreign-Aid Lobby

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. GROSS. Mr. Speaker, the Waterloo (Iowa) Daily Courier, in an editorial in its April 10 edition, properly argues that private groups such as Eric Johnston's foreign-aid lobby should not have access to Government funds with which to stage promotional affairs. The Courier also questions whether contributions to Johnston's lobby, known as the Committee for International Economic Growth, properly are deductible for income-tax purposes.

As part of my remarks, I desire to include the Courier editorial, which follows:

When the United States House of Representatives was considering a bill appropriating funds for the executive office of the President, Representative H. R. Gross, of Waterloo, offered an amendment providing that none of the money could be used for publicity or propaganda purposes designed to support or defeat pending legislation. The amendment was accepted on a voice vote.

The amendment was designed to prevent the use of special White House funds to finance such activities as the recent gathering in Washington to promote the President's foreign aid recommendations. While citizens' groups and interested individuals have an obligation to promote the legislative causes in which they believe, they should not have access to Government funds with which to stage promotional affairs.

Much the same issue is involved in the question of whether a business contribution to the foreign aid lobby is deductible for tax purposes. Eric Johnston, who has been directing the efforts to build public support for foreign aid, has declared that such contributions are deductible. Presumably he has consulted with the Internal Revenue Service on the question.

Yet such contributions are not logically deductible under previous Internal Revenue rulings. For example, the department has ruled—under pressure from public power advocates—that utilities cannot even deduct as a business expense the cost of advertisements to present the advantages of stockholder-owned powerplants. This tends to restrict the right of a business to advertise the facts necessary for its own survival. Yet Johnston declares that businesses can deduct contributions for political agitation in the foreign aid field.

Foreign aid should be weighed objectively by Congress on the basis of the public interest. A sorry aspect of the pressure for large foreign aid appropriations is that some of it has come from businesses which see foreign aid as the only way of retaining foreign markets. If such businesses can deduct money spent to promote foreign aid from their taxes, then utilities should be given the comparable right to deductions for money needed to present their case to the public.

The Federation of the West Indies

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. FASCELL. Mr. Speaker, the Federation of the West Indies, comprising the islands of Jamaica, Barbados, Trinidad and Tobago, Grenada, Dominica, St. Vincent, St. Lucia, Antigua, Barbuda, St. Christopher, Nevis, and Anguilla and Montserrat, came into existence on January 3, 1958, when Lord Hailes was invested as the first Governor General of the federation. Members of the upper house have been appointed by the Governor General in consultation with the political leaders in the islands. On

March 25, 1958, the members of the lower house were elected as representatives for each island in the federation. The federal legislature will officially convene for the first time at Port of Spain, Trinidad, on April 22, 1958, and will be inaugurated by Princess Margaret, of Great Britain.

April 22, 1958, will be an important day in the lives of the 3 million inhabitants of the islands of the West Indies which have an area of more than 8,000 square miles. It will be a day of historic occasion for them to achieve self-determination by taking this forward step toward dominion status. The formation of this federation offers the possibility of sound economic development of the territories for the welfare of its people. The United States is always interested in the welfare of its neighbors and always benefits when our neighbors grow more prosperous. Difficult political and economic problems face the Federation of the West Indies, but the knowledge of the advantages which can emerge from successful solutions provides a powerful incentive.

The newly organized federation comprises an area that is strategically located in the Western Hemisphere.

Our country has enjoyed the various tropical fruits and vegetables that are produced in this area. Pioneer industries thrive and multiply because the people of the West Indies take readily to new ideas and are skillful; especially in the commercial trades. Tourism has always played an important role in the development of the islands.

The United States is keenly interested in the people of the West Indies and wishes for them continuing success in their new status.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Appendix

Labor and Labor Policies and Programs

EXTENSION OF REMARKS
OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered last Saturday before the CIO–COPE convention, at Fresno.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Californians, I appreciate having this opportunity to come before California's CIO Council on Political Education to discuss with you in person my views in the field of labor and the policies and programs I recommend.

Frankly, this is a novel experience for me. My recollection is that when I was elected to the Senate in 1946 and reelected in 1952, I only heard from the A. F. of L. and CIO endorsing conventions when I read that they had recommended the election of my opponents.

There is no illusion on my part, nor I am sure on yours, that my candidacy for governor is about to receive the endorsement of this group.

You have a powerful and effective organization. In many States of the Union and in numerous areas within the several States, your efforts have elected governors, United States Senators, Members of the House, and State legislators. Many competent observers believe COPE has sufficient power, if not to nominate, at least to veto the nominee of the Democratic National Convention.

As one who has had a quarter of a century of public life in California, I believe I understand effective work in political affairs when I see it.

Your power in this State has become so great it is no longer realistic to consider your organization as a junior partner of the Democratic Party. As the dominant factor in the opposing political party to the one in which I hold membership, you have been doubly generous in inviting me here.

In some respects I understand how Daniel felt in the lion's den. My action in coming here, however, was voluntary. Compulsion was used to put him there. That, at least, is quite a difference in the manner of our respective arrivals.

Based on my record of public service to our State and Nation, I do seek the help and votes of the AFL–CIO members as individual Americans and as fellow Californians. Large numbers have already pledged me their support.

You can be assured that the comments and recommendations I make to you here today are the same thoughts and policies I submit to any other group in California or in any other section of the State.

You and the voters of this State will always know where I stand and why I stand there. The views I express in the northern part of the State are no different from those expressed in the south.

From the day, last October 3 (in Sacramento), that I announced my decision to be a candidate for Governor of this great State, publications sponsored by your organization and certain union leaders have continuously proclaimed that I am unfriendly to labor. Such is not the case.

The supporting statements that have been used to bolster this charge seem to me to be either inaccurate or incomplete.

I am not certain whether these claims mean that candidates you endorse must always support the policies you recommend or the programs you submit. Is this in the best interests of the union movement? Is this in the best interests of the people of California? I think not.

If this and other similar labor organizations are to claim to be educational, they cannot be narrowly partisan, for such partisanship destroys the very objectivity of education.

In the 1956 national campaign the record shows that of the reported $1,078,852 political contributions from labor, all but $3,925 went to Democratic candidates.

Of the candidates marked as antilabor at the national offices of COPE, 14 are Republicans and only 1 is a Democrat.

These facts hardly indicate a bipartisan approach to the endorsement of candidates.

In view of this background, I believe it would be constructive to separate my comments today on the things upon which we should be in agreement and the obvious matters upon which we apparently disagree.

Twenty-five years ago, I was a member of the State legislature. I participated in the drafting and subsequent approval of the first unemployment compensation law in California, and it still remains as the basic law of this State.

As an assemblyman I sponsored the antilynching legislation now on the statute books of this State.

As minority leader of the Senate it was my motion last year that brought the civil-rights bill before the Senate. It was the first such legislation to pass the Congress in 80 years.

As a member of the State legislature I supported legislation which made illegal the so-called yellow-dog contract. I took this stand because I believed then, as I do now, in the right of a worker to join a union.

In the United States Senate, I have supported the Government's unemployment compensation program and voted for legislation to establish a Government program to promote full employment.

I have supported minimum wage increases and legislation on establishing standards to govern employee health and welfare funds.

In 1946, I supported legislation to establish the Federal Mediation Board to encourage the peaceful arbitration of labor disputes.

Later that year I opposed a Democratic President's request for unprecedented peacetime authority to draft into the Army the railroad workers who were out on strike.

I have supported increased benefits for the Nation's railroad workers and their dependents. I voted for legislation starting on-the-job and on-farm training programs for our returning veterans.

My support has been given to increased social-security benefits and to bring millions more of our citizens under the protection of the law and millions more into our unemployment insurance system.

I do not believe there is anything in that record with which you would disagree.

To be sure, some of your leaders might have wanted to have moved at a faster pace and with more astronomical spending. But union members pay taxes, too. Together with their union initiation fees, dues, and assessments it makes quite a drain on their take-home pay. The worker and his wife know the economics of both government and union taxes.

One other point that I should like to mention is that I have participated with you and some of your national leaders in helping to maintain the moral, psychological, and physical defenses of this Nation against the godless menace of international communism.

I have not failed to express my convictions in opposition to policies of appeasement of communism, whether suggested by business or labor or political officials. Now, as at Munich, the road to appeasement is not the road to peace. It is only surrender on the installment plan.

Whether in or out of public office, I intend to continue to frankly discuss the objectives of the men in the Kremlin and the Communist philosophy, whose only promise to the worker is to make him a slave of the state. I salute the president of the AFL–CIO, George Meany, for his outstanding leadership against international and domestic communism. He is no "Johnny come lately" to this crucial struggle.

I also voted for the Taft-Hartley bill, for which I was accused of being antiunion. I cannot believe, however, that my support of this legislation, which I believed then and now is constructive labor legislation, is a reason for your opposition of my candidacy.

The fact is that the Democratic Congressman from the Second District, who is receiving labor support for his senatorial contest, also voted for the Taft-Hartley legislation and also voted to override a Democratic President's veto of the bill. So this can hardly be the basis of your opposition to me. Or is there a double standard? If a Democrat voted for Taft-Hartley is he excused and endorsed? If a Republican does the same thing is he condemned and liquidated?

You will recall that the Taft-Hartley bill was misrepresented as a "slave labor bill." A great and expensive propaganda drive was undertaken to convince union members that it would destroy their organizations.

Of course, it did no such thing. In 1947 when the bill was enacted there were 15 million union members. Today there are an estimated 19 million. Union treasuries are, for the most part, larger than they have ever been before.

What sort of slavery and destruction of unionism is this? Now the same old refrain is being played over again.

I merely want workers and union members to have the protection against arbitrary power on the part of union officials that the Bill of Rights gives us as citizens against the arbitrary acts of Government officials.

The labor program I recommend may be the basis for your organization's opposition to my candidacy. This proposed legislation has been subject to distortion and misleading representations.

I believe in and support strong and free unions. I want them to be responsible to their membership and to the public. They

exercise great power and with power must always go responsibility.

I believe in and unqualifiedly support the right of every American worker to join a union. Any attempt to restrict the opportunity of an employee to participate voluntarily in a union, or to prevent a duly elected union organization from representing such employees in collective bargaining, will be vigorously opposed by me.

I believe in the right of every union member to have a free voice in the administration and activities of his or her union, and if the union does not act in their best interest I believe in the right to withdraw from the union without losing employment.

I have introduced legislation in the Senate, and support similar legislation in California, which will guarantee democratic control by union members over the officers and activities of their respective unions. This legislation does the following:

1. Guarantees the election of union officials by secret ballot and makes sure that the ballots cast are the ballots counted.

Is this against the best interests of the members?

2. Provides for the recall of union officials who misuse their positions of trust and responsibility.

Is this undemocratic or antiunion?

3. Prevents conspiracies between management and union officials that work against the welfare of union members.

Is there anyone here in favor of "sweetheart contracts?"

4. Protects union members' welfare and pension programs. (This provision protects the welfare programs of union members whether they are controlled by unions or management).

Does this threaten the intersts of the rank and file?

5. Requires that where unions, under the existing low, represent all employees in an industry or plant, then all employees are entitled to be admitted into the union if they should desire union membership.

Who here believes in class A and class B membership or in discrimination in union membership?

6. Provides that union members shall by secret ballot have the determining voice in the conditions, terms and duration of strikes.

Should not union members, who are called on to make the sacrifices in strikes have the right to determine the issue?

7. Prevents arbitrary control over local unions by trustees appointed by national or international unions.

Can this be considered detrimental to either the members or the locals?

8. Provides for regulation by union members of the actions of their unions on questions of excessive union fees, assessments or arbitrary actions.

Is this undemocratic or harmful to the rank and file?

Of course, I understand that there may be some of the provisions I mentioned on which some of you may recommend a different approach.

Those who completely opposed this basic bill of rights for the working men and women are the ones not serving the best interests of their members or the public.

A question has arisen as to where my opponent for governor stands on the workers' bill of rights. On February 26 in a speech at the Press Club in Los Angeles, he supported it in principle. On March 25 in a speech in Albany, he opposed it. I do not know if his southern view or northern view currently prevails in the matter of giving the members control over their own unions. If he doesn't support the workers' bill of rights, just what is his alternative?

Public minded citizens and organizations, whose support for organized labor is publicly recognized, have recently expressed themselves on the subject of democratic reform in union organizations.

The American Civil Liberties Union, which states it has been urging the organized labor movement for 15 years to adopt improved internal practice of civil liberties, last month recommended a labor union bill of rights. The areas covered by their proposal are in substantial agreement to those covered in the legislation I have just outlined. You certainly do not consider the American Civil Liberties Union as antiunion.

Clark Kerr has recently authored a report for the fund for the republic on "Unions and Union Leaders of Their Own Choosing." Mr. Kerr comments:

"The title of this paper suggests that national policy might move from the 'unions of their own choosing' of the 1930's to 'union leaders of their own choosing' and even, to a degree, to 'union rules of their own choosing.' But how is this to be accomplished? Action by the unions themselves would be most desirable and there has been a surprising amount of it during the past year. Experience here and abroad, however, suggests it will not be sufficient, that behind the good intentions of most union leaders will need to stand the power of the law, as in the case of corporations in the past.

"This is a troublesome issue. The pluralist will defend the private association from the control of the State. The individual, however, also needs defense against being controlled by the private government of the trade union, and ultimately this defense can be guaranteed only by the State."

Does anyone accuse Mr. Kerr, who is a member of the United Auto Workers Review Board, of being unfriendly to labor?

Mr. Clyde Summers, a labor expert and professor of law at Yale University, recently submitted an article for the New Leader magazine, a liberal weekly published by the American Labor Conference on International Affairs. Mr. Summers recommends a "bill of rights" affirmatively guaranteeing the rights of membership. He also recommends removal from union constitutions of those provisions which stifle the democratic processes. Is Mr. Summers antiunion or working against the interests of union organizations?

Mr. J. B. S. Hardman, former editor of Labor and Nation as well as the CIO Advance, has recently written:

"Unionism as a whole may well find it of advantage to itself, in the long run, to have the members' rights and leaders' responsibility bolstered by adequate legislation, carefully devised and properly administered under foolproof institutional setups."

Mr. Hardman concludes his remarks with the following:

"There still lingers in the recesses of union consciousness that ancient fear of government, of law, of the courts. That no longer fits the new state and status of the 20-million-member union movement in the democratic United States."

I have stated my position in support of voluntary unionism, and I intend to bring this issue to labor organizations and their members and to the people of California this year.

I believe that unions, in order to grow, prosper and function effectively, must induce employees to become members of their organizations voluntarily and not by compulsion.

The late Samuel Gompers, the founder and the father of the American Federation of Labor, pleaded the cause of voluntarism in unions. He also wrote in his autobiography printed in 1925, page 132 (this quote has been curiously omitted from the newly revised and edited edition of 1957):

"I held and I hold that if a union expels a member and he is deprived of a livelihood, in theory or in fact, insofar as he and his dependents upon him are concerned, it is capital punishment."

No permanent progress has been achieved in our society, or in any other civilized nation, where people are compelled to belong to particular organizations in order to exist.

The strength and contribution of our churches, parent-teacher associations, and fraternal, charitable, veterans, and civic organizations has been due to the free and willing participation of our citizens.

I believe in the right of an individual to decide, without coercion, his intention to become and remain a member of a union. Good leadership and promoting the real interests of the workers will produce stronger unions than trying to hold reluctant captive members who feel they have been coerced.

In voluntary organizations, there will always be some individuals who will not participate in the activities of institutions working in their behalf. But that is the price we must willingly pay for liberty. Its alternative is compulsion without cooperation.

This is not a partisan issue.

If we are to continue to make progress through our free enterprise system with its benefits flowing to all, responsible management and responsible unions are necessary to achieve this objective. We are all, in a real sense, each our brothers' keepers.

I have great faith in the ability of the citizens of California to independently see the difference between truth and falsehood. I am convinced that the recommendations and policies that I propose will be supported by the members of organized unions when they are fully and fairly informed.

Freedom and democracy must prevail throughout organized labor, for only responsible union organizations operate in the best interests of our society and their own membership.

Can any reasonable man believe that attendance at union meetings will be increased by compulsory membership in our unions? In the early days of our country, there was a requirement in some sections of the Nation, where the citizens of a community were compelled to belong to a particular church or religious group, and severe penalties in the form of exclusion from all community life were levied for noncompliance.

We must never forget that unions, as all other organizations, are a means to an end, not an end in themselves. Unions are a medium through which individuals are able to act not only in their own best interests but in the best interests of all the people.

I have stated in my public speeches in California and elsewhere that neither the record of the McClellan committee nor the legislation I have introduced in the Senate should be construed to constitute an indictment against all labor officials.

Many of these officials, past and present, have labored unceasingly in the best interests of their fellow workingmen. And I know they will continue to do so.

Despite the honest differences of opinion that may exist between us as to the merits of the proposals and objectives we seek, I want the membership of all labor organizations in this State to know that if I am elected Governor of California they will always have a fair hearing in matters coming before my administration. I will seek to the best of my ability to serve the people of the entire State.

In the meeting of the problems of our generation, we must show the same courage and commonsense as the men who gave us our Republic and have helped to maintain it.

As Republicans, Democrats, or Independents we can all join in subscribing to the oath of Thomas Jefferson when he said:

"I have sworn upon the altar of God eternal hostility to every form of tyranny over the mind of man."

Texas Editor Says Department of Agriculture Releases Misleading Information

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. JOHNSON of Texas. Mr. President, a Texas authority on the livestock industry, Mr. Grover C. Lee, Jr., editor and publisher of Livestock Marketing Journal, declared in a recent address that the United States Department of Agriculture is releasing out-of-date and misleading information to our country's livestock producers.

Mr. Lee cited a number of specific examples to back up his contention.

I ask unanimous consent that a report of Mr. Lee's address, as published in Livestock Marketing Journal, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EDITOR SCORES USDA REPORT ON MARKETING

HOUSTON, TEX.—The Nation's livestock producers are receiving "too much inaccurate, antiquated, misleading information from Washington," Grover C. Lee, Jr., editor and publisher of Livestock Marketing Journal, said here recently during a district meeting of the Texas Livestock Auction Association held at the Rice Hotel.

Attacking a marketing research report, Market Outlets for Livestock Producers, based on 1955 studies and released in March by the Agricultural Marketing Service, United States Department of Agriculture, in Washington, Lee charged that the conclusions therein were grossly misleading and added that "it should have been burned along with those other reports which we understand from the newspapers were labeled by USDA bureaucrats as being of questionable value."

The Livestock editor declared that "conclusions in the 2-year-old report are already outmoded and that it fails to give proper credit to the markets now selling most of the Nation's livestock—the livestock auctions."

Lee said that livestock auction markets now sell more of the Nation's volume of livestock than do centers. Industry-compiled figures for 1957, he said, show that the country's livestock auction markets sold about 53 percent of the Nation's livestock consigned to market.

"It is only logical to assume that the total volume of sales of 2,300 independent, conveniently located markets in areas of livestock supply are outselling the old, centralized terminal and public market centers.

"However, this latest USDA study even fails to define these 2,300 auctions as markets where all buyers and sellers of livestock are privileged to use facilities."

He quoted from the report, page 5:

"Terminal public market (also referred to as terminal markets, central markets, public stockyards, and public markets) are livestock trading centers having complete facilities for receiving, caring for, handling, and for the sale of livestock on a private treaty basis. The terminal public markets in this report are the 64 livestock trading centers for which the United States Department of Agriculture assembles market information. Various numbers of commission firms depending on size of market, sell livestock at these markets. All buyers and sellers of livestock are privileged to use these facilities."

Defining auctions, the report says on page 7:

"Livestock auctions (also referred to as sales barns, livestock auction agencies, community sales, and community auctions) are trading centers where anmials are sold by public bidding to the buyers who offers the highest price per hundredweight or per head."

The Texas livestock editor quoted Webster's dictionary: "Market: A public place for the sale or purchase of commodities."

"All livestock auction markets are open to the public and serve the public, and 'all buyers and sellers of livestock are privileged to use facilities.'

"Why," he asked, "was the word 'market' purposefully omitted from the definition of a livestock auction?

"Reference also is made to '64 terminal markets.' As a matter of fact, there now are only 60 markets included on the USDA's so-called 'public' or 'terminal market' list. Furthermore," he added, "10 markets selling all or 50 percent or more of their consigned livestock by the competitive, high-bid auction method are listed on the 60-market 'private treaty' roster repeatedly referred to as '64 terminal or central markets.'

"These markets include the world's largest cattle auction at Amarillo, Tex., Clovis, N. Mex., Richmond, Va., and Stockton, Calif., all 100 percent auctions; and Billings, Mont., Montgomery, Ala., Ogden, Utah, Spokane, Wash., Detroit, Mich., and south San Francisco, Calif.

"Around 3 million head of salable receipts moved by the outgrowingly popular high-bid auction system thus are being erroneously—or deliberately—tabulated with totals credited to the 'private treaty markets,'; that is, according to the markets which appear on its so-called 'public market' list.

"On page 5, this report also says—and we quote: 'The 64 terminal public markets vary greatly in size. The 10 largest markets handled between one-half and three-fourths of the combined total of various species of livestock sold during the period 1951–55.'

"We can't vouch for the truth of that statement in 1955. It could have been correct—but we don't know. We even have doubts, as a matter of fact. We can say, however, that it is a misleading and erroneous statement to issue in March, 1958.

"For example, let's have a look at Texas—the Nation's leading livestock State—and let's consider actual salable receipt totals, not the results of estimates or questionnaires, but actual head-by-head count by the United States Department of Agriculture and inspectors of the Livestock Sanitary Commission of Texas.

"In 1955, according to official USDA and ISC records, a total of 7,897,817 head of livestock were sold by all Texas stockyards, including more than 150 auctions and the 3 central markets at Fort Worth, San Antonio and Houston. Of that total, 5,205,012 head were sold at free, open, unrestricted, competitive auction markets—65 percent of the gross volume of the entire State;

"Now, then—in 1957, according to those same reliable and accurate sources, the share of Texas livestock auctions had increased to 71 percent. During last year, all Texas stockyards (auctions and centrals) had combined salable receipts of 7,155,317 head of all species of livestock. Fort Worth, San Antonio, and Houston handled a total of 2,054,208 head and the State's auctions moved a combined total of 5,091,109 head.

"To further illustrate the actual amazing gains and increasing popularity of the auction method of selling livestock, 10 years ago—in 1948—auctions were moving only 53 percent of the State's livestock. Today they are handling 71 percent.

"During 1957, the auctions' share of the State's total of cattle and calves climbed from 68 to 73 percent, hogs from 74 to 76 percent. They handled slightly less sheep and lambs than the prior year, slipping 2 percent to 64 percent.

"And don't think for a moment that this amazing progress has been made without stiff competition. In 1957, according to the United States Department of Agriculture itself, our 3 Texas central markets had these respective rankings nationally: Fort Worth, 11th in cattle, 6th in calves, 27th in hogs, 2d in sheep and lambs. San Antonio, 24th in cattle, 11th in calves, 19th in sheep and lambs. Houston, 38th in cattle, 4th in calves, 55th in hogs, and 56th in sheep.

"That is the picture in Texas. There is no reason for us to believe, on the basis of United States Department of Agriculture's own statistics relating to terminal and/or central market receipts—year by year—that auction marketing is not making similar progress in most other States over the Nation.

"It also is interesting to note that this latest Department of Agriculture report is based on sampling drawn from basic lists obtained from the 1954 Census of Agriculture.

"We, frankly, consider much of that information similar to the somewhat unreliable livestock data which appears on a Texas county tax collector's rendition rolls.

"In the introduction to this so-called report, its authors, Victor B. Phillips and Gerald Engleman, state on page 4:

" 'Estimates of sales of livestock by farmers through different types of market outlets in 1955 are based on data obtained in connection with a comprehensive survey in 1956 of farmers' expenditures in 1955 period. The survey was made under the supervision of the Agricultural Marketing Service of the United States Department of Agriculture and the Bureau of Census. A sample of approximately 6,600 farms was drawn from basic lists obtained from the 1954 Census of Agriculture.'

"Now, again taking a look at figures here in the Nation's No. 1 livestock State: In 1954, the United States Bureau of Census reported that livestock sales in Texas totaled 7,995,481 head; yet actual salable receipt totals show that 8,119,761 head were sold through the State's central markets at Fort Worth, San Antonio and Houston and 150 auction markets alone—and this figure, of course, does not include a heavy volume of direct sales or other transactions.

"In a speech delivered at Denver, Colo., on June 15, 1956, to the annual convention of the American National Livestock Auction Association, Mr. Engleman, one of the coauthors of this recently issued report on Market Outlets for Livestock Producers, said, and we quote:

" 'Because of some technical problems in making estimates for those auctions which did not respond to our inquiry, it is not possible at this time to give any precise figures on the number of livestock sold through auctions. However, a preliminary analysis indicates that about the same number of cattle were sold through the auction ring as were sold at terminal markets in the country as a whole. It appears that in 1955 approximately four times as many calves were sold at auction as at terminal markets. If cattle and calves are added together this would mean that more than one-third more cattle and calves were sold through the 2,322 auctions operating in the United States in 1955 than at the 64 terminal markets.

" 'Our preliminary estimates indicate that auctions sell about two-thirds the number of hogs that are sold at terminal markets. The auction also appears to be a very important market for the nation's sheep and lambs. Tenative estimates are that in 1955 nearly four-fifths as many sheep and lambs were

sold through auctions as were sold at the terminal public stockyards.'

"May I pause here to inject one more interesting Texas statistic: In 1955, the year to which Mr. Engelman refers, the Mills County Commission Co., a livestock auction market operating under regulations of the Packers & Stockyards Act which also govern the Nation's terminal or central markets, and located in a Texas community of slightly more than 1,500 population, sold a total of 582,974 head of sheep, lambs, and goats. And, on the basis of salable receipts listed on the USDA's own roster of 64 public or central markets, this Texas auction ranked 6th in the entire Nation in salable receipts of that species. Furthermore, despite lower receipts in 1957 the result of forced selling and liquidations of herds and flocks in our Lone Star State due to the severity of the 8-year drought in 1956, this Texas livestock auction—last year, 1957—ranked seventh among all markets in the Nation.

"Continuing now to quote from Mr. Engelman's speech at Denver:

" 'These preliminary figures have been surprising to those of us engaged in livestock marketing research. Although researchers have been aware of the growing importance of livestock auctions, few have realized the full importance of the auction as a livestock marketing institution.

" 'Some of the other estimates also are somewhat surprising. It has been commonly thought that the major function of auctions in many areas was to provide a market for interfarm sales. However, the tentative analysis indicate that over 50 percent of each of the species of livestock sold through auctions in 1955 were purchased for slaughter. The data also indicate that packer buyers and order buyers for packer accounts were the most important buyers at auctions. Livestock producers and feeders were the most important buyers of nonslaughter animals. Dealers and order buyers for feeder accounts, combined, bought about two-thirds as many animals as did livestock producers and feeders.

" 'There are preliminary results, of course. A more complete analysis of this survey with more precise and more detailed estimates will be published late this year. You gentlemen will all receive copies of the publication and will be able to compare the operation of your auction with others of different sizes in your own region and in the United States.'

"Today—21 months later—we still await this auction study report which Mr. Engelman said in 1956 'will be published late this year.'

"The United States Department of Agriculture spends millions and millions of dollars compiling central or terminal market information. Yet apparently, they can't 'afford' to publish this study of the industry which today is selling most of the Nation's livestock consigned to market.

"This outdated, misleading report, Market Outlets for Livestock Producers, is another forcible reminder that the Nation's livestock markets—both private treaty and auction—should conduct more private research.

"On the basis of this apparent 'too little and too late' marketing research by bureaucrats in Washington, there is a vital need—by both market operators and producers—for more responsible, more reliable, and certainly more timely livestock marketing information.

"Being quite human, we readily realize and admit that everyone makes mistakes. On the other hand, it should be purpose and policy to keep those mistakes at a minimum and to insure to all extent possible that errors be little ones. Nothing can be more damaging to industry—or even to Government—than an incorrect statistic.

"Which reminds us of this news story, widely published in the Nation's press earlier this year and which, incidentally, appeared in our own newspaper, Livestock Marketing Journal. And we quote:

" 'The headline reads: "Revised Figures Show Drop in 1957 Farm Income."

"And the story says, and again we quote:

" 'WASHINGTON—The Agriculture Department reversed itself and said net farm income in 1957 went down instead of up.

"The 1957 net, the agency reported, 'was probably slightly below' the $12.1 billion of 1956. Officials said the final tabulation would probably show 1957 net farm income at $11.9 billion, compared with the $12.2 billion originally forecast.

"Net farm income measures gross income—cash for marketings plus Government payments—minus costs.

"Agriculture Secretary Benson was clearly counting on higher farm income in 1957. Most of his recent public statements have excluded some such phrase as this excerpt from his year-end report: 'During 1957, farm income increased for the second consecutive peacetime year despite rising costs.'

"As we said, may all of our mistakes be little ones. And, with pride, painstaking care and diligence—our industry—on behalf of our growing number of satisfied customers, the livestock producers of America—should expand and improve its own private statistical research which, year by year, continues to show more and more progress for the auction method of selling the Nation's livestock."

Heights and Depths of Unemployment

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. WILEY. Mr. President, on yesterday there was published in the Washington Star magazine an article entitled "Heights and Depths of Unemployment." I am very happy to ask that the article be printed in the Appendix of the RECORD, because I believe that we talk too much in generalities and the statements we make tend to be colored by the views we hold on one side of the problem or the other.

The article sets forth the total amount of unemployment in 1929 and in the following years, up to the present time. The reasoning of the article is, I believe, definitely worth while.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEIGHTS AND DEPTHS OF UNEMPLOYMENT

(By Doris Kanter)

"Unemployment" is a word with a Dr. Jekyll and Mr. Hyde personality. Much of the time, it's simply a statistic—a relatively mild, if slightly sad, statistic vaguely known to affect some anonymous citizens in some remote communities. Then, suddenly, by the alchemy of economics, it's a specific, immediate and ominous fact, a terrible threat to one's neighbors—even to one's self.

In January of this year, for instance, there was a variety of opinion on the state of the Nation's economy. You could find economists and/or politicians to support any of the following views:

1. A dark and foreboding cloud hovers over the Nation's economy.

2. There's a cloud, all right, but it's not so dark and foreboding.

3. It will soon pass.

And then it hit. Unemployment in mid-January, it was announced, was up, sharply and dramatically. If there were other, brighter factors in the overall economic weather picture, they were obscured by the fact that unemployment had climbed to 4,494,000, an increase of 1,120,000 in a single month. The figures invited comparisons with times past: It was pointed out that this was the highest monthly increase since 1950. The national unemployment total was to climb still higher and, thanks largely to the spector in the shape of an unemployment statistic, a dread word of the early thirties was back on the tips of American tongues.

How did unemployment in the first month of 1958 compare with times gone, good, and bad? If there any number of percentage of unemployed which serves as a standard to distinguish "normalcy," "recession", and "depression?" A lot of statistics and facts are presented to the ordinary citizen: How can John Q really tell when unemployment portends dark times and when it doesn't?

Sunday, the Star magazine, put these questions to Seymour L. Wolfbein, chief of the Labor Department's Division of Manpower and Employment Statistics. The accompanying graphs, showing the percentage of unemployment in relation to the total national labor force over the last quarter of a century, are based on statistics furnished by his office.

Briefly, here is background Mr. Wolfbein considers essential to an understanding of unemployment statistical developments:

Since World War I, three important changes have affected the Nation's wage and salary workers. One of these is a shift in job concentration from the "goods-producing" industries (coal, oil, gas, steel, machinery, food, feed, etc.) to "services" (all activities that involve buying, selling, teaching, transporting, government service, etc.). More persons now are engaged in the provision of services than in the production of goods. Some 60 percent of the increase in nonagricultural employment has taken place within three subdivisions of the general "service" category—Government, trade, and miscellaneous services. Even in periods when nonagricultural employment generally has declined, these three have shown increases. Weakest of all employment areas are the farms, which had 7 million workers in 1870 and which today, despite tremendous increases in the over-all labor force, claim the same number of workers.

The composition of the labor force has changed: There have been substantial increases in the number of women and older workers.

Still another change has been geographic. Employment is now much less highly concentrated in particular States and regions than it used to be.

January is momentous still as the month that brought in, as well as a new year, a rapidly spreading new fear. Using January as an illustration of what his office looks for in statistics, Mr. Wolfbein says:

"We were anxious to learn from the figures whether unemployment had spread. Certainly, you watch the totals to see the rate and magnitude of change. But from the past, we've learned to expect that unemployment, when it's on the rise, will hit the 'durables'—auto, steel, radio, television, refrigeration industries—first. So long as other sectors of the economy hold their own—even if unemployment goes up in the durables—things may not be so bad. But if unemployment is spreading to other segments of industry, that's definitely not good."

More significant sometimes than totals, too, the statistics chief says, are the characteristics of jobless persons and the durations of their unemployment. In January, half the unemployed were men 25 and over

and presumably married. Mr. Wolfbein says, "This was not a good sign," he adds, "because it was clear a good many breadwinners were caught.

"In a long period of unemployment, benefits are exhausted and savings threatened. So the question of how many unemployed have exhausted benefits is a most meaningful one.

"We also watch closely," he says, "what happens to the average number of work hours. Ordinarily, $1 out of $10 a factory worker earns is for overtime." In January, total hours and overtime hours were both down.

As for a norm or standard by which to measure recessions or depressions, Mr. Wolbein shrugs.

"What year would you call normal?" he asks.

He suggests the lowest unemploymen figure the Nation could expect is 670,000, based on 1944, when wartime employment reached its peak.

"Seasonal unemployment," he explains, "accounts for part of the statistics, even in the best of times. Then there's frictional unemployment—where joblessness can be accounted for by those just out of college and not yet settled, those between jobs, etc. "The lowest annual level since World War II was 1953, with approximately 1,602,000 unemployed."

What of the worst?

"Well, in 1933—"

Estimated total labor force and percent of civilian labor force unemployed, annual averages, 1929–57, compiled by the Bureau of Labor Statistics

Year	Total labor force	Percent of civilian labor force unemployed
1929	49,440,000	3.2
1930	50,080,000	8.7
1931	50,680,000	15.9
1932	50,280,000	23.6
1933	51,840,000	24.9
1934	52,490,000	21.7
1935	53,140,000	20.1
1936	53,740,000	16.9
1937	54,320,000	14.3
1938	54,950,000	19.0
1939	55,600,000	17.2
1940	56,180,000	14.6
1941	57,530,000	9.9
1942	60,380,000	4.7
1943	64,560,000	1.9
1944	66,040,000	[1] 1.2
1945	65,290,000	1.9
1946	60,970,000	3.9
1947	61,758,000	3.6
1948	62,898,000	3.4
1949	63,721,000	5.5
1950	64,749,000	5.0
1951	65,982,000	3.0
1952	66,576,000	2.7
1953	67,362,000	[2] 2.5
1954	67,818,000	5.0
1955	68,896,000	4.0
1956	70,387,000	3.8
1957	70,746,000	4.3

[1] Estimated lowest percent of unemployment Nation may expect.
[2] Lowest annual level of unemployment since World War II.

Comparison of unemployment figures for the month of January in significant years, in the period 1941–58 [1]

Year:	*Percent of unemployed*
1941	13.7
1942	7.9
1944	1.5
1948	4.0
1949	5.1
1953	3.5
1958	6.7

[1] Monthly figures were not kept by the Bureau of Labor Statistics before 1940. The monthly percentage figures before 1950, however, are assumed to be of the same general magnitude as the yearly percentages, according to the Bureau.

These are seasonally unadjusted figures; that is, the number of unemployed divided by the total civilian labor force. No account is taken in them of seasonally recurring factors, such as weather, which affects the construction industry, etc.

A Visit to Redstone

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. SPARKMAN. Mr. President, recently the Association Press in Alabama had a State meeting in Huntsville. On this occasion a great many of the newspaper men of Alabama had their first opportunity to visit Redstone Arsenal and see some of the things that are taking place there.

Mr. Barrett Shelton, Editor of the Decatur (Ala.) Daily, was one of those who had that privilege. Upon his return he wrote an editorial in his paper entitled "A Visit to Redstone."

This is an interesting comment by one who had seen for the first time this great arsenal and its activities. I commend its reading to everyone. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A VISIT TO REDSTONE

We had, during the past weekend, a chance to tour some of the inner sanctums at Redstone and to watch a static firing of the 1,700-mile Jupiter missile.

We came away with a strong knowledge of just how little do we who live within the shadow of this awesome enterprise know about it.

We have read the accounts of what the Germans and the generals are doing there. We almost daily catch a brief notice in the papers of some new construction plan.

And, still, a visit to the place provides a rude and frightening shock.

No imagination can picture the bewildering array of glistening concrete towers, the oddly shaped buildings housing laboratories and God knows whatever else.

Everywhere there are signs of new construction—they tell us at the present time $25 million worth in progress.

Antique missiles with their stingers gone dot the landscape much like Civil War statues dot southern courthouse lawns. A museum contains more of these antiques, the oldest of which is not yet 20 years off the drawing board.

Olive-drab missiles nestle on flatbed trailer trucks in fenced-in parking lots. The fronts of classrooms and barracks bear jawbreaking title signs like Ordnance Missile Command, Army Ballistic Missile Agency, and Antimissile Missile Agency.

Always, however, the word is "missile."

Even a GI chapel mirrors the work of this strange land. We passed the chapel en route to watch a Jupiter test. It was the usual Army-post type, complete with slender spire, except that from the base of this particular spire there protruded four small fins.

Another incongruity here amid the honks and squawks of test-warning horns, the blast and fury of missile engines is the livestock.

A guide explains that the arsenal still has considerable open land and this is leased to farmers.

Strange indeed is it to watch white-faced cattle contentedly grazing within the sight and sound of flaming, roaring test stands and to see sheep munching on the slopes near where technicians watch through foot-thick glass the performance of some missile monster.

And monster is the name. No picture we had seen, no story we had read quite prepared us for the world-tilting sight that is a big missile engine at full power.

We stood but a few hundred yards away while liquid oxygen and alcohol mixed and burned in screaming, steaming fury for 80 seconds. We were told that the force generated would have hurled a hydrogen bomb some thousand miles across the earth.

There are 17,000 well-paid personnel at Redstone, civilian and military. They seem to joke and laugh and go about their work as men do everywhere.

But somehow the big central heating pipelines that snake across the arsenal to every building site remind us of a fuse.

The feeling of tension and strain that lies underneath all activity here is as real as these same heating lines.

And we discover Redstone is not a happy place.

Promotion of Wheat Exports by Oregon Wheat Growers League

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. NEUBERGER. Mr. President, from time to time, I have called to the attention of my colleagues significant news stories from Oregon newspapers which reported the work the Oregon Wheat Growers League is doing in introducing soft white wheat to additional thousands in the Orient. This story is now being told outside Oregon; and just the other day I discovered in the eminent Christian Science Monitor of April 16, 1958, a news release, over a Pendleton, Oreg., dateline, in which special correspondent Malcolm Bauer tells of the latest steps being taken by this organization of wheatgrowers. For the further information of my fellow Senators, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JAPANESE EAT OREGON WHEAT

(By Malcolm Bauer)

PENDLETON, OREG.—A few thousand Oregon wheatgrowers are changing the eating habits of literally millions of men, women, and children in the Orient. Three years ago the Oregon Wheat Growers League set about the considerable task of educating the Japanese palate to wheat products as a substitute for the basic food, rice.

So successful has been the promotional program that it will now be extended throughout southern and southeastern Asia, in India, Pakistan, Burma, Thailand, and Indonesia.

As the oriental taste discovers wheat, the objective of the Oregon wheat salesmen is being realized: The wheat surplus of the Oregon-Washington-Idaho inland empire is dwindling away. Shipments of wheat to

Japan and India from northwest ports have never been so great.

In 1955 the league took the first small step in its campaign to win a new market of a billion consumers. It dispatched to Japan an Oregon farmer, Joseph Spiruta, with instructions to make friends, influence people, and sell wheat. He did all three.

The program established so recently in such a small way has produced starting results and has been significantly expanded.

The league's chemists and home economists have devised new processes for wheat, resulting in grain products which cook much like rice. Under various trade names, these new wheat products have become popular in this country as well as in Japan and India, for whose tastes they were prepared.

In Japan, the league has taken its demonstration of wheat as a food directly to the people. A fleet of eight mobile kitchens has been operating throughout the rural areas of Japan showing Japanese housewives the uses of wheat flour and other wheat products. Recipes feature the combination of wheat products and foods available to families in Japanese villages and towns, such as fish sausage, whale meat, ginger, and beans.

The league's representatives are also helping with the Japanese school lunch program. More than 6 million Japanese school children—half of the entire enrollment of Japan's elementary schools—receive wheat rolls with their lunch. Prior to the Oregon-based experiment, few had ever tasted wheat rolls.

The school program is in the process of expansion to reach another 500,000 Japanese children. The campaign to win the hearts of the children's mothers also will be enlarged. Four new kitchen-equipped buses will be added to the demonstration fleet. The aim is to reach at least 45 percent of the population of Japan living outside the large urban areas with the hope that, once having tasted wheat products, these millions will become permanent customers of the Oregon wheat farmer.

The league also conducts a bakery training school in conjunction with the Japan Institute of Baking in Tokyo. Students learn to create a variety of products from Oregon wheat flour.

The impact of the league's Far East development program is apparent in statistics released here recently by Jack Smith, of Condon, Oreg., president of the league. In certain areas visited by the league's mobile kitchens in Japan wheat consumption has tripled, from 30 pounds per capita per year to 90 pounds. At the same time, average Japanese annual per capita consumption of rice has declined from 330 to 264 pounds. Mr. Smith credits the league's program with the remarkable inroads wheat has made on the traditional Japanese staple, rice.

Early this month Wayne B. Gentry, of Pendleton, a former United States Foreign Service officer, arrived in Japan for a period of indoctrination prior to taking charge of the league's program in India. The India program will be expanded to match that in Japan. And next will come other countries noted above.

Oregon has found that there is a better way than letting surplus wheat pile up in elevators and mothballed ships.

Frank R. Kent, Great Maryland Journalist

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. BEALL. Mr. President, Frank R. Kent, who was one of the greatest journalists in the State of Maryland and the country, died last week. He was an able columnist on the Baltimore Sun, and his sage comments were read by people throughout the country with a great deal of interest and with a sincere respect for his insight.

John W. Owens, a former editor in chief of the Baltimore Sunpapers, wrote an article about Frank R. Kent, which appeared in the Baltimore Sun for Sunday, April 20, 1958. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FRANK R. KENT
(By John W. Owens)

Acuity in perception. Audacity in execution. These were qualities which made Frank R. Kent notable in Maryland journalism and politics before he was 30 years old. These were qualities which brought him quick fame when, in his middle 40's, he moved into national and international journalism and politics. No newspaperman of his time was less hobbled by custom and usage. None was less cowed by preponderant opinion. What he saw with his own eyes and mind was there to be seen. When seen it called for treatment, swift, unhesitant.

Yet, unhobbled as he was, Frank Kent was not a rebel. At the core of him he was a regular of regulars. He loved and had faith in the old order, social, cultural, economic as well as political. His acuity and audacity ran to the treatment of the actions of men. To their sincerity or insincerity, and decency or indecency. In the field of ideas, he was a traditionalist, willing to entertain the new when it was sincere and decent, but preferring the old in which he had been reared. He liked the ideas which had been his heritage and he wished these familiar things to be stable things.

In part, his support of Woodrow Wilson and opposition to Franklin D. Roosevelt can be explained by his traditionalism in the field of ideas. In the somewhat hackneyed phrase, Wilson was evolutionary, than than revolutionary. He worked within and from the established order, which he treasured. In Roosevelt's policies, those which have survived and those which have passed with time, there was more than a tinge of the revolutionary. Frank Kent could be steadfast for Wilson; relentless against Roosevelt. Of course, it was more than the form and play of ideas. Both Wilson and Roosevelt stirred Frank Kent's interest in human behavior. He believed in Wilson as a man. He did not believe in Roosevelt as a man.

But acuity of perception and audacity of execution were not the full of Frank Kent's arsenal. He was a man of powerful emotion, which influenced all that he said or did in private or public life. In the presence of sorrow, emotion gave Frank Kent the impetuous directness of a child. Years ago, the adored wife of an old friend was killed in an accident. When we went to the home on a gray afternoon we were told that the husband was in bed but wished to see us. Entering the room, we found a man speechless in despair. Frank walked straight to the bed, threw his arms around the broken man and kissed him, as though he were a little boy who had been badly hurt. Life flickered back into the stricken face.

Frank's emotion could provide entertainment, too. When he became managing editor nearly a half century ago, women were breaking through the walls of journalism. As a responsible editor and a practical man, Frank thought the girl reporters should do their share of the work. But, as an emotional devotee of the old order, he had the duty to protect those girls. With knit brows he was found checking assignments. The girl reporters must not be exposed to the vulgar or the sordid.

Out of this guardianship grew companionship. Most of the girls, in that distant day, were feminists, that is, they fought for women's rights and, above all, the right to vote. Frank teased them about their cause; the girls teased back. After 2 or 3 years of this lighthearted nonsense, we realized that the traditionalist was having a good word for the feminists—in a half-embarrassed way and with no clear notion of how he ever got into such a position. There was no mystery. A lot of brave girls were fighting for a cause, without anger, and without asking us, and Frank's emotion had taken charge.

When this emotion, which could be so tender and so gay, reached Frank's work it was another story. Emotion took his acuity and his audacity and made them instruments of inflexible convictions. Frank himself never dreamed that emotion had anything to do with his opinions. He was sure that his opinions were the product of cool reason. But, as with many another strong man, emotion was the force that welded all else together and gave certitude. Once in a while this emotional certitude led to vehement arguments with men and women for whom he cared a great deal. Usually, the results were not serious. Always possessed of a great gift for friendship, Frank was as emotionally dedicated to those he loved as he was to his opinions. In his later years he was at pains to guard against even a ripple. One could see the outspoken man heading off and gulping down some opinions which he thought might be distasteful to a friend. After one of those gulpings down, his face always became serene as though he were saying to himself, "Well, I handled that one."

An extraordinary man. A vivid human being. He will not depart from the lives of the men and women who worked and played at his side, who argued with him and laughed with him.

William F. Knowland, Senator from California

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The New 'Mr. Republican'," written by Joseph Alsop, and published in the Washington Post and Times Herald of April 21, 1958. The article is very complimentary of the distinguished minority leader.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEW "MR. REPUBLICAN"
(By Joseph Alsop)

If you had to choose a single individual to typify the Republican Party, the best choice nowadays would surely be WILLIAM F. KNOWLAND. By the same token, KNOWLAND'S situation in California beautifully typifies the situation of all the Republicans who are running for election this year.

Over the weekend the Senator flew across the continent to appear, like a burly Daniel in a populous lions' den, before a Fresno

meeting of the California leaders of big labor. His chosen topics were the beauties of the two measures that AFL–CIO chiefs dislike the most, the right-to-work bill and Senator JOHN L. MCCLELLAN's new labor-reform bill.

"I expect," he said with a grin, "something less than an enthusiastic reception."

This defiantly tenacious adherence to established Republican attitudes is what makes BILL KNOWLAND the new Mr. Republican. In this troubled year, with the threat of joblessness on most workers' minds, another candidate might be inclined to de-emphasize the right-to-work bill. But KNOWLAND points out that Bob Taft beat the tar out of the Ohio labor leaders after he pushed through the Taft-Hartley Act, so he plunges doggedly onward, down the road he chose a year ago.

"I think," he says, with his peculiar confidence, "that I'll actually get a fair percentage of the labor vote. I'm going to work for it, anyway."

But what makes KNOWLAND's situation so typical of the situation of all Republican candidates is something that the hardest work by KNOWLAND cannot alter. To be blunt about it. President Eisenhower is by no means the great Republican asset that he used to be. No known Republican candidate anywhere is making his main pitch this year on the basis that he is a hundred-percent. Eisenhower man. A few Republicans, in the farm States of the Midwest particularly, are virtually running against their own President, and above all against their President's farm policy.

Nothing of that sort is to be expected from BILL KNOWLAND, whose party loyalty is as solid as his large physical frame. All the same, if President Eisenhower had sat up all night thinking about the best way to hurt BILL KNOWLAND's chances for the California governorship and Goodie Knight's chances for the senatorship, he could not have found a better method than his veto of the pump-priming rivers and harbors bill. The bill Mr. Eisenhower vetoed last week included no less than 29 California projects, estimated to cost just under $200 million of Federal funds. Furthermore, development and control of water resources are just about the hottest issues in California today by KNOWLAND's own frank admission.

Characteristically, KNOWLAND is no more than a bit rueful about the President's action. Of his visit to the White House to plead against the veto, he says (and one believes him, strangely enough), "I didn't put it on a personal basis—I just explained the viewpoint of Congress." And of the veto itself he says (sticking out his chin like a bulldog seeking a good, enduring grip), "It may hurt me for the time being; but the people of my State will remember my own 25-year record on water resources. That's what will count in the end."

You catch the same tone in a less marked way in BILL KNOWLAND's discussion of what is for him the real, life-and-death election problem, the recession. He admits that the Eisenhower administration is taking a bit of a gamble to adopt a wait-and-see policy toward the current lag in the economy. He personally forecasts an autumn upturn.

Ask him whether there is truth in the theory that the Republicans cannot carry crucial Los Angeles County with unemployment at 7 percent or above, as it is at present. Then he replies soberly:

"I don't necessarily agree with that. Furthermore, I think people will feel next fall that we are going ahead again. But if the economic picture gets very much worse, it will be pretty rough, I have to agree."

Yet nothing discourages KNOWLAND, who is already spending all the time left over by his Senate leadership on plans for "my intensive 90-day campaign." After the Senate session ends, he expects to make 6 speeches a day for 3 continuous months. He remembers all the other times when he ran against odds, beginning with the very first time in 1932, when he got an 1,100-vote majority in a State Assembly district that Franklin Roosevelt simultaneously carried by 6,000 votes.

KNOWLAND is not only solid; he is also tireless. He is not only naturally sanguine; he is also firmly convinced that every Republican campaigner is doing the Lord's work. Finally, he likes a fight.

"I think I'll win," he sums up, with stern conviction.

The Effects of the Recession

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Four United States Families in Ten Feel Recession's Effects," written by George Gallup, director of the American Institute of Public Opinion, and published in the Washington Post and Times Herald of April 20, 1958. The substance of the article concerns the result of a recent Gallup poll.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOUR UNITED STATES FAMILIES IN TEN FEEL RECESSION'S EFFECTS

(By George Gallup)

PRINCETON, N. J., April 20—The current business slump has hit home with Americans in a variety of ways.

To a retired steel executive in St. Petersburg, Fla., it means that "I am getting no dividends on my investments." To a widow in Clinton, Iowa, it means that "I've had to take in roomers and because of that I've lost my Social Security benefits."

All told, about 4 out of 10 of the 50 million United States families have already felt the recession in one way or another.

The greatest number of those affected say that it's either a direct case of unemployment or a fringe effect of the job situation—a grocery store owner whose sales are off or a service station owner who's had to extend more credit than normal.

The institute corps of 162 reporters assigned to find out just what the recession means to the typical American asked the people they talked with this question:

"Has the present business situation affected you and your household in any way?"

The replies:

Yes, we've been affected: 42 percent; 22 million homes.

No, we have not been: 58 percent; 38 million homes.

Analysis of the reports from across the Nation reveals that the slum—so far as its effect on voters is concerned—has not been limited to any one group or any particular region of the country. In all groups, a sizable percentage reported that they had been affected.

From across the Nation comes reports of conversation such as these:

In Greeley, Kans., 70 miles southwest of Kansas City, a grain-elevator operator commented: "The prices these days are just too high for my income."

A young wife of Henderson, Ky., told a reporter:

"We run a trading post here; we buy and sell most anything. But our business is hurtin'; people are just tighter about their money."

Southwest of Wooster, Ohio, along State route No. 3, a Gallup poll reporter questioned a 65-year-old dairy farmer who, the reporter comments, "was a very angry man." The dairyman exploded: "It sure has hit me. I get less and less money for my milk; I've got no money to pay taxes. It wouldn't do any good if the Government gave me back any tax; I don't pay any to start with. There's no money in dairy farming."

The Economic Situation

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. BARRETT. Mr. President, recently I received from an old friend, in Cheyenne, a very interesting letter in which he discusses the current economic situation. I was very much impressed by his approach to the solution of the problem.

Because I believe he has considered the matter very thoroughly and has reasoned with great logic in arriving at his proposed solution of the matter, I ask unanimous consent that his letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CHEYENNE, WYO., *April 8, 1958.*

Senator FRANK A. BARRETT,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: I believe the most important issues today are, keeping the peace, unemployment, and inflation. I further believe all three can be controlled by cooperation between government, industry, and labor.

An increase in wages and a reduction in personal income tax is not the answer, either one or both will only cause more inflation, the people who would benefit the most are those who do not need the help and would spend very little of the money received from a wage increase or a tax reduction, but those in the low income group, those who would not receive a wage increase, those with large families who pay very little if any personal income tax, our retired people and those on welfare would not be as well off as they are now on account of the increase in the cost of living.

In my opinion and it is the opinion, I would say of the majority of the working people that, after the expiration of the current wage contracts if labor would voluntarily agree not to demand an increase in wages for at least 2 years.

Industry not being faced with a strike on a wage increase could and I believe would reduce the cost of the product to the consumer the amount to be decided by what they could afford that would create a market for billions of dollars worth of the product, as those who are now unemployed, those who are now on welfare, the retired, and the low-income group of workers could and would buy so much more with the same amount of money they are now spending, also it is a proven fact the people who now have plenty of money to spend are not buying but are waiting for the price of the product to be reduced then they will start buying, we know this to be true, as an ex-

ample in Cleveland when the automobile dealers reduced the price of the cars what they could afford they sold 6,800 new and used cars in a week and a good percent were sold for cash.

Under this sort of a plan the unemployed would be returning to work in a very short time, spending more money, paying taxes, buying more goods thereby creating more jobs and it would not cost the taxpayers 1 cent.

If you people in Washington could get the idea that to spend less and pay a small amount on the debt each and every year it would restore confidence in our lawmakers and leaders starting a return to solvency instead of down the short road to bankruptcy.

I believe the above views are somewhat similar to the views of the majority of the people today.

Yours very truly,

FORREST MCBAIN,
Cheyenne, Wyo.

Proposed Investigation of Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. PROXMIRE. Mr. President, one of the most powerful intellectual forces in Wisconsin for several decades has been the Sunday radio editorial delivered every week by William T. Evjue, editor and publisher of the Capital Times of Madison.

In his broadcast a week ago, Mr. Evjue delivered an eloquent appeal for Congress to drive ahead with a thorough and penetrating investigation of the Federal Communications Commission.

Mr. Evjue makes the point—with which I agree emphatically—that there are a great many extremely serious situations involving the FCC which still bear the sharpest public scrutiny. The investigations that have been held so far by the House committee have not touched on many of the most serious allegations.

Bill Evjue has always held public officials to the most exacting standards of integrity. He is consistent with his entire career as a leading newspaper publisher in his insistance that not even a shadow of doubt should be permitted to cloud the public's confidence in the integrity of public officials. When public officials are entrusted with such enormous powers, to give or to withhold grants from the public domain worth many millions of dollars, then it is all the more essential that every charge and every suspicion be cleared up quickly.

This should be the goal of Congress in respect to the Federal Communications Commission. The FCC should be beyond suspicion. If any suspicion or dissatisfaction exists, it should be cleared up promptly and vigorously.

Mr. President, because Mr. Evjue has set forth so clearly and forcefully the principle reasons for a vigorous probe of the Federal Communications Commission, I ask unanimous consent to have that portion of his Sunday broadcast printed in the Appendix.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

Hello Wisconsin. Broadcasting, the publication which has long been the spokesman for the Federal Communications Commission and the big corporate interests that control and own the 335 TV stations in operation today, makes this statement in the current issue:

"It's unlikely that FCC members will take their wives to the west coast this year to attend the National Association of Broadcasters Convention. As things stand now they will get only their traveling expenses and $12 per diem from Government and must pick up their own hotel bills, whereas the NAB has paid them in the past."

John C. Doerfer, the former chairman of the Wisconsin Public Service Commission and now the Chairman of the FCC, is now going to forget about the American amenities with which he justified the acceptance of money from the NAB for the payment of expenses of any of these conventions in the past. The FCC members will again be starting on an across-the-continent trip to Los Angeles to fraternize with and be wined and dined by members of the National Association of Broadcasters who have received TV licenses in the past valued in the billions of dollars.

What would we think if the United States Supreme Court, desiring to take advantage of American amenities, would start out across the country to be wined and dined by interests having litigation before the court? The Federal Communications Commission is supposed to be a semijudicial body. For a number of years the FCC members have been chasing around the country picking up honorariums, generous expense tabs and other emoluments for attendance at these meetings. This year they are going without their wives and the amenities because an investigation in Washington has not been able to cover up the big sums of money received by Commissioner Mack in connection with the Miami scandal. Of course the committee quickly fired Special Counsel Schwartz when it became evident that Schwartz would bring a lot of things into daylight that powerful interests in Washington wanted to cover up.

Two weeks ago, Frieda Hennock, a former member of the Federal Communications Commission, charged that TV today is in the hands of a giant monopoly. We think it is too bad that Miss Hennock didn't bring this out when she was a member of the Commission. While the members of the FCC are being buttered up at Los Angeles, here are some of the things that they should be answering on the congressional investigation witness stand in Washington.

Who put the pressure on to bring about the granting of a TV license worth from $10 million to $15 million to the Boston Traveler, the largest Republican newspaper in New England? The recommendation of the examiner who conducted the hearings was overruled. Didn't Sherman Adams in the White House and Secretary of Commerce Weeks have a big hand in getting the license for the Boston Traveler? Victor Emanuel is a big New York financier and promoter who has been able to ingratiate himself in administrations in Washington whether Republican or Democratic.

Following the last world war, Emanuel was angling for some of the big German drug properties that had been seized by the alien property custodian. Emanuel then controlled a big utility empire and the alien property custodian who had charge of the disposition of the seized big German drug firms was made chairman of Emanuel's utility empire at a salary of $75,000 a year. Emanuel has now turned up as owning the controlling interest in the Crosley Corp., of Cincinnati, which owns several choice TV licenses. Again, the examiner's recommendation was overruled and Emanuel's Crosley concern succeeded in getting a choice license in Indianapolis.

Time and Life got into the TV scramble quite late but they have had enough influence to already get five choice VHF stations, which is the maximum. The TV empire of Time and Life was built up by a man named Coy, who resigned as chairman of the FCC to head up the TV aspirations of Time and Life. He died of a heart attack while leading the fight for a TV license in Indianapolis. Today, Indianapolis is complaining because all TV stations in that city are owned by big New York interests that have great influence with the administration.

Incidentally, the committee might take a look at two letters sent to the Commission by Senator McCarthy, stating that he wanted to be heard at the hearings when the application in which the Capital Times was interested was to be heard. In his letter, McCarthy stated that he wanted to oppose any license to any company in which William T. Evjue was interested. He never appeared at the hearing but his two letters were sufficient to line up three friends of McCarthy on the Commission.

Farmers Union Grain Terminal Association Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the Daily Radio Roundup published by the Farmers Union Grain Terminal Association, of St. Paul, Minn.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

FARMERS UNION GRAIN TERMINAL ASSOCIATION
DAILY RADIO ROUNDUP FOR APRIL 9, 1958

Some 25 years ago, during the great depression, the Division of Cooperative Marketing of the old Federal Farm Board prepared a history of the beginnings of cooperative grain marketing. We'd like to quote a few paragraphs from that history.

"Wisconsin farmers," the history relates, "were among the first to produce a superabundance of grain, and to attempt collective action in marketing their crops. Grain buyers had established themselves at strategic points on the larger rivers and the Great Lakes at an early date. The outlet for grain to eastern markets was through Milwaukee and other lake ports. To these the grain had to be transported by team and wagon, and the farmer who could cart a load to market and be back home in a week was considered fortunate. In 1855, the railroad was completed from Milwaukee as far as Madison, and in 1856 it reached Prairie du Chien on the Mississippi. Its advent was hailed with joy, which soon turned to indignation and condemnation of the giant monopoly that was fleecing the very farmers who had recently helped to finance the construction of the road.

"Freight rates were a major grievance. Another source of irritation was the evident combination of the grain buyers at various shipping points, and their unfair and high-handed methods. Against this monopoly a group of farmers in the vicinity of Madison decided to rebel. They organized the Dane County Farmers' Protective Union and built an elevator of their own at Madison. This was early in 1857, and so far as is known, was the first farmers' elevator ever built. Ten years after the Wisconsin venture, in 1867, Iowa farmers built an elevator at Blairstown. Within a decade, 42 farmers' elevators were built in Iowa and several in Minnesota."

Few of these early farmers' cooperative survived. The cards were stacked against them. But, they served a useful purpose. Through them the farmers learned something of organized effort. In the 1880's, this cooperative spirit swelled again into organized effort in grain marketing. The Federal Farm Board history related that "farmers were convinced that the railroads were leagued with the line elevator systems, to hold down prices on grain, and with the coal, lumber, and farm machinery companies, to hold up prices of farm supplies. As a result of their grievances, groups of grain farmers again launched cooperative enterprises in the grain-handling business."

We cannot relate here all the struggles against adversity that the farmers went through, or the battles with interests that time and again killed the farmers' efforts. But, as proof that farmers did succeed, we offer the evidence of the National Federation of Grain Cooperatives in which today 24 regional grain marketing cooperatives work together, serving more than 1 million farmers, and 2,200 local cooperative elevators. M. W. Thatcher is president of that federation, and he is also general manager of our GTA, which serves some 600 local co-ops in Montana, Minnesota, the Dakotas, and handles nearly one-third of all the grain marketed from these States. It is one of the Federation's 24 members.

The final chapter in this inspiring co-operative history is far from being written. Farmers have a lot of co-op building to do yet, before they can call the tune in the market places. But, it is in the co-ops, where farm neighbor meets farm neighbor, to build their power into a mighty organized voice. That's why we urge all of you to join your neighbors and market your grain, GTA, the Co-op way.

Resolution Commending Col. O. Z. Tyler

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolution commending Col. O. Z. Tyler, who has served as chief of staff of the United States Army Infantry School and the infantry center at Fort Benning, Ga., during recent years, as adopted by the Board of Commissioners of Roads and Revenues of Muscogee County, Ga.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas Col. O. Z. Tyler has served as chief of staff to the commanding general of the United States Army Infantry School and the infantry center at Fort Benning, Ga., during recent years; and

Whereas as chief of staff, it has been necessary for Colonel Tyler to take an active part in the relationship between Muscogee County, Ga., and Fort Benning, Ga.; and

Whereas Colonel Tyler, above and beyond the call of duties as chief of staff, undertook to take a very active interest in creating an excellent understanding and cooperation between Fort Benning and Muscogee County; and

Whereas Colonel Tyler's extremely courteous and friendly personality, his intense interest in community relationships, his immediate attention to community problems and his coordination between civilian community and the command at Fort Benning, greatly assisted in creating the outstanding relationship which now exists between Muscogee County, Ga., and Fort Benning, Ga.: Now, therefore, be it

Resolved by the Board of Commissioners of Roads and Revenues of Muscogee County, Ga., That in appreciation of the efforts, interests, and abilities of Col. O. Z. Tyler as aforesaid, he is hereby commended by said board; and be it further

Resolved, That since Colonel Tyler has brought great credit and honor upon himself and the military services of the United States Army for the reasons aforesaid, the clerk of said board is hereby directed to forward a copy of this resolution to the commanding general of the Third Army, the Chief of Staff of the United States Army, the Secretary of Defense, the United States Senators from Georgia, the Representatives of Muscogee County in the House of Representatives, the commanding general of Fort Benning, Ga., and Col. O. Z. Tyler.

The foregoing resolution was introduced, read, and duly adopted at the regular meeting of the Board of Commissioners of Muscogee County, Ga., held this 8th day of April 1958.

Address by Hon. Edward Martin, of Pennsylvania, at 49th Annual Meeting of Pennsylvania Manufacturers Association

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at the 49th annual meeting of the Pennsylvania Manufacturers Association in Philadelphia on Tuesday evening, February 25, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE 49TH ANNUAL MEETING OF THE PENNSYLVANIA MANUFACTURERS ASSOCIATION, IN PHILADELPHIA, FEBRUARY 25, 1958

It is an honor to address this distinguished group of leaders of business and industry.

Your influence and example can accomplish great things for our country. In meetings such as this we can plan the defense of America on every front where danger threatens.

In the month of February patriotic Americans commemorate the birthday anniversaries of George Washington and Abraham Lincoln. These greatest of all Americans guided the destiny of our Nation in the most critical periods of our history.

Washington's military genius led us to victory in the struggle for independence. His statesmanship helped to organize a Government dedicated to the ideals that we hold sacred.

Lincoln's great achievement was the preservation of the Union.

In our day we face another time of crisis and we are fortunate to have another great President, Dwight Eisenhower, upholding freedom of the individual against those who would enslave mankind under the dictatorship of the state.

The course of world history has made the United States the backbone of the forces fighting to retain God's greatest gift to the human race—freedom of the individual to choose for himself. This sacred right was never more wonderfully expressed than in the immortal words of the Declaration of Independence:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

On the other side of today's conflict stands the power and might of the Communist conspiracy to destroy those rights and to dominate the world. The Soviet Union, by terror and tyranny, enforces its unholy doctrine that every man owes everything to the state.

With such powerful forces arrayed against each other, armed with weapons of unbelievable destructive capacity, it would be folly to minimize the dangers confronting us—not only from beyond our borders but also within our own midst.

What is our job in this critical situation?

During my long career as a soldier and public official I have always advocated the most powerful defense preparations. We must have the best weapons that scientific knowledge can produce. These weapons must be in the hands of dedicated men and women who are imbued with the ideals of our Republic. They must be backed up by the patriotism and sacrifice of a people who have pride in our flag and our way of life.

At the same time I have always maintained that one of the great elements of our defense against aggression is a strong domestic economy. Keeping our economy strong, sound, and stable is no less important than building our military power—and, my fellow Americans, in striving for that goal your part is just as important as the part played by government.

For 5 years we have enjoyed the greatest and most widely shared prosperity our country has ever experienced. Now we have moved into a period of economic adjustment—call it a recession if you will. This condition calls for economic statesmanship of the highest order—yet there are some politicians who seem to welcome the rise in unemployment as a vehicle on which they can ride to political advantage.

These are the prophets of gloom who would rob people of their faith in the future. They criticize and seek to tear down the forceful program put forward by President Eisenhower to create new job opportunities. The President is to be commended for mobilizing all the power of Government to alleviate the plight of the unemployed. I am sure every one in this meeting will support his efforts to accelerate industrial and business recovery.

The point I want to make most emphatically is that this is no time to abandon sound principles.

No wishful thinking or political demagogery can upset the fundamental truth that

our system of competitive, private enterprise produces more jobs than any other system ever devised. It does not depend upon Government. On the contrary, when Government, through excessive taxation, burdensome debt, restrictive controls, and special privilege destroys individual initiative, it wipes out incentive, drys up venture capital and reduces job opportunities for our workers.

Those who are familiar with my record in public life know that I have always been on the side of economy in government. But I do believe that we are on safe ground when we favor the investment of public funds in the sound and constructive public works program launched by President Eisenhower. Such investments in highways, river, and harbor improvements, flood control, post office construction and renovation will not only provide immediate employment but will bring long-range benefits of a lasting character.

In order to carry out these programs it becomes increasingly important to exercise the strictest economy in other fields of Government spending. All unnecessary government must be abandoned. Overlapping and duplication must be eliminated.

As businessmen you can take leadership in that direction. You must work to bring about a proper balance between wages, prices, and profits. You must battle against inflation because a stabilized currency is the strongest foundation of a sound economy.

Working together, labor, industry, and Government can overcome the difficulty facing us today and can build a healthy, vigorous, stable, and expanding economy.

Housing Response Is Reported Good

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. SPARKMAN. Mr. President, at the time we had under consideration in the Senate the recent housing bill which I sponsored, I stated that in my opinion it would put people to work, and that this could be done quickly.

A few days ago there appeared on the front page of the New York Times an article by Edwin L. Dale, Jr., in which he told of the activities within the first week of the signing of the bill into law. I believe the reading of this article will indicate to anyone that the prediction I made was justifiable.

I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSING RESPONSE IS REPORTED GOOD
(By Edwin L. Dale, Jr.)

WASHINGTON, APRIL 16.—The Government signed up for the purchase of $6,444,000 worth of mortgages in the first week of operation of the new antirecession housing bill.

This quick response of the building industry was reported today by officials of the Federal National Mortgage Association. They said the response to the bill had been good and that the number of applications for commitments to purchase mortgages had been considerably greater than the number the agency had been able to process.

The number of applications for mortgage purchase commitments approved by April 10, was 609, worth $6,444,000. Under the program, Fannie May will commit itself to purchase mortgages of up to $13,500 at par on homes that have not yet been started. Thus the program is intended as a stimulus to housing starts.

Under the new program $1 billion is provided for such mortgage purchases. President Eisenhower signed the bill reluctantly, on the ground that the mortgage financing would be a direct drain on the Treasury. He reserved the right to reexamine the program after $300 million had been used.

BULK EXPECTED TO BE GI

Officials said today that they had no breakdown on the number of GI mortgages, guaranteed by the Veterans' Administration, included in the early purchase commitments. But they expect that the great bulk of applications for Fannie May purchase will be for these GI mortgages, which bear only 4¾-percent interest and thus are relatively unattractive to private lenders.

Related to today's report was an announcement from the Veterans' Administration that March showed the best volume since last September on applications for appraisal of proposed construction of GI housing.

These appraisal requests were 8,406 in March, compared with 5,301 in February and the recent low of 3,501 in December.

The new bill raises the GI interest ceiling from 4½ to 4¾ percent, removes discount controls and establishes the new program of Fannie May purchases.

Although the new legislation was not in effect in March, today's VA announcement said the increase "undoubtedly was due to the anticipated signing by the President" of the legislation.

Renewed Communist Repression

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. DOUGLAS. Mr. President, from time to time we hear statements that the Communist satellite countries and Communist Russia itself are becoming more liberal in their treatment of opposition elements.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Prague Dismisses Foes of Regime," written by Sidney Gruson, and published in the New York Times of April 14, 1958; and an article entitled "Gomulka Curbs Workers' Rights," written by Sidney Gruson, and published in the New York Times of April 15, 1958.

The articles indicate quite clearly that both the puppet government of Czechoslovakia and the puppet government of Poland are curbing the rights of trade unions and of opposition elements. I think it is clear from a reading of these articles that Russia is returning more and more to the policies of Stalin, and that the liberalization which occurred in Poland in October and November of 1956 is rapidly being replaced by repression.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PRAGUE DISMISSES FOES OF REGIME
(By Sydney Gruson)

PRAGUE, CZECHOSLOVAKIA, April 13.—Czechoslovakia's program of economic reorganization and decentralization, now in full swing, has been made a vehicle for purging politically alien elements from even the minor jobs to which they had long ago been relegated.

Speeches by Communist leaders, press articles and privately acquired information had given western observers here a fairly clear picture of 5 classes of people considered by the Communists to fit this label. They are:

Former factory owners, managers, and businessmen, usually lumped together as unreconstructed bourgeoisie.

Persons with close relatives in the West. Official instructions were to dismiss only those whose western relatives were engaged in anti-Communist political activity. Playing it safe, the authorities in charge of the program now have tended to disregard the official qualification.

Former members and officials of political parties that existed between the two world wars.

Former members of the Communist Party, whether they had quit voluntarily or had been expelled.

Persons who served in official posts under the Austrian monarchy, between the two wars or under the German occupation of World War II.

FOLLOW SOVIET EXAMPLE

Following the Soviet example, the Czech Communists have aimed to shatter the rigid centralized administration under which the country has been run since they seized power in February 1948.

The reorganization was to have been completed by April 1, 1958. Rude Pravo, main Communist newspaper, recently conceded that the program was running behind schedule and warned responsible officials that it must be speeded up.

As outlined by the party, 38,000 administrative employees of economic ministries and other agencies were to be shifted into production. Most of these people lived in Prague and with their families total possibly 150,000, more than 15 percent of the capital's population.

The Communist leaders have not tried to hide the fact that politics has been made a primary criterion of judging who should stay on the job and who should be dismissed.

Oldrich Cernik, a secretary of the party's central committee recently wrote in Zivot Strany, the Communists' main ideological magazine:

"Many politically alien elements have filled various posts on the pretext of possessing professional qualifications. They must be eliminated. Such elements are bearers of bureaucratism, block the initiative of their Communist associates, are anti-Soviet, grovel before all things Western and are used by the class enemy for subversive purposes."

Such people, M. Cernik said, should be offered work in production or, on assembly lines "where they will be under the direct influence" of workers. A "Socialist state apparatus has no place" for the old intellectual and bourgeois classes, the party secretary declared.

UNDER WORKERS' EYES

The Communist effort to get people to take up jobs outside of Prague, particularly in hitherto neglected frontier areas bordering on East and West Germany, has run into trouble.

"Where to go?" Prace, the labor union paper, wrote recently. "That is the question that hundreds of dismissed workers are asking themselves. There are many opportunities, but there is one thing wrong with them. Everyone would like the vacant posts

in the frontier areas—if only they were in Prague."

"It will not be easy for some people to go to the frontier areas," the paper said. "However, it is necessary because industrial production is to increase by 56 percent by 1960, compared with 1955 and this will require every head and hand available."

GOMULKA CURBS WORKERS' RIGHTS

(By Sydney Gruson)

WARSAW, APRIL 14.—Wladyslaw Gomulka laid down today a new hard line for Poland's workers, and in effect ended the country's 18-month experiment with workers' councils.

Speaking at the opening of the Polish Trades Union Congress, the leader of the United Workers (Communist) party made these points in what appeared to be an important withdrawal to the classic Communist position on labor's rights:

The workers' councils, which sprang up in the October 1956 political upheaval that restored M. Gomulka to power, must give way to organizations more susceptible to party control and discipline.

Strikes are illegal.

The trades union cannot be independent of the ruling Communist party.

NEW INSTITUTIONS PLANNED

M. Gomulka told 1,000 delegates to the congress that new social institutions would be organized to carry on the limited venture into workers' self-government started during the 1956 political reformation. The new institutions will take over the rights granted to the workers' councils.

The party secretary did not discard the councils altogether, but simply dissolved them in larger bodies that would contain all the members of the factory party committees in every enterprise where workers' councils existed. M. Gomulka has been strongly criticized by the Soviet Union for trying to follow the Yugoslav lead in the establishment of workers' councils with responsibility for production and management.

The new policy on strikes took the party back to the position it held on the question before the 1956 upheaval. For the last 18 months strikes have been legal, though late last year, after a spate of short-lived stoppages, the Communists forbade party members from participating in them.

STRIKES LIKENED TO ANARCHY

M. Gomulka condemned sporadic strikes that had taken place since October 1956, as signs of anarchy appearing amid Socialist democratic freedoms or forms of class enemy action.

MOVE IS SURPRISE

The announcement on the works' councils by the party secretary came as a surprise. The party had permitted establishment of the councils grudgingly, under pressure from workers. The scope allowed the councils was nowhere nearly as broad as those in Yugoslavia. Even so, the principle had been considered here as one of the main gains of Poland's political reformation.

M. Gomulka disclosed that 5,600 workers' councils had been set up. He said they had proved useful but added that it had been shown that "workers' self-government cannot develop itself fully in this organizational form."

COMPOSITION GIVEN

The executive of the new body in each factory will be composed of the presidium of the worker's council plus the chairman of the trade union committee, a representative of the party committee and the factory director. M. Gomulka said the new organizations would be known as the conference of workers' self-government and that they would have the same competence as that previously accorded to the workers' councils.

M. Gomulka said strikes were the only weapon the working class had to defend its rights under capitalism. He said it was different under communism because the workers had organizations to protect them.

A slight modification of this was made later by Ignacy Loga-Sowinski, chairman of the trade unions central council and member of the party politburo. He said workers could refuse to work for a few minutes as a warning if all other efforts to satisfy their grievances failed.

M. Gomulka indicated the party would soon order increases in the production quotas that decide a worker's earnings. The aim would be to obtain increased production.

Address by Hon. Barry Goldwater, of Arizona, at the Annual Awards Dinner of Indianapolis Junior Chamber of Commerce

---

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague, the Senator from Arizona [Mr. GOLDWATER], at the annual awards dinner of the Jaycees, honoring the outstanding young farmers of the year, in Indianapolis, Ind., on April 16, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. BARRY GOLDWATER, UNITED STATES SENATOR, BEFORE THE ANNUAL AWARDS DINNER OF THE JAYCEES HONORING THE OUTSTANDING YOUNG FARMERS OF THE YEAR, INDIANAPOLIS, IND., APRIL 16, 1958

It is a distinct privilege for me to come to Indiana tonight to participate in this tribute to the accomplishments of young Americans.

In attempting to appraise the future of our country, there is nothing more gratifying than the knowledge that such potential citizen-leaders as these are already recognizing and accepting their place in the continuing march of freedom.

Likewise, to those of us who respect the fundamental economic tradition by which our Republic has grown great, there is no place where more significant contributions can be made to the perpetuation and enlargement of those traditions than in the field of agriculture.

America was, first and foremost, an agricultural nation.

Through farming, and constantly improved farming techniques, we have been able over the years to feed, clothe, and house a people whose progress has been aptly characterized by our undisputed recognition as the breadbasket of the world.

Farming is basic to America's growth—not only economically, but morally and spiritually, as well.

It is inconceivable to me that there could be a more wholesome atmosphere than the American farm in which to nurture the qualities of character, morality, and love of God and country.

The crowded, bustling, smoldering cities of this land sometimes distort and undermine man's perspective upon his life and his responsibilities to the world into which he was born. But in the rich, bountiful, and untarnished atmosphere of our farmlands it is possible, even in the dizzy swirl of this age of space, to feel the closeness with the purpose of our existence and to discover our most real and lasting values.

Truly, America is suffering today from a grave imbalance in both personal and political standards.

We have allowed ourselves to relax too comfortably upon the laurels of material achievement.

We need to pause, as it were, beside the highway of life and decide just where we are going and why.

If human liberty is to survive, we must take stock of our own lives and ask ourselves whether or not we are following a course that will preserve the American system.

We must determine whether or not the America we leave to our children and our grandchildren will provide for them the same opportunities in freedom that we have had, or whether the twilight of human dignity and individual liberty is now actually upon us.

It is here, in this midwestern heartland of America, that the determination of these questions can best be made.

It is in the preparation and devotion of young Americans—young farmers—to the challenges of freedom that we can devise our best estimate of the shape of tomorrow.

Certainly, these issues will not be resolved in Washington.

Neither will they be resolved in the expedient promises and platitudes of any politician who is willing to compromise liberty for a headline or the welfare of the next generation for victory in an election.

Yet, in every front, and in both major parties, we find that political considerations are too often the criteria for actions which will reverberate upon the lives and fortunes of the American people for years to come.

And no area of our economy has been treated with less respect or more shockingly maligned and abused by political power enthusiasts than has American agriculture.

To my mind, the one American, above all others, who personifies our traditional spirit of individual initiative and personal incentive is Ezra Taft Benson, our Secretary of Agriculture.

He is a man who learned about farming by being a farmer.

He is a man who learned about free enterprise by operating in the field of agriculture when agriculture was able to function without federally instituted systems of price support—when the agricultural economy was strong and vibrant by virtue of its own genius in a climate of unrestricted opportunity.

If ever there was a man who unfailingly put principle above partisan advantage or personal popularity, that man is Ezra Taft Benson.

Still, today, and for the greater portion of his tenure in the high office which he holds, he is vilified and condemned by those in the Congress who would continue to shackle the American farmer with governmental restraints and phony profit stimulus.

Consider for a moment the impact of politics upon the American farmer.

Observe, if you will, the ridiculous imbalance of economic concepts which has brought American agriculture to the brink of a potentially disastrous revamping of its institutional structure.

Fundamentally, the farm policy under which we are functioning in this country today was developed during a period of economic stress.

Minor changes in this policy notwithstanding, Government planners have foisted upon us an acceptance of the illusion that the Federal Government should either fix prices on certain commodities or, at the very least, exert a maximum influence upon them.

During the periods of economic upswing following World War II and Korea, the farmers proved a significant and disturbing exception to the rule of general prosperity. The reason for this, I think, is that we followed too closely these policies of earlier years: We did not allow for readjustments in the agricultural economy as a result of improved conditions generally.

Since 1951 Government surpluses have been increased from approximately $3 billion to $8 billion. At the same time, the Government has bartered, sold, or otherwise disposed of an estimated $18 billion worth of farm commodities.

Forgotten, of course, has been the fact that some of the most important farm commodities are not under Government price supports. For example, our farm and range producers of beef have suffered because the props under grains have increased their feed costs without giving them any relief at the market place.

The result has been that, despite the application of practically every conceivable Government program for agriculture, farmers in the main have been more hurt than helped by Washington-inspired directives designed to inflate a prosperity balloon for them.

Added to this bureaucratic confusion, and perhaps aided and abetted by it, is the rapidly decreasing farm population. That such a confused and deteriorating situation should occur at a time when the technological revolution in agriculture offers so much hope and inspiration is a challenge to all who will but apply themselves to a rekindling of the fires of free farming enterprise.

There may be a host of answers to this problem. Not being blessed with an intricate knowledge of farming, I am unable to project any series of formulas which would satisfy the total agricultural needs of our country today.

This much I can say, however: a man who farms his land in order to provide crops to sell at the marketplace, and to reap a maximum of profit for himself, is no different from the shopkeeper, or the barber, or the restaurant owner, or any of the myriad of other types of people who derive their living from the provision of goods and services to the consumer public.

The farmer, like his small-business counterpart in the urban areas, depends for his livelihood upon the laws of supply and demand.

Logically, the Government's role in his affairs must be a minor one.

Subsidy "crutches" remove him from the competitive pattern of the economy and make him nothing less than a pawn of Government.

On the other hand, a minimum of restrictions on farm production and marketing will permit the farmer a maximum of dependence upon free markets as the best guides to production and consumption.

As Secretary Benson has said:

"Farmers should not be placed in a position of working for Government bounty rather than producing for a free market."

I would like to ask, therefore, just who in this country do those who abuse Ezra Benson suggest to take his place?

What kind of superman do they have in mind who can unscramble the unholy mess of planned agriculture so as to make it work and, at the same time, to enable the farmer to maintain his rightful balance in our total economic structure?

Or am I correct in assuming that those in both political parties who dispute the integrity and moral soundness of Secretary Benson deliberately desire to supplant economic principle with expedient measures whose only consequence will be the destruction of American agriculture?

The truth is—and this is a particularly basic lesson for the young farmers of this Nation—that politics and agriculture don't mix.

Politics means government, and whenever the Government starts doing things for people in any walk of life it automatically and unavoidably takes from them certain rights by which their initial opportunities were inspired.

Now you may be wondering why I, admittedly not a student of agricultural problems, should express such an intense interest in this critical issue, as well as such a devout respect for the thinking of Secretary Benson.

Well, there are several reasons. And not the least of these is the fact that Ezra Benson is a Mormon—in fact, one of the leaders of the Mormon Church—and I was brought up among these people out in my home State of Arizona. I know their intense strength of character, their abhorrence of governmental addicts and welfare-state handouts. I have seen their enormous contributions to the development of our Rocky Mountain West. In fact, the colonization efforts of the Mormons in Arizona have been a foundation and an inspiration in the progress my State has made.

Perhaps I should add, as well, that I have personally tried to part Ezra Benson from his adherence to principle on one matter which could have been of benefit to me politically and to Arizonians generally—and I have seen the immovable devotion with which he follows his creed of ethical, honest, objective, and selfless government.

Another reason why I, as an Arizonan, feel qualified to adopt this view of our farm situation is reflected in the attitude of Arizona agriculturalists toward the Government price support program.

Arizona still depends extensively upon farming for the development of its expanding economy. Particularly in the cotton and cattle industries Arizona exerts a forceful influence upon the national market. And our cattlemen and cottongrowers indicated opposition to Federal subsidy programs.

The attitude of the Arizona Cotton Growers Association, for example, is plainly and simply, "We want to sell our cotton to the mills, not to the United States Government."

And that, I suggest, is the kind of courage and economic know-how which built our farm economy. And it's the only way that economy is going to be spared the ax of socialistic annihilation.

We in Arizona are proud of this spirit of rugged independence on the part of our cottongrowers, just as we are proud of their development of the extra-long-staple Supima cotton which is the product of that wonderful Pima cotton that outwears, outlasts, and outshines all other cotton fibers.

But the Agricultural Act, under which we now operate, invokes heavy restraints upon the growth of cotton in the areas of the great Southwest where it can be grown easiest and cheapest—namely, Arizona, California, and west Texas.

The long-staple cottongrowers who comprise the Supima Association assessed themselves $3 per bale of cotton for the purpose of raising additional revenue for advertising and promotion; and, by this device, the demand for their product has been increased to a point where the Secretary of Agriculture has lowered the support price to 75 percent and, at the same time, allowed them to double their acreage.

Obviously, if cotton could be removed from the Agricultural Act, Arizona's farm income would at least double.

By legislation, we are controlling the law of supply and demand to the point where agriculture in Arizona, California, and west Texas suffers in order to support inefficient cotton farming in the Deep South.

The resultant expense is detrimental to both farmers and consumers.

To show you how strongly Arizona depends upon the free operation of our agricultural economy, and how adversely present unrealistic conditions affect the outlook in my own State, consider that between 1920 and 1950 the farm population of Arizona dropped from 92,000 to 84,000.

At the same time, the cash receipts from farm marketings in Arizona increased from $53.2 million in 1924 to $369.6 million in 1957.

Isn't this revealing testimony to great progress, scientifically and technologically, in Arizona farming, despite a farm population decline?

Isn't this a clear indication that Washington farm strategists ought to begin considering this problem from a point of view that is at least as up to date as the methods which have made such advances possible?

The plain truth is that Arizona farmers don't want their chance for prosperity crippled by restrictions emanating from Washington.

They don't want to be told what to plant and what not to plant; when to plant and when not to plant; and at what prices to sell their yield.

Above all, I suggest that it is contrary to the bent of our farmers—just as it is contrary to the bent of all Americans—to be given something for nothing, to be paid for not producing, to have their opportunity and incentive destroyed by being forced into a common mold where every individual's capacity is judged in terms of the lowest standard of production.

Now the sum and substance of what I have been saying is simply this: The farm problem, by itself, should be solved in terms of fundamental American economics, not in terms of political expediency.

Additionally, a great portion of the problem in agriculture today is the result of political misadventures of the recent past.

It is high time the swivel-chair farmers in the Congress of the United States stopped making American agriculture the "whipping boy" for their political dreams.

It is time to give the business of farming back to those who know what it's all about and who have the biggest stake in it—the farmers themselves.

It is time that all Americans stopped questioning, quarreling, and quipping about Secretary of Agriculture Ezra Taft Benson, and started thanking their lucky stars that we finally have a man in the national administration—in the Department of Agriculture—whose dedication to the principles of a free economy is so great that he will not sacrifice the opportunities of the next generation for an illusory victory in the next election.

American agriculture can survive this present turmoil. But it can only do so when the Federal Government stops trying to legislate farm income through direct price supports, stops the idiotic flow of crops into the Government's bulging bins, undertakes the job of finding new uses and markets for our farm products, and gives the farmers of this Nation the freedom to produce in accordance with free market prices.

It is up to farmers—it is up to citizens generally—to understand the historic truths behind our present agricultural capacity.

It is up to all of us to stem the tide of that philosophy which would wreck the free institution of farming in this country.

Most of all, however, it is up to coming generations of Americans, today's young farmers and tomorrow's farm leaders, to recognize that the only sound course for our future, in any area, is one of a firm reliance upon the individual citizen for the accomplishment of our basic social, political, and economic needs.

That is why I am happy to join in this occasion of commendation to these young farmers for their outstanding achievements.

My charge to them, as I know it is yours, is that by holding fast to the concepts of human liberty they may ever be worthy of the high responsibility to the field of agriculture which is theirs.

Veto of Farm Price Freeze

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. MARTIN of Pennsylvania. Mr. President, there has been much discussion relative to farm prices. The recent veto by President Eisenhower of the farm price freeze has caused many outstanding newspapers of the Nation to speak editorially on this subject.

The United States is a country where we may all express ourselves, and I ask unanimous consent that 3 editorials on this subject—1 from the Philadelphia Inquirer, 1 from the Philadelphia Bulletin, and 1 from the New York Mirror—be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer]

FARM PRICE FREEZE VETO WAS NEEDED

President Eisenhower is to be commended for his veto of the thoroughly unsound farm price freeze bill. It was politically motivated for this crucial election year.

Both for the farmers and consumers in this country, there is need for wise, constructive—and permanent—efforts to give those who raise our crops and cattle stable positions in America's economy.

Programs afflicted with the malign influences of politics, of huckstering for farm votes, cannot achieve that end. Look again at what this freeze bill proposed to do. It intended to strike from the hands of Secretary of Agriculture Ezra Taft Benson the authority to adjust farm price support structures. The measure stipulated supports must be held at the 1957 level.

And for how long? Just 1 year. An important election year. The President was correct in his statement of the results: More farm products piled up in Government warehouses; further restriction of markets; extension of Federal controls.

For years just such conditions have plagued American agriculture and the American people creating vast, unwieldy surpluses, which have proved to be a weakening menace to our farm economy.

What happens now? There will be an effort to override Mr. Eisenhower's veto. Chances appear to be against it. That will leave the administration free to deal fairly and realistically with the price support situation. Fortunately, farm prices have taken a somewhat encouraging upturn through which, without excessive aid from the Government, the position of the Nation's farmers should improve.

The President was subjected to extraordinary pressures to sign the support freeze bill. It came from members of his own party, as well as from the Democrats. He acted not only with wisdom but with courage in resisting those pressures. The way is open now for worthwhile, earnest measures, on the part of the administration and of Congress—and both parties—to formulate sound American farm policies. That is the path that should be followed.

[From the Philadelphia Bulletin]

FARM GRAB VETOED

President Eisenhower's veto of the bill which would freeze farm price supports at their 1957 level will probably come as a welcome action to many Senators and Congressmen who voted for it, and who will vote for it again when the two Houses are asked to override his veto.

They will welcome it on two counts. First, because many of them know as well as he does that this was a measure that would simply perpetuate a farm relief program that has proved itself worse than a failure. Second, because it will enable them, in the coming election campaigns, to picture themselves as the farmer's friend, and President Eisenhower as the farmer's foe.

The President's veto was an act of courage in a campaign year, when commonsense does not always pay off at the polls.

[From the New York Mirror]

THE FARM BILL VETO

It has been apparent for years that order could not be restored to American agriculture without some pain, strain, and political caterwauling.

High price supports resulted in large surpluses being dumped in the hands of the Government; high food prices for the city dweller and no real, long-range solution for the problems of the farmer.

Secretary of Agriculture Benson attacked this problem with courage and tenacity; President Eisenhower has been statesmanlike in backing him up, in the face of wailing despair from many Republican Members of Congress.

The President has just vetoed legislation that would have frozen present farm price supports for 1 year. "What the farm economy needs is a thaw rather than a freeze," the President said.

Freezing would add to the surplus stockpiles, restrict the development and growth of new markets, give little aid to the small farmer, maintain high consumer prices and continue to limit the farmer in the exercise of his own judgment.

We believe the President's action was sound and that it also was an exhibition of political courage.

Funds for School Construction Loans in Community Facilities Legislation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. NEUBERGER. Mr. President, last week some of us voted for the Bush amendment to earmark for long-term loans for school construction 50 percent of the funds in the worthwhile community-facilities bill.

Although the amendment was defeated by a margin of 60 to 27, the New York Times, a great and enlightened newspaper, and one of the most persistent and valiant editorial voices favoring Federal aid to schools, published, on April 19, 1958, under the title "Needed—More Schools," an editorial commending this proposal.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEEDED—MORE SCHOOLS

By better than a 2-to-1 margin the Senate has passed and sent to the House a bill to facilitate local public-works projects as a major antirecession measure. The proposal, introduced by Senator FULBRIGHT and more than a dozen colleagues, would increase by 10 times—to $1 billion—the amount of Federal funds available for public-facility loans, lower the interest rates, increase the maximum term to 52 years, and broaden the provisions so the funds could be used for almost every kind of State and local public work.

Heretofore, the loans under this particular form of Federal aid, carried out through an agency known as the Community Facilities Administration, had been used almost exclusively for construction of water and sewer systems. Under the new legislation their use would be encouraged for a wide variety of useful projects including streets, bridges, parks, hospitals, libraries, water and timber conservation, and public schools. In his report Senator FULBRIGHT correctly noted that such projects are desperately needed in most sections of the country; and it was his hope that stimulation of construction activity along these lines would aid in economic recovery.

While it is gratifying that schools are explicitly mentioned in this bill, we ask again why amid all the talk of pump-priming through public-works programs the original objective of a large-scale federally aided school-construction effort has virtually disappeared. Some individual Members of Congress try to keep the issue alive. Senator BUSH, of Connecticut, for instance, offered an amendment to the Fulbright bill that would have earmarked half the Federal loans for school construction. He was voted down, 60 to 27.

Various Members have introduced bills to make Federal funds directly available to the States for school construction on a matching basis; but without support either from the Republican administration or the Democratic leadership they have gotten and will get nowhere. Yet new schools are still more important to America than any other kind of public work, and the quality of what goes on inside those schools is more important than any other domestic problem facing our country today.

Tass Agency Did Quick Job of Rewriting Khrushchev's Report

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Tass Agency Did Quick Job of Rewriting Khrushchev's Report," issued by the American Committee for Liberation under date of April 14, 1958.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TASS AGENCY DID QUICK JOB OF REWRITING KHRUSHCHEV'S REPORT—RADIO LIBERATION ANALYST REVEALS OFFICIAL TEXT OF SPEECH ON HUNGARY DIFFERS FROM ACTUAL VERSION

NEW YORK.—A striking illustration of how Nikita Khrushchev's extemporaneous remarks are doctored before they are released for broad dissemination can be seen in the handling of the Soviet dictator's recent Lenin Stadium speech by Tass, the official Soviet news agency.

According to Radio Liberation, only 14

sentences of Khrushchev's 50-minute speech—as recorded in Munich by the anti-Communist station's monitors—remained intact in the 3,700-word Tass version of the speech.

"It is doubtful that Soviet history has ever been rewritten faster than in the few hours between last Thursday's (April 10) live broadcast of Khrushchev's extemporaneous report of his Hungarian trip and the ensuing Tass release of the official text of his remarks," commented James Critchlow, Radio Liberation's top Soviet affairs analyst.

And, added Critchlow, most of what was left intact consisted of stock propaganda phrases with which Soviet orators interlard their speeches.

"The relatively few Soviet citizens present at Lenin Stadium to hear the speech, delivered during working hours, or who were able to listen to the live broadcast over the radio, must have been shocked the next day to see how the Tass version in their morning newspapers differed from what they had actually heard," Critchlow said.

Radio Liberation, the voice of former Soviet citizens who have found freedom abroad, is beaming Khrushchev's actual comments—including those censored by Tass—to all parts of the Soviet Union. Radio Liberation broadcasts around the clock exclusively to the U. S. S. R. in Russian and 17 other Soviet languages via powerful transmitters in West Germany and the Far East.

According to Critchlow, Khrushchev's original remarks supassed in incoherence, vulgarity, and sheer absurdity any of his past live broadcasts. Even making allowance for the fact his voice was hoarse from 8 days of exhausting speechmaking in Hungary, it is difficult to reject the idea that he may have been well under the influence of alcohol, coupled perhaps with the psychological impact of what apparently was an exceedingly frigid reception from the crowds he addressed in Hungary.

But, according to Critchlow, only a part of the discrepancy between Khrushchev's original remarks and the altered Tass text could be explained by the need to convert into a more literate document what was for the most part a tangled web of disconnected thoughts and incompleted phrases.

Whole sections of Khrushchev's remarks, places where he made unguarded admissions or advanced ill-advised formulations of Soviet policy, were removed from the Tass rewrite, according to Critchlow. At the same time, completely new passages were added, things Khrushchev never said, in an obvious attempt to render the speech coherent and to bring it into line with current policies.

Most revealing are the omitted passages. Here are some of the more conspicuous ones:

1. A reference to the now deposed Hungarian Stalinist Premier Matyas Rakosi as "guilty for what happened in Hungary" was deleted, as were all three other mentions of Rakosi's name. (It has been reported that Rakosi is now living in exile in Mongolia, but recent Soviet press treatment of him has been very restrained.)

2. Khrushchev's admission that the present Hungarian party leader, Janos Kadar, spent 5 years in prison under the Communist regime was also omitted.

3. His claim that Western correspondents "either distort the truth or don't report it the way they should to serve the people" was cut out, evidently because it implies that telling the truth and serving the people are not always the same thing in Communist philosophy.

4. At one point Krushchev burst into a song which he said he and Hungarian Government Chief Ference Muennich had sung together when they lived in the same tent while undergoing military training in Moscow in 1930. It is not clear whether this was taken out because Khrushchev's rewrite men considered it undignified for him to sing on the rostrum, or because the words of the song, "Our cannons roared, our machineguns rattled," were thoughts inappropriate in the context of his report on the situation in Hungary.

5. In discussing the international situation, Khrushchev said that the Communists are opposed to the capitalist order, just as the capitalists are opposed to communism, but admitted that—"it is not in our power" to destroy capitalism "anymore than the capitalists could overthrow communism." This remark was excised, presumably as a defeatist statement, although Khrushchev corrected his lapse in another portion of his speech by claiming that capitalism could be overthrown by "a flank attack," that is, through economic competition.

6. At one point Khrushchev threatened the West with an indelicate Russian idiom ("Mi pokazhem nashu russkuyu kuzkinu mat") which defies direct translation but corresponds in force—and vulgarity—to saying, "We'll show the bastards." This, too, was removed.

7. A statement that "we're going to open the door," that is, to more tourists so they would know "what fools" they had allegedly been to have misjudged the Soviet system, disappeared from the official version, perhaps because a more liberal visa policy is not really in the offing.

8. Several lengthy and rambling reminiscences by Khrushchev about articles he had read in prerevolutionary Russian publications also went out, possibly because they seemed pointless even to the TASS editors—or possibly because the reference to Russia's pre-1917 press, which by Soviet standards was relatively free in spite of Czarist censorship, seemed inopportune.

Also interesting was the way in which, in some instances, Khrushchev's basic remarks were preserved but slightly altered to change their meaning. For example, in referring to a meeting which he had addressed in Hungary, he said that the workers "had been brought there in organized fashion." In the Tass version he was reported as saying that his listeners "came out" to hear him.

In another passage, when he described a Hungarian factory which he had visited as "well organized," the rewritten version expanded this to a statement that "one feels a great upsurge, the desire to devote all forces to peaceful construction."

And in still another place, a thinly veiled reference to the Polish and Yugoslav Communists as "willing to accept any stale goods" (that is, Western aid) in order to "effect a break with the Soviet Union and lure followers" was changed to make it appear that he was attacking only Hungarian revisionists.

At several points in the test, a few muttered words by Khrushchev were expanded by the editors to lengthy lectures on various points of Soviet policy.

"There is no reason to believe that the revised version was composed without Khrushchev's knowledge and consent," said Critchlow. "At the same time, it is a striking illustration of the way in which his public utterances have to be doctored before they are considered fit for broad dissemination. Unfortunately, his speeches are rarely broadcast in his own voice, so that students of his rhetoric have few opportunities to compare his words with the altered text."

What the Founding Fathers Would Have Done With the Supreme Court

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from from W. Fairfield Peterson, of Baltimore, which was published in the Union News, of Towson, Md., on March 28, 1958:

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WHAT THE FOUNDING FATHERS WOULD HAVE DONE WITH THE SUPREME COURT

Very probably, if at the time of the American Revolution there had been a Supreme Court like the one we have today, the Continental Congress would have abolished it. Knowing the resolution and vigor of the doughty patriots who freed the American Colonies from the yoke of England, it is certain that they would not have tolerated a Supreme Court which ruled:

1. That the several States or Colonies could not pass laws for the apprehension and punishment of Tories;

2. That Tory teachers could not be fired by local school boards;

3. That Tory lawyers were entitled to practice law in the State courts;

4. That the government established by the Continental Congress could not fire Tory employees of the Government unless they were in sensitive positions;

5. That the Continental Congress did not have the power to conduct investigations to determine who was a Tory.

There is no doubt that such fiery patriots as Patrick Henry, Thomas Jefferson, Sam Adams, John Hancock, and James Wilson would have laid far more violent hands upon the Supreme Court which made such rulings than the mild and moderate legislation now proposed by WILLIAM E. JENNER, the Senator from Indiana. The Jenner bill proposes only to have Congress withdraw from the Supreme Court the right to hear appeals involving the five matters of internal security we have mentioned. Under article III, section 2, clause 2, of the Constitution, Congress has every right to withdraw those cases from the jurisdiction of the Supreme Court which Congress thinks the Supreme Court is not properly deciding.

The power of Congress to withdraw certain cases of appeal from the Supreme Court is one of the checks and balances provided by the Constitution. Of it Alexander Hamilton said in the Federalist:

"This will enable the Government (Congress) to modify it (the jurisdiction of the Supreme Court) in such a manner as will best answer the end of justice and security."

Thus Hamilton, 170 years ago, recognized that this power to withdraw cases from the Supreme Court would have to be exercised by Congress in the interest of national security.

The realistic and effective way in which our Founding Fathers dealt with their enemies is in sharp contrast to the soft and tolerant manner in which we treat Communists today. Our patriot fathers did not let

fine-spun academic theories about liberty distract them from the necessities required to win independence. They would not have tolerated for 1 minute a twist in the meaning of the fifth amendment or the other equivocations used by the Communists today.

The liberals of today may argue that the patriot fathers were at war with George III, whereas we are not at war with communism. Not at war with communism. It may be called only a cold war. Many accept it as such. But our enemy knows it and is using it for what is really is—an initial phase in total war. In this total war our enemy hopes to achieve final victory without firing a shot—exactly as it did against Japan and Korea and as it has done ever since. The Soviets have proclaimed their determination relentlessly to force their will and the communistic philosophy into all parts of the world. So whether this war is labeled "cold" or "total," it is the most sinister, the most dangerous threat our country or the world has ever known or contemplated.

Or, the liberals may say that our patriot fathers fought a foreign country, England, whereas we are fighting a philosophy of government, communism. The answer to this is obvious. Is not the Soviet Union a foreign government? Is not monarchy, for which the Tories fought, a philosophy of government? It is most unlikely that the patriot fathers who used such forceful methods to establish independence, would have written a Constitution which the Supreme Court could, at any time, reasonably interpret as forbidding us to use similar forceful and effective means to preserve and keep that independence. This simple observation alone refutes the fine-spun theories by which the Supreme Court puts the rights of a Communist above our national security, liberty, and independence. Those who would use the freedom of our country to permit our enemies to destroy that very freedom will, if they have their way, end up by enjoying neither freedom, liberty, nor independence. And Communists enjoy no freedom in Russia.

The liberals say we must give the Communists liberty because everybody, including the Communists, has a moral right to liberty. Well, the patriot fathers who wrote our Constitution did not concede such a moral right to enemies of liberty—the Tories. How can it be argued that our enemies today—the Communists—are entitled to more liberty under that same Constitution than our patriot fathers gave their enemies—the Tories—at the time they wrote the Constitution.

As we said, our patriot fathers in the Continental Congress, if they were alive today, would abolish the Supreme Court. Surely the least the present Congress can do to preserve our way of life is to pass legislation to save us from a Supreme Court which, for reasons of its own, puts the rights of a Communist above our national security.

Dairying Strives To Meet Its Own Problems

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. WILEY. Mr. President, one of the great spokesmen of Wisconsin and American farming is Mr. Milo K. Swanton, executive secretary of the Wisconsin Council of Agricultural Cooperatives.

In an address delivered last month at the annual meeting of the Land O'Lakes Cooperative, at Minneapolis, Mr. Swanton analyzed America's dairy problems with his usual insight, ability, and constructive emphasis.

Those who are interested in becoming more familiar with the unique problems of dairying will, I know, be impressed by his illuminating statement.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AGRICULTURE A POSTWAR CASUALTY—DAIRYING IS DIFFERENT

Milo K. Swanton, executive secretary, Wisconsin Council of Agriculture, told those assembled at the annual meeting of Land O' Lakes that "American agriculture is a postwar casualty. To meet the crisis of a global war, the farmers of this country expanded their production to meet the most critical food and fiber requirements this world had ever seen. Farmers met the life needs of our millions of military men, most of whom were on foreign shores. Also they took care of our allied armies and much of the needs of their civilian populations. When the war ended, 11 percent of our agricultural production was going abroad. During that time this Nation's farm area was expanded by nearly 26 million acres. With Federal aid, milk-drying plants were extensively built in the dairy belt of this country. Other expansions and changes came rapidly into being as American agriculture and the food industries associated with it rose to meet the worldwide war emergency.

"After the war, during the rehabilitation period from 1945 to 1948, truly we were our brother's keeper. During this period of rehabilitation, our agricultural production going abroad rose to 14 percent of total output.

"Then came the day of reckoning when this great expansion and stimulated production were no longer needed. These millions of added acres, as well as new and expanded food-processing plants, plus the advance of agricultural technology, resulted in a productive capacity far in excess of our ability to consume. Thus we became a postwar casualty.

"But with industry the picture was different. Americans at home were hungry for cars, household gadgets, and a multiplicity of things that they had been deprived of during the war. With the war over, the demand for industrial products was limited only by the customer's ability to pay.

"In this country, people are generally well fed. Because the human stomach is only so big, the demand for farm products is relatively inelastic. Therefore, here again agriculture differs from industry.

"Dairying is also different from the rest of this Nation's agricultural economy. Dairy farmers have a heavier investment per unit in buildings and equipment of a special type than is true of the producers of cash crops, meat animals, wheat and other cereals.

"Because milk and dairy products are so essential to the life and health of man, quality must be guaranteed all the way from the original producer to the ultimate consumer. This requirement means greater capital in buildings and equipment to meet sanitary stahdards, that are not required of other farmers.

"Dairy farmers, unlike most other agricultural people, work 365 days of the year. And the dairyman must be trained and highly skilled as a stock man.

"The dairy industry has maintained a better supply-demand balance than have the so-called basic crops. The percentage of total dairy production acquired by the Government, as compared with the basic crops, tells a significant story.

[In percent]

	Dairy	Wheat	Corn	Rice
1955	4.1	34	13.8	47
1956	4.0	25	13.8	50

"Because of this situation and for additional reasons, I believe the proposed reduction in dairy price supports is not justified and will not accomplish the anticipated results. For example, feed supplies are abundant and relatively cheap throughout the dairy belts of this country. Much corn is of high moisture and cannot be sealed, sold, nor stored. Lower supports will, therefore, have little or no influence on total milk production, nor, in my opinion, will lowered dairy price supports materially affect the amount of manufactured dairy products that will be acquired by the Government, even at 75 percent of parity.

"It must also be recognized that dairying is the only major farm industry subjected to a dual price-support standard. A reduction in price supports will fall heaviest on the manufacturing end of the industry and, at the same time, will have little or no effect on fluid-milk markets where Federal orders and strong collective bargaining will probably maintain milk prices at previous levels.

"In my opinion, there is much more that we ourselves can do. I believe that the dairy self-help proposal, if enacted into Federal law, could and would do much to stabilize the dairy industry. It would place a sense of responsibility upon producers themselves to maintain an even closer balance between supply and demand. It would eliminate, to a large extent, taxpayer responsibility for the present cost of the dairy price-support program. It would bring greater stability to the dairy industry and increase the income of dairy farmers.

"But if such a self-help program is to be accomplished, there must be a new sense of unity within the dairy industry. All phases of the dairy industry have a stake in this program, be they fluid-milk producers, cheese, butter powder, or any other segment of the industry.

"There are other vitally important forms of self-help too. I have in mind the type of self-help that you people in Land O'Lakes creameries have practiced for nearly 40 years. I refer to the constructive marketing programs that you people have built. You have built your marketing program on the cornerstone of quality. Your products are known throughout America for their uniformity. You have made quality your best salesman.

"But you didn't stop there. Your program of merchandising and advertising—your system of distribution and marketing have won nationwide acclaim. Internally, your sound business program has brought efficiency, fairness and excellent returns for your thousands of members.

"Your financial condition is a tribute to sound management and outstanding membership loyalty. Your 2.92 to 1 ratio between current assets and current liabilities for 1957 is a monument of success. Whatever reliance we may place upon national programs, let us not forget that nothing can really take the place of an outstanding cooperative-marketing program such as yours in Land O'Lakes.

"Yes, we can improve the situation for agriculture generally if in the future we will put more emphasis upon marketing. We should never turn back from our present high degree of production efficiency, yet the farmers of America generally have a long way to go to reach a comparable record from the standpoint of marketing efficiency. I believe

and I know that the farmers of this country can, within themselves through their own cooperative associations, meet the marketing challenge."

Mr. Truman's Memory

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "They're Answering Harry," published in the Madison (S. Dak.) Daily Leader of February 24, 1958; also an editorial entitled "Has Mr. Truman Forgotten?" published in the Nashville (Tenn.) Banner of February 25, 1958.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Madison (S. Dak.) Daily Leader of February 24, 1958]

THEY'RE ANSWERING HARRY

Republican leaders are really excited over the speech by Harry S. Truman Saturday night, and today put forth a series of statements, indicating that they are going to prepare massive retaliation to his outgivings.

Frankly, we do not see any great point in it. We hardly think the American people will pay too much attention to the discredited charges of a discredited leader.

Mr. Truman can qualify as an expert on foreign policy, for under his administration nearly a billion (yes, billion) persons were lost to the free world, and critical situations were set up that are even yet plaguing the anti-Communist world.

He is also an expert on business conditions, for the overall business index right now during the current recession is higher than at any time in the Truman administration, except during a few months after the Korean war broke out and furnished an artificial inflation.

As to honesty and efficiency in government, his testimony is also valuable, for nearly everyone remembers Johnny Maragon, the 5 percenters, and other scandals of his administration.

He can speak with particular effectiveness on the lag in the guided missile program, for no less an authority than Dr. Wernher von Braun has characterized the later years of the Truman administration as 6 years lost in missiles development, while the Russians were going ahead.

So we do not see why political leaders are too excited about what "our Harry" says, plausible as he may be.

[From the Nashville (Tenn.) Banner of February 25, 1958]

HAS MR. TRUMAN FORGOTTEN?

The politician's memory can be extremely short at times—as when Harry S. Truman embarks on one of his "Give 'em h—" jags to drum up a depression and foment security misgivings. He was in his element Saturday night; alongside him a colleague in convenient disremembrance, Adlai Stevenson.

If Mr. Truman's forgetfulness were not so complete—or if, to put it another way, his audacity didn't outrank his forthrightness when he steps up to a microphone—he might mention 1950 to his audience. Let's see now, that was a Truman year.

He was just starting his sixth year as President. What he said in marking that April occasion was that the country was enjoying record prosperity, and that "I intend to take full credit for it."

By the reckoning of his own Bureau of Labor Statistics there were 4,684,000 unemployed at the time. There were 42,263,000 at work on nonfarm jobs.

Today there are an estimated 4,500,000 unemployed.

There are 57,200,000 working at nonfarm jobs.

The total employed stands at more than 63 million.

Yet to hear Mr. Truman tell it, 1950, was a prosperity year; and 1958—under different auspices—is a "depression" year.

And, oh, yes, security, or foreign policy and war. Let's see again:

Mr. Truman just cannot have forgotten what happened in that same 1950, however conveniently he avoids mentioning it.

Just who was it—what administration was it—that conducted America over that brink? Surely Korea sticks in his memory; that which he called a police action, taking its toll of 33,629 American sons killed and another 103,284 wounded in action.

Since the windup of that adventure which Mr. Truman's policies neither won nor ended, there hasn't been a shooting war involving the forces of this country on any battlefield.

Does that suggest policy failure?

What is it that irks Mr. Truman so much?

Which set of policies—securitywise, and economywise—does he imagine the American people prefer?

Who does he think he is fooling?

The Corn Tassel

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. DOUGLAS. Mr. President, last year I submitted a resolution to make the corn tassel the national floral emblem of the United States. I ask unanimous consent to have printed in the Appendix of the RECORD a poem entitled "America Grows Corn," written by Howard Zahniser, and published 10 years ago in the Scientific Monthly for May 1948. In Whitmanesque verse, the poem celebrates corn as the great basic element in the agriculture of the country.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

AMERICA GROWS CORN
(By Howard Zahniser)

When spring comes to America
The farmers of forty-eight United States
Get up from their breakfasts
And plant a hundred million acres of Indian corn.
Out of the south into Texas
The corn-planting time moves into February,
Drifts northward thirteen miles a day,
Sweeps northward across a Nation,
Comes to March, to April, to May,
Comes to forty-eight sovereign and United States.
And in every State of the Union
The farmers get up and plant their Indian corn.
(Only man grows corn.)
In Iowa where the tall corn grows,
In Ohio and Illinois,
In Indiana, Kansas, and Nebraska,
In Minnesota and Dakota,
In Georgia, where more acres grow corn than grow cotton,
In Maine and California,
In Michigan, Kentucky, Tennessee, Alabama, and Louisiana—
In every State of the Union—
The farmers of America plant corn.
(Only men and their women grow corn.)
Seed corn on a hundred million acres,
Planted with care and with pride
To rise into the rank and file
Of the greatest crop that man has yet mobilized.
Roasting ears, corn-on-the-cob, succotash,
Canned corn, dried corn,
Corn-meal mush,
Johnnycake,
Corn flakes,
Corn syrup.
Seed corn rising to feed,
The cows, the pigs, the poultry,
The livestock of forty-eight States.
Seed corn rising to feed
Men and women and boys and girls.
Seed corn rising to feed them
With as good food as the good earth grows.
(Only men and their women plant corn in the earth.)
Say "corn" to the English and they think about wheat.
Say "corn" to a Scotchman,
And he kens you're talking of oats.
Say "corn" to any man,
And he thinks of the greatest grain of his native land.
Say "corn" to the American, and he knows you mean corn.
Be English and call it maize.
Be scientific with Zea mays.
Call it whatever you will,
It grows on a hundred million American acres,
Grows and yields right well—
Yields corn enough
To give two dozen bushels to every man, woman, and child
In the United States of America.
Clear the living rooms of America.
Make way for Indian corn.
For every man, woman, and child in the United States of America,
Two dozen bushels of Indian corn.
Picture the baby
On the living room floor
And twice a dozen baskets full of corn.
Picture the preacher
In the pulpit
And twenty-four bushels of Indian corn.
Picture every man, woman, and child
In the United States of America
With twice a dozen bushels of corn.
Make it into succotash, corn meal, corn flakes, and sirup.
Feed it to the cows, the hogs, the chickens.
Feed 90 percent of America's corn
(And we do. We usually do.)
Feed 90 percent of America's corn
To the cows, the hogs, the turkeys, the chickens—
And taste the beef,
The pork
The milk, the cream, the cheese, the eggs,
And smell the bacon in a thousand kitchens.
And who grows the corn?
Only men and their women grow corn from the earth.
Columbus discovered America in 1492.
Columbus discovered corn.
Cortez marched on the Aztecs,
And he ate corn.
Pizarro pillaged Peru,
In 1532,
And the Incas were harvesting corn.
But no man knew
Where the wild corn grew,

And no man knows
Where wild corn grows.
(Only man grows corn from the earth.)
The scientists of America study corn—
Yet they don't know
Where the wild plants grow—
The scientists of America study corn,
And dreaming and scheming,
And plotting and planning,
With tall talk
Of chromosomes, genes, and megaspores,
The plant breeders of America
Do a new thing under the sun
With their old friend Zea mays.
And Indian corn is hybrid corn.
Sing the praises of hybrid maize.
Sing the praises of man.
Men with their scheming have managed to raise
More bountiful corn than Nature can.
Take if you will an inbred strain.
Make your selections again and again.
Do it some more
And choose out four.
Call one A, and call one B.
Call one C, and call one D.
Call them in rhyme.
(It's corn-planting time.)
It's corn-planting time
For A with his B
And C with his D.
Watch the summer winds sway
The tassels on A,
The pollen-rich tassels of A,
And at harvest time see
The kernels on B—
The full-ripened seed of detasseled B,
Predestined to mate with the seed of CD.
For C with his D
Has a way
You can say
Is like A's with his B.
(But the grain they both yield
In the seed-grower's field
Makes no johnnycake, cornmeal, or succotash,
Makes no chicken corn, cow feed, or hog mash.
Its fate
Is to mate;
Its deed is to breed.)
So call them in rhyme again
It's corn-planting time again.
And AB
With CD
Will cross and sublime again.
And the double-crossed grain that their harvest will yield
Is a new kind of seed for the corn farmer's field.
Thus Science discloses
Controlled heterosis,
And hybrid vigor
Makes corn yields bigger.
And Indian corn is hybrid corn.
And the farmers of America
In the Year of Our Lord Nineteen Hundred and Thirty-three
Rise up from their breakfasts
And plant a hundred thousand acres of hybrid corn.
And when harvesttime comes
They like it.
And ten years later
They rise up from their breakfasts
And plant fifty million acres.
Sing the praises of hybrid corn
To the tune of twenty percent
Hybrid vigor in Zea mays
Boosts the yield by twenty percent.
Yes, sir,
The corn growers of America
Get six hundred and fifty million bushels more
For their time and their trouble
Than they could have
Without the magic of hybrid corn.
Sing the praises of hybrid corn
To the tune of twenty percent.
Hybrid vigor in Indian corn
Boosts the yield by twenty percent.
Feed it to the hogs of America.
Fed six hundred and fifty million bushels of Indian corn
(And we feed them more than that. We certainly do.)
Feed six hundred and fifty million bushels of Indian corn
To the greedy, grunting, squealing, pork-growing pigs of America,
And how much pork do you get?
Brother, you get pork enough
To give three pounds
To every man, woman, and child on the face of the Earth.
Sing the praises of hybrid corn
To the tune of pork at your meals.
For seven billion pounds of pork
Is hybrid vigor in Zea mays.
But no man knows
Where the wild corn grows.
(Growing corn is a human thing.)
When spring comes to America
The farmers of forty-eight United States
Get up from their breakfasts—
They and their sons and their daughters too—
In every State of the Union
The farmers of America
Rise up from their breakfasts
And plant a hundred million acres of Indian corn.
And before
And behind them
Across the cornfields of America
A Nation moves with them.
America grows corn.

Wisconsin Research Cooperation With the National Heart Institution

---

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. WILEY. Mr. President, as an indication of the splendid program of scientific cooperation at the grassroots of America, in this instance in my own research-minded State of Wisconsin, I send to the desk a most stimulating compilation which has been forwarded, at my request, from the information office of the National Heart Institute.

The memorandum sets forth the facts on how the appropriations which we in the Congress provide to the Institute are translated, so to speak, into backing up research, training, and grant programs the length and breadth of America.

I ask unanimous consent that the memorandum be printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

THE PUBLIC HEALTH SERVICE HEART GRANT PROGRAM

The National Heart Institute, established in 1948 by unanimous vote of Congress, is the focal point of the cardiovascular research and training program of the Public Health Service. As a unit of the National Institutes of Health, the principal research arm of the Public Health Service, the National Heart Institute conducts research at its laboratories in Bethesda, Md., and elsewhere. It also cooperates actively with the Heart Disease Control program of the Division of Special Health Services, Bureau of State Services, Public Health Service, in providing technical assistance and grants-in-aid to the States for the development of community heart programs.

Nationwide advances against cardiovascular disease are augmented by National Heart Institutes grants and awards for cardiovascular research and training. Funds for carrying out the work of the National Heart Institute are appropriated by Congress. The appropriation for this purpose for fiscal year 1958 (July 1, 1957, through June 30, 1958) is:

Research grants	$19,364,000
Research fellowships	1,600,000
Clinical traineeships and training grants	5,135,000
Grants-in-aid to States, $2-125,000, plus assignment of professional personnel, $144,-794	2,269,794

I. RESEARCH

Research grants

Research grants are awarded to investigators working in hospitals, laboratories, and institutions throughout the country. The research proposal is designed by the investigator and reviewed by study sections (panels of scientific experts) and by the National Advisory Heart Council. Research grants are awarded on a scientific merit basis and are not apportioned according to geography or formula. These grants make possible cardiovascular research that could not be carried on otherwise.

II. TRAINING

A. Research fellowships

Research fellowships provide training stipends to qualified predoctoral and postdoctoral personnel who wish to obtain research training in the preclinical and clinical sciences associated with the cardiovascular and related areas, including the area of aging.

B. Training grants

Graduate research training grants are available to institutions for the establishment, expansion, and improvement of research training programs in the cardiovascular and related areas, including aging. Graduate clinical training grants are available where a unique opportunity exists to meet a national need in these areas. Undergraduate training grants are being made to medical schools to assist in the improving of cardiovascular undergraduate medical training and to schools of public health for public health training in the chronic diseases.

III. HEART DISEASE CONTROL

State grants-in-aid

Through grants-in-aid to States administered by the Bureau of State Services of the Public Health Service, health departments are assisted in developing community programs against cardiovascular disease. These grants are awarded on the basis of population and economic need within each State.

Grants and awards in the cardiovascular area active Feb. 1, 1958

Procurement of Lawyers for the Navy

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Rear Adm. Chester Ward, Judge Advocate General of the Navy, regarding the procurement of lawyers for the Navy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OFFICIAL STATEMENT OF REAR ADM. CHESTER WARD, JUDGE ADVOCATE GENERAL, UNITED STATES NAVY, BEFORE THE STENNIS SUBCOMMITTEE OF THE ARMED SERVICES COMMITTEE OF THE SENATE, ON THE PERSONNEL PROCUREMENT AND RETENTION PROBLEMS OF THE LEGAL DEPARTMENTS OF THE SERVICES, APRIL 17, 1958

The official position of the Navy Department and Department of Defense does not favor incentive pay for the military lawyer. In my official capacity as Judge Advocate General, I, of course, support this view.

The chairman of your subcommittee having invited me to appear and present my personal views, I am prepared to do so.

Shortly after assuming office, I caused a study to be made on the ways and means of improving legal services in the Navy.

I found:

1. A great and continuing increase in workload.

2. The number of lawyers available to me was inadequate to render the type of service to which I believe the Navy is entitled and needs.

Added to this, and of special significance, I found that I was unable to retain those presently on board.

The inability to retain lawyers in the program seriously affects my capacity, as Judge Advocate General, to perform my statutory duties.

Virtually every young lawyer gets out of the service as soon as his military obligation is fulfilled. This means, therefore, that he would not have come in at all but for the draft and that he would rather serve as an officer than an enlisted man.

Thus the Selective Service Act indirectly has the effect of drafting young lawyers for legal duty in the service.

These young men enter the service to fulfill their military obligation but by the time they have attained a modicum of experience their military obligation is completed and they return to the more lucrative civilian practice. With the draft law as it is, those departing are being replaced—but they, too, will depart when they have completed their military obligation.

A law degree and admission to the bar do not make a seasoned lawyer. The constant ebb and flow of these young lawyers in the military results in lack of continuity of service and, of even greater import, low experience level. The services in effect become training schools preparing these young lawyers to enter lucrative civilian practice at great cost to the Government. Also, it is difficult for servicemen being tried before courts-martial to believe that a young, inexperienced lawyer can fully protect their legal rights. This has a definite effect on the morale of those accused of offenses.

The Court of Military Appeals had this to say in the case of *U. S.* v. *Fisher* (3 U. S. C. M. A. 396, 24 C. M. R. 206):

"We are, however, disturbed by an apparent tendency at the higher appellate levels to give only 'pro forma' attention to the records of trial of inferior courts. Possibly the situation is due to an inadequate percentage of qualified professional personnel, and consequently the services are at a disadvantage in processing their court-martial cases. It is quite possible that the shortage of legally trained personnel particularly in the Navy is so great that the few are just physically unable to carry the heavy burden. Nevertheless, we must insist that the same careful attention be given to the inferior courts-martial records especially when a punitive discharge is imposed as is accorded the records of general courts-martial. A punitive discharge imposed by a special court separates the accused from the service just as effectively as does one imposed by a general court-martial; a period of confinement at hard labor adjudged by a special court is not different from the same period imposed by a general court. It is not a compliment to the system of military justice that the highest appellate court should be called upon by an accused to correct as many errors as appear in this record."

Admiralty claims, tort claims, and other claims grow out of the Navy's activities and involve millions of dollars a year. It is the Navy lawyer who represents the Government's interest in investigating, processing, and effecting settlement of these claims. I do not believe that I should be required to entrust the handling of such important matters to inexperienced lawyers. Nor can our increasing responsibilities in the important field of international law be met by inexperienced legal personnel. Substantial interests of the United States are constantly at stake even in dealing with our allies.

Efforts to retain junior law specialists on active duty to meet these needs have proved unavailing. A recent program offered eligible reserve law specialists in the grades of lieutenant (junior grade) and ensign a permanent lieutenant (junior grade) commission plus 3 years constructive service in return for a voluntary extension of 1 year of obligated service. Less than 10 percent of the officers eligible accepted. During the last half of fiscal year 1957, 20 Reserve law specialists came into the program but 24 left. During the first half of fiscal year 1958, 41 Reserve law specialists came into the program but 53 left.

As a consequence, the Navy has been forced to rely largely on a hard core of senior law specialists, whose contributions in terms of experience and legal ability have been outstanding. In 4 or 5 years, the large majority of this group—which now totals about 187—will attain eligibility for voluntary retirement. There is every indication that many will seek retirement because of the present dim prospects for pay and promotion. A recent poll of these law specialist captains and commanders revealed that 72 percent would seek retirement upon attaining 20 years' active duty. Of these 83 percent

indicated that they would remain on active duty if incentive pay legislation were enacted. This means that 5 out of 6 of those who would otherwise retire would stay on.

The younger Regular officers are resigning. Within the past few months 4 lieutenants and 1 lieutenant (junior grade) have either resigned or tendered their resignations. A vital factor which causes these young officers to return to civilian life is inadequate pay. As was stated by 1 young officer in submitting his resignation:

"I should like to express my gratitude and appreciation for the honor and privilege accorded me of having served on active duty with the Navy and particularly in the Office of the Judge Advocate General and I regret only that it is a luxury I can no longer afford."

The procurement program for Regular officers is not meeting with success. During fiscal year 1957, 10 officers were procured for the Regular Navy. Thus far in 1958, 6 have been procured. Prior years were less productive. It is apparent that relatively few are interested in making a career out of the Regular Navy, and of those who chose a career on entering many have changed their minds and resigned.

My Regular strength is also subject to depletion by proposed legislation which would render vulnerable to accelerated release during the next 3 fiscal years of 36 of my senior officers in the grade of commander who are failed of selection for promotion. Additionally, the legislation proposed could result in 37 of my 61 present captains facing consideration for retention within the next 3 fiscal years. How many will be retained, I don't know. If all categories of officers must take the same attrition, I can lose up to 13 experienced captains. Since these 36 commanders and 13 captains represent about 18 percent of my total Regular strength, it is serious.

I believe therefore that the Navy stands in present and increasing danger of not having experienced and competent legal officers to handle its large volume of legal business. This most disturbing situation can be resolved only by furnishing sufficient incentives to encourage some of the well qualified younger law specialists to make a career of the military service and at the same time to retain those senior experienced lawyers who have strongly indicated their intention to retire on attaining 20 years of active duty.

It seems clear the procurement and retention problems that exist for law specialists are comparable to those that existed for doctors and dentists. The Medical Officer Procurement Act of 1956 which provided career incentives in the form of pay and promotion advantages reversed the trend of losses of doctors and dentists from the Navy. I firmly believe that incentive pay legislation would achieve comparable results with respect to law specialists.

It is my opinion that:

1. There is a serious shortage of experienced military lawyers.
2. The services are unable to procure and retain lawyers in the numbers needed.
3. The services are unable to retain lawyers beyond their obligated duty periods.
4. The senior military lawyers will soon leave the services in large numbers as they become eligible to retire.
5. The lawyer is the only officer except for those in the medical department, who is required to have several years of graduate training to be commissioned in the services.
6. The enactments of the Congress require that military lawyers be provided.
7. Incentive pay solved the doctors' problem; it will solve the lawyers' problem.

In addition to these vitally important needs in numbers and experience, I wish to invite your attention to the need in the Navy for flag rank for the position of Deputy Judge Advocate General. There is presently a great disparity in flag and general officer rank between the Navy and the other Services in their legal organizations. The Navy is at a definite disadvantage in this powerful incentive to able lawyers to remain in the service to compete for flag rank and responsibility. There is pending before this Committee a bill—H. R. 8121, passed by the House at the last session—which would satisfy this need and which I urgently commend to your early and favorable consideration.

I am convinced that unless effective remedial action is taken, the Navy will be faced with the unacceptable situation of being unable to carry out within reasonable professional standards its legal duties demanded by the Uniform Code of Military Justice. Further, I believe we will be unable to render the legal services necessary to the proper administration of the Navy as a whole, and to conserve naval appropriations in areas such as tort and admiralty claims. Also, skilled and experienced lawyers are required to protect the rights of our servicemen overseas and to administer foreign claims.

A careful evaluation of all the factors involved has convinced me beyond doubt that the incentive pay for military lawyers will be the most effective and practicable course of action if the Congress desires to maintain military lawyers in sufficient number and at a sufficient experience level to carry out adequately the provisions of the laws already enacted by the Congress.

Safety With Solvency

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. WATKINS. Mr. President, on April 19 there was published in the Salt Lake City Tribune a thoughtful editorial which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PLAN TO GIVE UNITED STATES SAFETY WITH SOLVENCY

President Eisenhower's forceful speech in favor of his program for reorganizing the Pentagon puts his critics on the defensive. They will have to answer him. And they will find that hard to do.

For the President said plainly that he has no intention of setting up a Prussian-type general staff, or of merging the three armed services, or of depriving Congress of the power of the purse.

These are some of the horrible things that congressional critics have said would result from the Eisenhower program.

We agree with the President when he brands these claims as nonsense—partly misrepresentations and partly misconceptions.

The public is weary of bickering between the three armed services.

As a solution Mr. Eisenhower proposes expanding the authority of the Secretary of Defense and strengthening the hand of the chairman of the Joint Chiefs of Staff.

This means that instead of three services, going more or less their own way despite so-called unification, there will be unified combat command and strategic planning.

It does not mean turning the Secretary of Defense into a czar or creating a Prussian-type general staff which could dominate the country. A civilian President would still be commander in chief. A civilian Congress would still have the responsibility of appropriating funds and making laws.

Indeed, it is absurd to contend that one piece of legislation could create both a civilian czar, in the person of the Secretary of Defense, and a military junkerdom, in the persons of the Joint Chiefs of Staff.

As for the claim that Congress would lose the power of the purse, that also is absurd.

The President wants the Secretary of Defense given authority to transfer some appropriations between the services. But Congress will still make the appropriations and will still be able to make its voice heard if it does not like what the Defense Secretary does. Moreover, a degree of flexibility in the use of appropriations should make for greater efficency and perhaps economy.

President Eisenhower promised to fight—and fight hard—for his reorganization program. He has made an excellent start, but the battle has hardly begun and he will have to keep on fighting if he is to win. The opposition is strong and determined.

Chairman VINSON of the House Armed Services Committee has made it plain where he stands. In an hour-long speech this week he lashed the Eisenhower program. Though Mr. VINSON's committee will begin hearings on the program next Tuesday, Mr. VINSON isn't looking for enlightenment. He has made up his mind in advance and his answer is a flat rejection.

There are other "Vinsons" in House and Senate. They have allies, both in the Penagon and in such unofficial organizations as the Navy League.

We are convinced, however, that the public wants reorganization. We believe also that the President's program, based on his own wide experience as a military man, will provide the right kind of reorganization—in Mr. Eisenhower's words, to give the Nation "safety with solvency."

A nation which spent $200 billion on defense in 5 years must have a defense organization which is both effective and efficient.

Pan-Americanism

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. MARTIN of Iowa. Mr. President, April 14 was the formal Pan American Day during Pan American Week. Celebrations of this anniversary recurrence take place in our own country and in our various sister nations to the southward. Ever since the days of James G. Blaine and the truth birth of pan-Americanism, the doctrine of western hemispheric solidarity has obtained; and, generally, with most salutary results. The importance of the practice of the principles thus involved cannot be overemphasized. In the official councils of the affected countries, and in the representative body of the organization of American States, reliance upon and application of those principles have been tremendously beneficial to all concerned.

True and successful pan-Americanism must stand on the firm, wise basis of mutual respect and esteem between and among the western nations. We know

that communistic influences are constantly striving to undermine the unioned strength of these lands, and to create dangerous frictions and fatal divisions. These subversive efforts require that, for the common good—indeed, for the interests of survival—they be met and mastered by the unfailing vigilance, and the timely and effective action of the Americas.

Anything that tends to emphasize and promote the cause of pan-Americanism is of value. In this connection, and as being apropos of this anniversary occasion, I take pleasure in including as a part of these remarks, a very fine poem written by Hon. Maurice H. Thatcher, the only surviving member of the Isthmian Canal Commission, which had charge of the construction of the Panama Canal, and, later, a distinguished Member of the House of Representatives, from Kentucky. He has always been a very firm believer in the spirit and purposes of pan-Americanism, and has done much, through the years, for the cause. As a result there have been bestowed upon him by Panama, Ecuador, and Venezuela their highest civic orders. In the course of a busy and eventful life he has found time to indulge an undoubted talent for poetic effort. Some of his poems deal with the Isthmus of Panama and the Panama Canal, and have been variously published. I ask unanimous consent that the indicated poem, which appeared some time ago in Colombia, a monthly magazine published in New York City under the auspices of the Colombian-American Chamber of Commerce, be printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

PAN-AMERICANISM

(Inscribed to the American Republics)

Join all your hands together,
  And bind your hearts as one;
In fair or stormy weather,
  Act ye in unison!
Ye face in like directions,
  Your pathways are the same;
Thru mutual affections
  Achieve a common fame!

In Northern, Southern reaches;
  In lands that lie between,
Preserve the faith that teaches
  Yourselves and sons to glean;
To glean the grain eternal,
  That bears the precious bread,
Wherewith your needs fraternal
  Shall be forever fed!

And never may ye falter
  In aught of purpose true!
Yours is a single altar,
  One aim ye have in view;
One aim and one ambition,
  Which in your souls must lie,
To keep the old tradition,
  That freedom shall not die!

Soft speeches may not solve them—
  The problems which arise,
But wisdom should resolve them
  To friendly enterprise.
Mistrust and fear will vanish,
  When all is understood;
And motives mean or clannish,
  Dissolve in brotherhood.

Blest Bunker Hill and Lexington
  To far Maipu call;
And Carabobo's field, twice won,
  Hears and re-echoes all.
Yorktown and Ayacucho,
  And San Juan's Hill and Tree,
Point the way for all to go,
  Who search for liberty.

E'er linger Clay and Bolivar,
  In spirit, to inspire;
Each shining on, a deathless star,
  Ringed with celestial fire.
Strive ye to reap the vision
  These matchless leaders saw,
A Western World, Elysian,
  Ruled by a Western Law!

Remote from foreign faction,
  Begirt by oceans twain,
Bar ye, by unioned action,
  The alien bit and rein!
So, "All for each, and each for all,
  Yet each forever free!"
The Earth shall heed your cry and call,
  Thru all the years to be.

—*M. H. Thatcher.*"

WASHINGTON, D. C.

Support Prices on Dairy Products

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Long View," by Hugh Casline, which appeared in the American Agriculturist for April 19, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LONG VIEW

You cannot expect a man to be happy over a reduction in the price of what he has to sell. The only way he can honestly approve of such action is through a belief that in the long run he will gain more than he will lose.

There is no question about the short-time effect of lowering price supports on dairy products. For a few months—no one knows exactly how long—milk checks will be about 10 cents a hundredweight lower than if dairy supports had been frozen at last year's level. Any further decrease in your price as compared to last year will be due to other factors, especially to higher production so that a smaller percentage will be sold as fluid milk.

Many dairymen do believe that the President's veto of the price-freeze bill will benefit the dairy industry in the long run. Therefore, they approve the veto—and I agree with them.

I realize that the approval is far from unanimous. My own feeling, after talking with many dairymen, is that the sentiment is fairly equally divided. Those who are disappointed with the veto may feel that prices during the next few months are more important than for the long pull, or they may sincerely believe that Government has the responsibility of guaranteeing profitable prices.

Some who keep their fingers on the pulse of milk marketing believe that manufactured dairy products will be selling above support levels before next winter. They (and many dairymen) feel that supports have failed to improve prices, that they prevent desirable changes in farming, that they increase surpluses, and that they inevitably lead to more Government controls.

It seems reasonable, if price supports are the solution to unsatisfactory prices, that the problem should have been solved by this time. Also that growers with price-supported products should be more prosperous than those without supports—which definitely is not true.

In the February 15 issue I expressed the belief that supports should have been reduced more gradually, preferably starting a year ago. I still believe that. Yet I also believe that in a few months an overwhelming majority of northeastern dairymen will agree that freezing supports at last year's level would have been a step backward, and therefore, that the President's veto was wise and in the interest of the men who milk cows.

Decision in the Trilling Case

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. THYE. Mr. President, in yesterday's Sunday Star—the issue of April 20—there is an excellent and thought-provoking editorial discussing the United States court of appeals opinion in the case of John Trilling. The editorial is self-explanatory, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

I heartily concur with the reactions of Judge Burger. He is an able and respected jurist. Judge Burger has a high sense of duty and a feeling for the obligations inherent in the letter of the law.

Able Judge Burger has called for a full reexamination of Federal rule 5, either by the rulemaking process or by Congress.

The fact that a man can be freed of a serious crime, even though he has confessed to it, by a rule which calls for his arraignment without necessary delay, can well become a loophole freeing dangerous men, and allowing them to move about in our society.

The Congress should review the necessity for Federal rule 5. We should do this now and without delay.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Sunday Star of April 20, 1958]

HELP! HELP!

A Solomon would stagger away, talking to himself and shaking his head, if called upon to explain what the Mallory rule means in the Nation's Capital today.

It has been almost a year since the Supreme Court handed down its unanimous decision in the Mallory case—a ruling which threw out the confession of a convicted rapist and resulted in his release. Mallory had been held by the police for 7½

hours. The reason for the reversal was that he had not been arraigned without unnecessary delay as required by Federal Rule 5 (a).

We thought from the beginning that the Supreme Court's decision was unreasonable in the circumstances of the Mallory case and that its meaning was unclear. Others disagreed, contending that the opinion was both proper and its meaning clear.

Now, almost a year later, comes the opinion of the United States court of appeals in the case of John Trilling, an eager-beaver safecracker. This appellate court is composed of nine able and conscientious judges. Yet they are in hopeless disagreement with respect to the meaning of the Mallory rule as applied to the Trilling case.

The division among the judges is cited here, not in any needling spirit, but to illustrate the massive confusion which prevails. Judge Danaher wrote what becomes the opinion of the court, affirming Trilling's conviction on 1 count in 3 indictments. Trilling, in three trials, had been found guilty under all of the indictments. Judge Danaher was joined in full only by Judge Burger, and we will return to Judge Burger later. Judge Bazelon, joined by Chief Judge Edgerton, would have thrown out all confessions and reversed the one conviction. Judges Washington and Fahy came to this same conclusion, but, perhaps significantly, they did not join in Judge Bazelon's free-wheeling opinion. Judge Prettyman was joined by Judges Miller and Bastian. He agreed with Judge Danaher as to the correctness of the one conviction, thus supplying a majority of the court on this point. But Judges Prettyman, Miller, and Bastian thought that all of the confessions were valid and that all of the convictions should have been affirmed.

This, then, is the prevailing state of the law in the District with respect to the Mallory ruling. How can any policeman, prosecutor or trial judge be expected to know which end is up?

Let's get back to Judge Burger. In a brief statement he said he agreed reluctantly with Judge Danaher because he thought he was compelled to do so by the Mallory ruling. He would have preferred to join Judge Prettyman because what he said makes sense and ought to be the law. Then Judge Burger said this: "Rule 5 (a) should be reexamined by the rulemaking process or by Congress."

To this we say "Amen" although we believe action by Congress is preferable. This community, in which the Mallory rule hits with full and crippling impact, is in desperate need of help. That help can best come through enactment of pending legislation which provides that mere delay in arraignment shall not serve to invalidate voluntary confessions. We earnestly hope the decision in the Trilling case will furnish the extra push needed to get the bill through Congress.

A South Dakota Editor Appraises Walter Reuther

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. McGOVERN. Mr. Speaker, in recent weeks the leaders of American labor have been in the national limelight. Because of the controversy which swirls about some of these labor personalities, it is difficult for the general public to evaluate properly the individual men who lead labor. There are those who flatly deny and wrongdoing at all on the part of labor's leadership. There are others, equally blind, who lump all labor leaders together and falsely assume that because a few individuals have been revealed as corrupt, the entire labor leadership is corrupt.

Objective evaluation of our principal labor leaders is a rare article today. For that reason, I am very grateful to the editor of the largest daily newspaper in South Dakota for setting forth an honest and discerning evaluation of Mr. Walter Reuther, president of the United Auto Workers. Mr. Fred C. Christopherson, editor of the Sioux Falls Argus-Leader, set forth his reactions to Reuther after hearing the labor official outline his views at the International Press Institute in Washington, D. C., last week.

Mr. Christopherson's appraisal of Reuther which follows is a portion of an excellent editorial of April 18, 1958, entitled "Two Men of Controversy," which gives the editor's reactions to addresses by both Dr. J. Robert Oppenheimer and Reuther:

REUTHER SPEAKS WELL

(By Fred C. Christopherson)

Reuther's power can be readily understood. He speaks easily and simply. He has a good sense of humor and he knows how to use the kind of language that illustrates effectively his own ideas.

He is not in the same class, or so it seemed to me, as labor leaders such as Beck and Hoffa. The committee of the United States Senate investigating him has found no trace of personal graft in his records. It also has learned he has been vigilant in ferreting out communistic influences in the unions under his direction.

SOUND ECONOMICS

The economic policies that Reuther stressed in his speech to the editors seemed fundamentally right. And he said much that is entitled to respect by both organized labor and management.

The problem in earlier years, he pointed out, was how to manage scarcity. Now, he explained, our problem is how to manage abundance.

We should use, he said, the most productive and labor-saving tools we can devise but we should learn how to share our benefits.

"We have learned how to create abundance," he explained, "but we have a long ways to go in arranging for its adequate distribution."

EASY TO LIKE REUTHER

Reuther, of course, is condemned in many circles. He is regarded in some quarters as a ruthless man determined to attain his objectives through vigorous methods.

But certainly there was nothing in his appearance or in his remarks to the editors to suggest that he was, as some persons say, a dangerous man. He was even-tempered, good-humored, and logical. About what he said was an air of sincerity.

He battles in a rough game, to be sure. Across the table from him at conferences are the best brains that management can assemble. He tries to get as much as he can for the men whom he represents. That, of course, occasionally, annoys management.

To be honest about it, nevertheless, I must say that I liked him. And, if the United States economy has nothing more to fear than men such as Reuther, I'm not too much worried about it.

Water Needs To Meet

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. LOSER. Mr. Speaker, I call to the attention of the House a rather significant course of action taken by the United States Chamber of Commerce sometime ago. This action was rather poignantly pointed up by an editorial appearing in the Nashville (Tenn.) Banner, one of our leading southern newspapers.

More recently this great newspaper called to the attention of its readers a valid reason for Stewart's Ferry Dam on its editorial page.

The United States Chamber of Commerce has recognized that a national policy covering water supply, reclamation, navigation, flood control, and power programs is a must in industrial planning.

The mayor of the city of Nashville, the Honorable Ben West, has recognized the need for future planning of a supplementary water supply for Greater Nashville and he has called attention to the need for the construction of Stewart's Ferry—Percy Priest—Dam on Stone's River, just outside the city of Nashville.

Consulting engineers for the city, as well as its own director of waterworks, Robert L. Lawrence, Jr., have recognized and anticipated the water needs of this great city. These experts point out that this water-resource project is most desirable and needed. The two editorials, under the unanimous-consent rule, are herewith inserted in the CONGRESSIONAL RECORD. I commend their reading to my colleagues as being most convincing and enlightening:

WATER NEEDS TO MEET

The assurances of abundant—or at least adequate—water resources is a recognized must in industrial planning, a fact leading to efforts for a consistent national water and power policy. To that end, the United States Chamber of Commerce reports, legislation is being drawn, for such a policy covering water supply, reclamation, navigation, flood control, and power programs.

Significantly, Tennessee has not waited for such a program to confront its own problems. The 1957 legislature created the water resources division, operating within the framework of the conservation department, to set up a workable policy before the well runs dry.

Actually, of course, the well has not run dry—or nearly so. But the necessity of conserving these resources long ago was seen. Where water in tremendous quantities is wasted, or where it is made unusable by stream pollution, etc., action is needed to end these practices—and that is within the scope of the policy sought.

In the national picture, uniform policy is desired to determine the exact role of the Federal Government in these programs, and so make it easier for States, local governments, and private citizens to fit their program into national planning.

Industry stands to gain most from water supply improvement, it is pointed out, be-

cause it uses more water than any other sector of the economy. Total industrial water consumption now is about 77 billion gallons daily, and by 1975 it is predicted this industrial demand will double. Yet in many areas industrial water consumption has reached the capacity of local water resources.

It is for the future, meaning years ahead, especially, that Tennessee is laying the groundwork for assured available supply. The State is growing industrially. While it hasn't waited for joint action by all the States, through formulation of Federal policy, it will stand to benefit from that. Meanwhile, the efforts now being undertaken nationally underline the value of the steps Tennessee already has taken. The water resources division can render an immeasurably important service.

A VALID REASON FOR STEWART'S FERRY DAM

Recommendation for construction of a vitally important supplementary water plant for greater Nashville on Stone's River provides additional and compelling support for the construction of the proposed Stewart's Ferry dam.

Nashville Waterworks director Robert L. Lawrence, Jr., has successfully anticipated Nashville's growth in terms of its water needs and expansion of its distribution and purification facilities for many years.

His full agreement with the survey, estimates, and recommendations of the Chester engineers for locating a new waterworks facility on Stone's River in conjunction with the proposed Stewart's Ferry dam should leave little doubt in the minds of citizens of this community as to the desirability and need for this project.

Mayor West is certainly thinking in terms of the long-range future needs and progress of this entire metropolitan area when he renews the fight for the Stone's River project.

Nashville needs, and must have a supplemental water supply. This community is, and has been in the past, extremely fortunate in having an almost unlimited source of water. Looking into the future it now appears that the industrial growth of this community, the needs of its growing urban population and its safety in time of record floods make more than feasible the projected impoundment.

Nashville's competent consulting engineers and waterworks director Lawrence have presented a strong case. It remains for Mayor West, other public officials, and the citizens of this middle Tennessee section to make their wishes known to their representatives in Washington.

This is the time for the community to get behind Mayor West and other officials who will join him in this endeavor and bring the Stewart's Ferry dam into reality because of its importance to the orderly and progressive development of this metropolitan area.

Population Increase and Growth of Utah

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful and interesting editorial which was published in the Salt Lake City Tribune on April 19.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HEADING FOR A MILLION

A Utahan doesn't have to be very old to remember back to the days when the State's population was less than half a million. It was that through the 1920's. It was only 550,000, in fact, just 18 years ago.

And yet population analysts are already confidently predicting a Utah population over a million by 1965.

This forecast, just made by the Utah Foundation, is based on various official and unofficial studies. One of these is the comprehensive analysis made each year by the Utah Population Work Committee. This committee recently made its January 1, 1958, estimate of Utah population, the figure being 858,000. This represents a gain of 25,000 the last year, which seems to assure that the 1960 census will see the Utah total over the 900,000 mark.

Since 1950, the report showed, Utah's population gain has nearly doubled the national rate.

An article in the Utah Economic and Business Review says Utah is the eighth fastest growing State in the Union, with its population increase the last 7 years equaling the gain of the previous 17.

Of course, population gain of itself doesn't make a better Utah. There must be gain also in opportunity and general individual and community well-being. But there is reason to believe Utah is making such gains to go along with its population increase. The State is shifting to an industrial economy, with more jobs and better paying jobs. This in turn adds to governmental revenues and makes possible the financing of many improvements.

Perhaps the best news of all for Utah in these population analyses and forecasts is not the rapid growth or the prospect of a million-plus State in the very near future. The best news is that after some 20 years in which Utah failed to keep pace with its natural population growth (excess of births over deaths), for the last 7 years the State has had a net inmigration of people from other States and foreign countries.

This simply means ample opportunities and jobs for all native Utahans who want to stay here—plus something extra to attract those of energy and ability who want to follow the trail of the pioneers in seeking new life and new opportunity in Utah.

Procurement of Lawyers for the Air Force

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 21, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Maj. Gen. Reginald C. Harmon, Judge Advocate General of the Air Force, regarding the procurement of lawyers for the Air Force.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY MAJ. GEN. REGINALD C. HARMON, THE JUDGE ADVOCATE GENERAL, USAF, BEFORE THE STENNIS SUBCOMMITTEE OF THE ARMED SERVICES COMMITTEE OF THE SENATE ON THE PERSONNEL PROCUREMENT AND RETENTION PROBLEMS OF THE LEGAL DEPARTMENTS OF THE MILITARY SERVICE, APRIL 17, 1958

Mr. Chairman and members of the committee, in the beginning, I should like to state that it is indeed gratifying to me to learn that the members of this committee are interested in the procurement and retention of qualified legal personnel in the military services. As briefly as possible, I shall present to you those facts which are available to me and are relevant to this problem. In the interest of conserving the time of this committee, I have prepared a written statement which, with your permission I shall read at this time.

In presenting the facts which concern the maintenance of an effective legal department in the Air Force, I should like to mention, first, the magnitude and importance of the legal work in that service; second, the problem of procuring and retaining qualified legal personnel in the service to do that legal work; and, third, the reasons given by the officers in my department for their lack of interest in seeking or continuing a military career in the legal profession.

In regard to the magnitude and importance of the legal work in my service, I shall not take too much of your time or burden you unduly by going into detail to describe the countless fields of legal activity within the Air Force. I shall mention only a few of the principal ones.

(a) During the fiscal year 1957, the lawyers in my department reviewed for legal sufficiency procurements valued at more than $8 billion and rendered legal advice in approximately 44,000 contractual actions of various kinds in the negotiation, execution and administration of Government contracts. The Government was represented by members of my department in 280 appeals before the Armed Services Board of Contract Appeals in matters involving over $26 million and the patent lawyers reviewed for legal sufficiency or rendered service in about 12,000 patent matters involving more than $3 billion.

(b) During the same fiscal year, the Air Force alone adjudicated and settled 11,000 claims involving payments of approximately $3 million which now is primarily and almost exclusively the responsibility of the legal department.

(c) In the field of international affairs, in the year 1956, there were over 3,100 trials of Air Force personnel by foreign courts; in more than 2,500 of these cases, waivers of jurisdiction were obtained. One of my legal officers was present at every trial in which no waiver was granted to safeguard the rights of our citizens as guaranteed by the North Atlantic Treaty Organization Status of Forces Agreement.

(d) In the field of criminal law, which comprises about half of the work of my department, in the calendar year 1956 the Air Force conducted over 37,000 trials which is 5,500 more than it is reported by the Attorney General as having been filed during the same year in all of the United States district courts in this country. As you know, under the Uniform Code of Military Justice, the duty of the military lawyer does not end with the trial. He is responsible for the appellate review of these court-martial proceedings to see that both the rights of the Government and the rights of the accused are protected in accordance with our system of Government. While it might be a little self-serving for me to say so, I am obliged to state, since it is relevant here, that I believe the Air Force record in the fair and equitable administration of criminal justice is second to none in the Nation today either military or civilian and State or Federal. I further believe that the Air Force has been equally well represented in its manifold civil activities. I would not be completely frank with you if I did not also state at this time that in my judgment, this high quality service cannot possibly continue unless something is done immediately to solve the personnel procurement and retention problems which are the subject of the second part of this discussion.

Of 1,272 judge advocates on duty on July 31, 1957, 573 were lieutenants. The author-

ination of manpower legal spaces took into consideration, of course, experience requirements and provided for only 149 lieutenants. Due to the fact that the Armed Forces have not been able to retain their lawyers in the service, we have been compelled to rely on inexperienced lieutenants to do a lot of the important work which should be done by experienced military lawyers. Let me cite a concrete example. Strategic Air Command provided spaces in its legal staff for only 11 lieutenants and has said concerning its requirements that all of its judge advocates except 11 must have experience levels of captain or above. SAC has over 100 lieutenant judge advocates today, because we are having to fill requisitions for captains, majors, and even lieutenant colonels with comparatively inexperienced lieutenants. Unfortunately, this is only a part of the picture. Of those over 100 lieutenants, not more than 3 or possibly 4 will remain on active duty after their committed 3-year tours are completed. Between 95 and 100 percent of all of our lieutenants on duty today will return to civilian life as soon as their obligated tours are completed. The reason I say between 95 and 100 percent is that our experience of the past shows that at least 95 percent returned to civilian life, and a poll conducted by the American Bar Association indicates that about 99.1 percent of those now on duty expect to return to civilian life when their obligated tours are over. Our present judge advocate strength is 1,196, a reduction of 76 since last July. Our turnover last fiscal year was nearly a third of our department meaning that our level of inexperience is very high, and in the future we are going to be unable to fill our vacancies even with inexperienced personnel. This is indicated by the fact that in fiscal year 1958 we will get only between 100 and 125 against a requirement of 287. The reason we are getting far fewer in 1958 than we did in 1957 is because of the relaxation of the draft pressure and the fact that an individual can now enlist in the Army for a period of 6 months and discharge the remainder of his military obligations in the inactive Reserve.

As you know, our department is made up of Regular officers and Reserve officers on extended active duty, sometimes called career reservists. Our present authorized strength of the former is 749 officers. Prior to the augmentation program which is now being completed, we had actually assigned to fill those 749 spaces, 360 officers. In the augmentation program, we had 389 vacancies which is the difference between 749 and 360. For those 389 vacancies, we had 238 applications or 3 for every 5 vacancies. After stretching the qualification standards as far as possible, we could accept only 193 of those applicants. Assuming that each of the 193 will accept the commission and pass the physical examination, this will bring our Regular strength up to 553, still about 200 short of the authorized Regular strength. After the augmentation program is over, it seems very unlikely that we will have very many applications for Regular commissions during the next 4 years because during the past 4 years we have gained only 26 Regular officers or an average of 6½ per year. In order to compare our success in the augmentation program with the Air Force at large, I should like to point out that the Air Force had approximately 60,000 applications for 19,644 spaces or 3 applicants for each vacancy or 15 for each 5 vacancies, whereas we had 3 for each 5 vacancies or one-fifth as many per vacancy as the Air Force at large. Between now and 1962, we will lose by retirements approximately 180 senior officers, including both Regular and career reservists. This does not include losses by disability retirements and death which will probably bring our losses to around 200 with almost nothing coming in from the bottom. Our present strength is 1196 officers, a reduction of 76 in less than a year. Of that number, 504 are lieutenants, leaving a total of 692 in grades above that of lieutenant. Of the number of such officers, we will lose in the next 4 years approximately 200 which will reduce our Regular and career reservist strength to 492 by 1962. Assuming by that time the number of lieutenants coming in will be reduced to nearly zero, our number of Judge Advocates in the Air Force cannot be much over 500, which will be less than half of the number required to do the legal work in the service. This simply means that in the short period of 4 years we are not going to have an effective legal department in the United States Air Force unless something is done immediately to solve our personnel procurement and retention problems. You might ask the question "What about the people in the Air Force who have been legally trained but who are not actually doing legal work or who are doing work of a semilegal nature." Those of you gentlemen who are lawyers know full well that not all people who are legally trained can be classified as lawyers capable to render effective legal service in important matters. I also believe that anyone who has practiced law for any substantial period of time knows that after a man has been out of the law business for a good many years, it is very difficult for him to get back into it again. This is especially true in the military where a man's rank and accompanying responsibility because of that rank increases with age. After he has been out of the law business for years, he is not capable of carrying the responsibilities of his rank in the field of his profession. In 1952, we lost 98 lawyers because of a decision by the Air Force to take Judge Advocates off flying status. Inherent in that decision, was the determination that Judge Advocates would remain Judge Advocates and specialists in their field similar to the medical doctors, thereby eliminating any possibility of ever going into a command position. These 98 elected to retain their flying status and forsake the law rather than continue in the legal business and give up their flight pay. The 98 who retained their flying status have collected over a million dollars in flight pay since 1952. While these officers are now performing effective service in other fields of activity, their use to the legal department is lost forever because the professional parade has moved on down the street while their grades have increased. In the legal department, they would have to be assigned to positions commensurate with their grades and nothing can be more damaging to morale than to have a senior officer supervising the work of junior officers who know more about the business than their supervisor. It would be a most extravagant policy to allow legally trained people who have been away from the law for several years to try now to perform the important legal work which they would be required to handle if an attempt were made to utilize their services in the legal field at this time. The Air Force also would lose their effective service in fields where they are now able in an effort to rejuvenate them in the law where their effectiveness would be lacking for years if not forever.

While it is virtually impossible to compute with any degreee of accuracy the value of effective legal service to an organization with as much law business as that of the Air Force, that value is sufficiently high to justify every private corporation in the land to employ legal counsel of the highest quality at tremendous cost to represent it in all transactions of any importance. I stated earlier that the lawyers in my department had reviewed for legal sufficiency procurements valued at $8 billion during the fiscal year 1957. This did not include the review of local purchase contracts made by commanders in the field in amounts not in excess of $100,000 each. The importance of having qualified lawyers to represent the Government in its vast procurement program for defense is readily apparent.

Even in the field of military justice where the advantages of effective legal service would not ordinarily be expected to result in money savings, substantial losses occur when criminal cases have to be retried.

During the calendar year 1957, 37 court-martial cases were either dismissed or returned for rehearing by the Court of Military Appeals and boards of review. The average cost of a court-martial in the Air Force has been determined to be $3,674, therefore, the 37 cases represent a cost to the Air Force of $134,938, a substantial portion of which was a result of inexperience at trial level. In calendar year 1958 to this date, 21 cases have been remanded for rehearing or dismissed representing a total cost during the first 3 months of this year of $77,154. This does not reflect the number of cases ordered reversed, dismissed, or reheard by convening authorities because of error during the course of the proceeding.

This now brings me to the third part of my discussion, which concerns the reasons given by the officers in my department for their lack of interest in seeking or continuing a military career in the legal profession. Many months ago, I made an inquiry through my staff judge advocates in the field in an effort to obtain an answer to this question. The answers I received were almost universally confined to three reasons:

(a) Inadequate pay as compared with civilian opportunities. Official statistics reveal that during the year 1957, the average income of civilian lawyers was $11,390, while that of military lawyers was $7,460. Even under the new pay scales which you are now studying, the average total income of the Air Force lawyer would be only $8,100 based upon authorizations.

(b) Lack of prestige. The officers feel that the position and rank of the Judge Advocate on the staff in all echelons of the Air Force from the top to the bottom are not as high as they should be when his responsibility is compared with that of other staff officers whose position and rank are higher.

(c) Promotion. The officers believe that due to the fact that a graduate degree or its equivalent with the accompanying 3 years of additional college training which are required to enter the legal profession should be compensated for in the way of constructive service for pay and promotion rights, just as are the members of the medical profession.

Mr. Chairman, this concludes my written statement of the facts concerning this subject. I thank you very much.

Report of the United Nations Representative for India and Pakistan for the Security Council

---

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. McCORMACK. Mr. Speaker, the distinguished United States Representative for India and Pakistan. Dr. Frank P. Graham, has been patiently and tirelessly engaged for a long period of time toward trying to bring about a peaceful settlement by an implementation of the resolutions of the United Nations Commission for India and Pakistan of August 13, 1948 and of January 5, 1949.

On March 31, 1958, Dr. Graham made his report to the President of the Security Council, transmitting the report prepared in pursuance of the Security Council Resolution of December 2, 1957.

The report shows how tirelessly and, with diplomatic skill, Dr. Graham worked in an effort to solve the differences, or to relieve the tensions, or to make some progress toward an ultimate peaceful solution.

The report, which I include in my remarks, with his accompanying letter, and particularly the last six paragraphs thereof shows where responsibility rests on the Government of India for no progress being made. I am confident that the efforts of Dr. Graham laid the foundation for the success, in whole or in part, of future efforts.

Dr. Graham is to be congratulated for his statesmanlike efforts.

The report follows:

LETTER DATED MARCH 28, 1958, FROM DR. FRANK P. GRAHAM, UNITED NATIONS REPRESENTATIVE FOR INDIA AND PAKISTAN, TO THE PRESIDENT OF THE SECURITY COUNCIL, TRANSMITTING THE REPORT PREPARED IN PURSUANCE OF SECURITY COUNCIL RESOLUTION OF DECEMBER 2, 1957 (S/3922)

UNITED NATIONS SECURITY COUNCIL,
March 31, 1958.

I have the honor to transmit to you herewith the report I have prepared in pursuance of the resolution of the Security Council of December 2, 1957 (S/3922).

Accept, sir, etc.

FRANK P. GRAHAM,
United Nations Representative for India and Pakistan.

REPORT OF THE UNITED NATIONS REPRESENTATIVE FOR INDIA AND PAKISTAN TO THE SECURITY COUNCIL

I

1. On December 2, 1957, at its 808th meeting, the Security Council adopted a resolution (S/3922) by which it requested the United Nations representative for India and Pakistan to make recommendations to the parties for further appropriate action with a view of making progress toward the implementation of the resolutions of the United Nations Commission for India and Pakistan of August 13, 1948, and January 5, 1949, and toward a peaceful settlement. He was further authorized to visit the subcontinent for these purposes and instructed to report on his efforts to the Security Council as soon as possible.

2. In pursuance of this resolution, I proceeded to the subcontinent. I arrived in New Delhi on January 12, 1958.

3. Discussions were held with the Government of India between January 12 and 17, between January 23 and February 1, and again between February 7 an 13; with the Government of Pakistan between January 17 and 23, between February 1 and 7, and again between February 13 and 15. I departed from Karachi on February 15.

4. The principal participants in these discussions for the Government of India were the Prime Minister and Minister for External Affairs, Shri Jawaharlal Nehru, the Minister of Defense, Shri V. K. Krishna Menon, and the Commonwealth Secretary, Shri M. J. Desai. The Government of Pakistan were represented by the Prime Minister and Minister for Foreign Affairs and Commonwealth Relations, Mr. Malik Firoz Khan Noon, the Foreign Secretary, Mr. M. S. A. Baig, and the Adviser on Kashmir Affairs, Mr. Din Mohammed.

5. The two Governments extended to me their complete cooperation. Our conversations were marked both by frankness and cordiality.

6. The Secretary-General of the United Nations placed at my disposal the services of Mr. J. P. Engers of the Department of Political and Security Council Affairs; of Mr. Elmore Jackson as Special Consultant; and of Mrs. Daisy F. Lippner of the Department of General Services.

II

7. In the debates in the Security Council, held between September and December 1957, the Governments of India and Pakistan affirmed that they continued to be engaged by the resoluitons of UNCIP of August 13, 1948 and January 5, 1949.

8. In my initial discussions with the 2 governments I addressed myself to certain obstacles which appeared to stand in the way of progress in the implementation of these two resolutions. Foremost among these was the procedure for the withdrawal of the Pakistan troops and the withdrawal of the bulk of the Indian Army, as provided for in part II of the resolution of August 13, 1948, of the UNCIP. I therefore embarked on discussions with the two governments to ascertain their views on how these difficulties might be overcome. In following this approach I was of course fully aware of the fact that the Government of India had not accepted the resolution of the Security Council of December 2, 1957, and of their position regarding the sequence of actions contemplated in the resolution of August 13, 1948, but I believed that they would be interested in finding ways and means to facilitate the implementation of those elements which were standing in the way of the withdrawal of the Pakistan troops from the state.

9. In my conversations with the two governments I could not fail to note that while the objective envisaged in part II–A, namely the withdrawal of Pakistan troops from the state, was clear enough, the method and machinery to be pursued to this end would be likely to create its own problems.

10. As I envisaged the situation that would obtain after the withdrawal of Pakistan troops, I foresaw, as provided by the first resolution of the UNCIP, an area administered by the local authorities under the surveillance of the United Nations Commission, or, as, it had now developed, of the successor organ, the United Nations Representative for India and Pakistan.

11. It should be noted that the position of this territory is of a peculiar nature. Its sovereignty rests with the State of Jammu and Kashmir but the full exercise of that sovereignty would be limited under the resolution by (a) the surveillance of a United Nations organ, and (b) the commitment by India that their forces would remain within the cease-fire line.

12. Furthermore, the degree of United Nations concern with the administration was left undetermined by the Commission by using the term "surveillance". Such problems as the logistics, economics and supply, to mention only a few, have never been fully considered, though they could hardly be expected to be met satisfactorily without due preparation.

13. Thus it would appear that the execution of section A in part II might create more serious difficulties than were foreseen at the time the parties agreed to that clause. The determination as to who are the local authorities, might not be an easy matter. Whether the United Nations Representative would be able to reconstitute the status quo which had obtained some 10 years ago, would seem to be doubtful.

14. I therefore came to the conclusion that prior negotiation with the parties on these problems would not only be essential but imperative. Otherwise the evacuated territory might be left in an unsettled condition.

III

15. Since I was aware that the Government of India were concerned about the security of the evacuated territory, and more particularly, were apprehensive that the Pakistan Army, after its withdrawal, might return to the territory, I felt it my duty to give serious consideration to ways and means to allay this concern on the part of India. I therefore proposed that the feasibility of placing a United Nations force on the Pakistan side of the Pakistan and Jammu and Kashmir border should be explored. If this conception in principle were to meet with approval, agreement might be sought from the Pakistan Government for receiving such a force and negotiations might be initiated within the United Nations on the size, composition and functioning of such a force.

16. Other suggestions were also discussed informally with the two Governments. In view of the urgency, however, of what I considered the most immediate requirement of the situation, namely, a resumption of direct negotiations—under United Nations auspices—I decided to make my formal proposals with as little detail as possible.

IV

17. In order to create the proper framework for these negotiations, I asked the 2 Governments to give prior consideration to 2 undertakings which I considered an essential prerequisite for their success.

18. In the first place, I suggested that the two Governments should consider the possibility of a renewed declaration in line with the resolution of the Security Council of January 17, 1948, and part I of the resolution of August 13, 1948, of the UNCIP, under which they would appeal to their respective peoples to assist in creating and maintaining an atmosphere favorable to further negotiations and in which they themselves would undertake to refrain from statements and actions which would aggravate the situation.

19. In the second place, I proposed that the two Governments reaffirm that they would respect the cease-fire line and that they would not cross or seek to cross the cease-fire line on the ground or in the air, as established in the cease-fire agreement, ratified by the Governments of India and Pakistan respectively on July 29 and 30, 1949.

20. Thus, on the day of my departure from the subcontinent on February 15, 1958, I submitted to the representative of both Governments the following recommendations:

I. That they should consider the possibility of a renewed declaration in line with the January 17, 1948, resolution of the Security Council and of part I of the August 13, 1948, resolution, under which they appeal to their respective peoples to assist in creating and maintaining an atmosphere favorable to further negotiations and in which they themselves undertake to refrain from statements and actions which would aggravate the situation.

II. That they reaffirm that they will respect the integrity of the cease-fire line and that they will not cross or seek to cross the cease-fire line on the ground or in the air, thus further assisting in creating a more favorable atmosphere for negotiations.

III. The withdrawal of the Pakistan troops from the State of Jammu and Kashmir is provided for in part II of the August 13, 1948, resolution. Pending a final solution, the territory evacuated by the Pakistan troops is to be administered by the local authorities under the surveillance of the Commission. Part II of this resolution also provides for the withdrawal of the bulk of the Indian forces from the state in stages to be agreed upon with the Commission.

In an effort to speed the implementation of these actions provided for in part II, the United Nations representative is suggesting that a prompt study be undertaken, under his auspices, of how the territory evacuated by the Pakistan troops could, pending a

final solution, be administered in accordance with the provisions of the resolution.

With a view to increasing the security of the area to be evacuated, the United Nations representative recommends that consideration be given to the possibility of the stationing of a United Nations force on the Pakistan side of the Pakistan and Jammu and Kashmir border, following the withdrawal of the Pakistan Army from the state.

IV. If progress is to be made in the settlement of the Indo-Pakistan question there is need for an early agreement between the two Governments on the interpretation that should be placed on part III of the August 13 resolution and those parts of the January 5 resolution which provide for a plebiscite. In this connection the United Nations representative would call attention to the communique of the Prime Ministers of India and Pakistan issued following their meeting in New Delhi in August 1953, which recognized that a plebiscite had been agreed to and expressed the opinion that a solution should be sought "causing the least disturbance to the life of the people of the state."

The United Nations representative will be considering with the two Governments the means and timing under which agreement might be sought on these questions.

V. The United Nations representative, believing that further negotiations on the questions which he has been considering with the Governments of India and Pakistan would be useful, and believing that it would facilitate progress if these negotiations could be undertaken at the highest level, proposes to the two Governments that a prime ministers conference be held under his auspices in the early spring.

If the latter recommendation would not be agreeable to either or both Governments, the United Nations representative recommends to the parties that they keep the general proposal, or any reasonable variation thereof, under consideration and that such a conference be held at the earliest practicable date.

V

21. The Government of Pakistan agreed to these recommendations in principle. They informed me that they were willing to make a renewed declaration as suggested by me and that they were prepared to reaffirm that they would respect the integrity of the cease-fire line.

22. They informed me further that they were prepared to withdraw the Pakistan troops from the State of Jammu and Kashmir simultaneously with the withdrawal of the bulk of the Indian forces from the state in stages to be agreed upon with the Commission, as provided in part II of the August 13, 1948, resolution.

23. They also agreed with my recommendation that a prompt study be undertaken under the auspices of the UNCIP of how the territory evacuated by the Pakistan troops could, pending a final solution, be administered by the local authorities in accordance with the provisions of the resolution.

24. The Government of Pakistan also informed me that they were agreeable to my recommendation to consider the possibility of the stationing of a United Nations force on the Pakistan side of the Pakistan Jammu and Kashmir border, following the withdrawal of the Pakistan Army from the state.

25. In the matter of the interpretation that should be placed on part III of the August 13 resolution, and those parts of the January 5, 1949, resolution which provide for a plebiscite, the Government of Pakistan indicated that they were prepared to abide by the terms of the prime ministers' communique of August 1953.

26. Finally, the Government of Pakistan agreed to my proposal of a conference at the prime ministers level, or any reasonable variation thereof, to be held under my auspices, adding that they would hope that this conference be held as soon as possible.

27. The Government of India declared themselves unable to agree to my recommendations. They based their position on the ground that my recommendations were made without regard to the failure to implement the Security Council resolution of January 17, 1948, and clauses B and E of part I of the UNCIP resolution of August 13, 1948, for which they held Pakistan responsible. In their view the sole onus of performance was on Pakistan and the United Nations, which both had the responsibility and the capacity for taking steps toward a peaceful approach to the situation and for making a contribution to resolving the difficulties between India and Pakistan.

28. While, therefore, the inability of India to accept my recommendations primarily followed from their contention that my approach was not feasible, since in their view it tended to bypass the implementation of what they considered to be the preliminary question, they also informed me that they did not look with favor on the substance of my recommendations.

29. Thus, they felt that a new declaration regarding a peaceful atmosphere and the cease-fire line might denote a displacement of the previous engagement. They further contended that such a declaration would imply that Pakistan had not violated their previous engagements and that the consequences of them would thereby stand condoned.

30. The Government of India could also not see their way to accept the study I had recommended in my third recommendation as they felt that it would tend to bypass and evade what they considered to be the main issue, namely, the illegal occupation of Indian Union territory by Pakistan. In their view that territory was an integral and inseparable part of the Union of India and the recommendation was based on a misconception that Jammu and Kashmir were a no man's land. Further, the study, in their view, would not be relevant since, according to the UNCIP resolutions and the assurances given on behalf of the Security Council to the Government of India, they alone, with the United Nations, were concerned in this matter and Pakistan would not seem to have any place whatsoever in these arrangements.

31. With regard to the recommendation on the stationing of a United Nations force on the Pakistan side of the Jammu and Kashmir border, the Government of India were taking cognizance of a concern of the United Nations representative in this matter which they understood to be conditioned by the previous conduct of Pakistan. They would on their part, however, consider it as highly improper and indeed an unfriendly act to promote a suggestion which would involve the stationing of foreign troops in a neighboring sovereign state with whom they desired nothing but the most friendly relations. Since, however, this was a matter for decision by the Government of Pakistan in their sovereign competence, they would not be in a position to object to this proposal, though they would regret it.

32. With regard to recommendation IV, the Government of India informed me that they regretted that they could not enter into any such discussions in view of their preliminary objections.

33. Finally, the Government of India declared themselves unable to accept my last recommendation since it would in their view place the aggressor and the aggressed on the same footing. They therefore considered it contrary to the Charter and all considerations of international ethics and equity.

VI

34. I should, however, inform the Council that the Government of India, at the same time as they declared themselves unable to accept my recommendations, also informed me that they have been and are anxious to promote and maintain peaceful relations with Pakistan. They stated that they firmly held the view and belief that there should be a constructive and peaceful approach to every problem and that they firmly adhered to their determination to pursue paths of peace, while placing their faith in the United Nations and its Charter.

35. In keeping with this spirit expressed by India, which I know is shared by Pakistan, I still express to the Council the hope that the two Governments will keep under consideration the proposal for a high level conference. I trust that, in their further consideration, they will find it possible promptly themselves to make, without prejudice to their respective positions on the Kashmir question, preparations for holding, within the framework of the charter of the United Nations, such a conference at the earliest practicable date, covering questions of time, place, auspices, and agenda. The agenda, as the parties might choose, might include the basic differences which the parties find to stand in the way of a settlement and such other matters as the parties might find would contribute to "progress toward the implementation of the resolutions of the United Nations Commission for India and Pakistan of August 13, 1948, and January 5, 1949, and toward a peaceful settlement."

VII

36. However wide the differences and deep the distrust, and however bad the situation in the opposite views of each other's position, no situation is completely and forever beyond the redemptive power of the development of reciprocal faith and the creative interchange of views and proposals for a peaceful settlement as alternatives to the deepening differences in an age of unprecedented peril and hope. Better than talking at long distances across the sub-continent is, on occasion, to talk directly to each other in a conference at the highest possible level. The holding of well prepared direct talks with the desire for a settlement is more than talk: it is itself an act of potentially creative faith which might lead to steps for a fair and peaceful settlement.

37. These unsettled and unsettling differences between two great peoples have long corroded their relations, continuously drain off their resources, and cut deeply into their hopeful programs for education, health, production, and welfare. Instead of continuing endlessly the corrosive polemics of all blame on one side and the other, the conference might, with sound preparation and resolute will, work out present steps toward a settlement; set in motion a higher release of the productive capacities of the people; and give an effective impetus to the world's floodtide of the yearning of the people for freedom and peace amid the hazards and hopes of this age.

38. In this age, any situation engaged by U. N. sponsored resolutions cannot be isolated from the dynamic currents of the world's concern even by the highest mountains, whose pinnacles rise in comparable grandeur from the topmost "roof of the world." Though bright rays of light shine through the overhanging clouds of our time, thermonuclear power casts its lengthening shadows across the earth, darkening the homes and hopes of man. As alternative to the sudden extinction of the human race and the destruction of the precious treasures of the heritage from all peoples in all ages, there rises above the authentic fears, despair and tumult of the times the unconquerable aspiration of the human spirit for the sublimation of thermonuclear power in the cause of peace and the equal freedom, dignity, and opportunity of all people, East and West.

40. The light of faith and the fires of the inner spirit, which, in dark times in ages

past, were lighted among Asian, African, and Mediterranean people for people in all lands, have shone most nobly in our times in the heroic struggles, liberation, and universal aspirations of the people of the historic subcontinent for a free and fairer life for all. With their twofold heritage of faith in the moral sovereignty, which undergirds the nature of man and the universe, and with a reverence for life challenging the violent trends of the atomic era, those peoples, in the succession of their prophetic leadership and great example, may again give a fresh lift to the humane spirit of people everywhere. The peoples of the world might in high response begin again in these shadowed years to transform with high faith and good will the potential forces of bitterness, hate, and destruction, step by step through the United Nations, toward the way of creative cooperation, economic, social, and cultural development, responsible disarmament, self-determination, equal justice under law, and peace for all pepoles on the earth as the God-given home of the family of man.

Mr. Gromyko's Timing

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 16, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New Republic magazine of April 7, 1958:

MR. GROMYKO'S TIMING

The smiling gentleman who commutes from Washington to Gettysburg told his press conference last June that he "would be perfectly delighted to make some satisfactory arrangement for temporary suspension of tests while we could determine whether we couldn't make some agreements that would allow it to be a permanent arrangement."

He might have been delighted, but his advisers who decide these matters in Washington were not. They did not then want, nor have they ever wanted, a ban on nuclear testing. They had their excuses: No test ban, said they, could be enforced. When the absurdity of that argument became too apparent, they added that perhaps a ban could be enforced but it would require aerial and ground inspection unacceptable to the Russians. Then, after the Russians said on June 15, 1957, that they would be willing to consider the monitoring of a test ban by international inspection teams, the administration retreated to the unprepared position that inspection was not after all enough—the Soviets must also suspend production of fissionable material.

This evasive and deceitful dodging has gone on for a long, long time, and when Adlai Stevenson suggested nearly two years ago that we should face the fact that the Russians too were making progress in nuclear armaments and that an end to testing at that time would be to our national advantage, he was practically accused of serving Moscow. We must continue testing, said the administration; there is always something more to be learned.

Last week we learned from Mr. Gromyko that the Russians intend to suspend further testing of their own. They invite us and the British to go and do likewise. It was a brilliant political move, even in an era when almost anything reasonably astute looks brilliant by comparison with the sleepwalking that passes for American diplomacy.

The Russians, understandably, are themselves now perfectly delighted to rest awhile on the high ground that they have won, for it is reliably reported that they have conducted 56 nuclear tests, 14 in the 9 months since the breakup of the London disarmament talks, including the long series just completed in which they tested warheads for their rockets. The timing of the Gromyko announcement was perfect, coming just before the United States begins a lengthy series of new nuclear tests.

What can be done? It is not pleasant to say, but our answer is: Nothing substantial while this administration remains in office. But as for what should be done? A frank and uncomplicated reply to the Gromyko announcement on test suspensions would:

Welcome it.

Point out that the tests we are about to run are similar in purpose to those the Russians have just finished, and that we intend to carry on as planned in the absence of any mutually acceptable plan for controlling testing.

Announce our desire to begin negotiating an agreement to cease all further nuclear tests for 2 years, this agreement to be monitored by U. N. inspection teams based on United States and Soviet soil, and agreeing to divorce this issue from that of the production of fissionable material.

Ask the Soviet Union to join us in the U. N. Disarmament Commission to negotiate not merely methods for assuring an end to nuclear testing, but the internationally supervised elimination of all nuclear weapons from the arsenals of all nations.

Procurement of Lawyers for the Army

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 21, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Maj. Gen. George W. Hickman, Jr., Judge Advocate General of the Army, regarding the procurement of lawyers for the Army.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the subcommittee. I am Maj. Gen. George W. Hickman, Jr., the Judge Advocate General of the Army. I am honored to have been asked to appear before your subcommittee.

I have a brief prepared statement I would like to present to the subcommittee. In the absence from the city of Secretary Brucker, Assistant Secretary Milton has stated to me that I should tell this subcommittee everything that my heart dictates. The views I shall express are my own and not necessarily the official views of the Department of the Army or the Department of Defense.

I have become increasingly concerned over our military lawyer procurement problem. Unless an effective method is devised to procure able lawyers for military service and to retain those experienced in military law, the ability of the Army's Judge Advocate General's Corps to perform its mission will be seriously compromised. As a consequence, servicemen will not be properly represented and the interests of the Government will not be adequately protected in the mutibillion dollar operations of the Army. At present, 1,061 officers are on duty in the Judge Advocate General's Corps. Of these, 502 are in the Judge Advocate General's Corps, Regular Army, and 559 are in the Judge Advocate General's Corps Reserve.

Of the latter category 424, or 40 percent of the entire total are lieutenants who were commissioned generally upon graduation from law school with concurrent call to active duty. In other words, they are under pressure to serve because of the operation of the selective service system and are serving what we call obligated tours of service.

As of August 31, 1957, our Regular Army authorized strength was 645 and our actual Regular Army strength was 489. As of today, Our Regular Army authorized strength is 645 and our actual strength is 502. Regardless of these figures our situation has not improved. This increase in Regular Army strength does not represent the recruitment of military lawyers from outside sources, but merely a transfer of 13 career reservists, nearly all in the senior grades, to the Regular Establishment under the current Regular Army Augmentation program. Even more serious is the fact that our Regular Army lieutenant strength is only 36.

In connection with the problem of our corps being attractive as a career, it is significant that under the officer augmentation program the Department of the Army received approximately 19,500 applications, but only 175 applicants indicated any desire to be appointed in the Judge Advocate General's Corps. Of that number only 80 indicated our corps as first choice, a smaller response than any other branch of the Army except the Veterinary Corps.

In the past few years it has been possible to alleviate the overall shortage in lawyers to some degree by commisisoning law students upon graduation with concurrent call to active duty. However, over 40 percent of the entire active duty strength of the corps is comprised of lieutenants. Even this source of manpower, which is dependent upon pressure resulting from the operation of the Selective Service System, is fast disappearing with the advent of the 6-months' Reserve program. In any event, it provides no method of procuring, either for the present or the future, career officers of proper experience and maturity. It supplies no input of career lawyers at the bottom.

Nevertheless, in the past several years, we have paid special attention to inducing these young Reserve officers on active duty to make a career of our Corps. However, of the 1,242 law-school graduates who have been granted commissions with concurrent call to active duty since 1950, only 9 have accepted commissions in the Regular Army and less than 1 percent have remained on active duty in any status.

From what I have stated it becomes obvious that we are not procuring even a minimum number of young lawyers for the Regular Army. At this rate it will soon be impossible to man a large number of the responsible positions in the Judge Advocate General's Corps with officers of proper experience and maturity. In fact, that inability is already becoming apparent.

During the last 4 fiscal years we have procured officers for the Judge Advocate General's Corps, Regular Army, at the annual rate of only 11, whereas to merely hold our own (and for the moment to ignore the large number of vacancies which have accrued) we should be procuring such young officers at the annual rate of not less than 27. Future Regular Army losses through retirement alone through fiscal year 1963 are projected at the rate of 13 per year. During the last 4 fiscal years resignations have been at the annual rate of 6. We have had 5 resignations so far this year. For every 2 highly experienced career officers lost since

July 1, 1953, we have been able to recruit but 1 inexperienced officer to replace them. The survey conducted by the American Bar Association indicates that resignations may be expected in the future at a much higher rate.

I emphasize that since July 1, 1953, 20 percent of our officers have left the service each year. It is obviously inefficient and uneconomical to operate a Judge Advocate General's Corps under a system which results in a turnover each year of approximately 20 percent of the corps.

Let me emphasize that we have at all times made use of every reasonable opportunity to obtain qualified lawyers from other branches in the Army. For instance, following World War II lawyers in other branches were encouraged to integrate in the Judge Advocate General's Corps, Regular Army. Army regulations and other directives, setting forth in detail the career possibilities in our corps, have at all times been widely circulated. In addition, members of the corps have constantly been alert to our recruitment difficulties and have as individuals endeavored to encourage those who might be qualified to apply for transfer to, or apply for a commission in, our corps. Those lawyers in other branches who might be useful to our corps are in the other branches through choice. Also, some qualified young lawyers are drafted as enlisted men, preferring to serve the shorter period in that status to the longer period commissioned as a lieutenant with concurrent call to active duty as a Reserve officer in our corps.

Moreover, we believe we have exploited all reasonable means of procuring Regular Army replacements from sources outside the Army. For example, some of the actions we have taken during the last year include the sending of letters and recruitment information to the deans of about 125 accredited law schools, to the law student associations at those institutions, and to about 1,500 State and local bar associations, as well as placing recruitment announcements in publications of the American Bar Association, those of numerous State and local bar associations, and other legal periodicals. Also, our officers have personally appeared before senior law classes in an effort to recruit applicants for commission in the Regular Army. I have personally written sincere recruiting letters to some 300 young lawyers who served 3 years with us since 1950 and then went into private practice. Only two have responded with applications for the Regular Army.

The United States Court of Military Appeals has expressed some dissatisfaction because of the lack of experience and maturity on the part of some military lawyers engaged in courts-martial work. I agree that lawyers just out of law school, lacking experience in both life and law, are not as well qualified as they will be 10, or even 5, years hence. I do want to make clear, however, that about 95 percent of these young lawyers we commission do remarkably good work. Among them in twenty years or so will be many of the leading lawyers of the country. The trouble is that they just do not stay with us beyond their obligated tours. Just when they are becoming well able to carry competently a full load, they go home or elsewhere to engage in private practice. Obviously, if military lawyers of more experience and maturity were available, very substantial advantage to the Government could be effected in procurement, courts-martial, and other fields of military law. In fact, today we administer the Uniform Code of Military Justice with its mandatory requirement for three lawyers on each general court-martial and yet have no satisfactory method of procuring the essential military lawyers.

I would be remiss in my duties to our corps if I did not state that we are in grave danger of losing all semblance of a strong and properly staffed Regular Corps.

Sadie P. Delaney: Bibliotherapist and Librarian

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mrs. BOLTON. Mr. Speaker, since 1923 Dr. Sadie P. Delaney has served as chief librarian at the Veterans' Hospital in Tuskegee, Ala. In 1956, after 33½ years' service, she received the top award of the United Sttaes Veterans' Administration for the excellency of her work and for her service to humanity.

The story of Dr. Delaney's life and work recently appeared in an article written for the Southeastern Librarian by Clyde H. Cantrell, director of libraries, Alabama Polytechnic Institute. Under leave to extend my remarks I include the article herewith:

SADIE P. DELANEY: BIBLIOTHERAPIST AND LIBRARIAN

(By Clyde H. Cantrell)

Dr. Sadie P. Delaney, of Tuskegee, Ala., has ahieved State, national, and international recognition for her work as a librarian, but more especially as a bibliotherapist. It seems appropriate, therefore, that the life and workers of this tireless and energetic person should be recorded for the readers of the Southeastern Librarian.

Mrs. Delaney, chief librarian at the Veterans' Hospital in Tuskegee, was born in Rochester, N. Y., in 1889. She attended the Poughkeepsie, N. Y., High School, the College of the City of New York, and received her professional training in the New York Public Library system.

In 1920 Mrs. Delaney was assigned to the 135th Street Branch of the New York Public Library, where she provided library service for Negroes, Chinese, Jews, Italians, and many other races. While employed at this library, she was active in civic and literary circles; and her work with delinquent boys and girls and with the foreign-born drew worldwide recognition. A beginning was made in helping delinquents through the use of bibliotherapy. The story-telling hours attracted public and parochial schoolchildren, and special work was carried on with parent-teacher groups. Boy Scouts, YMCA leaders, social workers, and others were brought into the library. The first Negro art exhibit was held and a booklovers club was organized for bringing authors and readers together. Mary Austin, Dorothy Canfield Fisher, Clement Wood, Bobbette Deutsch, and other writers came to the library to speak and meet library patrons.

Because of Mrs. Delaney's great interest in books dealing with Negro life and literature, she placed special emphasis upon building a Negro collection at the New York Public Library. As a result of this interest, she came to know Mr. Arthur Schomburg, Puerto Rican-American historian, who later gave his valuable collection on the Negro to the New York Public Library.

While working with various groups and individuals, Mrs. Delaney became interested in work with the blind. This interest was so great that she learned Braille and Moon Point.

In 1923 Mrs. Delaney was called upon to organize the library for the Veterans' Administration Hospital at Tuskegee, Ala. At first she was reluctant to accept the appointment because she was not sure she would ever want to live in the South. However, after considerable deliberation she asked and received a leave of absence for 6 months from the New York Public Library to allow her to organize the library at Tuskegee. At the end of this half year, seeing the demands and opportunities for library service so great, she accepted as a permanent appointment the position of librarian, where she has achieved a reputation which has gone far beyond the boundaries of the United States.

Not until January 1956 did this writer see in a library periodical an advertisement seeking the services of a bibliotherapist.[1] Yet this is an art and/or science which Mrs. Delaney has practiced since her period of service at the 135th Street library in New York City.

What, then, is bibliotherapy? It has been defined and discussed in a recent article in our professional literature.[2] The term is taken from biblio, meaning book, and therapy, designating treatment. Hence, bibliotherapy means book treatment. It is, therefore, the art or science of curing or improving the state of health of the ill and infirm, either physically or mentally, through the skillful selection and reading of appropriate books and use of other media. Mrs. Delaney has defined bibliotherapy as meaning "the treatment of a patient through selected reading."[3]

Gladys Oppenheim has published, in South Africa, an illustrated article on the bibliotherapeutic activities of Mrs. Delaney. Miss Oppenheim writes that in Tuskegee "one can see bibliotherapy in practice at its very best * * * and its success in this hospital is entirely due to the gifted and devoted librarian, Mrs. Sadie Peterson Delaney * * * every book in the hospital library has to be read by the librarian, who has to be familiar with the case history of each patient * * *."[4] A bibliotherapist, according to practices at Tuskegee, looks upon a patron as a patient who is entitled to receive the same individual attention as that given to him by his physician and psychiatrists. It is in this area of activity that Mrs. Delaney has been lauded at home and abroad.

What was the sequence of events leading to the establishment of an adequate library and development of bibliotherapy at the veterans' hospital in Tuskegee, Ala.? To answer this question, let us consider the entire scope of Mrs. Delaney's work there, the problems she found and her achievements in their solution.

A very interesting record of the first year of the veterans' hospital library has been recorded by Mrs. Delaney herself.[5] She arrived in Tuskegee the first day of 1924, and on the third day of January the doors of the library were opened to patrons. There was only 1 table and the book collection numbered a mere 200 volumes. She decided to begin with equipment and books on hand rather than waiting for deliveries. The library room had formerly been used as a place for the sale of cigarettes and candy; when the candy was about exhausted, stories were substituted. At first there were no books for mental patients, so fairy tales borrowed from the Tuskegee Institute Library were used. Within 2 weeks the library was moved to more adequate quarters and read-

---

Footnotes at end of speech.

ing tables, chairs, and an office for the librarian were provided. Flowers, plants, wall maps and posters were used to good effect. Within a few weeks, Mrs. Delaney began carrying books to the wards of the hospital so patients confined there might begin to read them. A medical library was begun on a small scale on January 15, but has continued to grow from year to year.

A book wagon was received in April of the first year of operation, and it tended to increase the reading interests of patients in the wards. Monthly book talks by the librarian and weekly story hours in the wards did much to stimulate patients to read more and more. Although the circulation at the end of the first month was only 275, by the end of the year it had increased to 1,500 monthly, about 90 percent being nonfiction. By 1953 the circulation of books from the general and medical libraries was more than 10,000 per month. The organization of a literary society, which met in the library, gave the librarian further opportunities to work with the reading needs of patients. At the end of the first year there were 4,000 volumes in the hospital library and about 85 volumes in the medical library for the use of doctors and nurses. When one considers that the libraries were catering to 500 patients and about 300 employees, the first year of operation seems phenomenal.

After this beginning, every conceivable means was used to stimulate further the interests of patrons in the use of books. By 1925 the number of patients had increased from 500 to 1,000; and reading increased proportionately. In 1926 a special library binding service was organized to give patients vocational experience. In 1930 a Disabled Veterans Literary Club was formed, becoming the nucleus for the active Literary Press Club at this time. Patients are the officials of the club, and meetings are held Monday mornings and Thursday evenings in the library. In 1933 a special bibliotherapy unit was organized so patients might attend the library rather than having it brought to them. A department for the blind was started in 1934. It is concerned with book fairs, exhibits, projected books, talking books, Braille group therapy, stamp and coin clubs, radio broadcasts, binding service, and trips of book carts to the bedsides of patients.

In 1934 a library debate club was organized and 1935 saw the beginnings of a special numismatic club and a philatelic club, both started to give the patients good, wholesome hobby and recreational activities. The clipping service (1936), the nature study group (1938), and the historic forum (1939) have supplied other avenues of interests for those in need of library and bibliotherapeutic attention. These activity groups and the various services provided for patients and patrons have, without doubt, given the Veterans' Hospital Library at Tuskegee the highest circulation per patron of any library in this area. It is all attributable to the planning and forethought of Mrs. Delaney.[6]

It is doubtful that any other Southern librarian has ever been praised for his (or her) humanitarian work more than Mrs. Delaney. She has thriven in a life of devotion and service to others. Thrilling indeed have been her experiences in assisting in the rehabilitation of the mentally and physically ill. Seeing the spark of interest kindled in the minds of neurotic persons who thought the world offered no reason for living; assisting the blind to learn to read and to come to fill useful roles in society; showing the permanently disabled how, despite their handicaps, they may develop hobbies and vocations for their own amusement and profit; and advancing the general cultural and specialized educations of hundreds or even thousands of citizens have been self-satisfying experiences which Mrs. Delaney looks upon with great joy. Such a life lived in the interest of suffering humanity has earned for her the appellation of "Great Humanitarian."[7] It is not surprising that she should have received numerous honors and awards.

One of the most significant tributes paid to Mrs. Delaney was written by Morteza D. Sprague,[8] who has been acquainted with her and her work for the past 26 years. He points out that, whereas there is much ado about bookmobiles today, Mrs. Delaney has been carting books to patients since 1924. In New York, says Sprague, Claude McKay, Langston Hughes, and others were given their initial push by Mrs. Delaney. At the Veterans' Hospital in Tuskegee, her program has been so successful that library schools such as Illinois, North Carolina, and Atlanta have sent students to study her programs and methods. The Veterans' Administration long ago adopted the policy of having its hospital librarians study the policies and practices of Mrs. Delaney. People who have paid distinguished tribute to her include Dr. F. D. Patterson, Dr. Charles S. Johnson, and Dr. George Branche. She has been acclaimed by librarians such as Dr. Keyes D. Metcalf, Dr. Luther Evans, Dr. E. W. McDiarmid (now a dean at the University of Minnesota), and Dr. Virginia Lacy Jones.

It would require too much space to list the numerous citations of merit and the honors which have come to Mrs. Delaney during the last 32 years, so only some are mentioned in this article. She and her work are included or discussed in 51 publications. The United States Department of State sent to 100 USIS units in 75 countries information on Mrs. Delaney, citing her life and work as an example of what is great and good in "The American Way of Life." In 1934 she was listed in Principal Women in America, edited by Mitre Chambers (London, 1934). In 1938 Mrs. Delaney's work was discussed in an illustrated article published in South Africa.[9] In 1949 she was cited by the American Legion "for meritorious service to veterans"; and the same year she was selected as Woman of the Year by the National Urban League, the Iota Phi Lambda sorority, and the Zeta Phi Beta sorority.

In 1950, Mrs. Delaney's work as librarian, humanitarian, and bibliotherapist was discussed and lauded by Look magazine (September 26, 1950), the American Medical Association Journal (May 6, 1950), Military Surgeon (June 1950), and the Book Trolley Hospital Librarians Guild of London, England. In 1951, a sketch of Mrs. Delaney's work in Alabama up to that time was published by Sprague.[10] In 1952, she was honored at Howard University as one of the National Council of Negro Women honorees. Closer home, the Montgomery Advertiser selected Mrs. Delaney as one of Alabama's outstanding women in 1953. In December 1955 she was honored in Washington, D. C., by the 200 chapters of the Zeta Phi Beta sorority as national honorary member, based on her accomplishments in library service.

Mrs. Delaney has taken an active part in the work of the hospital librarians division of the American Library Association. She is also a member of the Southeastern Library Association. The high esteem in which she is held in Tuskegee was shown when she was invited to become a member of the Neuropsychiatric Journal Club, composed largely of resident psychiatrists.

Of all the honors which have come to Mrs. Delaney, there is none of which she is happier than the honorary doctor of humanities degree conferred upon her by Atlanta University in 1950. On that occasion she was cited as a "great humanitarian, who has labored tirelessly with courage, fearlessness, patience, and love."[11]

After 33½ years of service, Dr. Delaney received the top award of the United States Veterans' Administration for the excellency of her work and for her service to humanity. This award came in the form of a certificate completed in Washington under date of June 8, 1956; and it reads as follows:

"Commendation: This certificate is awarded to Sadie P. Delaney in recognition of her outstanding contribution to the rehabilitation of veteran patients. Through the use of bibliotherapy and braille she has had particular success in aiding the mentally ill and the blind. Her many years of service have brought universal renown and gratitude.

"Given at Washington, D. C., this 8th day of June, 1956.

"[SEAL] VETERANS' ADMINISTRATION,
"WILLIAM S. MIDDLETON,
"Chief Medical Director."

This honor is indeed appropriate and signifies to the world the admiration in which Dr. Delaney is held, because of the patience and love she has showed in administering to those who have needed her Christian assistance.

Dr. Delaney's philosophy of life and her eagerness to be of service to mankind were illustrated in her speech at the Atlanta University commencement banquet, held the evening after she received the honorary doctorate. She began by stating that "Were I a poet tonight, I might put my emotions in verse; were I an artist, I would paint a picture and title it, 'for those who serve'; were I a singer, I would sing 'Hallelujah'; but I am only a servant and can say, this is my finest hour."[12] Dr. Delaney spoke at length on the joy she has had in administering to the needs of those who could not help themselves, but she pointed out that it was she herself who was benefited. "We feel that we are enriching the lives of those we serve," she said, "but we are the benefactors; we are enriching our own lives. The faith, hope, and tenacity which they taught us might tend to inspire others." She added that "The more one works with people in trouble, the greater his confidence in human kind and his respect for human beings becomes. * * * Let a man be free to be himself and his success is almost assured. * * * Concluding her speech, Dr. Delaney said that "Out of life's very difficulties; out of our own frailty comes renewed appreciation of all that living means and the privilege that is ours to practice."

Dr. Sadie P. Delaney's story can never be written completely, because her assistance and kindness to those in need may have set up chain reactions which will be passed on from one person to another for years to come. However, this much we know: Dr. Delaney has wrought well, her work has been a blessing to the South and to the Nation, and the various honors which have been bestowed upon her have been deserved. May her good work continue for many years, because she has been a candle in the darkness for countless individuals who desperately needed to have light shed upon their pathways.

Federal Reserve Surrenders; It Pulled a Blooper in 1957

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. MULTER. Mr. Speaker, the following article by Leslie Gould, which appeared in the New York Journal-American of April 18, 1958, is most timely and I commend it to the attention of our colleagues:

FEDERAL RESERVE SURRENDERS; IT PULLED A BLOOPER IN 1957

(By Leslie Gould)

The Federal Reserve Board's retreat on its tight-money policy is now a complete surrender.

The Board has made its fourth cut in the rediscount rate in 6 months and the third reduction in reserve requirements in 2 months.

The new discount rate is 1¾ percent. The cut in reserve requirements by one-half of 1 percent is the same as the two previous reductions, making the total 1½ percent and providing additional credit of around $9 billion.

The cut in reserve requirements is a full 1 percent for the New York and Chicago banks, in two half-percent changes, one effective now and the second on April 24. For the other reserve cities, the reduction is only a half percent, effective April 24.

This is the first move by the Federal Reserve to reduce the spread between the New York and Chicago banks and the other reserve cities. The requirements for New York and Chicago will be 18 percent after April 24 and for the reserve cities 16½ percent. The spread formerly was 2 percent.

No change is to be made in the reserve requirements of the country banks which remain at 11 percent.

BASE FOR $9 BILLION CREDIT

Today's action frees about half a billion of such deposits, which in turn will provide a base for about $3 billion in additional credit. Thus, the three reductions in reserve requirements will provide $9 billion in additional credit.

Both actions are additional shots in the arm for the lagging economy.

It was only 8 months ago that the Federal Reserve, insisting money had to be tightened, jacked the discount rate to 3½ percent—the highest level in 24 years.

That was a mistaken move, coming at a time when the stock market was faltering and business beginning to slide.

HELPED BRING ON SLUMP

This untimely—or more correctly dumb—action gave the market and business the extra shove that brought on the slump.

Another arm of the Washington Government helped worsen the two pictures in fumbling on the defense contracts. This was the stretchout of payments and cancellation of some contracts by the Defense Department.

When it increased the rediscount rate to 3½ percent last August a Reserve spokesman made the reassuring statement that if business did turn down the rates would be changed as "the situation warranted."

The action and that statement showed what poor pulse feelers as to the economy's health the experts of the Federal Reserve are. They are bungling economic doctors. Yet, the Federal Reserve is the agency that is supposed to have the best and most immediate figures on the changing economy.

COULDN'T DIAGNOSE DATA

The kindest thing that can be said for the Federal Reserve doctors is that they had the information but didn't know how to diagnose it.

Today's change in the discount rate applies only to 5 of the 12 Federal Reserve Banks, but the other 7 will follow.

The new discount rate of 1¾ percent is the lowest since 1954. The reserve requirements at 18½ for the central Reserve cities—New York and Chicago—are the lowest since 1936, when they were raised to 19½ from 13 percent.

The requirements still are too high. A more realistic requirement would be 10 or 12 percent. The Federal Reserve, still living in the past, has 3 schedules for requirements—2 percent difference up to now between the central Reserve cities—New York and Chicago—and the other Reserve cities. Rates in San Francisco, for example, which is headquarters for the world's biggest bank, will still be 1½ percent lower than New York and Chicago.

NOT A CREDIT INFLATION

The Federal Reserve erred because it treated the business boom and the accompanying inflation as if it were similar to that of the late 1920's—a credit inflation. The inflation of this era is a wage-price inflation. It is not the result of any feverish bidding for credit for speculation as in 1929. Nor is it the result of any shortages, with consumers vying for scarce goods. There were no shortages last year. Nor are there any today.

Wages were going up then and are continuing to rise, without any offsetting increases in worker productivity.

It looks like a new set of doctors are needed.

What Part Will I Play as a Citizen?

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following winning essay in the Ohio American Legion contest, a very thoughtful effort by this young man from my district:

WHAT PART WILL I PLAY AS A CITIZEN?

(By 12th grader Mark S. Hanna, 881 Scott Boulevard, Bowling Green, Ohio)

To be worthy of the title of citizen, I believe that it will be necessary for me to be a good steward. A good steward not only preserves that which he receives but improves and increases the trust he has been given. I have received a great and costly inheritance—a free and democratic Government. How can I improve and increase this gift for future generations?

As a good steward I must develop mentally, physically, morally, and emotionally to the utmost of my abilities. To think clearly and to make wise decisions, I must have a knowledge of the past as well as the present. I must be strong physically, not only to do my daily work but also to help others and to defend my country from aggressors. Morally, I must learn to know right from wrong and to have the courage to do the right. Emotionally, I must be stable and not be swayed by false fears.

A good steward preserves that which has been entrusted to him, so I must guard zealously the liberties and freedoms my country insures. I must preserve the Constitution with its checks and balances and be reluctant to let it be changed unless with great care. I must not let trouble, discouragement, panic, sputniks, or enthusiasm for any person or group induce me to give up my freedom.

A good steward must be alert to any influence which tends to divide this country by race, creed, or class prejudice. I must watch for those who slyly work to undermine my Nation and if it is attacked I must defend it with my life. It is my duty to obey the laws, know how the Government operates on all levels, and determine the qualifications which candidates for office possess. I must help get out the vote so that those who govern are truly representative. I must support my country with my loyalty, taxes, service, and my life if necessary, remembering that my personal interest is secondary to the good of all. I must so live as to be a credit and honor to my family, school, community, and Nation.

As a good steward citizen I will work for conservation of our natural resources, balancing of the budget, equal opportunities for all, greater emphasis on learning and science, and better international relations. Also as an individual I will keep myself free from prejudice, and be a good-will ambassador for my country.

Playing the part of a good steward I will renew my allegiance to God and pray for my country—that its leaders may be guided by God, freedom be preserved, and that "this Nation under God shall have a new birth of freedom and that government of the people, by the people, and for the people shall not perish from the earth."

A good steward is also his brother's keeper, so I will use my resources to spread the blessings of our free Government around the world—to make democracy work so well that it can be recommended to every nation. I must help to keep this light of freedom burning to show the way to the rest of the world and to offer a haven to those whose freedom has been restricted. I must work for good will and peace among nations by sharing with them and by practicing the golden rule. I will not become panicky for I know the true strength of a country is in its beliefs, philosophies, and ideals—not in sputniks.

As a citizen of the United States of America I shall play the part of a good steward. I will merit the judgment, well done, good and faithful steward.

Results of the Questionnaire in the Second Congressional District of South Dakota

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include the results of a questionnaire I recently sent out to the people of the Second Congressional District of South Dakota.

Since this district is about equally divided between agricultural and nonagricultural interests, I made a special effort to obtain the benefit of the views of those in the agricultural area.

In the counties outside of the Black Hills area, I sent the questionnaire to all boxholders. In the Black Hills area I sent it to a more limited group. For that reason I believe the returns on agriculture are of particular interest.

In compiling the agricultural returns, I have divided the results into three groups, those who indicated their occupation as farmers, those who indicated their occupation as farmer-ranchers, and those who indicated their occupation as ranchers. I am setting those returns out separately because I believe it will be of special interest not only to the people of South Dakota, but also to the Members of Congress.

All other returns and all other categories are included in the final tabulation.

Let me say, Mr. Speaker, that this questionnaire has been most valuable to me, not only because of the answers to the various questions submitted, but also because more than 8 out of 10 returning the questionnaire gave me the additional benefit of their thinking at the foot of the questionnaire in the space provided for remarks, and probably half of those answering the questionnaire included a letter explaining their ideas and their philosophy of government.

The tabulation on agriculture is as follows:

FARMER ONLY

	Percentage		
	Yes	No	No opinion
Do you favor—			
1. Soil Bank program as presently operated?	21.0	70.0	9.0
2. Discontinuance of the acreage reserve program in the Soil Bank?	54.0	30.0	16.0
3. Raising supports to 100 percent parity with tight production controls?	26.0	49.0	25.0
4. Continuing flexible supports?	33.0	44.0	23.0
5. Dropping all supports and controls and returning to free production in accord with supply and demand?	43.0	35.0	22.0
6. Enactment of domestic parity program for wheat with allotment based on bushel rather than acreage quotes?	52.0	29.0	19.0
7. A foot-stamp plan by which needy persons could obtain surplus foods through normal commercial channels?	68.0	24.0	8.0
8. Taxing co-ops on the same basis as other businesses?	63.0	21.0	16.0

FARMER-RANCHER ONLY

Do you favor—			
1. Soil Bank program as presently operated?	16.9	70.0	14.0
2. Discontinuance of the acreage reserve program in the Soil Bank?	51.0	31.0	18.0
3. Raising supports to 100 percent parity with tight production controls?	50.0	31.0	19.0
4. Continuing flexible supports?	18.0	55.0	27.0
5. Dropping all supports and controls and returning to free production in accord with supply and demand?	36.0	48.0	16.0
6. Enactment of domestic parity program for wheat with allotment based on bushel rather than acreage quotas?	57.0	21.0	22.0
7. A food-stamp plan by which needy persons could obtain surplus foods through normal commercial channels?	67.0	20.0	13.0
8. Taxing co-ops on the same basis as other businesses?	45.0	34.0	21.0

RANCHER ONLY

Do you favor—			
1. Soil Bank program as presently operated?	16.0	64.0	20.0
2. Discontinuance of the acreage reserve program in the Soil Bank?	54.0	26.0	20.0
3. Raising supports to 100 percent parity with tight production controls?	26.0	62.0	12.0
4. Continuing flexible supports?	26.0	31.0	43.0
5. Dropping all supports and controls and returning to free production in accord with supply and demand?	57.0	31.0	12.0
6. Enactment of domestic parity program for wheat with allotment based on bushel rather than acreage quotas?	48.0	23.0	29.0
7. A food-stamp plan by which needy persons could obtain surplus foods through normal commercial channels?	65.0	21.0	14.0
8. Taxing co-ops on the same basis as other businesses?	66.0	22.0	12.0

RESULTS OF ALL RETURNS

NATIONAL DEFENSE

Do you favor—			
1. Spending more money for defense?	41.0	41.0	18.0
2. Increased spending for missile program warning system, research, etc.?	44.0	18.8	37.2
3. A crash program on earth satellites?	13.4	51.1	35.5
4. A huge nationwide Federal bomb shelter program?	15.4	62.8	21.8
5. Maintaining conventional military forces as now? (If "no," smaller (1), larger (2), none (3).)	61.4	19.6	18.9

FOREIGN POLICY

Do you favor—			
1. Continuation of our present foreign policy?	34.8	29.4	35.8
2. Eisenhower Middle East Doctrine of military support against Communist aggression when requested by any nation in that area?	61.6	18.0	20.4
3. Extension of Reciprocal Trade Agreements Act?	50.4	10.0	39.6
4. Furnishing atomic missile weapons to our NATO allies in Western Europe?	48.4	31.0	20.6
5. A summit conference between the President and Soviet leaders?	48.0	28.0	24.0
6. Inviting to this country heads of Communist nations for conferences?	40.6	27.6	32.8
7. Continuation of our mutual security foreign aid program? (If "yes," at present cost (2), at reduced cost (1), or increased cost (3).)	52.6	21.4	26.0
8. Aid to Communist satellite nations (Yugoslavia, Poland, etc.)?	14.8	58.2	27.0
9. Aid to "neutralist" nations (India, Indonesia, etc.)?	45.6	28.2	26.2

RESULTS OF ALL RETURNS—Continued

AGRICULTURE

	Percentage		
	Yes	No	No opinion
Do you favor—			
1. Soil Bank program as presently operated?	16.2	64.8	20.0
2. Discontinuance of the acreage reserve program in the Soil Bank?	50.0	24.8	25.2
3. Raising supports to 100 percent parity with tight production controls?	23.3	55.5	21.2
4. Continuing flexible supports?	27.5	39.0	33.5
5. Dropping all supports and controls and returning to free production in accord with supply and demand?	48.8	31.3	19.9
6. Enactment of domestic parity program for wheat allotment based on bushel rather than acreage quotas?	44.7	23.8	31.5
7. A food-stamp plan by which needy persons could obtain surplus foods through normal commercial channels?	53.3	18.2	28.5

LABOR AND MANAGEMENT

Do you favor—			
1. Public inspection of union pension and welfare funds?	90.4	1.6	8.0
2. Antimonopoly legislation for unions as for corporations?	79.2	5.2	15.6
3. Mandating secret ballots for strikes and for election of union officers?	67.6	10.0	22.4
4. National right-to-work law which bans the union shop?	74.6	10.0	15.4
5. No union dues being used for political purposes?	73.6	15.4	11.0
6. Extending Federal minimum wage laws to cover most retail and service businesses?	44.6	32.8	22.6

TAXES, BUDGET AND ECONOMIC POLICY

Do you favor—			
1. Balancing the budget at all costs?	28.2	44.2	27.6
2. Keeping taxes as is and raising the debt ceiling if necessary?	32.0	35.2	32.8
3. Increasing taxes to cover a possible deficit?	28.6	40.2	31.2
4. Giving professional men and other self-employed persons tax help in accumulating savings for retirement?	35.2	41.0	23.8
5. Taxing co-ops on the same basis as other businesses?	73.4	15.4	11.2
6. Use of the Federal Reserve rediscount rate as a means of curbing inflation or deflation?	51.6	10.2	38.2
7. The recent action of the Federal Reserve in loosening credit by reducing rediscount rates?	48.8	10.8	40.4
8. Wage and price controls to halt inflation?	48.4	29.6	22.0
9. Further relief now from "tight money"?	33.0	25.2	41.8
10. Reductions in nondefense Government spending even if existing functions are curtailed?	64.0	16.0	20.0
(If "yes," what programs would you suggest cutting: Foreign aid (1), farm subsidies (2), public works (5), veterans' aid (6), public housing (4), slum clearance (7), grants for local disposal plants (3), highways (8).)			

EDUCATION

Do you favor—			
1. Federal aid to education?	29.8	57.6	12.6
(NOTE.—49 percent of those voting favored assigning 1 percent of internal revenue collections from the State to the State treasurer, disbursing under the direction of the State legislature, as an alternative. The remainder opposed any type of Federal aid.)			

GENERAL

Do you favor—			
1. Developing new Federal public power and irrigation projects?	34.2	48.8	17.0
2. The present policy of allowing private companies to develop atomic power?	68.4	9.2	22.4
3. Reform of the presidential electoral system so that electors will be chosen in each State proportionately to the vote of each candidate instead of the winner take all as at present?	51.8	8.0	40.2
4. Or selection of electors by congressional district?	10.6	26.6	62.8
5. Enactment of presidential disability legislation?	67.2	5.8	27.0
(If "yes," do you feel the power to declare the President disabled should rest with the President himself (4), with the Vice President (5), Cabinet (1), Congress (2), Supreme Court (3).)			
6. Further action to get the Government out of competition with private business?	70.4	12.6	17.0
7. Returning to the States some Federal Government activities?	64.8	7.4	27.8
8. Having Government help railroads continue their passenger business by reducing their tax load or by subsidy?	31.0	42.6	26.4
9. Raising postal rates to cut huge postal deficit?	41.2	27.4	31.4
10. Increasing salaries of Federal employees and service personnel?	21.4	57.4	21.2
11. Allowing experimental pay TV?	20.8	49.0	30.2
12. The proposal to permit State, rather than Federal, control of natural gas at the wellhead?	35.4	36.8	27.8
13. Liberalizing the immigration laws?	12.8	67.0	20.2
14. Increasing social-security benefits with a corresponding increase in individual and employer contributions?	36.4	51.4	12.2
15. Increasing disability, hospital, and survivor's benefits for veterans?	34.2	46.0	19.8

Address by Lt. Gen. James M. Gavin, Chief of Research and Development, United States Army, Before the Charitable Irish Society of Boston, Mass.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. McCORMACK. Mr. Speaker, the Charitable Irish Society of Boston, Mass., is the oldest one in our country, dating back to the early 1730's. Throughout the years it has held its annual banquet on March 17, having always as its principal speaker an outstanding person.

On March 17 of this year, the society had as its principal speaker one of the outstanding Americans of this era and one of the country's greatest military leaders, Lt. Gen. James M. Gavin, who at that time was Chief of Research and Development of the United States Army.

It is a pleasure, officially and personally in my extension of remarks, to include the splendid and inspirational speech made on that occasion by General Gavin:

Members of the Charitable Irish Society and guests, it is a great pleasure and a great honor to be here with you this evening, on this St. Patrick's Day. This is more than just another city in which to make a St. Patrick's Day talk and, in fact, it is more than just another St. Patrick's Day. In the first place, Boston was and has been not only the cradle of American liberty, but the cradle of American Irish thinking. The first sizable Irish settlements were here and the names of Irishmen from Boston who have gone forth to serve this Nation unto the far corners of the earth are legion. And it is fitting and proper that we always associate Boston with not only the origin of our country but with the contributions Irishmen have made to the greatness of our country.

Next, I said that this to me is not just another St. Patrick's Day talk and it is not, for a very special reason. Exactly 10 years ago I spoke in Boston. It was not long after the war and it was my first talk in Boston. Much has happened in that time, both good and bad. To me it has been a decade of dilemma, a decade of constant searching for solutions to problems far too complex to lend themselves to any readily understandable so-

lutions. It has been a decade in which we have had to adjust our programs and policies from time to time to meet the opportunistic shifting policies of the Soviets and of those inspired by them.

Of those 10 years, I have spent almost 7 in Washington, in the Department of Defense and in the Army, and I have been engaged in work in which some understanding of these problems had to be found; otherwise, how could we have planned, in a military sense, for our survival? Out of all of this experience, to me at least, comes one overwhelming conclusion. The great goal which we seek in this battle in which we are now joined is the minds of men now uncommitted to either the East or the West, and the retention of those minds of the West, those now on our side. Despite our great preoccupation with satellites, missiles, and science in general, the most important things today are those of the mind, of the spirit, let us say, rather than of physical things.

This may sound strange, coming from a soldier, but for good reason, I believe it to be true. I have long analyzed and studied the things that we do in the Department of Defense and in doing so I have searched for the answer to the more fundamental question: Why do we do them? Since the beginning of history, the military man has asked science and industry what it could give him so that he might fabricate that given him into the weapons of war. How he can inflict catastrophic damage on a major portion of the human race with weapons that could be given to him, and thus serve no good, but in fact irremedial harm on humanity. The question, therefore, is no longer what, but why? And having obtained an answer to the question why, he merely must ask science and industry to produce weapons adequate to the expressed need, no more and no less.

This would appear to be a very simple and uncomplicated procedure—it does appear so but it is not. And in answering the question why, we touch upon the very heart and soul of our problem; our national attitude.

It is well that we ask ourselves from time to time, and if there ever was a time this is it, this year of 1958: "Where goeth the Republic"? What are our aspirations and our goals? Is it, as some would have us believe, that democracy has reached its greatest hour of fulfillment and that the abundance of physical comforts and the luxury that it brought to us are now ours to enjoy, and in order that we may enjoy them we are against any thing or any ism that would challenge that enjoyment? We are, as it were, for the status quo.

Max Lerner, in his excellent book, America as a Civilization, expresses it this way:

"The crucial question about America's destiny in the world frame brings us back to the tests of America's strength as a civilization. It is hard not to feel that while America is still on the rising arc of its world power it is on the descending arc of its inner social and moral vigor; that it has allowed itself to be switched off from the main path of its development into the futile dead ends of the fear of ideas and the tenacious cult of property."

I would point out that this is not Mr. Lerner's conclusion but it is a challenge that he poses.

It is important that we ask ourselves these questions and that we understand ourselves and our relations with other peoples and other nations who reflect our own aspirations. Once we decide what our relations with others will be this finds expression in national policy and then the military plan follows. Weapons systems are created to serve policy. So again, I say, it is important that we understand ourselves and know exactly where we stand and what we are for, we Americans.

If what I have said so far is a valid description of our national view then a policy of maintaining the status quo is adequate to the national need. And if one were to ask what we are for, the answer would most likely be, we are for "against communism." What a foreboding prospect this is, and how sterile, how lacking in creative hope, and how certain would be our end as a sociological and political entity.

I say these things because I believe that our democracy is a dynamic, living entity that can and does enflame the hearts and minds of men today wherever it touches them. I believe that the words of Ralph Waldo Emerson in describing the current state of our democracy are true, and I quote:

"Whe think our civilization is near its meridian, but we are yet only at the cock-crowing and the morning star."

Now, in saying this I should support it, I realize. And I will impose upon you for a few moments to do so. Volumes have been written on the subject of "What is America," and it would be difficult to capture in a few minutes the greatness of this Nation of ours, but of its uniqueness there is no doubt. There are those who would attribute its greatness to an abundance of natural resources, to our position of isolation on the earth, protected as we have been by two great oceans, or to a lack of war in our own land, but this cannot be true for we have had the bloodiest of all wars on this continent, or the fact that that our Nation from its inception was an expanding frontier and each generation had to meet the challenge of the unknown from its infancy and thus it developed men of great self-reliance, determination and courage as well as friendliness and mutual trust, among themselves. They had to develop these in order to survive.

I believe that America is all of these things, although I incline to the so-called frontier theory more than the others, although none of them is exclusively valid as the reason for the greatness of our people. But I would go back farther and point out that this country was established by men of exceptional courageous stature as we measure men today. They were the men determined, stout of heart, the rugged individuals who had the courage to turn their backs on all that Europe offered and to strike out and hew a new civilization from a wilderness. They, and those who came after them by the millions, and many of them are represented in this room here tonight, had the courage to say no to the castes, the cartels, the restrictions of societies somehow contriving an existence from the rubble of one decayed empire on top of another. They had the courage to turn to this land.

The original ones settled on the Atlantic seaboard, where they soon made articulate their loftiest of aspirations:

"To form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity.

"To establish and preserve a system based on the concept of the dignity of the individual. * * *"

They were determined to promote and secure conditions under which this system could live and prosper. They were determined, to defend, with their lives this system for themselves and for posterity. The intensity of their purpose was well expressed in the Declaration of Independence:

"With a firm reliance on Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

The Republic they created expanded across the Appalachians and the Allegheney, down the Ohio and across the Great Plains. Few Americans have captured the moving spirit of the time as well as Stephen Vincent Benet, particularly in Western Star, when he wrote:

"Oh, paint your wagons with 'Pike's Peak or Bust!'
Pack up the fiddle, rosin up the bow,
Vamoose, skedaddle, mosey, hit the grit!
(We pick our words, like nuggets, for the shine,
And, where they didn't fit, we make them fit,
Whittling a language out of birch and pine.)
We're off for Californ-lay,
We're off down the wild O-hi-o!
And every girl on Natchez Bluff
Will cry as we go by-o!
So, when the gospel train pulls out
And God calls 'All aboard!'
Will you be there with the Lord, brother,
Will you be there with the Lord?
Yes, I'll be there,
Oh, I'll be there,
I'll have crossed that rolling river in the morning."

They went on to California and history records that upon reaching the Pacific one said: "It's too bad; we wanted to go on." Well, they did go on, they and their sons after them, and they went on ultimately to the beaches at Okinawa and Iwo Jima, and the 38th parallel in Korea. They went on for reasons that to many people seemed to be hard to explain at the time, but they were not hard to explain to those who were touched with fire in an earlier war and saw totalitarianism at its full effectiveness in the concentration camps. We knew what we were fighting for although, at times, it may have for some lacked clear definition.

For devotion to country and for what it stands is more than an idea, and the conduct of battle at the hands of your sons is more than mere ruse of high explosive nuclear weapons, steel, petroleum, and the like. For the destined purpose of our people can only be realized when we hold clear convictions on the reasons why we conduct ourselves as we do, in peace and war. And we hold these convictions closely and fiercely. Among these, today, I would list such things as respect for the truth, belief in the dignity of the individual, belief in government by law, not by man, belief that responsibility matches privilege, belief in honesty and fair play among friends and strangers alike, belief in a good God, belief in man's rights to speak his mind freely, worship openly, and climb as high as his talents will lift him and his ambitions drive him, held within reasonable bounds only by his consideration for others and the desire that the common good be served, first of all.

These, gentlemen, are the imperishable, eternal truths, and as long as men live they will live in their hearts. And as long as good men serve their people they will be motivated by them. Today these ideals have permeated to the far corners of the Western World. The high tide of democracy surges and laps up against the 38th parallel in Korea, the 17th parallel in Vietnam, the East-West border in Europe, the Brandenburg Gate in Berlin. It is inconceivable to me to surmise, even for a moment, that the dynamism of democracy is waning even the slightest bit. For it represents the essential goodness in man and as long as freemen live it will live, and live with all the vitality and energy and dynamism of men themselves.

I have tried in a few minutes to tell you what our democracy means, as I have been able to understand it, and what the great promise of its future may hold. And this promise is for our children and our children after them, except for one thing: the well-publicized aspirations of the Communist Party, now controlling the Soviet Union.

The Communist Party is but 3 percent of the population of the Soviet Union but it exercises complete dictatorial control and so far with each passing year it has become more totalitarian in its methodolgy. All of the trappings of totalitarianism are present—the concentration camps, the control of in-

formation mediums, the system of election by appointment, and the ruthless destruction of any minority in disagreement, as was made so evident in Budapest.

But while these things are self-evident, the picture to the average individual must be thoroughly confusing. Mr. Churchill:

"Russia is a riddle, wrapped in a mystery inside an enigma." It was a description that caught the public fancy, as it was intended to do, and it is perhaps for this reason that it is best remembered. Yet, it was quite descriptive of the phenomena with which we must deal. On one hand their leaders say, "We shall bury you," and on the other hand they say, "We shall continue this policy of peace in the future with all our might and with all our resources." Lenin, who, incidentally, has not been "Stalinized," said:

"The existence of a Soviet Republic next to a number of imperialist states for a long time is unthinkable," while latter-day disciples preach about a pattern of coexistence, living side by side in lasting peace. Perhaps this apparent conflict was clarified by Lenin's comment, made as a marginal note on a book by Von Clausewitz. Lenin wrote, "Ah, ah, witty," next to Clauswitz' statement:

"A conqueror is always a lover of peace. He would like to make his entry into our state unopposed."

In a modern version of this state of mind, we have had tons and tons of Soviet supplies pouring into the hands of the North Koreans while American and United Nations young men were dying by the thousands to deter that aggression, while at the same time the Soviet-inspired Stockholm peace petition was circulated and even Picasso's white dove was exploited. Is there an answer to this? There is, and it is very simple.

"War is peace," as George Orwell put it in 1984. As the Soviets would put it today, war and peace are inseparable and they are at war today and will continue at war as long as it serves their policy, which clearly seems to be our total destruction. In the end, as Mr. Khrushchev tersely put it, "We will bury you." War is a mere continuation of policy by other means and war should be continued in some form until their objectives are achieved. As far as the Soviet leaders are concerned they are at war now, and will be until we are utterly destroyed and they bury us, as they put it, or until they themselves are destroyed.

Now, I have carefully refrained from discussing specific military programs and problems, because I did not consider it appropriate for this occasion. Because of the technical background that I now have, however, I could not leave you this evening without urging more interest in and greater support for our space programs. I have been profoundly disturbed by the widespread lack of appreciation of the importance of space exploration. Far too many people consider it unreal, and perhaps feel that it is far and away and not in their time, and meaningless as far as they are concerned today. Nothing could be further from the truth.

We could have launched a satellite of good size long ago. We could have circumnavigated the moon by now, and we could have been much closer to manned orbital flight, if we had had the vision necessary to support such programs adequately several years ago. Perhaps our tardiness may spur us to a greater effort now that we are underway. I hope so. And I know of nothing of greater significance to us and to our security in the future than an adequate space program now. I agree entirely with Dr. Teller that:

"If they surpass us (referring to the U. S. S. R.) in technology in the year ahead, there is very little doubt who will determine the future of the world."

What good can come from space exploration? Well, first of all, we can understand the weather and weather patterns, and possibly ultimately to a significant degree, control weather.

We can establish worldwide communications nets via satellites.

We can, by launching satellites at sufficient velocity and distance, place satellites in what would be essentially stationery orbits; that is, stationery as far as their position opposite a point on earth is concerned. Such a family of satellites could be used to establish a worldwide television net and thus be an invaluable contribution to worldwide transmission of ideas, resolution of differences, and a clear contribution to the maintenance of peace. Likewise, reconnaissance satellites could be used under, for example, United Nations supervision, to keep under constant surveillance any portion of the planet.

Detailed photography can be accomplished and through this, major war preparations anticipated and thus, again through the United Nations, preventive measures taken. Thus, for the first time in man's history he has within his grasp the technical means of guaranteeing peace, if he will develop and use those means.

Returning to our relations with the U. S. S. R.: What is the answer to this dilemma? The answer is quite simple.

We must be honest with ourselves in recognizing the danger for what it is—our very lives and the life of our Nation are at stake. We must make sacrifices and prepare for the long pull. This begins with better preperation of our children for the challenges that lie ahead, and by this I mean a more thorough and better education.

We must have the wisdom to not seek an easy solution militarily, not rely on any one single weapons system, but recognize the need for a spectrum of capabilities as flexible and as responsive as the very concept of democracy itself. This will take sacrifice on our part and a larger investment of our national product in national defense.

We absolutely must have the moral courage to face up to these problems now, and not act as though we hope they may go away, as we continue to devote inadequate attention to them.

Our fundamental strategy must recognize that the battle, essentially, is for the minds of men, and this means that our strategic considerations must include many things besides military hardware.

And finally, our strategy will be most successful if never a hostile shot is fired, while at the same time the Western World gains in cohesion and in strength. This is entirely possible if we will devote ourselves to this goal and work hard toward it.

Lastly, we should urge and support the United Nations in a space program that can, if properly carried out, insure the world against ever again suffering from a major conflagration.

For a Sound Program in the Middle East

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Hon. Wiilliam Benton at a luncheon meeting of the American Committee for Israel's Tenth Anniversary Celebration, February 27, 1958, Hotel Pierre, New York City:

FOR A SOUND PROGRAM IN THE MIDDLE EAST

(By William Benton)

The celebration we are planning will have special meaning for Americans. The United States was the first government to recognize the infant republic of Israel. American citizens have contributed more than all others toward the maintenance and upbuilding of that courageous nation. And now recent events in the Middle East underscore that our role in that area is inevitably bound up with the destiny of Israel. The American people seem to understand this better than does the administration in Washington.

Since its inception, the State of Israel has demonstrated to the world what a dynamic democracy can achieve despite adversities that continuously threaten its very existence. Israel's great achievement has been its dedication to freedom, and its ability to provide a refuge—within that framework of freedom—to hundreds of thousands who have suffered indescribable persecution and oppression.

About one and a half million Jews have entered Israel in the past 10 years. They came in poverty; many lacked skills; most were without a knowledge of Hebrew. All needed shelter and medical care. Yet within this decade Israel has moulded its diverse population into a proud and homogeneous people capable of developing their homeland to high levels of productivity and of defending it against great odds. All the free Western world should take pride in Israel's triumphant achievements.

Mr. Chairman, you have stated that this anniversary is a time for turning the spotlight of public attention on the present perils in the Middle East—a time for mobilizing public opinion on behalf of those programs which will bring to that region peace and stability within the framework of freedom and justice. I applaud this goal. I congratulate you on the great leadership you are providing to help us toward it.

The free world now faces a critical challenge in the Middle East. Since 1947 the United States has been increasingly involved in this challenge. When Soviet power threatened the eastern Mediterranean in 1947, the Truman doctrine was proclaimed and Greece and Turkey were saved. In 1949, President Truman enunciated his great point 4 program which gave fresh hope to the depressed peoples of the Middle East. But in recent years as new responsibilities devolved upon us—as Great Britain and France continued their withdrawal from the Middle East—we have failed to meet them.

The Soviet Union has vaulted over the so-called northern tier and has penetrated the Middle East with its economic, ideological and political programs. The Soviets have exploited the disease, ignorance and poverty of 40 million Arabs while we have negotiated for oil, arms and military bases.

Despite the Eisenhower doctrine the Russians have succeeded in planting their feet firmly in the Middle East—one foot in Cairo, the other in Damascus. Though the U. S. S. R. has supplied arms to Egypt and Syria, its Middle East policy is based mainly on economic and technical assistance. While Khrushchev calls for summit conference to promote peace, he has publicly declared economic war. While we ponder strategy, he wins round afer round.

In the past 2 years, the Soviet bloc has given Egypt, Syria, and Yemen $770 million in military and economic aid. With the exception of $5 million—a gift to Egypt from Communist China—Soviet assistance is on a long-term, low interest basis. The United States—having promised Egypt $61,678,000 in economic and military aid in 1952—had as of last June 30 actually de-

livered only $39,200,000. Even if we include our aid to Iraq, Lebanon, Jordan, and Saudi Arabia, United States assistance only totals about one-fifth that of the Soviet bloc. These figures help show why Secretary Dulles testified last Monday that the current Soviet aid—and—trade offensive is a greater danger to the United States than open armed attack.

The Communists' loans are at about 2.5 percent interest. We charge from 3.5 to 5 percent.

Soviet technicians stream into Egypt and Syria speaking Arabic. They make friends with the people and live and work with them. American technicians, relatively, keep aloof and stick to their English.

A Soviet delegate at the recent Cairo conference set forth the Kremlin's approach in these telling words:

"We do not ask you to participate in any blocs, reshuffle your governments or change your domestic or foreign policy. We are ready to help you as brother helps brother, without any interest whatever, for we know from our experience how difficult it is to get rid of need. Tell us what you need and we will help you and send, according to our economic capabilities, money needed in the form of loans or aid * * * to build for you institutions for industry, education and hospitals * * *. We do not ask you to join any blocs * * * our only condition is that there will be no strings attached."

Here in the mouth of a Kremlin spokesman are the words and the spirit which used to be our trademark. Are they the words of intended subversion? We think so, but many Arab leaders do not.

Clearly, we need a new policy in the Middle East. Perhaps I should merely say we need a policy. We need a policy which recognizes the fundamental unity of the Middle East and which is keyed to human and economic problems rather than to military strength. Military aid in itself will never enable the Middle East to become a bulwark of peace. In addition, there must be internal peace coupled with progress toward economic health and social well-being.

We must seek patiently and persistently to persuade the Arab world that the State of Israel is a great and irrevocable historic fact, and that the fortunes of the Jew and the Arab in the Middle East are inextricably intertwined. I believe the Arab world will come to accept Israel only in a climate of economic and social advance for the Arabs. Thus we must develop programs for economic betterment which will turn the interest and energies of the Arab leaders from fighting destructive wars and nursing self-destructive hatreds, to developing the economic potentialities of their countries. As a part of such programs, we must develop plans for economic improvement so advantageous to the Arab countries that they cannot reject them. We must seek plans which will encourage both Arabs and Jews to compete with one another not in arms but in the vigorous economic upbuilding of their countries. We must quietly and persistently encourage Arabs and Israeli to work together on projects like the Johnston-Jordan River Valley project where each obviously needs the cooperation of the other.

The new confederation of the Kingdoms of Iraq and Jordan now gives us a unique opportunity. This is the opportunity to promote and finance a great "TVA" of the Mesopotamian River Basin, involving flood control and irrigation from the Tigris and Euphrates Rivers. Iraq has the undeveloped resources. Jordan has the needy people. We have a tremendous stake in the peaceful progress of these two friendly lands.

I like Senator HUMPHREY'S proposal for the creation of a Middle East Development Agency, organized under the United Nations. Governor Bowles has suggested a similar approach. We must remember that the impetus which gave NATO its successful start came from the fact that it was preceded and accompanied by the Marshall plan.

I should like to seize this auspicious occasion to suggest that—after proper preparations—the President of the United States join with the heads of the Western Powers in calling a conference of Middle East nations, including Israel, to chart a course that will speed economic development and strengthen the idea of freedom and democracy in that repion. Here indeed may be a chance for a summit conference that would be really productive.

The objective is a program that will attack disease, ignorance, and poverty, and promise an increasing measure of human dignity to the peoples of the area. Such a program would call for the development of natural resources and the reapportionment of farm lands, for industrialization and revision of obsolete taxation systems. It would guarantee liberal trade agreements. It would project long-range loans—from 25 to 50 years—at interest rates of less than 3 percent. It would promise trained Western technicians, teachers, and instructors for all Middle Eastern countries.

To implement such a program, we must inform the peoples of the Middle East. To offset the pro-Nasser and pro-Communist propaganda now being beamed to millions of Middle Eastern peoples by Radio Cairo, Radio Damascus, and Radio Tashkent, we must greatly strengthen and expand our Voice of America and other informational activities and facilities.

Even the Chinese are now beaming some 69 hours of Arabic broadcasts weekly.

A week ago Monday, testifying before the Senate Foreign Relations Committee, I identified the Iron Curtan as the gravest threat to peace. I outlined nine ways to pierce the Iron Curtain.

The same can be said of the Middle East. While the United States concentrates on negotiating with the rulers—some of them very shaky—the Communists go after the Arab people.

If we will, the United States can develop a sound and imaginative program of economic, social, and political action, and at the same time develop an information program designed to show the masses of the people of the Middle East that we recognize their legitimate aspirations, that we seek peace and cooperation, not exploitation; and that will give them the reasons why their best interests lie with the West.

We have a long way to go to regain our lost initiative in the Middle East. It is a long and difficult road. But we must take it. There is no time to lose. We must seek the road at once.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my weekly newsletter of April 19, 1958:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, 5th District, Texas)

APRIL 19, 1958.

Cherry blossoms (3 weeks late), plus alternately balmy and brisk temperatures, have delighted throngs of Washington visitors. The pale pink blossoms are profuse, edging the Tidal Basin and Jefferson Memorial. Washington is lovely in the spring. The dockside *Mayflower II* is another visitors' attraction.

The freedom of information bill, H. R. 2767, occasioned an afternoon's lively debate. The bill amends an existing statute (sec. 161) which authorizes Government department heads to prescribe regulations for conduct and for custody, use, and preservation of records. The bill then adds this amendment: "This section does not authorize withholding information from the public or limiting the availability of records to the public." With the announced intention to prevent the needless withholding of information from the people, press, and Congress, no one disagreed. However, the possible misinterpretation of the specific langauge used (including by the court) occasioned a near rhubarb. Arguments for: (1) Only section 161 is hereby amended (not any of the other 78 laws concerning secrecy are affected, such as military information, FBI files, Internal Revenue Department files and many others); (2) section 161 has been abused as a convenient device: (a) For department heads to take the easy course (stamp a matter "Classified" rather than laboriously examine it); (b) For too many, who now have authority, to determine whether material is to be classified or not; (c) For the concealment of mistakes and wrong actions; (3) The intent of the original law of 1789 is thus restored, which intended section 161 only as a housekeeping authority, and not for the withholding of information, which should result only from further congressional legislative authority. Arguments against: (1) The wording becomes ambiguous by not being tied to section 161 closely enough, therefore the other 78 statutes are jeopardized, and necessary Government security is removed; (2) the press, including congressional staff men who are newspapermen, have lobbied this through under the catchy slogan, "The pople's right to know"; (3) the people have no absolute right to know having given up this right in the constitutional division of powers with accompanying discretionary authority.

The bill passed handily, after all amendments were defeated. Many misgivings remain. This bill is labeled "freedom of information", yet coincidentally several of us were cut off in asking questions in debate seeking information. Equally damaging is the fact that Congress isn't practicing what this bill preaches, since many of our committee hearings are secret (33 percent of them according to Congressional Quarterly survey).

The basic dilemma remains—no matter how sincere our intention in opening up Government files, the Court as ultimate arbiter of Congress' intent, can particularly if liberal, reinterpret the Constitution as it sees fit.

The rivers and harbors bill veto saves the taxpayers $349 million of unfounded boondoggle projects. The President should be commended for his courageous action on this and on his earlier veto of the farm price freeze bill. In my opinion, he should have vetoed the housing and highway bills, too, because of the haste-makes-waste treatment in the name of recession. Now the liberal Democrat-controlled Congress is pushing a new Community Facilities Act which would loan Federal money to local communities. Isn't this rich? The most heavily indebted Government entity in history is offering the loan of money to the people from whom the money is taken, for the reason that these people in the local communities haven't the money. And our Texas Senators are responsible for this gem.

The Dallas community refused the money, although only because the city could borrow the money elsewhere for less. What an opportunity existed there for telling the Federal men, the Senators, "We don't want the

money because it isn't the role of Federal Government to offer it; it's taxpayers' money; stop spending it and give it back to us in the form of a tax cut." What an opportunity still exists, too, to tell Uncle Sam the same thing in public housing, now that Dallas wants to get all it can, too, in the name of "urban renewal" under existing law. So it is, that a people lose their right to demand the return of tax moneys and the local and personal freedom that goes with it. Los Angeles people finally flatly refused Federal public housing. Will Dallas?

Briefs that deserve fuller treatment: (1) the public housing and race issue in northern cities is breeding crime and unhappiness; (2) congressional integrity is endangered by Members who change what they said on the House floor or add more (Curtis debate—April 16, 1958); (3) President Truman was caught in a lapse of memory or falsehood, denying the earlier Krock interview (recalls Cordell Hull's statement, "A lie can get halfway round the world while the truth is getting on its pants"); (4) Congressman POAGE's Dallas speech saying, "The administration is dedicated to kicking the farmer in the face" needs rebuttal; the farmers' hardships, whatever they are, are obviously the result of earlier Democrat programs and Democrat-controlled Congresses.

Archbishop Cicognani

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an editorial Archbishop Cigognani, a deserving tribute appearing in the Pilot, of Boston, Mass.

As the editorial well said about His Excellency, the apostolic delegate:

From one end of America to the other, his friendly person is familiar to Americans.

The editorial follows:

ARCHBISHOP CICOGNANI

In the perspective of a human life 25 years is a sizable portion and it often provides an eminence from which it is possible to survey some measure of a man's accomplishment. A quarter of a century ago, in the colorful sanctuary of Santa Susanna in Rome, Amleto Giovanni Cicognani was consecrated titular Archbishop of Laodicea in Phrygia just before leaving to become apostolic delegate to the United States of America. Today, on his silver anniversary, 25 volumes could not contain the vast story of his labors and our progress in the time that has elapsed.

The contribution which Archbishop Cicognani has made to the church began long before his advent to America. His work with Cardinal Gasparri in laying the foundations for the codification of oriental law must be mentioned especially as a monumental labor of personal scholarship. His assignment to the United States was certainly one of special challenge, for the church in this land had problems and anxieties different from those anywhere else and they required the patient care of a representative of the Holy See who would understand at once the true depth of the faith here and its imperishable dedication to the successor of St. Peter. Archbishop Cicognani had brought a warm-hearted spirit of fatherly understanding which encouraged American initiative without permitting undue precipitation, and which gave its blessing to the active apostolate which the expansion of the church demanded of its people.

When the delegate came to us in 1933 there were in the United States only 20 million Catholics; the latest figures released this year by the Bureau of the Census indicate a national figure of just twice the earlier one, 40 million. But the church in America has not merely grown, it has grown wisely and well in the generous proliferation of dioceses and institutions to nourish and strengthen the faith of the faithful. A large measure of the present success and the high hopes for the years ahead must rest upon the shoulders of Archbishop Cicognani who, with the most admirable foresight and the most indefatigable industry, watched and worked over the speedy expansion of Catholic life and guided it in most productive directions.

To most of us Archbishop Cicognani is the delegate—we have never known any other. It is no disrespect to his illustrious predecessors in the office that we should think of him rather than of his office. From one end of America to the other, his friendly person is familiar to Americans. Not a single even of major significance in the life of the church during the last quarter century but his presence, and often his words, have graced the occasion. The Holy See has actually been present among us, moving in familiar circles, taking the measure of our necessities and blessing our endeavors. His name and his face are both happily familiar to all our people, even as to our clergy and hierarchy.

Here in Boston we have often had the honor of his visitation and the encouragement of his words. On this visit we are especially pleased to note that his personal anniversary of consecration coincided with the sesquicentennial observance of the See of Boston. This is a year when we look back over the 15 decades since the diocese was established and locally survey the progress made during this time. It is fitting that we should have with us during these celebrations that unique figure in our ecclesiastical history, Archbishop Cicognani, who in quiet wisdom and in his special manner, framed our present fortunes. God grant him length of days among us.

The Krol Family: Part of the American Dream

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lois Wille in the Friday, April 18, 1958, issue of the Chicago Daily News relating to the Krol family who were honored with achievement awards at the Immigrants Protective League's 50th anniversary dinner in the Gold Room of the Congress Hotel:

A BUSY LIFE'S REPORT CARD GIVES PAPA AND MAMA KROL NINE "A'S"—IMMIGRANT AWARD HONORS REARING OF OUTSTANDING FAMILY

(By Lois Wille)

A huge stack of report cards—all of them marked "good"—have been edged out of first place in the life of Alex and Mary Krol.

"For more than 40 years I save them," Mary said. "Always my bigggest thrill was when my children come home from school bringing their good grades.

"But now"

Mary slipped a hand through the arm of the man she married 50 years ago, and looked again at the impressive leather-bound citation he held.

"Now I think this is my biggest night, this paper here is my biggest thrill," she said.

"My report cards are second best now."

Thursday night Alex and Mary Krol, a Polish couple who reared nine outstanding children, were hailed as the best example of family life among Chicagoans of foreign birth.

The Krols, of 6059 S. Francisco, received one of 10 awards given to distinguished Chicago immigrants at the 50th anniversary celebration of the Immigrants' Protective League.

Alex and Mary sat quietly at the speaker's table in the lavish Gold Room of the Pick-Congress hotel and listened to such men as Adlai E. Stevenson and Supreme Court Justice William O. Douglas heap praise on them.

"You are part of the American dream," Justice Douglas said.

"You have been as distinctly human as markedly individualistic in thought and achievement as Einstein, Fermi, Toscanini."

Stevenson read the nine Krol children's list of achievements, and announced:

"All I have to do is look at you and your family, and I am convinced that if the United States ever loses its vitality, history will fix the date of the decline as May 1921—the year Congress passed restrictive immigration quotas."

Alex and Mary listened to the other nine awardees give gracious little acceptance speeches.

But when their turn came, they said nothing.

"I was speechless," said Mary, plump, 70, and pinkcheeked as a teenager.

"Me, too," said Alex, 72, a beaming little man with a shock of thick, white hair.

But it didn't matter, because the standing ovation from the audience of 700 would have drowned out any thank-you's

The Krols emigrated to Chicago from Skulsk, Poland—Alex in 1903, Mary in 1906. They were married in 1908, and the happy results are these:

Dr. Edward J. Krol, president of the staff of Holy Cross hospital.

Dr. Zenon J. Krol, oral surgeon, Holy Cross hospital.

Dr. Arthur J. Krol, assistant professor of dentistry at Loyola University.

Dr. Henry J. Krol, optometrist.

Leonard W. Krol, professional engineer.

Adam T. Krol, fellow of the American Institute of Chemistry and head of Clearing Chemical Laboratory.

Walter J. Krol, professional engineer.

Alexander J. Krol, electrical contractor.

Henrietta J. Krol, dental nurse.

Sending nine children through college meant enormous sacrifices for Alex, a cabinetmaker, and Mary, a steamstress.

"We would put the children to bed, and then go back to work," Mary Krol recalled. "I would sit in the front room and sew. Alex would go back to his workshop. We didn't count our work by the hours."

The Krol system of rearing intelligent, prosperous citizens is threefold, Mary said:

"Take them all to church every Sunday, make sure they get good report cards—and don't let them get sassy."

How do you make sure those report cards are good?

"Every night we would sit them around the table and make them study," Mary said. "No fooling around—just study. It works."

And how do you prevent the back talk?

"Spank," Alex and Mary chorused.

Their children got jobs as grocery clerks, delivery boys, and newspaper copy boys to help put them through high school.

All worked in college, too.

Mary doesn't think much of today's youngsters.

"All too spoiled," she said. "Too much toys and too much television."

She added that this does not include her 19 grandchildren.

The Dismissal of Oppenheimer

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

THE DISMISSAL OF OPPENHEIMER—REASON FOR REMOVAL OF SCIENTIST FROM UNITED STATES COUNCILS IS CLARIFIED

(By David Lawrence)

J. Robert Oppenheimer, who was ruled to be a security risk by the Atomic Energy Commission in 1954, made a speech before the International Press Institute here Tuesday. Whatever mistakes he might have made in the past would not have come into public notice again, but the American chairman of the meeting, in introducing Dr. Oppenheimer, gave to the assembled journalists from all over the world an erroneous impression of why the scientist was denied access to security data. This needs to be clarified lest an important group of newsmen from foreign lands depart with a mistaken concept of what American policy was in this case. The chairman said:

"The charge, in brief, was excessive loyalty to one or two very old friends, and an occasional disdainful attitude toward the cops, and I submit to you, ladies and gentlemen, those are two solid, sterling American traits. Unfortunately they were somewhat out of style during a few months in 1954."

The chairman added that there is "right now an evergrowing demand in these United States, and particularly in the scientific community, that Dr. Oppenheimer be returned to active work for his Government."

No doubt there are some Americans who feel that way and sincerely believe that what Dr. Oppenheimer did should not cause him to be removed from the Government councils on scientific matters. There are others who feel that, had Dr. Oppenheimer's advice against developing the H-bomb been followed, an important weapon would not perhaps have been available to the United States and that this country would subsequently have been at a serious disadvantage against Soviet Russia.

But the facts show the Atomic Energy Commission did not remove Dr. Oppenheimer from Government councils because of the advice he gave against making the H-bomb but solely because of his lack of cooperation in security matters.

Thus the decision of the Atomic Energy Commission in June, 1954, reads in part as follows:

"Dr. Oppenheimer has now admitted under oath that while in charge of the Los Alamos Laboratory and working on the most secret weapon development for the Government, he told Colonel Pash a fabrication of lies. Colonel Pash was an officer of military intelligence charged with the duty of protecting the atomic weapons project against spies. Dr. Oppenheimer told Colonel Pash in circumstantial detail of an attempt by a Soviet agent to obtain from him information about the work on the atom bomb. This was the Haakon Chevalier incident. In the hearings recently concluded, Dr. Oppenheimer under oath swears that the story he told Colonel Pash was a 'whole fabrication and tissue of lies.'

"It is not clear today whether the account Dr. Oppenheimer gave to Colonel Pash in 1943 concerning the Chevalier incident or the story he told the Gray board last month is the true version.

"If Dr. Oppenheimer lied in 1943, as he now says he did, he committed the crime of knowlingly making false and material statements to a Federal officer. If he lied to the board, he committed perjury in 1954. * * *

"Dr. Oppenheimer, under oath, admitted to the Gray board that from 1937 to at least 1942 he made regular and substantial contributions in cash to the Communist Party. He has admitted that he was a 'fellow traveler' at least until 1942. He admits that he attended small evening meetings at private homes at which most, if not all, of the others present were Communist Party members. He was in contact with officials of the Communist Party, some of whom had been engaged in espionage. * * *

"However, Dr. Oppenheimer's early Communist associations are not in themselves a controlling reason for our decision. They take on importance in the context of his persistent and continuing association with Communists, including his admitted meetings with Haakon Chevalier in Paris as recently as last December (1953)—the same individual who had been intermediary for the Soviet consulate in 1943. * * *

"It is clear that for one who has had access for so long to the most vital defense secrets of the Government and who would retain such access if his clearance were continued, Dr. Oppenheimer has defaulted not once but many times upon the obligations that should and must be willingly borne by citizens in the national service.

"Concern for the defense and security of the United States requires that Dr. Oppenheimer's clearance should not be reinstated."

If it was "excessive loyalty" to his friends by Dr. Oppenheimer and less concern for the maintenance of the security regulations of his own Government, can this be regarded in the circumstances as a "solid, sterling American trait"? Was it also just an "occasional disdainful attitude toward the cops"? Or was it, as the official record shows, a case of "deliberately misleading" the cops? Commissioner Thomas E. Murray, who was 1 of 4 members of the Atomic Energy Commission who voted to deny Dr. Oppenheimer security clearance, went further than all his colleagues. In a concurring opinion, after reviewing the evidence, he said flatly of the noted scientist: "He was disloyal."

The commission, itself, did not charge disloyalty but a "persistent and willful disregard for the obligations of security."

Cats That Walk on Snow

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. PORTER. Mr. Speaker, one of the high spots of my visit home during the Easter recess was a visit to the Tucker Sno-Cat plant in Medford, Oreg. This is where the famous sno-cats are made and is the home of their inventor, Emmitt Tucker and his three sons. I even had the pleasure of driving one of the big sno-cats, although not so big as the ones which recently took Dr. Vivian E. Fuchs and his party across 2,100 rugged ice-caked miles over the continent at the bottom of the world. I also drove a smaller model which is built for going through mud, at the same time trying, unsuccessfully, to get it stuck in a quagmire.

Under a previous consent I am including an article by Montgomery M. Atwater, Cats That Walk on Snow, which appeared in Mechanix Illustrated in January 1958. The article is as follows:

CATS THAT WALK ON SNOW—NO OTHER MACHINE CAN MATCH THESE CRAZY CATS TRAVELING OVER SNOW ON ANY TYPE OF TERRAIN

(By Montgomery M. Atwater)

It was January 13, 1952, the winter of the big snow. Donner Pass was cluttered with the roofs of abandoned cars. Pride of the Southern Pacific, the City of San Francisco's huge diesel thrust its plow into the clogging mass of an avalanche. Like some prehistoric monster caught in the quicksand, the luxury train struggled but could not move.

For a day Southern Pacific men and machines fought to rescue its train and passengers. In rapid succession the storm swallowed four huge rotary snowplows. One it smashed with an avalanche, killing the crew. The train's engine finally ran out of fuel. Cold, darkness, and fear seeped in through the metal walls of the Pullmans as the snow drifted higher around them.

On the second day the railroad called for help. The Army sent a fleet of Weasels, those rugged little snow buggies so well known to the mountain troops of World War II. They wallowed helplessly in the white quagmire. News accounts began referring to the passengers on the train as the second Donner party.

On the third day two Tucker Sno-Cats calmly floated across the sea of snow that had blocked every other effort.

Rescuing the streamliner is the most spectacular exploit of the incredible Sno-Cats. But professionals of over-snow travel can think of many that were actually more difficult. In 1950, for instance, the Bell Telephone Co. was trying to complete a new microwave station on Mt. Rose, not far from the Donner Pass, a year ahead of schedule. When avalanches obliterated the construction road a fleet of Sno-Cats took over. In 1955, the telephone company issued 5 of its coveted awards for heroism to the Sno-Cat jockeys who rescued 22 motorists stormbound in a Utah pass. Logically a sixth award might have gone to the inventor of the unique machine that did the job.

Emmitt Tucker can't explain what drove him to spend half a lifetime on this project. Part of it was a perfectly normal ambition to make some money. As far back as 1914 he realized that there was a market for a machine that would really travel on snow.

There's no great trick to designing a machine that will travel on well-packed snow and moderate grades, Tucker will tell you with a shrug. Dozens of inventors have gone that far with the problem. Because he insisted on a vehicle that would maneuver on every type of snow in rough country, Tucker at one point discarded a machine he had been working on for more than 20 years and began all over again.

This forerunner of the Sno-Cat on which Tucker labored from 1914 to 1938 is interesting in itself. For one thing it was a new and radical approach to the double-barreled problem of travel over snow: flotation and traction. Most designers have tried to solve it with a sled or a tractor in one form or another. Tucker's spiral-driven machine got its flotation from a cylinder or pontoon. For traction he welded a fin, corkscrew-fashion, to the cylinder. When the assembly was rotated, it floated and pulled itself forward like an auger.

In spite of its promising beginning, the spiral machine turned out to be an inventor's nightmare. Explaining why in simple terms is not easy. The first law of designing a snowbuggy is that its pounds per square inch must be approximately the same as a skier's. This is a simple rule but translating it into metal and horsepower leads the engineer into an impasse. He starts with a nice wide base—runner, track, pontoon, whatever he happens to fancy. He adds a body to carry passengers and cargo. He adds an engine, transmission gear and controls. Nervously he watches the table of weight which always goes up faster than he likes. Thus flotation and traction lead him around in a vicious and frustrating circle.

A skier's pound per square inch is about half a pound. Nothing that goes more than a few tenths above that figure can travel on soft snow. It doesn't give a designer much room to maneuver. Tucker spent years and built dozens of models of the spiral machine in the attempt to find a winning combination of flotation and traction.

No one, not even his own family, can predict how the brain of an inventor will react. After many failures with his corkscrew design, Emmitt Tucker went to bed one night in 1938 convinced that he was all done with snowbuggies and woke up next morning with an entirely new design blueprinted in his mind.

The test model that began to take shape in his garage was revolutionary. Yet it included one idea from the spiral—the pontoon method of flotation. This had always been the spiral machine's best feature. The worst was the amount of power it took to spin that bulky screw in the snow. What Tucker literally dreamed up was a new way of applying power. Instead of the spiral fins welded to a rotating pontoon, he saw the pontoon floating free with a track revolving around it.

This is the design, unlike anything that had been tried before, which at last made it possible for a machine to compete with a man on skis. Tucker was certain that it would work from the moment the picture was clear in his mind. He had to build it piece by piece, with hacksaw and file, or salvaged parts in his spare time. In the winter of 1941 he finally loaded the first Sno-Cat onto a trailer and started for the proving ground he knew so well, Crater Lake.

In a small town where Tucker stopped for lunch a stranger began to ask questions. Since the man seemed to be genuinely interested, Tucker invited him along to watch the tests. It turned out that the stranger was manager of a mine near Mount Shasta. He had a serious problem of hauling supplies in that big-snow country and was so impressed by the performance of the Sno-Cat that he bought the test model on the spot.

The Sno-Cat had to wait for its first real boost until after the war. At that time the Soil Conservation Service of the Department of Agriculture was rapidly expanding its network of snow survey courses.

By one of those happy coincidences, R. A. Work, chief of the snow survey unit, was a personal friend of Tucker and knew all about the Sno-Cat. Between them they concocted an oversnow demonstration to end all demonstrations. It was a midwinter journey from the California border north to the Columbia River, along the crest of the Cascade Mountains. What it amounted to was 600 miles of the roughest, toughest, deepest snow country in any land.

It was an epic journey in March 1948, tougher than anything of the sort that had ever been attempted. Snowfall was heavier than usual that winter, so heavy that many of the trail markers had been buried. The network of trails and logging roads Work expected to follow through the dense coastal forest was choked with fallen timber. Soft snow or hard, wet snow or dry, across sidehills, up steep grades, over fallen logs, the Sno-Cat navigated the wilderness from Mount Shasta to Mount Hood.

The high point of the trip was a chance meeting with a party of engineers. This group had come directly up from the lowlands on a highway grade with a different type of snow machine.

Naturally the drivers got into an argument over the merits of their snowbuggies. And naturally the argument had to be settled by a tug-of-war. Thus on the summit of the Cascades in midwinter, two roaring snowbuggies fought it out before an audience of whiskery mountaineers, 50 miles from civilization. Both machines buried themselves. But the Sno-Cat got out of its hole under its own power and then rescued its adversary.

In 1950 the snow surveyors organized a come one, come all field trial for over-snow vehicles at Sun Valley, Idaho. By this time Tucker had made the final major improvement to the Sno-Cat design, the four-pontoon model. Fifteen different types of snowbuggies were entered in the tests which included obstacle courses, hill climbing, sidehilling in all types of snow. The Sno-Cat won. There wasn't any second.

The Sno-Cat is still the yardstick. It looks like something out of a bad dream. Although its top speed is about 15 miles per hour, it costs as much as a custom-built sports car. It is appallingly rough and noisy. But its pounds per square inch is 0.66 and its power factor compared to a skier is 1 to 500. Perhaps the greatest compliment ever paid to this machine and its inventor is that at his factory at Medford, Oreg., Tucker and his sons built eight huge snow cruisers for the Antarctic expedition. These machines are self-contained, mobile weather stations for use during the forthcoming International Geophysical Year. Though they weigh 8,000 pounds each, they will tread on the snow as lightly as a skier.

In addition to the Armed Forces, the Sno-Cat is used by utilities companies whose trouble shooters must maintain power, communications and fuel lines in mountainous country. Loggers, miners, ski area operators and game wardens also use the rugged Cats.

Emmitt Tucker is today a tall, slender, erect man of 64. With a sparkle in his eye he will tell you that he isn't much interested in over-snow transportation any more. It's a completed job. Then he'll get his hands on the wheel of a Sno-Cat and make it do tricks no one else dares to try. You remember those hands, the big, long-fingered, superbly dextrous hands that built the incredible Sno-Cat.

Address by Miss Frances G. Knight, Director of the Passport Office, United States Department of State

---

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 21, 1958

Mr. McCORMACK. Mr. Speaker, on April 7, 1958, in honor of Frances G. Knight, Director of the Passport Office, Department of State, Mayor John B. Hynes, gave an official luncheon on the occasion of her visit to Boston.

Many distinguished guests were present, including former Speaker MARTIN. I was also present.

On that occasion Director Knight made appropriate and informative remarks, which I am pleased to include in my extension of remarks.

The remarks of Director Frances G. Knight are as follows:

COMMENTS BY FRANCES G. KNIGHT, DIRECTOR, PASSPORT OFFICE, UNITED STATES DEPARTMENT OF STATE

This is indeed an honor, and on behalf of the entire staff of the Passport Office please accept sincere thanks and deep appreciation for your consideration and good will.

We are especially proud of the Boston Passport Agency, which was first opened in July 1925. The agency was closed in July of 1942 because due to the war the granting of passport facilities was centralized in Washington.

But on November 28, 1949, the Boston Passport Agency was reopened, and its growth and importance have been synonymous with the growth and importance of this part of our country.

In 1940 less than 2,500 applications for passports were received in the Boston agency. In 1951 approximately 10,000 applications were received; in 1954, 15,000 applications; and last year 18,500 passport applications were handled by the Boston agency. This, of course, is not the complete picture of overseas travel emanating from this area, because while the Boston agency is prepared to service the applications received by clerks of court throughout New England many applications are sent directly to Washington.

In order to better service Greater Boston and the Commonwealth of Massachusetts, we have enlarged our quarters in the Federal building and, with the cooperation of the regional office of the General Services Administration, had the offices redecorated and refurbished. We had installed modern equipment and initiated up-to-date business methods for handling volume. The result is that today the Boston Passport Agency is accepting applications and issuing passports on these applications within an average of 3 days.

Nationally, the length of time for issuing a passport has been reduced from an average of 6 weeks in 1955 and 3 weeks in 1956 to a standard of 4½ days since January of 1957. We are proud of the fact that 80 percent of our passports are mailed out 4½ days after the receipt of the application, providing, of course, that the application is correct, properly executed, and the fee and documents accompanying it are in good order. We are maintaining this speed despite the fact that we are issuing at an alltime high rate for this time of year. We are currently processing 4,000 passports a day.

On a day-to-day basis, our present workload is running approximately 18 percent over last year. The direct results of this speedup are a 50-percent decrease in followup correspondence, with a comparable decrease in telephone traffic in 1957 over 1956.

Your recognition of our improved public service is a very heartwarming tribute to the industry and initiative of our Passport Office employees. Under the leadership of Mr. John J. Flynn, passport agent-in-charge, every member of the Boston agency staff has cooperated in our modernization program and accepted with alacrity and enthusiasm our new procedures and streamlined organization. I emphasize this point because you must know how very difficult it is to make any kind of a change in Government procedures. There is a normal human resistance to change, but here in Boston, the installation of our new methods of operation was a happy and exciting experience.

For example, we have adopted modern filing procedures in the Passport Office. They are faster, more accurate, and make our files more accessible. Considering the fact that our master index file consists of 22 million cards, and our current application files con-

tain 40 million documents, anything we do to facilitate their use is bound to save time and money. We have streamlined the handling of close to a million pieces of correspondence a year; we have organized our carding, searching, and recording operation on a mass-production basis. We have revised the passport application form, and the format of the passport itself has been radically changed. Information in it has been rearranged to save time and space. We have provided the transportation and travel industry, as well as ourselves, with current passport statistics. We are now operating with the guidance of charts and graphs, facts and figures instead of hearsay. We have adopted a modern accounting system and have installed cash registers, numbering machines, stamping machines, electric staplers, flexiwriters, and a score of other new equipment which has resulted in an amazing increase in worker productivity. The General Services Administration has cooperated wholeheartedly in this rejuvenation, and in its report to Congress last year, estimated that the Passport Office effected a net saving of $386,000 a year over the cost of operating with antiquated procedures and obsolete equipment. In addition, the Passport Office averaged an increase of 5.5 percent in work productivity per employee in 1957, resulting in additional dollar savings. We expect to continue to absorb a 5-percent increase in our workload through increased worker productivity in the next 2 years.

But there are still many improvements that can and will be made. I am happy to announce that, as of today, the Passport Office is relaxing its requirements for a witness to the passport application. This is a very important step in cutting redtape and delay in passport issuance.

Consider the local situation. Over 30,000 persons visited the Boston Passport Agency in 1957. Of this number, approximately 14,000 were identifying witnesses accompanying applicants who, according to passport regulations, had to provide a witness willing to testify to the identity of the applicant. In April and May our workload is at its peak. During April of 1957, 5,000 persons milled around the Boston Passport Agency, of which over 2,000 were witnesses.

In our continuing studies to improve our services to the public, the question arose as to why couldn't the Passport Office accept the same identification used by banks, or the post office, or the Veterans' Administartion when cashing or accepting checks.

In my opinion, an applicant who would file a fraudulent application for a passport will not hesitate to produce a phony witness. It seems to me that the Government has adequate means of dealing with such situations. On the other hand, if an applicant can produce a former United States passport, or naturalization certificate, a driver's license, or a Federal, State, industrial, or commercial security pass or identification card which carries his picture or physical description and his signature, we should be able to accept such identification.

Starting today, April 7, the Passport Office has advised all its agencies, as well as the 3,800 clerks of court throughout the country authorized to execute passport applications, to accept such bona fide identification in lieu of a witness. If the applicant cannot provide any acceptable identification, then he must bring a witness. We estimate that this new procedure, if effective in only 50 percent of the applications we expect to receive this year, will relieve congestion in passport agencies and offices of the clerks of court by over 250,000 persons. In the Boston agency, we estimate that it will reduce traffic by close to 100 persons per day. I need not give you a blueprint of what this will mean to the more orderly operation of our business.

Recently we have been accepting personal checks in payment of the passport fee. This, too, is a great convenience to the applicant. It has been hard for me to understand why a citizen could pay his income tax with a personal check and not his passport fee. I am not greatly concerned about checks bouncing back at us. The passing of a bad check is a criminal offense, and it seems to me that this is another matter which the Government can handle effectively by means other than inflicting a bothersome restriction in the field of passport issuance.

Now, may I say one word about passport pictures. I've been asked how my campaign is coming along on promoting happy, relaxed and smiling passport photographs. The answer is, "Fine." We are getting an encouraging number of color photographs. A couple of months ago we announced the acceptance of color passport pictures, as well as those in black and white. They have been trickling in, and may I say that the ladies are charming and attractive, and the men are handsome and dashing.

Before I close, I want to say a very special thank you for the outstanding Members of Congress from this area. They have given the Passport Office consistent support and encouragement in its modernization program. They have been our stanch friends, and for that we will be forever grateful. It has been a privilege and a pleasure to work with the Federal and local government representatives in this city.

Once again, please accept the deep appreciation and thanks of the entire Passport Office staff for this honor and for your gracious hospitality.

Sputniks Fright Good for Schools

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Boston Sunday Herald:

SPUTNIKS FRIGHT GOOD FOR SCHOOLS
(By Bill Cunningham)

In all the recorded annals of man, nothing that didn't actually spill blood in great quantities ever brought such instantaneous fear and confusion over so much of the earth as the launching of the two Russian sputniks. That was true in our great and all-powerful United States. In fact, we seemed to come closest to national nervous prostration.

The fact that the Russians had beaten us to outer space was a matter of grave concern to a great many sincere people, some of whom may possibly have a vague idea of what outer space is, and a vague idea seems to be about all even the experts can boast to the moment. But it was also seized by various causists, theorists, lobbyists, and plain nuts as a great and God-given chance to prey on the public fear and promote their pet causes.

Politically, for example, the Democratic campaign strategists began to belabor the administration and cry down Eisenhower for having cut back the rocket program and let the Russians soar ahead. Militarily, the various arms with their varying forms of the same missile, began to clamor that they could have beaten the Russians by months if they could have been freed from interference and parsimony.

Ideologically, those whose idea of forward is a tack to port, began to ululate anew over the uncoupling of Oppenheimer from any nuclear connections where the national security is involved. They included all others who were dropped for cause, or who backed out of the tent using the fifth as a curtain.

M'CARTHY BLAMED

The persecution and hounding of these noble savants, resulting in their leaving Government work, was what actually threw the initiative to Russia, so quacked this claque, and it was all the fault of such witch burners as the House Un-American Activities Committee, the Senate Subcommittee on Internal Security and so on all the way back to that black-hearted Beelzebub, the late, but still never-to-be-spat-enough-upon Senator Joe McCarthy.

Just where in all this the professional education phalanx rightly belongs, it's hard to say. It, however, was one of the first to charge, with ram's horns braying and bloody shirts on its pikestaffs. To be fair, much of it had already been at work in the field, and much of it is sincere.

Not all of it, however, is unsuspect. The field of pedagogy is organized in great part into what amounts to a powerful union, and maintains what amounts to a powerful lobby in Washington. There also are potent campaigners who have been pushing Federal aid to education so long, and so hard, that it has become a perennial big issue in the successive seatings of the Congress.

There is now a Federal Department of Health and Education, which means a bureau, with a bureaucrat at the head of it and which like all such, wants more funds, more scope, more employees, more authority so the top job will be bigger, the Department's standing higher, its perpetuity assured.

So education, pointing a quivering finger at the topless vault and screaming sputnik, lathered its charges in an assault on the front pages. From the sidelines it was hard to tell whether their model was Poul Revere, with his warning, or some hairy Biblical prophet crying "Repent, repent." The net of their message, however, was that Russia has now far surpassed us in the field of general education, and specifically has passed us so far in the fields of science and engineering that we have but the comparative standing of Igorottes.

UNITED STATES FRIGHTENED

For a nervous while, there's no question about the fact that the people of this Nation were both frightened and concerned. The papers were full of the subject of education. Almost any qualified spokesman was certain of an anxious hearing. Sermons were preached. Editorials were written. School board and PTA's were meeting almost prayerfully.

The Government proposed putting a billion dollars into college scholarships forthwith. Various governors—our own for one—outlined ambitious State plans. Practically every endowed—which means private—college in the Nation rushed forth with a new, a huge, and a highly organized campaign for funds. Harvard's 82-odd million was the master call of all.

Then, in view of the significance, a sad, and actually a silly, thing happened. By what was obviously a crash program, and after 2 or 3 spectacular fizzles, we managed to pump a couple of miniature moons of our own up into that outer envelope.

They're only bird-shot compared to the marble the Russians stuck up there, but at least we equaled the Muscovites in orbits, and we may even have surpassed them. For we also upped a third, but can't call it official because it failed to beep, and hasn't since been seen. The best we can claim is that it looked all right going up and, so far as anybody knows, it has never come down, but what really happened with it nobody knows.

That, however, leaves us a certified two now up there alone since the Russian pair has burned out. It also brought proud statements to the effect that we could have done it long before the Russians, if we'd considered it sufficiently important. We'd suspended space probing to concentrate on what seemed more important—atomic submarines, to name but one item.

Our authorities—Mr. Dulles speaking—confessed that we completely underestimated the psychological and propaganda value of such a spectular scientific achievement and, to that extent, the Russians had taken us, but that was all, and so what?

The net result was that fear seemed to vanish.

CRIES CEASED

So did public concern with the issues the fear had raised, including the fears largely manufactured by the various causists. The cries have ceased, the campaigns stopped, the public interest changed to other things—the recession, for instance.

This also applies to the subject of education, which was smoking hot, not over 3 months ago. The bill for Federal aid is right back where it was and while that billion for scholarships may yet be voted there seems more than an equal chance it will never even make the floor.

Personally, my vote would be cast against Federal aid, and I doubt that the billion is necessary or, if voted and used, would produce anything more than the thinly lacquered type of "college man" and woman we're accustomed to settling for.

It will be a shameful loss, however, if further general interest in this vital subject dies just because we're not scared to death any more. Here is a great opportunity for some valuable soul searching. Charges have been made, and the charges still stand.

Furthermore, some very great authorities in the field were already concerned with the American educational problem, and had made surveys and recommendations long before that floating doghouse of the Russians ever went up amongst the stars. One of these is Harvard's former president, Dr. James B. Conant. For some years, he's been surveying and pondering our high-school structure, and he was already on record before the world ever heard the word "sputnik."

There were others, and what the sputnik hysteria did was to bring many of these studies, surveys, and blueprints forward with more speed and urgency than might otherwise have prevailed. Several excellent studies, and covering all levels, are newly released, and they deserve careful and conscientious attention.

On the college level, for example, there's a special report on American higher education, 1958. This is an unique cooperative effort by college alumni magazine editors all over the country, and it's appearing at the moment in some 153 magazines in the United States, Canada, and Mexico. It tells the college story.

HIGH SCHOOL STUDY

On the high-school level, there's the Conant plan. Sponsored by the Carnegie Corp., the former head of Harvard made a first-hand survey of 50 high schools in 16 States, and has now drawn his blueprint for a better type of high-school curriculum.

Covering the grade-school level, a new book called "Schools Without Scholars" by one John Keats, who writes as a parent, has kindled considerable controversy and is attracting wide attention. There are other brochures, addresses, and an interesting number of magazine articles.

These latter are mostly byproducts of the sputnik confusion just now seeing light because it takes that long for, especially, a monthly magazine to be made up. As already explained the sputnik jitters have passed, but these studies shouldnt be junked as a consequence. They still deserve to be read, and pondered.

Basically, the charge is that the Russian educational system is far superior to ours because the Russian pupil, from his earliest years, takes harder courses, more of them, and pust pass them, or else—the "else" being dropped as a scholar and consigned to peonage on a farm or in a factory. Furthermore, they not only make allowance for the brainy student; they screen for him.

The Russian system is summed up succinctly in John Gunther's new "Inside Russia," just off the presses, in the following words:

"The average Russian boy or girl gets more than five times the amount of science and mathematics than is stipulated for entrance even into such a specialized American institution as MIT.

"Every Russian student is paid to go to college. The Russians have the most formidable educational machine in the world, but they are also the most ignorant people in the world about affairs outside their own country."

SCORES SCHOOLS

Against this is the following commentary on the American system from that "Schools Without Scholars," by John Keats.

"The brave new philosophy of preparing the child for his place in society, rather than filling his mind with dates, rules, and formulas, has resulted in a curriculum dominated by courses in domestic sciences, industrial arts, and social adjustment.

"In attempting to do everything for the child, schoolmen are turning out high-school graduates who have been taught how to dress for a date, play football, make copper ash trays, and very little else. Fancy equipment for unnecessary courses inflates construction costs and bemuses students with gleaming gadgets."

Both the Conant plan for high schools and some of the newer college studies have the superior student especially in mind. Some few colleges have been trying to unfetter him from the classroom drag of his "average" colleagues, for a number of years now, but with differing grades of success.

In the Conant concept high schools would have three general levels of courses. For the top 20 percent of the class, presumably college bound, there would be a stiff academic curriculum. The bottom 20 percent would be expected to operate on an elementary level. There would be a diversified vocational program for the rest.

The whole would be flexible to the extent that students could move from one level up to the other to take some special course provided they could keep up in it. Every student would have to take 4 years of English, 4 of social studies, 2 of math and 2 of science. The wind, however, would be tempered to the shorn lamb. These courses would be taught at levels he could handle. If exceptionally bright, he'd also take 3 years of a foreign language.

The problem, as stated by the plan's author, and recently published in Life magazine, is: "How to raise (United States education's) intellectual quality—giving its best minds a chance for unhampered intellectual growth—and yet, still preserve its traditional democratic ideals."

TIME FOR DREAMS

It all, of course, starts with the children, which means the parents of the children, and some of the students of the matter are caustic on that point. Last month, in Sarasota, Fla., I heard Philip H. Hiss, chairman of the Board of Public Instruction of Sarasota County, speak along these lines. He said there is too much watching of television and listening to radio, without children contributing anything of their own.

We should really be grateful for the scare given us in this particular category and proceed with a complete and constructive survey. Never mind what the Russians do, or what the Russians are. Our yardstick should be only our own potential, and our concern how far below it we've been content to coast.

Social Science—The Unused Weapon

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
